The Indonesian thinks it of the highest importance that at least one sacrificial animal should be slain at his funeral, and this is universally done in the Archipelago. Often at the funeral of a man of rank so many animals are butchered that a great many of them remain unused. Among agricultural peoples, like the Indonesians, cattle constitute the greatest riches, and in order to be rich in the life hereafter the dead man must therefore take cattle with him. Among those that have become Muhammadan the animal slain at the funeral is considered as a beast to ride on across the bridge to the future life. It is also customary to kill one or more horses for the departed soul (Madagascar, Battaland, Rotti, Timor, Sumba). There are also a few records of dog sacrifice (New Guinea, Leti, Rotti, and among the Bahaus in Borneo).

**18. Lingering of the soul temporarily near the grave or the house.**—The soul of the dead person does not go to Hades immediately after death, but roves about for some time in the neighbourhood of the grave; therefore the Indonesian builds a hut on the grave as an abode for the soul. In the house of the dead man a kind of bed of state is arranged for his use, near which his property is exhibited and a light is burned every evening. This bed of state is left from three to forty days (Galelarese, Ambonese, Torajas, Philippine Islands, Dayaks, Minañkabauians). The third day after death plays an important part among the Indonesians, for they hold the belief that the soul is unconscious of the death of the body, and does not find it out before the third day after death. Generally the soul of the person who has just died must first be convinced of his death by the souls of the departed (Dayaks, Galelarese, Battak, Niassians). The native Christians in the Moluccas spend this day, therefore, in prayer and psalm-singing. For the same reason people attach great importance to having the bodies of their relatives with them in their native country, that the soul may immediately have the souls of the departed of his own tribe as companions. When a person dies abroad, his friends, if possible, take his skeleton with them, or only the head. If this is impossible, they take at least his clothes, his hair, or rarely (in Añkola) some earth from the spot where he has died. If they cannot get any part of his corpse,

a doll is sometimes used to represent him (Papuans, Galelarese, Afikolaians). The objects mentioned are used as a medium to convey the soul of the departed to his native country. The soul remains bound to the corpse, to the earth, till the great festival of the dead has been celebrated. This celebration cannot take place until all the flesh has been consumed; for until then the soul 'stinks,' and is not admitted to the Land of Souls. The most important part of the feast of the dead is the collecting of the bones of the deceased, which are then buried or put away in a cave (Central Celebes, Aru and Key Islands, Ceram, Timor Laut, Halmahera, Buru, Timor, Borneo, Battaland, Nias). Sometimes (as in Nias) all these solemnities are performed only with the head of the dead man. Many Indonesian tribes take the bones to a cavern, which they consider as the entrance to the Land of Souls.

19. **Burning of corpses.**—Generally corpses are buried in the ground, or placed on a scaffold or in a tree. One tribe sometimes practises different methods. The essential thing is that the flesh must be decayed before the soul is really soul, and for this purpose corpses are burned among the Dayaks, Battak, and Balinese. The Dayaks in the Southern and Eastern division bury the bodies, and then at the festival of the dead burn the bones. This custom is also prevalent among some Dayak tribes in Sarawak; corpses of chiefs are often burned two or three days after death. Among the Battak, only the Karo Battak and some more Northern tribes burn the bones of their dead. The ashes and the remnants of the bones are gathered in earthen pots and entombed. One of the divisions of the Karo Battak, the Marga Simbiring, put the pots with the ashes into miniature vessels, and let these float down the river. Among the Balinese, cremation is in direct relation to metempsychosis; for this enables a soul to ascend to heaven, and descend from there to the earth to animate another body. The souls of those whose bodies have not been burned become spectres, or ghosts. The corpses of people of rank are sometimes burned only a few days after death. Investigations have made it certain that cremation is not originally an Indonesian custom, but has been introduced by the Hindus.

20. **Conducting the soul to the Land of Souls.**—When the soul has got quite clear of the body because all the flesh has decayed, it is not sufficient to give it various objects to take with it on its way to the Land of Souls at the feast of the dead; it must also be 'conducted' there. This is done by the priests and priestesses whose soul-substance leaves their bodies in their songs, and conducts the soul of the departed to the Land of Souls. Among the Papuans the bones of the departed are wrapped up into a parcel and carried round in the dance; afterwards they are collected and put into a hut, round which the people dance faster and faster till at last they run back to the village. By this dance the soul is led or, rather, driven away. Among the Galelarese the feast of the dead consists chiefly in performing dances, which after some days end in the people running four times round the house of the family, and four times round the grave; on this occasion a daughter or sister of the dead man arrays herself like a warrior; she represents the deceased, and as such is treated with homage and reverence by the guests. The Tobelorese keep the feast of the dead for several dead persons at the same time, whose bones are wrapped up in a piece of cotton and placed in the temple. On this occasion the priests are supposed to deliver the souls from the power of evil spirits and convey them safely to their destination. After the feast the bones are placed on scaffolds round the temple, and left there to decay, or they are taken to a small island, pointed out for the purpose. The Sumbanese believe that the souls of the departed trouble men in many ways; through the feast of the dead they find rest, *i.e.* they settle finally in the Land of Souls. The Sundanese have a ferryman, who is summoned by the priests during the feast of the dead to ferry the souls to the island where they are supposed to assemble. In the Luafi Sernata islands a very old person calls upon the souls to place themselves in a diminutive vessel, which is then buried by the side of the grave. In the island of Babar only the skulls are dug up from the graves; they get something to eat at the feast of the dead, after which the women take them to a cavern. In Central Celebes the feasts of the dead are very elaborate. At the opening of the feast the souls are summoned; the next day the bones are dug up; they are cleaned and wrapped up in white bast. Among some tribes they are provided with a mask with a human face. These collections of bones are placed in huts erected for the purpose in the temple. The priestesses are constantly engaged in conducting souls to the Land of Souls through their songs, and to illustrate this dramatically the bones are now and then carried round the temple. The *tiwah*, or feast of the dead, of the Dayaks in the Southern and Eastern division of Borneo is generally very extensive. Three days before the feast commences, a chest containing the bones is placed in a hut built for the purpose, where it is decorated, and where the dead person receives something to eat. The priest summons Tempon telon, the Dayak Charon, to convey the souls to the Land of Souls; he himself also accompanies them, and in his song he informs the assembled guests what place he reaches on his journey. At this feast the bones of those who have been buried in the earth are dug up, and in festive procession they are carried to the *sandong*, the family grave. They cross the water in native boats. When the bones have been entombed in the family grave, the priestesses dance round it, and pray the souls of those who have previously been interred in this grave to welcome kindly the newly arrived souls. A separate ceremony takes place to convey the souls of the offerings to the Land of Souls. The whole ceremony is concluded with a sumptuous banquet, at which the older people are supposed to drink palm-wine with the souls from the Land of Souls. With another Dayak tribe (the Manyan) the priestess relates that she sees the souls chase a pig without being able to catch it; the newly arrived soul kills the animal without the slightest difficulty, since this is the pig which has been killed for him at his funeral. The Dayaks of Sarawak make a vessel of bamboo, and call upon the spirit of the winds to convey the souls. On account of the expense of the feast which must be held when the bones of the dead are dug up, the Battak celebrate it only with the bones of people of rank; these souls then go to the Land of Souls, and gradually rise in rank till they are gods; the souls of the common people, for whom this feast is not held, continue to wander about on earth. Even among the Indonesian tribes who have been converted to Islām, this feast of the dead, at which the departed soul is conveyed to the Land of Souls, survives. It is generally celebrated on the fortieth or hundredth day after death.

21. **Experiences on the way to the Land of Souls.**—The priest or priestess conducts the soul to the Land of Souls, because, according to the idea of the Indonesians, there are many difficulties to be overcome—*e.g.*, the climbing of high mountains and the crossing of rivers; the Dayaks even speak of passing through a cataract of fire. Some

tribes believe that it is a dog (Sarawak, Olo-Ngaju), others that it is a hog (Minahassa, Central Celebes), that keeps watch; in order to pass the animal the soul gives it a hard nut (Central Celebes) or a bead (Sarawak) to eat; while the animal is trying to chew the hard object, the soul can pass unmolested. It is a common idea that there is a guardian in the Land of Souls who interrogates the souls. In Central Celebes he is called Lañkoda, and is a smith by trade. Unmarried people and those who have never been incontinent receive a blow on their knees, which prevents them from going on; also the souls of men who have never killed any one are not allowed to pass undisturbed. Of the same nature is the *kukañ* of the Dayaks: the soul of a chaste man is pushed into a ditch, and that of a chaste woman crushed by a trunk of a tree (the ditch represents a vagina, the tree a penis). Among the Minahassa the guardian of heaven is Makawalang, who treats the souls of the rich to a piece of pork, but sends away those of the poor. According to the Macassars, the guardian of heaven asks the souls whether they have faithfully observed the duties imposed by Islām. Among the Orang Lom in Bañka the guardian of heaven is called Ake Antak. An aged person always whispers to the corpse what it has to answer to the questions of this spirit. In Añkola two spirits are supposed to keep watch near a trap. If the soul answers to their questions with lies, the trap comes down and the soul is crushed to death. Among the Karo Battak it is Bapa nibadabadia, 'the illustrious father-guardian,' who questions the souls, chiefly concerning the way in which they have died (this being, in Indonesian thought, closely connected with the character of their earthly life); he makes the souls pass over a plank which lies across a precipice; then he draws back the plank, and the souls are separated from the earth for ever. In Nias the guardian of heaven is called Kalekamô; he inquires about the deeds of the people on earth, and about the number of feasts they have given. When he judges a soul to be evil, he makes him cross the river on the edge of a sword; the soul wounds his feet, falls into the water, and dies. Many Papuan tribes also believe in a guardian of heaven; he admits to the city of souls only those who have brought something.

An idea common to all conceptions of the hereafter is that the soul has to cross a sea; this belief found its origin in the sun, which crossed the sea every day on its way to the Land of Souls under the earth. It is only with further development that this notion has begun to play an ethical part in the ideas about retribution. Originally the coffin must have been the vessel in which the soul was supposed to cross the sea. The Torajas, Dayaks, and Niassians still use words for 'coffin' which have also the meaning of 'vessel.' Some tribes put the corpses in vessels even to this day (some Dayak tribes, Karo Battak, in the Moluccas); the Kayans give an oar to the dead person. In the Moluccas and in New Guinea the dead receive miniature vessels in which to make the voyage.

Among the tribes who lived far inland, the idea of the sea gradually gave place to that of a river, across which a bridge was laid (Central Celebes, Southern Celebes, Minahassa, New Guinea, Borneo, Sunda, Battaland). This bridge consists of a plank or tree trunk, which bends and rocks violently when it is crossed, or it is a sword, or at least something as sharp as a sword (Galelarese, Bahaus, Niassians). It is only among the Papuans that we find the idea of a snake serving as a bridge to the Land of Souls.

**22. Retribution.**—The Indonesians have no idea of retribution, in our sense of the word; yet they try men by a moral standard. Whether they will be allowed to enter the Land of Souls is made dependent on the possession of some virtues: valour, liberality (and in connexion with this, riches), the gift of eloquence, or the observance of the marriage-duty. Killing an enemy after the death of a chief had also the purpose of endowing the chief with the character of valour. The souls of some people were not allowed to enter the Land of Souls; in the idea of the Indonesians they either have their own City of Souls or continue to wander about on earth. They are the souls of those who have perished suddenly by some accident, of those who have been killed in battle, of suicides, and of those who have died of smallpox, leprosy, or cholera. Such a sudden death was regarded as a judgment of the gods: they had offended in some way or other, and therefore the gods had suddenly cut off their lives. People are afraid of these souls: their bodies are often left unburied, and, if they are buried, this is done without any ceremonial. Some Indonesian tribes have notions about retribution which must have been borrowed from other peoples—*e.g.*, when thieves are condemned to carry for ever the things stolen by them (Battak, Southern Celebes, Sañir Islands), or when souls have to pass through a fire in which those of the bad perish and those of the good are uninjured.

**23. The Land of Souls.**—The course of the sun, which disappears in the West every day, and is supposed to take the souls with it to the land of the dead, gave rise to the belief that the Land of Souls was situated in the West, and also to the custom of indicating the age of people by the different positions of the sun; thus the word for 'setting of the sun' is used for 'dying' (Torajas, Macassars, inhabitants of Halmahera, Añkola, Battaland). Allied to this is the custom of building houses with the ridge from East to West, the entrance facing the West, so that a person, on entering the house, will have his face turned to the rising sun. For the same reason corpses are buried from East to West; or, in places where the Land of Souls is no longer supposed to be in the West, with the feet in the direction where it is supposed to be. Many peoples think that the Land of Souls is under the earth, and they look upon chasms and caves as being passages leading to it. Originally all the Indonesians believed in the under world, as may be seen from data still extant. At present many imagine the Land of Souls to be on the earth—on a mountain or in a valley. Among the inhabitants of Northern and Central Celebes it lies in the land which is their original home, so that the direction in which it is supposed to lie also shows where the people have come from. The religious conviction of the Teñgerese and the Baduis (both in Java) has had a share in the determination of the Land of Souls: the former consider it to be the volcano of Bromo, the latter the tombs of the last princes of the empire of Pajajaran.

The views about life in the Land of Souls harmonize fairly well among the different tribes. Two features in them are strongly marked: life in the realm of the dead is simply a continuation of the life on earth; he who was important here is important there; he who was of no consequence here is of no consequence there. The second feature is that there are different divisions in the realm of the dead; in every division the souls who have died in the same way live together: those who have perished in warfare live in one village, those who have been drowned or committed suicide, etc., live in others. Certain actions are done in the Land of Souls contrary to the way in which

they are done on earth: thus the souls give each other things with the left hand; the language of the souls is the same as that of men, but the meaning of the words in the Land of Souls is the direct opposite of their meaning on earth; *e.g.*, 'black' there means 'white,' 'backward' means 'forward,' etc. (Borneo, Ceram, Halmahera).

Some tribes believe that the hereafter consists of layers, generally seven, one above the other. This is, no doubt, connected with the belief that the soul dies several times—three, seven, or nine; finally, it turns to water or dew (Torajas, Macassars, Dayaks, Balinese), a tree or a species of grass, a fruit or a blossom (Dayaks, Karo Battak, Papuans), earth (Minañkabauians), an animal (Niassians, Minañkabauians, Papuans). This belief is another proof of how material the soul is thought to be. When it has died a few times, it finally becomes soul-substance, and animates another part of nature. If, *e.g.*, the soul which has been converted into dew or into a fruit is eaten, a new man is animated.

24. **Nature of the souls worshipped.**—About the Land of Souls and the life of the soul the Indonesians are indifferent; but there is frequent intercourse between the souls and the living people, which shows itself in the greater or less reverence which the people feel for the souls (the difference between the souls of the departed and spirits which have always been considered as such is often hardly noticeable). For the souls of the departed continue to live with their descendants; they are feared for their superior power, but they are also looked up to for help in the daily work; they have power over rain, and they accompany the living in war. The souls punish with bad crops, illness, or death, when the *'Âdat* ('customary law') is not observed. Therefore the living always try to conceal from them careless observance of the old customs. Thus an oath which has been made must be kept. The Indonesians have a strong sense of justice, and, when they know that they are wrong, they do not think that they can rely upon the help of their ancestors. The souls of the departed have a very exclusive character; the souls reverenced by one tribe will not help members of another. The Indonesians cannot form a conception of a universal God. Strangers may violate the *'Âdat* without being punished by the souls, but the latter avenge themselves in this case on the inhabitants of the land, or their descendants, over whom they have power; this punishment can be averted only by killing the offender.

Among the Karo Battak the souls of stillborn children, or children who have died before teething, are honoured with sacrifices, which induce them to avert illness from the house and to grant the wishes of their relatives. In the eastern part of the Archipelago it is chiefly the souls of those who have perished in warfare and who have died by accident that are reverenced as helps by their living relatives. Very often the Indonesian does not realize what souls he invokes, as he very rarely mentions them by name.

The souls of people who have called into life a new state of things are worshipped. So in Java every village worships the soul of the man who founded the village or first cultivated the land. At the beginning of every year a village-feast is held in his honour. In many islands of the Moluccas the founder of the village is reverenced; sacrifices are offered to him when a disaster is imminent. This is found also among the Galelarese, Minahassians, and Niassians. An even more natural object for adoration is the soul of a man who has brought about a great change in the economic or political state of things—*e.g.*, the first tiller of the soil, the first smith, etc.

25. **Accidental meetings with souls.**—As the Indonesians believe that many souls wander about on earth, they must sometimes come in contact with them. So there are stories relating how some one has seen a soul, and as a rule the consequence is that he dies soon after. It is generally believed that, when a dog howls without reason, it is seeing a soul or a spirit. This power of seeing spirits is often ascribed to chickens, cats (Macassars and Battak), and pigs (Niassians). Occasionally a spirit or soul copulates with a woman, and the result is an 'albino'—a timorous person who is afraid of the society of his fellow-men and soon withdraws to the wood—or a man endowed with supernatural strength. Some peoples pretend that they can perceive footprints of souls in ashes which are scattered on the floor for this purpose; these footprints are either transverse or only as large as the joint of a finger (Philippine Islands, Central Timor, S.E. of Borneo, Añkola, Battaland). When a soul returns to the house, it generally makes its presence known by imitating the noise of some one moving or dropping all kinds of household articles. When a soul or spirit speaks to, hits, or bites a person, the consequences are generally bad; a headache, fever, or a feeling of illness ensues. An irritating eruption of the skin, shingles, and similar diseases are also attributed to contact with a spirit or soul.

26. **Incidental worship of souls.**—At such casual meetings there is no question of adoration. Reverential acts generally take place in the house, because the souls of the departed usually stay in places where they lived during their lives. At feasts the souls of the departed always get a share; it is placed in the attic, or in the ridge of the roof, the places where the souls are supposed to reside. But the souls receive a share not only of the food, but of everything that is made in the village or outside it; if a house is built, the souls get a miniature dwelling (Torajas, Gorontalese, Galelarese, Dayaks; the Torajas also make miniature smithies and salt factories for the souls); if a rice field is made, a small garden is specially laid out for the souls (Niassians, Minahassians, Torajas).

27. **Worship of souls in houses specially erected for the purpose.**—The souls worshipped in the homes are naturally the ancestors of the family living there. Besides these, there are ancestral souls that look after the interests of all the village. These are the souls of chiefs and brave warriors, who protected the inhabitants of their own village during their lives, and continue to do so now that they are dead. For them a home is built—a temple. We find such houses among nearly all Indonesian tribes; and, where they are no longer extant, there are usually indications that they did exist. We sometimes read that souls, battling for the people in war, live in the temple (Timor, Halmahera, Central Celebes, Nias), but the village guardian spirit has joined them. Where, through the influence of the Government, warfare has been made impossible, as among the Macassars and Buginese, only the village guardian spirit is worshipped in the temple. When the people go to war, sacrifices are made in the temple, and the souls are asked to march with them; as a rule nobody is allowed to enter the building till the warriors have returned. But offerings are also made in the temple when a general disaster visits the village, or when the people join in work of a general nature, such as planting or reaping rice. Some tribes keep the captured skulls of enemies in the temple (Papuans, Dayaks of Sarawak, Torajas); among the Niassians the idols in the temple are touched with the skulls. Even among such tribes as the Kailians and the Luwuians in Celebes, who have adopted Muhammadanism, heads of slain enemies are preserved in

the temple, which in other respects has more or less assumed a Muhammadan character.

One of the chief functions of the chiefs is to discuss matters of general interest with their fellow-villagers (=relatives). The souls of the departed chiefs, however, must also have a share in the consultations of their descendants; therefore the temple of the village has come to be used as a council-house (Solor, Halmahera, Central Celebes, Borneo, Nias, Battaland).

The temples are mostly decorated with figures of animals, especially of crocodiles and serpents (New Guinea, Solor, Halmahera, Central Celebes, Borneo). These figures are believed to represent the incarnations of the souls that live in the temple. In the temples are kept the instruments with which the souls are summoned or their attention drawn, such as drums, bamboo speaking-trumpets, and triton shells (New Guinea, Ceram, Solor, Central Celebes).

28. **Corpse and parts of the body as mediums in soul-worship.**—When the Indonesian invokes the souls, he has in view either a certain class of souls or the souls of the departed in general. When he wants to have intercourse with the soul of a definite person, he does so usually by a medium. The medium must always be something with which the dead person was in close connexion during his life on earth—*e.g.*, the corpse or the bones. So the corpse of a person is sometimes used to find out who is guilty of his death; if the coffin begins to move at one of the questions, this is considered to be an affirmative answer (Babar, Buru). Among the Torajas a skeleton is preserved in his former home or in the temple to remain in contact with the soul. The numerous graves where the Indonesians continue to bring their offerings from year's end to year's end to obtain the fulfilment of a wish prove that the skeleton is considered as a medium for the soul. Among the Torajas an ancestor's skull is sometimes kept in the house, and on certain occasions people bring it offerings and ask it to heal their sick. Particularly among the Dayaks, preserving the skulls of deceased chiefs is of frequent occurrence. The Battak consider the loss of such a skull so important that they would sacrifice anything to get it back; all the happiness of the house is intimately connected with it. The Niassians bury the skulls of their men of rank before the house; in times of illness a cord is passed from the graves into the house, and prayers are uttered for the patient's recovery. In the islands of Timor Laut, Ceram, and Buru, and among the Papuans, skulls are often used as mediums. Hair and nails of the deceased are used throughout the Archipelago to get into contact with the departed soul. The Papuans frequently use the teeth and the lower jaw for this purpose.

29. **Objects as mediums.**—Objects used by the deceased are considered as mediums, for something of its late possessor is supposed to cling to them. Many objects which have now become fetishes must originally have been mediums, which carried on intercourse with the former owners; the State ornaments mentioned above are examples. Besides these old heirlooms which constitute the connexion with the deceased, many other objects are used as mediums, not to get into contact with a definite soul, but with any of the souls—experiments, resembling our table-turning, by means of which thieves are found out. The experiment with the rice-van resembles our table-turning very closely; it is laid on the extended fingers, and, when it begins to tap on the floor, the answer is considered to be affirmative (Luwu, Ambon); among the Macassars the van rolls over the floor and falls at the feet of the thief. The Dayaks spin an axe on the top of their fingers. In Babar, Leti, and Halmahera a piece of rattan or bamboo is made to vibrate; the Galelarese measure a piece of rattan with the span of the hand, and, if the fingers begin to trill when stretching the span, this is considered to be an affirmative answer. A lemon, a basket, or a stick is suspended on a rope; the answer is affirmative when the object begins to swing to and fro (Malays, Macassars, Buru). There are countless experiments of this kind among the Indonesians.

30. **Images as mediums.**—Making images which represent the departed is certainly of a much more recent date than the use of relics as mediums. The Torajas use wooden masks, which are bound before the bones at the feast of the dead; after the feast the bones are buried, but the masks are preserved till another feast of the dead; they are rarely used as mediums, yet people are very much attached to them. An image in itself has no value. It gets its value only when something of the deceased has been transmitted to it. Among the Torajas the masks owe their sacredness to their contact with the bones of the dead person. In Nias one of the shapes in which the soul appears, namely, a spider, is brought into contact with the image. In New Guinea the Papuans drive the soul into the image, etc. The Papuans call their images *korwar*; they are hideous things, carved in wood, a foot long; people pay homage to them, and on important occasions consult them, *e.g.* when going on a journey. When the questioner is seized by a fit of trembling, the affair looks ominous, and he gives up his plan; in cases of illness the images are placed at the head of the sick-bed. When a *korwar* has predicted something that has not come true, the image is ill-treated or sold. In many of the Molucca islands images of the departed are found, which are generally stored away in the attic of the house; in times of need or illness the father of the family feeds them, and asks for their assistance. Sometimes the tribes of the Moluccas do not use images as mediums, but stones and pieces of wood (Wetar, Timor), or palm-leaves cut in the form of a hand with six fingers (Rotti). At every death such an object is made, hung on the roof, and sprinkled with blood; it is left there till it has completely decayed. In Halmahera the soul is gradually lured into an image, but only temporarily. In earlier times the Javanese must have made images of the departed; we meet with a remnant of this in a children's game, called *Nini Towong*, in which a doll made in a special way is animated, after which it jumps about in a jerky manner, to the great enjoyment of the children. From many particulars of the game it appears clearly that we have really to do with an image used as a medium in former times. The Teñgerese in Java have their household gods, consisting of images, up to this day. The Battak use some images of ancestors which they call *debata idup*. They are kept among the rafters of the roof, and frequently receive food-offerings. They are believed to give life and to bestow blessings, and are particularly worshipped by barren women. The Niassians always worship their ancestors by means of skilfully carved images called *adu*. They feed them by rubbing them with blood and egg, and adorn them by sticking feathers of fowls and bristles of pigs on them. If an image receives a crack, it is thought that the soul has escaped, and a new image is made. Offerings are made to the images on all important events of life, in illness, etc. Several Dayak tribes in Sarawak keep images, which they feed at stated times, and which guard the village and watch over the work of the fields. Some tribes in the Philippine Islands used images of ancestors made of stone, gold, and ivory. They were kept in the houses. Here and there, as, *e.g.*, in the

Philippine Islands and in Borneo, the souls of the departed are worshipped by means of pots.

31. **Shamanism.**—It is possible to get into contact with the souls of the departed not only by means of objects, but also by means of men. Spirits wandering about freely enter a human being, take possession of him, and act and speak through him. Such a human medium is called a shaman. To summon the spirits, drums are beaten (Central Celebes, Halmahera), dracæna leaves are woven, rice is stewed, etc. During the ecstatic trance the soul remains on the shoulder of the medium or in the apex of his heart. The spirits enter through the joints, under the nails, through the anus, and so forth. The spirit generally leaves the medium imperceptibly; sometimes the medium snaps his fingers, or presses his hands on the back of his head; sometimes people blow into his ear to expel the spirit.

The spirits are believed to arrive when the body or the limbs begin to tremble. This trembling passes into shocks, after which the medium calms down, and answers the questions put to him; or else he leaps to his feet and begins to dance to the measure of the drums. A shaman is simply a medium who allows himself to be used as a mouthpiece for the spirits. A priest's only aim is to make his soul-substance rise up to the lord of the heavens, and to reclaim the lost soul-substance of a man. Among some Indonesian tribes this is still the salient trait in their shamanism, and the medium phenomena are a mere appendage; among others priesthood and shamanism have been blended; and among others priesthood has been merged in shamanism. Among the Torajas of Central Celebes, priesthood only is found. Among the Toba Battak the two classes are sharply distinguished. A shaman is called *sibaso*; he works quite spontaneously, and is perfectly unconscious of what he says or does; *datu* is the word for the real priest, who practises sorcery, banishes the spirits of disease, and recalls runaway soul-substance to a man. At sacrificial ceremonies it is the *datu* who calls upon the spirits, but they manifest themselves in the *sibaso*. The Papuans also keep the two functions separate; the *inderri* reveals his predisposition to be a shaman by a fainting fit in the presence of a corpse; the *konoor*, on the other hand, is simply a priest who acts as a mediator between men and spirits. The Javanese, too, distinguish the ordinary *dukun*, who bears the same character as the Batta *datu*, from the *dukun* shaman; the Javanese dancing-girls are probably a degeneration of the earlier shamans.

There is a blending of shamanism and priesthood among the Dayaks, Buginese, and Minahassians. The priests perform some shamanistic actions in addition to their priestly functions. Among the Dayaks the only shamanistic element is that the spirit which has helped the priest in discovering the soul-substance, or in conducting the soul of the dead person, incarnates itself finally in the body of the priest, who in this condition performs some actions as if it were the spirit itself that did so. Among the Minahassians the only sign of the shamanism part is that, wherever the priest in his peregrination through the heavens to seek the soul-substance meets a spirit, he makes the latter speak through himself. With the Buginese priests and priestesses the shamanistic side is not essential.

Among the inhabitants of Halmahera and the Parigians in Central Celebes, priesthood has been resolved into shamanism. Among the Halmahera the priest is entirely inspired by a spirit called *jini*; then he speaks another tongue; different spirits manifest themselves, according to which the *jini*-feasts are divided into different divisions. The shamanism in Parigi is exactly the same. It may be demonstrated with all but absolute certainty that both these peoples have adopted shamanism from the Muhammadans.

32. **Demonology.**—For different reasons souls of dead people may rise so high in the esteem of the people that they come to be regarded as gods. Besides these, the Indonesians have other gods who have never been men. They ascribe the mystery of the origin of man, natural phenomena —*e.g.*, volcanic eruptions, landslides, storms—to gods who have always been gods. With the souls of his ancestors the Indonesian has daily intercourse; he fears them, but at the same time he is familiar with them. With gods and spirits he comes only occasionally into contact—*e.g.*, when he happens to cross their path or offends them; but for the most part he feels indifferent towards them and leaves everything to the priests, who know how to manage them.

33. **The Creator and Creation.**—In the Archipelago we find some Hindu names for the gods, but it is going too far to say that the gods have been borrowed from the Hindus: the foreign names were given to existing conceptions. Thus the name of *Batara Guru* is found among Battak and Malays; among the Dayaks in *Mahatara* and *Betara* or *Pitara*; among the Balinese in *Pitara*; and among the Tagals in the Philippine Islands in *Bathala*. In the same way we find the Arabic *Allāh ta'ālā* in *Hatalla* among the Dayaks, *Lakatala* in Buru, and *Latala* in Solor.

Among all peoples we find a supreme Being who has created the world; sometimes his functions are divided among different gods. In the Moluccas the creator is often called Upu lero, but the connexion between him and the creation of man is very vague. In some islands people are supposed to descend from a woman who came down from heaven. In others the first men are believed to have originated from trees or bamboo. In Buru the highest god is called Opo-geba-snulat, 'the lord moulder of man,' 'the lord creator of man.' He is said to have sent his messenger to the earth in olden times; this is Nabiata (the 'prophet Adam'). The name has certainly been derived from the Muhammadans, but messengers of gods who descend to earth are prevalent among all Indonesian peoples. Among the peoples living more to the West we find creation stories. Thus the Buginese say that the first men were born from a union of a son of the god of the upper world with a daughter of the god of the under world. Their children were the first men, who, when their parents returned home, were left behind in this world, which was formed from a handful of earth given by the god of the upper world to his son. This is the poetic expression of an idea current among the Indonesians that man has arisen by conjunction of sun and earth. It is also strongly pronounced among the Minahassians. The first human being, a woman, is moulded from the earth, and is impregnated by the west wind. She bears a son, who wanders about on the earth, and, meeting her afterwards, but not knowing her to be his mother, marries her, and in this way becomes the progenitor of the first men. The son, Toar, is merely the sun, who in the morning arises from his mother, the earth, and in the evening returns to her again as her husband. Among the Torajas of Central Celebes the two gods Ilai, 'man,' and Indara, 'maid,' make man. These two again stand for the sun and the earth. They make a couple of men of stone, who are animated by the wind and live. In Siau the highest god is called *Duata* or *Ruata*, a corruption of the Skr. *Devatā* ('divinity'). (This name is also found among the Macassars and Buginese in *Dewata*; among the Javanese in *Dewata*, *Debata*, and *Juata*; among the Dayaks in *Jebata* and *Jata*; among the

Mongondouians in *Duata*; in the Philippine islands in *Diwata*, *Davata*, and *Diuata*.) The Dayaks in S.E. Borneo think that the world was created by Mahatara and Jata, who are simply the sun and the earth. The Battak believe that the first men were born from the daughter of the chief god Ompu Tuhan mula jadi, who descends on earth, after having moulded it in the world-ocean with the aid of her father. Probably this daughter stands for the earth itself. In Nias the chief god Lowalangi (Lubu-langi) and the lower gods and men are all believed to have come forth from the buds of one and the same tree.

34. **The preserver of Creation.**—Nature-worship, which is found in the Eastern part of the Archipelago, passes into myths of gods towards the West. The chief god is the sun, and this god continues to exert influence on his creation; he makes the earth fruitful, penetrates with his light everywhere, sees everything, and punishes what displeases him (chiefly incest, sexual intercourse with animals, lies, and theft). On the other hand, this sun-god has entered so little into the life of the people, that he is not worshipped to any extent.

Sometimes creator and preserver are united in one person; but often the creator has transferred to one or more other gods the task of the administration of created things. Then the creator retreats to the background and he is known only by name, while his servants, to whom he has transferred his task, are worshipped. In the Moluccas, creator and preserver are one person; he is worshipped under the symbol of a lamp. Once a year a great sacrificial feast is held, at the time when he is thought to descend to earth to make it fruitful. He never interferes with the deeds of other spirits, whether good or evil; he does not rule. In Buru the chief god is invoked only on special occasions, at oaths, at ordeals, or in general calamities. The Timorese calls upon the preserver when making a vow, or by way of confirmation of the truth of what he has said.

The chief servant of the creator among the Torajas is Puë mpalaburu; he is the sun, who sees everything and punishes; he receives offerings in cases of general disaster, and his name is called upon when some one takes an oath or is cleansed from sin. The myths of the Minahassians set forth with great clearness how the creator has divided the administration of the world among different gods, but all these different gods may be traced back to the sun. The Mahatara of the Dayaks does not take notice of unimportant things; he is called upon only in cases of the utmost need, and then it is always necessary to sacrifice a buffalo to him, the sacrificial rites being performed by seven priestesses. Tamei Tiñgei is the chief god of the Bahaus, who punishes misdeeds and gives rewards. Other gods have the charge of husbandry, and are therefore called upon at harvest-festivals. The chief god of the Battak, Ompu mula jadi, has transferred his power to three gods: Batara guru, Soripada, and Mañalabulan. The last is a wanton, inconstant, and fickle divinity. He has the principal share in the conduct of human affairs, and is always able to thwart the good intentions of the other two gods. For this reason the Battak are particularly anxious to secure his favour. The Niassians assert that the god Lature resides in the sun; he is the owner of mankind, and can kill people at pleasure; therefore offerings are made to him that he may spare them. But Lowalangi (Lubulangi) is even more powerful than Lature. Lowalangi has power over life and death, blessings and curses, riches and poverty; he appoints kings and deposes them; he is omnipotent, omniscient, omnipresent, and an avenger of evil. His name occurs in numerous expressions in daily life, but in spite of this the Niassians pay very little heed to him.

The administrator often interferes with men by means of animals, which are his messengers. Thus birds of bad omen are sent as the messengers of the gods to warn men. Among different peoples, crocodiles and tigers are sent by the gods to avenge some evil, and by ordeals also the gods judge guilt or innocence among men.

35. **Predestination.** — The Indonesians always consider an accident which has befallen a man as a punishment for some evil that he has committed. They also believe that their lot here on earth is predetermined, and that they themselves have wanted it to be as it is. This idea is illustrated in a great many stories. There is, for instance, a story of a man who was dissatisfied with his lot, and went to the supreme lord to ask him to change it. The lord consented, and allowed the complainer to choose again, and then it was found that he had chosen the same as had fallen to his share before (Torajas, Battak, Dayaks, Galelarese, Niassians). The way in which a person is to die is also predestined at his birth; to prove this a story is told about a man who was always on his guard against tigers, because at his birth he had been told that a tiger would kill him, and who was crushed by a falling wooden image of a tiger; of a child who was killed by a string of crocodile teeth, because it had been foretold that crocodiles would cause its death (Torajas, Battak). The length of a man's life is predestined among the Battak and Sea Dayaks by means of a plant; among the Dayaks of S.E. Borneo and the Torajas by means of a rope; among the Karo Battak by means of a measure for rice; among the Minahassians by a burning torch.

36. **Moon-worship.** — At the present stage of development of Animism in Indonesia a definite moon-worship is rarely found. Here and there in the Moluccas the moon is worshipped. In Babar the war-spirit is supposed to reside in the moon; the Tomorians point out the moon as the abode of the rice-spirit; and they have many songs in its honour. The Mafors in New Guinea receive the crescent of the new moon with shouts of joy, and the women sing in its honour. The Papuans believe the moon to be the abode of a woman. Many Indonesian peoples believe that happiness and misfortune are caused by the different positions of the moon—which proves that its influence on their spiritual conceptions must have been much greater in earlier times.

37. **Intermediate gods.**—Just because the gods who have never been men are so far above the inhabitants of the earth, the latter have felt the need of intermediate gods, souls of the departed who have risen to be gods. They can assist man in approaching the original gods. A frequently recurring name for these is *sañiañ*, and other modified forms. They are of little use to the people, but of infinite use to the priests, who call upon them to assist them in their work, and then the spirits accompany and help them. The Dayaks have the most intimate knowledge of these intermediate gods. According to them, they have not been souls of men, but are allied to men. They used to live with them on the earth, but a quarrel induced them to move to the heavens. Every priest (or priestess) has his own *sañiañ* who assists him, from which it appears that here we really have souls of the departed. This is also seen from the fact that heroic exploits are told of some of these *sañiañs*. In a storm a special spirit is called upon, whilst another has power over the tribes. These spirits punish their servant (the priest) when he does not fulfil a promise. The Torajas say that their intermediate spirits carry on an endless war-

fare with other evil spirits, who live in the air, and who always lie in wait to fall upon men.

**38. Abode and manner of living of the gods.**—These gods and spirits are supposed to live in heaven or on high mountains. As they always live in the light, they are imagined as white figures, who for that reason require white offerings: white hens, white buffaloes, etc. Stories prevail everywhere that heaven used to be close to earth, so that it was possible to reach it with the hand. Grease or oil was scraped off from heaven, but, in consequence of some injudicious action of an inhabitant of earth, heaven was drawn up (Moluccas, Central Celebes, Borneo, Nias). In former times there was a lively intercourse between men and gods; numerous stories survive telling of somebody climbing up to heaven along a liana or rattan. Mountains are considered as leading up to heaven (Minahassians, Toba Battak); or the rainbow is the way upward (Central and Southern Celebes); or a gossamer thread (Halmahera). In the abode of the gods everything is imagined as earthly, only much more beautiful; often wonderful trees are found there, which bear cotton, or gold and silver fruits. A peculiar trait in the conceptions which these people form of the gods is that they are easily deceived and imposed upon, one of the commonest deceptions being that a buffalo, pig, or other animal is promised as a sacrifice, whereas in reality nothing is given but an egg or some such trifle.

**39. Volcano gods and sea gods.**—Volcanoes and seas, with their dangers, in which some perish and from which others escape, are thought by the Indonesians to be inhabited by spirits. In Minahassa every volcano is supposed to be inhabited by a god, and numerous stories are current about these volcano gods. The volcano Gunuñ Awu in the island of Siau received an annual sacrifice of a child. Human skulls were occasionally thrown as sacrifices into the crater of Ternate. Every year the Teñgerese in Java hold a great sacrificial festival for the crater of the volcano Bromo.

Throughout the Archipelago sacrifices are made to the spirits of the sea. The most widely known of all these is the goddess Njai or Ratu Loro Kidul, who lives in a beautiful palace at the bottom of the ocean on the south coast of Java, whence she holds sway over the spirits living in the caverns. With great reverence and with offerings the Javanese enter this region. She is also supposed to live at some definite places on the south coast; there people lie down to sleep in order to receive revelations from her. Those who live by gathering swallows' nests in the crevices of the rocks especially reverence her. A temple has even been built for her there, in which sacrifices are made.

A spirit, Karaeng lowe, 'the high lord,' is worshipped in Southern Celebes under the sign of the *liṅga* and *yoni*. This is the only instance of this kind of worship in the Malay Archipelago. In many places in Southern Celebes there are houses dedicated to this spirit, where he is worshipped under the sign of two stones, which evidently represent the genitals of the two sexes. Karaeng lowe dispenses fortune and misfortune; he has dominion over life and death; the patient who desires health, the mother who desires a child, the merchant who desires success, the gambler who desires gain, the husbandman who desires a good harvest, all pray to Karaeng lowe, and vow to give him something if he will grant them their desire. When they have obtained what they wanted, it would be very dangerous to refrain from keeping their vow; Karaeng lowe would avenge this by sending illness. The Karaeng lowe worship is probably of Hindu origin.

**40. Tree spirits.**—Besides gods and demi-gods, the Indonesians have lower spirits, who reside in trees, mountains, and rivers. It is only when people cross their paths that they injure them. If a person supposes himself to have been made ill by such a spirit, he makes offerings to him; otherwise there is no worship offered to these lower spirits. Among them the tree spirits occupy a foremost place. Every tree has soul-substance, but not every tree has a spirit. These spirits inhabit large trees, generally some species of ficus. If the Indonesians cut down a large tree, they first make an offering to the spirit, and beg him to go to some other place. These tree spirits are very dangerous. They often carry off the soul-substance of a man, and then a sacrifice is made to reclaim it. The Dayaks believe that they sometimes carry off even living people. They can also cause lunacy. Some tribes (as in Borneo and in Siau) imagine the tree spirits to be spirits wandering about independently. The Minañkabauians believe that they appear in the shape of animals. The Dayaks of Sarawak hang on a tree a piece of their clothing, as being a part of themselves, as an offering for the spirit.

**41. How spirits appear and how they are banished.**—We have already mentioned that tree spirits sometimes appear as animals. This is also the case with other demons, when they reveal themselves to man. They sometimes appear as serpents (Buru, Sunda, Borneo), as fireflies (Babar), as birds (Minañkabau), as tigers (Sundanese), or as men. Some tribes believe that the spirits may appear in all possible shapes. The universal means of keeping them away is the use of pungent and bad-smelling things, among which onions and ginger-roots take a foremost place; very often a bad smell is produced by burning something. A custom of frequent occurrence in the Archipelago is to lay women after childbirth near a smouldering fire, to keep the spirits at a distance from them. Besides fire, thorny boughs are used to ward off spirits, who are supposed to be afraid of being wounded by them. When a man knows the spirit's name and pronounces it, the spirit's power over him is broken.

ALB. C. KRUIJT.

LITERATURE.—The greater part of Indonesia is under Dutch rule, and the Dutch have paid great attention to the customs and religions of their subject races. Many valuable contributions to these subjects are dispersed in a number of Dutch scientific periodicals, among which may be particularly mentioned: *Tijdschrift voor Indische Taal-, Land- en Volkenkunde* (Batavia and The Hague); *Bijdragen tot de Taal-, Land- en Volkenkunde van Nederlandsch-Indië* (The Hague); *Verhandelingen van het Bataviaasch Genootschap van Kunsten en Wetenschappen* (Batavia); *Mededeelingen van wege het Nederlandsche Zendelinggenootschap* (Rotterdam); *Tijdschrift van het koninklijk Nederlandsch Aardrijkskundig Genootschap* (Leyden); and *Tijdschrift voor Nederlandsch-Indië* (Zalt-Bommel).

i. *GENERAL.*—Of general works dealing with Indonesia may be mentioned: F. Valentyn, *Oud en Nieuw Oost-Indiën*, 8 vols., Dordrecht and Amsterdam, 1724–26 (still valuable); J. Crawfurd, *History of the Indian Archipelago*, 3 vols., Edinburgh, 1820; C. J. Temminck, *Coup d'œil général sur les possessions néerlandaises dans l'Inde archipélagique*, 3 vols., Leyden, 1846–49; S. Müller, *Reizen en Onderzoekeningen in den indisch. Archipel*, 2 vols., Amsterdam, 1857; A. R. Wallace, *The Malay Archipelago*[6], London, 1877; H. von Rosenberg, *Der malayische Archipel*, Leipzig, 1878; A. Bastian, *Indonesien*, 4 pts., Berlin, 1884–89; G. A. Wilken, *Handleiding voor de vergelijkende Volkenkunde van Nederlandsch-Indië*, Leyden, 1893 (the best general introduction in a moderate compass). The writings of G. A. Wilken are a storehouse of information on the religion and sociology of Indonesia. They were published in the form of articles in many periodicals, but are now accessible in a collected edition: *De verspreide Geschriften van Prof. Dr. G. A. Wilken*, ed. F. D. E. Ossenbruggen, 4 vols., The Hague, 1912. The fullest general account of the animistic beliefs of the Indonesians is the work of A. C. Kruijt, *Het animisme in den indischen Archipel*, The Hague, 1906.

ii. *SPECIAL.*—(*a*) Malay Peninsula: T. J. Newbold, *Political and Statistical Account of the British Settlements in the Straits of Malacca*, London, 1839; W. W. Skeat, *Malay Magic*, do. 1900; W. W. Skeat and C. O. Blagden, *Pagan Races of the*

*Malay Peninsula*, 2 vols., do. 1906; N. Annandale, *Fasciculi Malayenses*, do. 1903–04; R. J. Wilkinson, *Malay Beliefs*, London and Leyden, 1906.

(*b*) Sumatra: W. Marsden, *History of Sumatra*[3], London, 1811; C. Snouck Hurgronje, *De Atjehers*, 2 vols., Batavia and Leyden, 1893–94, and *Het Gajōland en zijne Bewoners*, Batavia, 1903; F. Junghuhn, *Die Battaländer auf Sumatra*, 2 vols., Berlin, 1847; J. von Brenner, *Besuch bei den Kannibalen Sumatras*, Würzburg, 1894; J. Warneck, *Die Religion der Batak*, Leipzig, 1909; B. Hagen, 'Beiträge zur Kenntniss der Battareligion,' *Tijdschr. voor ind. Taal-, Land- en Volkenkunde*, xxviii. (1883) 498–545; J. B. Neumann, 'Het Pane- en Bila-stroomgebied op het eiland Sumatra,' *Tijdschr. van het Ned. Aardrijksk. Genootsch.* II. ii., Afdeeling: Meer uitgebreide artikelen, no. 2 (1885), *ib.* iii. nos. 1–3 (1886), *ib.* iv. no. 1 (1887); C. J. Westenberg, 'Aanteekeningen omtrent de godsdienstige begrippen der Karo-Bataks,' *Bijd. tot de Taal-, Land- en Volkenkunde van Ned.-Indië*, xli. (1892) 208–253; J. H. Neumann, 'De Begoe in de godsdienstige begrippen der Karo-Bataks in de Doessoen,' *Mededeelingen van wege het Ned. Zendelinggenootsch.* xlvi. (1903) 23–39, and 'Een en ander aangaande de Karo-Bataks,' *ib.* xlviii. (1904) 361–376, xlix. (1905) 54–67, l. (1906) 27–40, 347–364; M. J. G. FRAZER.

**INDULGENCES.**—Indulgences, as employed in the Roman Catholic Church, are a partial survival of the primitive discipline of penance; they are the remission of the penitential satisfaction due for pardoned sins, and are granted by spiritual authority for the performance of optional works of merit. In order, therefore, to understand the true nature of indulgences, we must first trace their historical evolution.

**1. History.**—The fundamental principle, admirably stated by the Council of Trent (sess. v. n. 5, sess. xiv. chs. i., ii., viii.), lies in the different conditions controlling the pardon of sin by baptism and by sacramental penance. Baptism brings complete remission of all sins previously committed, and entails no further expiation; as soon as he leaves the baptismal font, the adult, born to supernatural life by the sacrament, is no longer responsible to God or to Christian society for any past fault or punishment. But the same conditions do not hold for the remission of sins committed after baptism, in violation of baptismal vows. Remission of post-baptismal sin takes the form of a sort of judgment, comprising a confession of guilt and a punishment—a penal reparation called 'satisfaction' in theological language. The Christian who by mortal sin violates the law which he promised at baptism to observe assumes a moral responsibility of which he must give an account to God; and he also renders himself unworthy of the holy society into which he has entered, unworthy of the sacred mysteries into which he has been initiated. To recover his former status, to participate worthily once more in the holy mysteries, he must present himself as guilty before the tribunal of the priest, confess his unworthiness, and ask to be reinstated by sacerdotal authority. Absolution remits his fault (*culpa*), and at the same time the punishment due for unpardoned sin ('eternal punishment'); but it still obliges the sinner to undergo a certain penalty, and to earn full rehabilitation by reparations or 'satisfactions' ('temporal punishment' for pardoned sin). It is to this satisfaction, or temporal punishment, that the concession of indulgences refers. Following the development of penitential discipline, indulgences did not attain their final form until the 11th cent.; but the essential element was present from the very beginning, viz. the remission, in consideration of certain good works, of such penances as the sinner would otherwise be bound to perform. In the early centuries this remission would result in hastening the return of the sinner to ecclesiastical communion; later, it would consist in the substitution of easier works or works of shorter duration for the required penances; and, when penances ceased to be individually imposed, they would be remitted all the more readily and generously.

The characteristic feature of ancient public penitential discipline was the exclusion of the culprit, by way of satisfaction, either from ecclesiastical communion or at least from eucharistic communion, this exclusion being supplemented by penances under ecclesiastical control. But the Church always reserved the right to terminate this exclusion; the bishop, who had judged the fault and given the sinner his penance, could also decide when the penitent had made sufficient satisfaction. The principle is clearly stated by one of the most ancient penitential canons:

> 'The bishops shall have the power, after having tried the conduct of each, to mitigate the penalties, or to extend the time of penitence; but they must take care to inquire what has passed before and after their fall, and their clemency must be exercised accordingly' (Council of Ancyra [A.D. 314], can. 5; cf. 2, 4, 7; Nicæa, can. 12; Basil's canonical letter [ccxvii.], can. 74 ff.).

We have facts of even earlier date. If Cyprian denied confessors, imprisoned for the faith, the right of admitting penitents to ecclesiastical communion by giving them 'certificates of peace' (*libellus pacis*), he himself reclaimed that right; for we know that he absolved all the penitents of Carthage *en masse* at the approach of the persecution (Cyprian, *Ep.* x., xiv., lv., lxiv., ed. Hartel, ii. [Vienna, 1871]); and it has always been the custom to give full ecclesiastical communion to repentant sinners at death. So much for the indulgence in the initial stage of penitential discipline.

In the system of the Penitential Books, the most important part of the satisfaction is no longer exclusion of the sinner from communion, but works of reparation, prayer, psalms, fasts, mortifications, and alms, every sin having its penance assigned, and the whole system being reckoned by days, weeks, months, or even years. The priest imposed penances on the various sinners in accordance with the Penitentials, and naturally had the right to see that they were fulfilled. Primitive indulgence took a new form analogous to that new form of penance. Not only did the Penitentials allow the priest great latitude in assigning the penance, but they provided various methods of compensation and commutation with a view to mitigating the satisfactions required. Thus, a bread-and-water fast equalled two or three ordinary fasts; the recitation of a psalter (50 psalms), or a flagellation, was equivalent to several days of penance; while alms, which could not be prescribed indiscriminately for all, served as a basis for compensation which varied with the wealth and charity of the penitent. This gave rise to 'redemptions' of penance, left at first to the discretion of the confessor, and then officially regulated, in particular by the Councils of Tribur (A.D. 895, can. 56 ff.) and Rheims (A.D. 923). A relic of this method of imposing and remitting penances has been preserved in the scale of indulgences, which are granted for a stated number of days, months, or years; the remission is in proportion to the penances indicated by the Penitential Books, though the scale is no longer employed in imposing them.

The control of penance by the priest who had imposed it gradually fell into disuse, and penitents could proceed to redemptions of penance on their own account. It was then possible to offer them not only compensations, which were calculated according to the amount of their personal debt, but even general reductions, from which all might

profit, by performing a work, not prescribed for each one of them, but which all were invited to do, even though they did not know their own exact penitential debt. From the 11th cent. onwards we meet with reductions of penances, either proportional (a seventh, a quarter, or some other fraction) or absolute (ten, twenty, or forty days), offered to every one on such occasions as the consecration of a church, the translation of relics, the festival of a venerated saint, or a pilgrimage, or even for alms towards the building or upkeep of churches, abbeys, hospitals, etc. This method of redemption or substitution reached its zenith when it covered all kinds of penance, which was done at the indulgence of the Crusade. At the Council of Clermont (1095), Pope Urban II. passed the following decree:

'Whoever, out of pure devotion and not for the purpose of gaining honour or money, shall go to Jerusalem to liberate the Church of God, may count that journey in lieu of all penance' (can. 2; Mansi, *Concilia*, Venice, 1759 ff., xx. 816).

Moreover, he preached the same thing to the masses. This was not only an indulgence, but a plenary indulgence—indeed for a long time the type of plenary indulgence—until it was imitated by so many others. Though the work proposed to Crusaders was peculiarly hard, the Crusade indulgence contains all the constituent elements of an indulgence according to the accepted definition: ecclesiastical authority remits the penitential satisfaction, without considering the personal debt of each sinner, in virtue of the accomplishment of an optional task proposed equally to all. This remission, far from dispensing with confession of sins, presupposes and demands it, since it is the confessor who imposes the penance when he pardons the fault. On the other hand, an indulgence is valid directly in the eyes of the Church, and indirectly in the eyes of God, in the same way as absolution is; for the Church, the authorized intermediary between God and the Christian for the pardon of sin, is none the less the intermediary for the imposition, and consequently the reduction, of satisfaction.

In those days, just as in our own, it was mainly for their value in reference to God that indulgences were sought, and, then as now, above all by those who had least need of them, since it is never the greatest sinners who frequent the confessional most. Thus people set themselves, as they still do, to pursue penitential works for their own value and to have the right to be liberated from penance, without considering carefully whether their penance had been determined or even incurred. And, when the gradual mitigation of penitential discipline had reduced penance or sacramental satisfaction almost to the vanishing point, the remission obtained by indulgences, by the performance of less and less arduous works, served to reduce this indeterminate but certain debt of every one to the divine justice, even for pardoned sins. The importance of commutation, which is the basis of all indulgence, decreased as that of condonation increased; at the same time, the primitive idea of debt to the Church and of the penitential scale disappeared gradually from the view and practice of the faithful and even of theologians, so that the indulgence has come to be the extra-sacramental remission of the temporal punishment due to God for our pardoned sins.

The transition evidently took place by degrees; towards the end of the 11th cent. we meet with the practice of getting definite penances imposed on oneself in order to ransom them more surely. St. Peter Damianus relates (*Sanctorum vitæ*, viii. [*PL* cxliv. 1015 f.]) that a pious hermit, St. Dominic of the Cuirass (Loricatus; † 1062), so named from the iron cuirass which he always wore for mortification, made his confessor impose years of penance, once even a thousand years, on him; and this the holy man accomplished in a single Lent, thanks to the methods borrowed from the ancient Penitentials; by singing a psalter, *e.g.*, while dealing himself fifteen thousand disciplinary blows, he did five years of penance. This exceptional fact, even in the 11th cent., practically marks the end of penances actually imposed on and redeemed by individuals; sacramental satisfaction could no longer be redeemed. There was, accordingly, nothing left but penitential works proposed indiscriminately to all. These, however, continued to be quite considerable, so that the remission of satisfaction had a very real counterpart. The Crusade indulgence, the first of the plenary type, was almost a commutation; though it was extended later to those who did not go themselves to the Holy Land, but sent a representative to fight, and then to those who merely supported the holy enterprise by their alms, it was still not too easily won. On the other hand, partial indulgences were still reckoned by ten, twenty, and forty days in the 12th and 13th centuries; there was no more than a year's indulgence for a pilgrimage to the tomb of Christ or to the basilicas of the holy apostles in Rome. This means that figures still retained nearly all their old significance. Further, when the Lateran Council (1215, Decr. lxii.), after checking the abuses of certain churchmen and alms-gatherers, decreed that bishops should not grant more than a year's indulgence after the consecration of a church, and forty days in other circumstances (by a concession of Pius X., of 28th Aug. 1903, this is extended to fifty days for bishops, a hundred for archbishops, and two hundred for cardinals), it must not be imagined that it was making a great reduction of a right that had hitherto been exercised to a much larger extent. Undoubtedly the Council was aiming at making episcopal concessions uniform and restricting abuses; but the limits which it assigned were by no means excessive at the time.

The whole history of indulgences after this, however, is summed up in constantly increasing concessions, ever more easily obtained, for the most varied acts of piety and charity. By the end of the 13th cent. there were numerous indulgences for a year, five years, and so on. We then come to the second plenary indulgence, the Jubilee, granted for the first time in 1300 by Boniface VIII. for the pilgrimage to the apostles' tombs in Rome. Originally proclaimed for secular years, the Jubilee was afterwards renewed at shorter periods, and was then extended beyond Rome, and imitated on various solemn occasions. Later, plenary indulgences were multiplied and made extremely easy of access; but by this stage the evolution of the indulgence was complete.

**2. Theology.**—The theology of indulgences was, in early times, complete according to the principles stated above: temporal punishment to be undergone after sin has been pardoned; penance imposed, controlled, and even reduced, by ecclesiastical authority, its concessions being approved by God, as pardon given in His name, but in a degree which cannot be definitely stated. When theologians came to consider, chiefly in relation to God, both the remission of the penalty and the absolution of the sin, they were inclined to ask how this temporal debt to divine justice was paid. This is where the theory of 'treasure' came in—the theory not, as has been alleged, invented by Alexander of Hales, but brought into relief by him and introduced into everyday teaching. It is no more than an aspect and a consequence of the Communion of saints: ought we not to pray for one another? If merit properly so called is not directly communicable between the members of the Christian society, at least satisfaction can

be transferred, almost as a man can pay a friend's debts. The infinite satisfaction of our Lord and the superabundant satisfaction of the Virgin Mary and the saints form a treasure which the Church guards and administers, drawing upon it for the payment of the debts remitted to the faithful by indulgences. This explanation pleased the realist spirit of the scholastics, and was accepted by the whole school; provided the limits of the comparison with debts between human beings are not transcended, it is indeed quite satisfactory. Clement VI. was the first to make much of it, in his bull promulgating the Jubilee of 1350, and the Church upheld it against the attacks both of Luther (Leo X.'s bull 'Exsurge Domine,' 15th June 1520) and of the Jansenist Synod of Pistoia (Pius VI.'s bull 'Auctorem fidei,' 28th Aug. 1794).

Connected with the theory of treasure are the theory and practice of the application of indulgence to the dead, a new form which helped, rather than hindered, the development of prayer for the dead, a custom always employed in the Church. The transfer of indulgence to the dead seemed to clash with the principle that the Church has no control over the other world; to this the theologians replied that it was not a case of granting indulgences directly to the dead, but simply a matter of offering to God for them the indulgences which the living could acquire; they added that the application of indulgences to the dead was not made in the form of strict, just payment, but by means of prayer—'per modum suffragii,' according to the accepted expression; in other words, it depended on the mercy of God. On this understanding the application of indulgences to the dead was adopted by the whole school (cf. Thomas Aquinas, *In IV. Sent.*, dis. 45, qu. 2, art. 3; Bonaventura, *In IV. Sent.*, dis. 20, p. 2, art. 1, qu. 5). It was not included in any official document till 1476 under Sixtus IV. This Pope, the first to accord indulgences to the dead, explained its significance; and from this time it became official doctrine and general practice (see the response of the Congregation of Indulgences of 28th July 1840 [*Decreta authentica*, no. 283]). The most notable official document on the theology of indulgences is the decree of the Council of Trent (sess. xxv.), affirming the traditional authority of the Church to grant them (cf. Mt $16^{19}$, Jn $20^{23}$), and declaring the practice most salutary for the Christian people.

This decree avoids precise statement, but this is because the real efficacy of indulgences cannot be estimated with precision. Not only is the Christian ignorant of the degree of temporal punishment that is his due (the scale for imposition of penance has not been preserved, but only that for remission), but he does not know how God measures this punishment or in what proportion He accepts the indulgence; and this uncertainty is, of course, more marked in the case of the efficacy of indulgences for the dead.

At least it is clear what indulgences are not: they are not merits, though some pious persons seem to think they are; nor the remission or pardon of sin itself, though this has been inferred from the celebrated expression, 'a culpa et a pœna'; nor the purely gratuitous, unconditioned remission of the expiation due for pardoned sin; nor a sort of authority to sin gained by making a promise of some simple expiation. Without entering into discussions raised by so-called indulgences 'a culpa et a pœna,' we may formulate some conclusions: (*a*) no single extant text implies the remission of mortal sin without recourse to the sacrament of penance; (*b*) a person who, after receiving absolution from his sins, obtains a plenary indulgence is actually free 'a culpa et a pœna'; (*c*) as a matter of fact, this expression is not found at first, except in reference to the two early plenary indulgences, the Crusade and the Jubilee, for which every one was allowed to apply to the confessor of his own choice; (*d*) the same explanation holds for letters of confession and indulgence, so frequent from the 14th cent.; (*e*) the expression has always been correctly interpreted by theologians: after all, it is no more difficult to explain than such expressions as 'peccatorum remissiones,' which continue to appear in pontifical letters without being misunderstood by any one; besides, is sin fully remitted so long as it leaves an expiation to be accomplished?

3. **Abuse and reform.**—The abuse commonly known as the 'sale of indulgences' was a very real exploitation of the concessions of indulgences granted in return for almsgiving to the churches; but it must be remarked that this was always an abuse, never a legitimate custom, and that it was always combated and finally suppressed by the Church. The principle that the Church can reward the contributions of the faithful to the temporal needs of the religious society by spiritual favours is unassailable, and requires no justification. The abuse consisted in the exaggerated and inaccurate statements made by preachers in order to encourage generous giving (especially for the deliverance of souls from purgatory), the culpable maladministration of alms, the deductions made from the alms for the benefit of the Church dignitaries and even of civil authorities, and other modes of procedure which gave to the granting of indulgences the appearance of a traffic. It is well known that the granting of indulgences for reconstructing the church of St. Peter in Rome was the occasion of Luther's revolt; if the doctrine was sound, as Tetzel proved, appearances were very unfavourable.

The Lateran Council (1215) and the Council of Vienne (1311) had tried to crush the abuses of alms-gatherers, but without much effect; it fell to the Council of Trent to strike at the root of the evil by condemning abusive practices, and abolishing the collecting of alms and trading in indulgences (sess. xxi. 'de reform.', ch. 9; sess. xxv.); the publication of indulgences was put in the hands of the bishops, assisted by two canons: they had to collect the alms of the faithful themselves, and keep nothing back. A further step was taken; indulgence-alms were completely suppressed (except the bull for the Crusade in Spain, which was also freed from all abuse); on the rare occasions when general indulgences included almsgiving, the latter was only one of the prescribed duties; its taxation and employment were left to the free choice of the faithful.

The reform of indulgences was energetically pursued by the popes, and the problems relating to them were entrusted by Clement VIII. to a provisional commission of cardinals. Clement IX. re-established it on a stable basis in 1667, charging it 'to resolve the difficulties that arose, to correct and suppress abuses, to do away with false, apocryphal, and indiscreet indulgences, etc.' This Congregation of Indulgences continued to exist till 1904, when it was united with the Congregation of Rites; in 1908, at the re-organization of the Roman Curia, indulgences were entrusted to a section of the Congregation of the Holy Office.

4. **Practical remarks.**—A plenary indulgence is one which covers all penance required of the penitent; a partial indulgence covers a part of the penance, and is counted by days, months, or years. A better distinction would be that the latter is reckoned, not according to the actual debt of the sinner, but according to the ancient penitential scales, while the former is not. While all indulgences really refer to persons, those which

are granted directly to persons, *e.g.*, to a confraternity, are called personal; those directly attached to a church, an altar, etc., are called local; while those attached to holy objects—crucifix, medals, beads, etc.—are called real. It is easy to understand the distinction between temporary and permanent indulgences, indulgences obtained for certain specified days, or once a day, or 'toties quoties,' whenever the penitential actions are repeated, and so on. The chief indulgences are, as formerly, the Crusade (still kept up in Spain in a special form); the Jubilee, which occurs every quarter-century, and is imitated more or less frequently by solemn indulgences called 'in form of Jubilee'; indulgences attached to the most popular devotions, as the Rosary or the Stations of the Cross; those of famous sanctuaries, as Rome, Jerusalem, Compostella, Assisi's Portiuncula, etc.; 'apostolic' indulgences, attached by the pope (or the priest authorized by him) to holy objects blessed by him, etc. The Congregation of indulgences published an official collection (*Raccolta*) of indulgenced devotions (Rome, 1854, and numerous editions), and two collections, one of decisions (*Decreta authentica ab anno 1668 ad annum 1882*, Ratisbon, 1883), the other of rescripts and summaries of indulgences (*Rescripta authentica . . . necnon Summaria indulgentiarum*, Ratisbon, 1885). Numerous other private collections exist, recognized and approved by Roman or Episcopal authority.

LITERATURE.—(*a*) *HISTORY.*—J. Morin, *Commentarius historicus de disciplina in administratione sacramenti pœnitentiæ*, Paris, 1651 (bk. x. is devoted to the history of indulgences); E. Amort, *De origine, progressu, valore, et fructu indulgentiarum*, Venice, 1738 (a rich store of texts); H. C. Lea, *A History of Auricular Confession and Indulgences*, Philadelphia, 1896, vol. iii. (Protestant); T. Brieger, art. 'Indulgenzen,' in *PRE*[3] (Protestant); above all, numerous artt. by N. Paulus in various reviews, esp. *ZKT*.

(*b*) *THEOLOGY.*—All theologians are occupied more or less with indulgences. The *Tractatus dogmatico-moralis de indulgentiis* of Theodorus a Spiritu Sancto, Rome, 1743, has long been regarded as classical. The best recent practical treatments and collections are: F. Beringer, *Die Ablässe*[12], Paderborn, 1900, Fr. tr. by P. Mazoyer, *Les Indulgences*[3], Paris, 1905; P. Mocchegiani a Monsano, *Collectio indulgentiarum*, Quaracchi, 1897.

A. BOUDINHON.

**INDUSTRIALISM.**—The conditions governing the progress of a country in civilization are exceedingly complex. Among these the industry of the people occupies a position of considerable importance. Wealth and culture are far from being interconnected; but, at the same time, a very poor country is unlikely to attain to the same stage of progress as one in which commerce has developed sufficiently to provide a moderate standard of comfort for the majority of the inhabitants. Thus industrial progress becomes the potentiality from which other agencies can realize a higher stage of civilization. In some recent discussions of progress, there are two forms of description, each of which is liable to mislead. On the one side, industry is spoken of in terms which imply that it is something altogether modern, while, on the other side, it appears to be inferred that industry alone will create a satisfactory amount of national wealth. Against the first trend of thought, it is to be noted that among primitive peoples, whose situation is disadvantageous, there are periods of sustained and painful labour. A tribe, trembling on the verge of starvation, will be condemned to severe toil, and the demands which this condition makes on mind and body account for the stationary or even declining state of such a society. Hence there must be conjoined with habits of industry a not unfavourable geographical position, in order that progress may be made—to modify a saying of W. Petty: 'Labour is the father, and natural resources the mother of wealth' (*Economic Writings of Sir W. Petty*, ed. C. H. Hull, London, 1899, p. 377). But of these two conditions of progress it is easy to over-estimate the importance of natural resources. There is some instinct or gift in certain peoples which urges them either to force their way from a disadvantageous situation or by their labour to modify a country which was originally almost barren so that it becomes moderately fruitful.

Wherever a society maintained itself for any considerable period, industry was a characteristic of its life. If it existed in a nomadic or pastoral state, there was the care of the cattle, while at the same time there was, no doubt, in most cases the work of providing clothing for the tribe. With the general advance of civilization there came the time when, as in England during a great part of the Middle Ages, the occupations of the people were predominantly agricultural. At this stage, the manor constituted a complete economic unit, providing for almost all its own normal wants. In it one can trace the beginnings of organization in the allocation of specific functions to certain workers. The rise of the towns involved important economic and social consequences. The bringing together of a population of some size and the contact with distant markets enlarged the horizon of the mediæval burgess as compared with the man living in the country, and the towns were centres of initiative and, on the whole, stood for the breaking down of oppressive customs. In fact, with the growth of towns the way was prepared for the beginnings of the period which is distinguished as the modern one, as compared with Mediævalism.

The problem of the 17th cent. was the substitution of some new method for the series of customs and laws which had been found to hamper industry during the previous two centuries. The method available was the enlarging of the productive unit, and for this capital was required. Gradually capitalistic production began to replace the purely domestic system. The former had been early adopted in the woollen, the coal, and the iron trades, and it had the advantage of enabling a certain amount of division of labour to be adopted; but in the 17th cent. and the early part of the 18th cent. there were limits to the specialization that was possible. When, for instance, one reads of a Glasgow woollen 'manufactory' which in 1700 employed 1400 hands, it is to be inferred that the majority of the workers were engaged in their own homes, while power was used for the finishing of the cloth. Such industries were, in fact, carried on under the domestic system in the preliminary processes, under factory conditions in the final processes, and there was a capitalistic regime in the marketing of the product.

During the first part of the 18th cent. in England considerable additions were made to the capital of the country. At the same time markets were being extended, and by the joint action of both causes it became possible to increase the quantity of capitalistic production. The latter again led to further division of labour—a phenomenon to which Adam Smith drew attention in *The Wealth of Nations*. Then there followed a series of important mechanical inventions, affecting first the textile trades and later other industries. As a result there was a great displacement of hand labour, followed by increased specialization and organization of industry. In many ways the period from 1770 to 1840 was one of change, even of upheaval, and it is usually termed 'the industrial revolution.' In the middle of the 18th cent. British industry was largely of the cottage or domestic type. A hundred years later the factory system had become predominant. Nor did the change end here; the second half of

the 19th cent. witnessed a revolution in transport, which is still continuing. The facilities of communication tend to bring distant places into commercial relationship, and thus to render possible production on a larger and larger scale, with further specialization of industry and increased invention of machines.

All these changes may be summed up in the word 'industrialism,' and they have profoundly modified not only the mode of production, but also the whole social life of those countries where they have taken place. The effects of industrialism extend into almost all departments of the national life. Under the domestic system the power required for the primitive instruments then in use was supplied either by the workers or by animals. Now it is drawn from purely mechanical sources. Thus it has become possible to use the labour of men and women for purposes which, on the whole, require greater skill, while the total product can be very many times greater. Real wages are much higher, and the condition of the skilled artisan is certainly much better. The concentration of factories in large towns gives the workers the advantage of city life, and their lives are brighter and fuller than those of their predecessors who worked under the domestic system. These constitute some of the chief gains of the system, as against which allowance must be made for its losses and its evils. During the transition period of the industrial revolution great classes of the population sustained severe hardships, and in the early days of the factory system the conditions of female and child labour were deplorable. These, as well as other abuses, have been lessened by the Factory Acts; but there remain certain dangers to national well-being in the aggregation of large populations in the towns. When public sanitation was little regarded, the mortality of urban life was high; and, even yet, when so large a proportion of the population lives in towns, there is a certain danger to the physique of the people. There are signs which encourage the anticipation that for large numbers of the working class population this disadvantage is capable of remedy. Town-planning, the opening up of slums, increased air space in the smaller houses, greater care of the children, and better knowledge of hygiene among the people themselves point to an ultimate improvement in the physique of those who live in towns. Then, as regards the state of the worker in the course of his employment, some occupations are 'dangerous trades,' either through the mechanical processes involving risk of accident or through danger to health from the substances which have to be dealt with. Regulation of factories tends to limit the number of the former, and, while the total accidents are distressingly great, the percentage according to the numbers employed has diminished as compared with earlier periods. Thus the number of accidents per 100 stage-coach drivers was higher than that per 100 engine-drivers, and similarly with the travellers. The best medical opinion points to trade diseases being preventable. From the purely economic standpoint there are strong inducements to their eradication. As a rule, where there is risk of a trade disease the nominal wages of the workers tend to be higher than they would have been otherwise, since such risk checks the inflow of labour and lessens the earning time of those employed. Besides, almost every trade disease is traceable to a waste of material, the saving of which represents an economy of human life. It has been urged against the factory system that it tends to create a surplus of labour which is little more than on the verge of starvation, which, indeed, apart from Poor Law relief, would be in the deepest distress. This 'submerged' portion of the population suffers either from irregularity of employment or from the unremunerative character of the employment that it can obtain, as in the case of sweated industries. Neither of these characteristics is generally prevalent among the artisan classes which have been called into existence by the factory system. Accordingly, it may be concluded that the cause of a depressed market for certain kinds of unskilled labour is to be sought elsewhere. Attempts have recently been made to deal with these unfavourable conditions by legislation—as regards sweating by the institution of wages boards, and as regards irregularity of employment by the second part of the Insurance Act of 1911 (see INSURANCE).

It follows then, on the whole, that, while the disadvantages of industrialism appear to be capable of gradual amelioration by the exercise of knowledge, forethought, and improved organization, the advantages are substantial, and they tend to be cumulative. At the same time, it is a dangerous error to suppose that, because industrialism has increased the material welfare of the nation, it has established a condition of life which is to be regarded as altogether satisfactory. Opinion has fluctuated between two extremes. For some years after the success of the industrial revolution it was commonly held that industry throve best in the absence of all interference and regulation by the State—a doctrine which reached its most forcible development in the interpretation of *laissez faire* by the Manchester School. Gradually this attitude was modified by the acceptance of exceptions from the principle of *laissez faire* in industry—as, for instance, in the Factory Acts. Of late the pendulum of opinion has tended to swing in the direction of increased State-regulation of industry. And, if this tendency is carried too far, there is the danger that initiative may be checked. Economic forces are so complex that the prevention of one evil sometimes occasions another no less serious. Thus the problem of the future will be, on the one hand, to correct, or at least diminish, some of the ills of the industrial system; while, on the other hand, this should be effected without the sacrifice of any of its essentially valuable characteristics.

**INDUSTRIAL SCHOOLS.**—See JUVENILE CRIMINALS.

**INFALLIBILITY.**—I. *GENERAL: INFALLIBILITY IN COMMON LIFE.*—1. **Infallibility a universal idea; its basis and general significance; equivalent terms and cognate ideas.**—At the heart of such universal questions as What shall I believe? Whom shall I trust? Whom shall I obey? Where shall I find certitude? What is the foundation of faith? What is truth? there lies a principle of faith in the existence of a source and channel of infallible knowledge. The quest and discovery of an infallible authority has, in some form or other, been the business not only of the great systems of religion throughout the world which have canonized the utterances and injunctions of their prophets, priests, and legislators, but also of innumerable social and political associations, each inspired with an analogous hope and confidence. Usually, it may be said, it is a practical or working infallibility that men agree to recognize; but just in proportion

as that infallibility is challenged and placed in need of vindication it is apt to be invested with a robe of mystery, and advanced to a dignity which it is fondly hoped will make it absolute and above question.

The word 'infallibility' is late Latin in its origin; but the idea, both religious and political, which it conveys is as ancient as authority in Church and State. As a negative virtue or perfection it is practically equivalent to 'inerrancy' and 'indefectibility,' the root notions of 'stumbling,' 'straying,' and 'failing' representing obvious and kindred defects in a guide to truth. As a positive virtue or perfection it has for its counterpart 'reliability,' 'trustworthiness,' or 'trueness.' The same difficulties and problems inhere in both sets of terms. In considering them we are brought face to face with an impressive series of ultimate questions, moral, social, political, legal, ecclesiastical, and religious. It is impossible to define, analyze, and weigh the concept of infallibility without recognizing that there are involved in it the foundations upon which human thought has built up its ideas of an absolute authority, a court of final appeal, a majesty of law and government, a divine right of persons or of institutions, a warrant of certitude, a rule of faith, a code of honour and of duty, a system of truth. To believe in inspiration, in revelation, in illumination, to accept a dogma, to proclaim a truth, implies in every case a faith in some infallible. Human intelligence may locate this ultimate ground of faith and conduct very variously. A man may be convinced that it resides in his own unaided mind or heart or conscience, or in the unaided faculties of some ruler or official or dignitary, or in the unaided instinct of some family or corporation or people, or in the contents of a sacred book or law or literature, or in any one of these conceived as dictated or imparted by supernatural instruction. But that an infallible seat and oracle of authority does exist is axiomatic in ethics and in politics not less than in religion. 'Oh that I knew where I might find it!' is the burden of a longing for it, hardly to be distinguished from the aspiration after God Himself. It is easy to say that to err is human, that inerrancy as a perfection belongs to God alone, that any human claim to it savours of rank presumption and, indeed, of blasphemy. And certainly it would be insufferable that any mortal mind or will should arrogate it to itself as an indefectible individual possession. But, as we shall see, its claimants in Church and State seek to elude the condemnation which they would otherwise incur, and which they freely inflict upon others in like case, by representing themselves as hereditary or official life-renters of a divinely delegated authority and wisdom. Kings or castes claim divine right, not as created or won by themselves, but as given irrevocably to themselves. A prophet or a priest claims to express the very will of God, not as a maker but as a recipient of revelation. The maxim of civil law, 'The King cannot err,' is neither more nor less intelligible and defensible than the later maxim of canon law, 'The Supreme Pontiff cannot err.' Each rests upon a philosophy of absolute monarchy as profound, subtle, and elusive as the other; each springs from an instinct deep-seated in human nature, and satisfies in its own way psychological needs that never fail to assert themselves. It will be the principal suggestion of this article that ecclesiastical or papal infallibility is not to be explained or criticized in theological or philosophical terms so much as in political and practical. Forensic and public rather than academic considerations have defended it during its protracted development. Sentiment and a sense of corporate discipline have done more for it than logic and apologetic. It was no accident that in the Vatican Council of 1870 and in the Roman Catholic Church outside that imposing assembly the conflict resolved itself into a bitter opposition between the scholarly and the administrative genius of the Church, the former as hostile to the definition of papal infallibility as the latter was urgent in its favour. The Curia is a court, not an academy. Its utterances are decrees, not theories. Its language is not theological so much as legal, and is to be interpreted and judged as such. To construe it literally, as if its vocabulary were derived from science, is perhaps as imprudent as to insist that court dress be made compulsory in the schools, or that wig and gown be borrowed from the hall of justice and made the dress of commerce and of recreation. It is true, of course, that infallibility, like other dogmatic formulations, has called into being a scholarship, or a scholasticism, of its own. But it rested on grounds distinct from scholarship and philosophy. It had silent reasons superior to the texts of Scripture which it cited. It was the canonization of a practical and essentially political principle. For its ecclesiastical promoters the doubts and hesitations and objections of their learned and eloquent opponents served no other purpose than the set speeches of the *advocatus diaboli* at the canonization of an already venerated saint. They were as shadows to enhance the new illumination. They were the resistance needed to give zest and triumph to a victory.

2. **Degrees of infallibility; qualified forms of the idea.**—The term 'infallible,' as applied to an individual, an organization, a system of doctrine, or a body of literature, does not, on the face of it, lend itself to qualification or modification. As a thing is either perfect or imperfect, so is a thing either fallible or infallible. But, in fact, the term is confidently employed, especially in controversy, in a variety of senses, its extreme asserters having in reserve a citadel of common sense for refuge when their exaggerations have been exposed and made untenable. As the term 'truth' has had to sustain a formidable diversity of interpretations, infallibility, as befits an idea so near of kin to it, has passed through the same experience. It may denote, as we have stated, absolute or practical immunity from error or failure. At the top of the scale a person may be conceived as in himself so perfectly constituted as not only in all circumstances to be found never to fail of right and truth in any degree, but as to be incapable of thus failing. At the bottom of the scale one may conceive a person not in himself, but by external influence, saved, on the whole and in the long run, from material or irremediable error. Between these two conceptions there lies a considerable series of descending degrees of infallibility, each of which is an adequate basis of faith and conduct, though it comes short of the ideal. Viewed scientifically, the proud boast of infallibility tends more and more to qualify itself. Though real, it is virtual, official, conditional, occasional, derived, or relative, in every claimant except God. The Bible is deemed infallible as inspired and kept pure by divine agency, either in every syllable and letter or as a whole, either in matters of faith and morals only or in matters of historical fact also, either in text or in substance, either in the original or in a particular version, either in the literal, in the historico-literary, or in a figurative sense, either as interpreted by the Fathers, by the Reformers, or by a particular branch of the living Church, and so on. The Church is deemed infallible in its clergy alone or in the episcopate, in councils or in popes, or in its clergy and laity together, either in matters touching faith and morals only, or in discipline or science or scholar-

ship also, either at a certain era or in its unbroken practice, either in a certain denomination or in its entirety, and so on. But, when viewed through the medium of religious or patriotic faith, infallibility rises in the scale and ascends to the lofty altitude at which truth and authority are absolute and divine. Of infallibility, as of truth, there are idealist, utilitarian, and pragmatist interpretations, and each varies in an individualistic or an institutionalistic direction.

3. **Wide range of the idea.**—It is important that the wide range of the idea should be recognized. Infallibility is claimed in some measure or degree in a large number of regions of human activity. While the ecclesiastical and political uses are the most familiar as themes of literary and academic discussion, others deserve mention in an article like this, since the analogies they present are valuable, and have undoubtedly lent support to the former. Wherever in human affairs authority is respected and truth recognized, a degree of infallibility appropriate to the circumstances is implied. Usually the quality of perfect trustworthiness is attributed simply to the object, person, or institution in which it is believed to reside. But in reality it is also implied that the mind which recognizes infallibility has itself formed an infallible, an absolutely trustworthy, judgment, whether directly on the basis of evidence before itself, or indirectly on the basis of evidence accepted by a reputed infallible, external witness or authority, such as tradition, usage, or a living organization. Nothing assists the student of infallibility more effectively to appreciate its essential complexity and subtlety than a swift glance at the less notorious and controversial regions of life in which it is acknowledged to be operative.

(1) *In external Nature.*—External Nature, upon any view of an ultimate explanation, presents the eye of man with a spectacle of infallibility. Think what you will of her achievements, her products in detail, her tragedies, and her catastrophes, her laws operate with a serenely or a grimly perfect regularity, her processes are so absolutely reliable that an alleged suspension of them or exception to them becomes a miracle, and no one credits it except a theist who may find himself able to explain it as a divine suspension of a divine custom for divine ends, and thus implicitly leaves intact the general conception of Nature's normally unbroken regularity and uniformity. The sequence of the seasons, the alternation of day and night, the undeviating course of physical processes and of natural laws which know no exceptions, have passed into a proverb of unfailing trustworthiness. For religious faith Nature is infallible within her appointed sphere, because her Author and Upholder is infallible, and expresses His mind and will, within limits, through her. Failure in her would be failure in Him.

(2) *In human Nature.*—Trust Nature, says one school, and she will guide you rightly in the end. In other words, instinct is infallible. Convention is artificial and represses Nature. But Nature, though you expel her with a pitchfork, will make her way back and master you. A return to Nature in its primitive sense, however, is not more attractive than a return to his cradle would be to a grown man. The trouble for a sansculottist philosophy of any type is that the great conventions of life are themselves profoundly natural; they are the dictates of instinct guided by long experience. It is more natural to the genus *homo* to go clothed than naked, to observe law than to be anarchist. And for the individual the rule to trust one's instinct as a sure guide is not to be crudely simplified into a wanton and libertine indulgence of each passing whim or fugitive passion. Even the brutes are above that. Instinct, the nature in us, is as complex as the universe, nature around us. Each has required an age-long evolution to bring it to what it is. Nature, instinct, is a perfectly trustworthy authority, but it needs patience and impartial investigation to know her mind and catch her final mandate. 'Be natural,' a first law of manners and of style in art and literature, and, rightly understood, also in morals and religion, does not mean 'Play the new-born babe, or play the backwoods savage,' but 'Be true to your real genius and station and mission in life.' Nature is infallible, in the region of human instinct as in her own external province, the world of the elements and forces; but her mind and will are expressed in decrees which are not momentary or intermittent or capricious, but are in time discerned as universal laws making for progress and cohering in consistency.

(3) *In human society.*—In human social life various degrees of infallibility are recognized under the conceptions of authority and discipline. No one pretends that all parents or that any parents are incapable of making mistakes and misleading their children, yet the will of the parent and the information and instruction of the parent are for a time infallible to the child, gladly accepted by him as such, and within limits authorized as such both by law and by public opinion. The rights of the parent in the child who is flesh of his own flesh and is brought up by him, the mutual affection that is natural to both and inspires trust, sympathy, and understanding, and makes submission to authority no hardship, the special knowledge which the parent possesses of the temperament and capacity of the child and his natural desire to develop the best in him—such considerations make interference between parent and child at a certain stage in life profoundly undesirable, and lend at least a temporary infallibility to parental authority. The same is true of the authority of the teacher in school and university not only to command obedience, but to command faith in his instruction. The apprentice in business or in handicraft, the subordinate official in well-nigh every organization in commercial, military, professional, and public service, accepts, and is authorized to accept, within limits as final for him the mandate or advice of his superior. Such infallibility is maintained as socially economical and as conducing to efficiency in the common interest. It is held to be justified as working well, and flagrant instances of abuse of power are held to discredit the individual, not the system. Democracy itself is not less a form of government, entailing discipline and subordination in its public departments, than a theory of citizen equality. Expediency alone, based on confidence in special knowledge, is the warrant of military infallibility with its autocratic subjection of all ranks to one mind and will, of legal infallibility with its judicial *cul de sac* in a court of final appeal, and of political infallibility with its autocratic or constitutional vesting of all authority ultimately in a sovereign power. The physician in practice is assigned an all but arbitrary infallibility, tempered by occasional appeal to the specialist, and restrained from gross incompetency or crime by professional honour fortified by the common law and the Medical Council. 'Trust the expert' is a rule in which humanity for the most part has a childlike confidence, utterly misplaced in numerous particular instances, yet based generally on a solid foundation of close observation and long experience. Proverbial though it is that doctors differ, no proverb encourages the patient to differ from his doctor. Proverbial though it is that tastes differ, each generation suffers itself willingly to be

directed in its architecture, art, and music by the experts of the day, in spite of the fact, too clearly shown by history, that their judgment in many cases proves to be as transitory and as unfortunate in its issue as the æsthetic canons and decrees of sartorial fashion.

(4) *In reason.*—If we turn to reason, the ultimate differentia of mankind in the world of life, in search of an infallible principle, our quest is not in vain, but the result is not the discovery of an automatic solvent of all problems. Reason is infallible. It is the organ of truth. But, though it resides in every normal human being, it confers no immediate miraculous identity of judgment or opinion upon humanity. All men reason; but not all reason accurately or consistently. Fortified though it is by increasing personal experience and individual knowledge, and fostered and assisted though it is by tradition and by common intercourse, the individual reason is not delivered from errors and shortcomings. When we speak of reason as infallible, we look beyond the individual and even beyond the aggregate to what is anything but an abstraction, to the common principle of all our thinking and judging, which is not many but one, which guides and directs our science in all its departments, which appeals to men of every race. The rationalist isolates it as a standard and criterion of faith and duty, forgets that it is but an instrument, though the highest in our use, and in its favour ignores other elements in our spiritual constitution which give force and value to life. But reason, by which we discriminate truth from error, religion from superstition, and in great measure right from wrong, as an indwelling principle in humanity, must be infallible. Apart from its complete and unimpeded exercise there is no rest to the soul. Through it the observation of nature and its operations rises from a pastime into science, enhancing not more man's knowledge than his power, and approximating his intelligence and his insight nearer and nearer to the divine. But, as with nature or instinct, so with reason—it is infallible as an ultimate principle, fallibly employed by individual intelligences even in the exalted sphere of science, which, outside the somewhat frigid bounds of pure mathematics, is never altogether innocent of questionable dogma and changing fashion.

(5) *In conscience.*—It is an axiom of all schools and all sects that a man ought to obey his conscience in all circumstances and at all costs. Religion, indeed, recognizes in human conscience the very whisper of the infallible Spirit of God. But what one man's conscience sanctions for him another's sometimes in the same circumstances refuses to permit. The slavery which one generation contemplates with equanimity and justifies without a qualm revolts the soul of its successor. The polygamy which one race practises deliberately as its social duty appears abhorrent to another people. The pride, the ambition, the love of power and wealth, which are the breath of life to one class of men, are as death to the soul of another. Usages and impulses which pass unchallenged in the OT, or are regarded as directly approved, are condemned in the NT. Yet conscience is not dethroned from its sovereign dignity, nor is it acknowledged to lack essential unity. For the individual, the time, the race, it is final; it is to be believed implicitly, and obeyed. But even conscience can be developed and trained, as in the individual so also in the race. It is the same principle in all its variations, in all individuals, periods, and peoples. Its function is the same. Its genius or spirit is the same. But, like everything human, it has to grow, to come to itself, to increase in self-knowledge and in vision. If it is the whisper of God, it is also a still, small voice sounding in human ears amid the distractions of other sounds, and it speaks a language whose vocabulary, accent, and tones man does not learn at once without education and taking pains. Conscience is not an oracle before whose tripod the human soul can sink its native intelligence and responsible discernment and resign itself to passive listening. To regard it as an automatic index to duty, operated supernaturally apart from the dispositions of the heart and mind in which it is resident, is to degrade both it and its divine operator. The compass is an infallible pointer to the pole, but science which gave it to the seaman for his guidance has had to toil and search in order to discover its true direction and to instruct him how to house it, how to allow for its deflexion, how to strengthen its power and protect it from external interference, how to construe its behaviour in all circumstances. So conscience in the individual, for all its dignity as a divine voice speaking in the soul of man, is no exception to the sacred law that revelation, though it comes to earth from heaven, enters through human faculties, entrusted to human vision, human intelligence, and human utterance. Essentially the same conjunction of human and divine which Christological theology has made familiar in the Incarnate Word as a mystery to faith, and which baffles prosaic analysis in the divine message of the prophets and in the written Word of God, which are at the same time intensely human, presents itself to reverent inquiry in the divine Word which we call conscience. It is infallible for religious faith, though its organs of utterance are in themselves found to be imperfect and errant. In the moral world it is better to do the wrong thing under the conscientious conviction that it is right than to do the right thing in spite of the conscientious conviction that it is wrong. But in either instance the organ of moral discrimination is at fault and is in need of further education. Thus the infallibility of conscience, absolute as it rightly is for the individual, is always relative to his enlightenment, and ought to be consciously so, and therefore open to fresh enlightenment. Education and development may modify its actual decrees, but as a principle it represents a consistent attitude towards ethical values as in the course of time and experience they are successively understood and rightly appreciated.

(6) *In the State and in political life.*—Again, it is a maxim and mark of good citizenship that the laws of one's country are to be loyally obeyed. They possess a certain majesty more sovereign even than the king in whose name they are promulgated and enforced. They express the genius and spirit of a people, mould its life incessantly, and outline for common instruction a certain minimal suggestion of its ideal of justice. What represents the settled conviction of many generations of experience must, it is readily felt, be true, and has a right to be enforced. Conscience and expediency combine to dignify its authority. But in all civilized countries the development of parliamentary legislation has introduced so great an amount of legal detail into statutory obligations, and the victories of party which carry legislative programmes into the statute-book frequently represent so attenuated, shortlived, and doubtful a majority of public opinion in their favour, that the majesty which once rightly belonged to the greater and often unwritten codes of earlier days has become at once a moral and a psychological impossibility. Party government is everywhere in just disrepute, except among the politically ambitious whose ends alone it serves, because more and more it presumes to employ coercion in

the name of the whole State and with the resources of the whole commonwealth to enforce the will of a section of the people in things morally indifferent. On one plea or another it will not wait to secure moral unanimity, the only legitimate basis of compulsion. It seldom cares to invite an explicit mandate, but prefers to merge a number of separate issues in its appeal to the constituencies, juggling as it pleases with their aggregate response. Yet in the Crown, the State, the commonwealth, however organized for government and administration, there resides a real infallibility. Its authority, like that of conscience, articulates itself in different lands and at different periods in very various utterances, and sanctions things which in course of time it would fain repudiate. Even with the best and most honourable intentions it may do wrong, act tyrannically, and retard progress. But such cases constitute to the right-minded reformer simply a signal of the need of education. The just authority of public opinion, and of immemorial tradition, and of the institutions which they have constructed for the public good must not be overthrown if it is to be brought to bear with a freshly enlightened purpose upon the establishment of a better order of things. Infallibility, therefore, in the State, vested in its head and officers, its government and administration, absolute though it appears from moment to moment when the interests of individuals collapse in conflict with it, is and always has been relative and conditioned. Autocracy at its worst has its restraints, and owes the very continuance of its power to them. Democracy is but a readjustment and redistribution of responsibilities and authorities. The legal principle that the king or the legislature cannot err holds its own only by the help of the seemingly inconsistent rule that the sovereign power is in duty bound to redress wrongs and to promote reforms as need arises. The same ministers and members of parliament who on admission swear to uphold the constitution of their country are vested with power to alter or modify it. If the interest of common order and public peace demand immediate obedience to the existing law, that obedience will not long be rendered where there is no confidence that the highest good of the people is being vigilantly promoted by the occupants of official power. Closely as the ecclesiastical claimants to infallibility have modelled their politics upon the theory and practice of the secular powers under whose shadow they have had to live, they have not found in them any example or analogy for an absolute regime whose decrees were not only affirmed to be final for the time but irreformable and unalterable for all time. It was reserved for ecclesiastical statesmen to endeavour to erect a hierarchical autocracy distinguished from all secular organizations by its steadfast and immovable exclusion of innovation even by constitutional means.

(7) *In religion.*—It is in religion that the principle of infallible authority asserts itself most powerfully. Every religion has its solemn ordinances and obligations, its absolute decrees which rule the public and domestic life of its people. The higher religions, which claim in some sense to save men here and hereafter, use the same order of language and operate with the same instruments of instruction and discipline as the lower, but they leave the lower far behind in respect of the urgency of their appeal, the dignity of their claims, and the wealth of means which they bring to bear upon mankind for the accomplishment of their lofty purpose. They make explicit and articulate the presuppositions and the genius of earlier faiths. They are theologically and ecclesiastically self-conscious. They are not content merely to proclaim, but feel bound also to explain. They develop organizations for their propagation and diffusion comparable in extent and in cost with the secular politics of history. They are not content to rest on the authority of custom or usage as the valid basis of their law, but affirm their direct origination by divine agency. They describe their authority not only as a power demanding to be obeyed, but as a power desiring and requiring to be believed. The truth they preach does not derive its credibility or its cogency from human sources. It is God's Word. It is a divine revelation, not a human discovery. Tradition itself can add no sanctity to it: it can only keep it pure and pass it down the generations. In such a setting infallibility takes on an enhanced solemnity. It is no longer an empirical convention founded on natural right and supported by simple expediency, but rises into an august principle of dogmatic faith. In Christianity most of all it has come to mature self-consciousness, and found expression in a series of transcendent affirmations of faith. Buddhism, Muhammadanism, Hinduism, Sikhism, Parsiism, have precisely analogous dogmas associated with their conceptions of an inspired founder, an inspired literature and canon, a holy organization or fraternity, and a providentially safeguarded tradition and interpretation. But in Christianity the questions relating to infallibility have been developed and worked out both by scholarship and by administration with a completeness that is without rival, and a literature of extreme value and great impressiveness is available for the student who desires to master them for himself.

II. *SPECIAL: INFALLIBILITY IN THE CHRISTIAN RELIGION.*—1. **Introductory considerations.** —In the Christian life and within the Christian organization of society the various types and degrees of infallibility which have been sketched in the first division of this article all have their counterparts. Each of the Churches and every type of Christian has a seat of authority, simple or complex, accessible or remote, to which it habitually refers its doctrinal and practical difficulties. The response of the oracle may not be regarded as final for more than the occasion or the party concerned, but it is believed to represent an independent and in some sense authoritative voice, confirming or correcting individual opinion. This authority in the Christian world is at once a rule of faith and of duty, promoting, if not demanding, belief in its testimony and obedience to its injunctions. In every case it is believed to owe its prerogative and power to divine inspiration and to a permanent divine commission. In argument and counter-argument the advocates of these authorities are apt to draw distinctions between the rival principles as in themselves either more or less spiritual in character. But the Christian rationalist, for example, who makes reason supreme, does so only under the conviction that God gave reason to man to be his guide through all his perplexities of faith and conduct, and that it is impiety towards the Author and Upholder of that noble faculty to doubt its authority and its adequacy. He can point effectively to the fact that all schools of Christian thought argue or reason, when they can, the correctness of their views, even when those views have reached the paradox *Credo quia absurdum*; and there is justice in his judgment that for Christendom reason is infallible within its own legitimate province, inferring truth from the data supplied to it by nature, experience, or revelation, correlating truths derived from whatever source, and exposing error either directly or by reduction to absurdity.

Broadly speaking, infallibility has been sought by Christian faith in a direction either external or internal to the individual. In historical documents, the Scriptures or the Creeds and Confessions of Faith, or in sacred traditions embedded in literature or embodied in life, or in the living Church either as a whole or represented by some class or individual, or in the historical Jesus, a fundamentally external norm of infallible truth is found. In the Christian reason, or in the witness of the Holy Spirit within the individual Christian soul, an inward norm is accepted. But the common presupposition of all these views is that God may be trusted not to fail the believing soul, that His guardian and guiding Spirit is increasingly at work in the Church, bringing infallible conviction to those who, officially or personally, use the means of grace and knowledge available in the Church in reliance upon God. Individuals and Churches emphasize differently the particular instruments and vehicles of infallible guidance, but under all their differences it is clear that they operate with the same elements of spiritual power and knowledge. There is one Spirit, the common ultimate; and His instruments, though they are many, are essentially alike for all. In a sense no claims to infallibility are more provincial than the ultra-catholic in so far as they are ultramontane, and none are more individualistic than the papal since they are vested in one man. Thus do extremes meet in their pursuit of a common object.

The principal forms of infallibilist theory which have been urged by Christian thinkers locate the seat of Christian authority in sacred writings, in the organized or visible Church, in the historical Jesus, or in the Christian reason, conscience, or spirit. In that order they are here reviewed.

2. **Infallibility of Holy Scripture.**—Christianity was born to revere a Bible. Its earliest place of worship was the Galilæan synagogue, a House of the Book, a provincial equivalent for the distant Temple, whose open Holy of Holies, in the full view of the congregation, contained the Old Covenant, the rolls of the Word of God, in their shrine or ark. Master and disciples had alike learned in the synagogue and its schools to regard the Law and the Prophets as the veritable utterance of the Spirit of God. For them a visit to the Temple at the great feasts owed its impressiveness not less to the Scriptural instruction than to the ritual and sacrifice which it housed. Their nation, in the phrase so picturesquely used by Muhammad in the Qur'ān to describe them, was the 'People of the Book.' The most admired and distinguished class in the nation, according to the popular judgment, were the scribes and Pharisees, whose profession it was, not by birth, but by learning and talent, to be the priests and Levites of the Temple and Cultus of the Book. If the Temple priesthood who served in the sight of Israel principally at the great festivals represented Aaron in their ephods, the Rabbis sat in Moses' seat with the phylactery on their forehead as their symbol, exercising an authority which practically overshadowed the direction of public ritual in the Capital alone, since it reached the infinitesimal details of daily life and piety throughout the country. Public opinion invested them in the period of the ministry of Christ with an authority in matters of faith and morals which Christian priesthoods with significant and ominous avidity have made the precedent and the model for their own. Yet it was the Book they handled rather than the way they handled it that surrounded them with popular veneration. To the almost superstitious awe with which the popular mind universally regarded book-learning in ancient times, the transcendent character of the Holy Book which they expounded lent vastly added force. If we remember what the OT in Hebrew and in Greek was to Israel, and also bear in mind the profound impression that it made, in spite of its foreign atmosphere and peculiar exclusiveness, upon the cultured classes of neighbouring races among whom it gained thousands of disinterested proselytes by its sheer grandeur, elevation, and spiritual uniqueness, we shall not wonder that from the beginning something verging on Bibliolatry was native to Christianity. The NT, which has no infallible pretensions for itself any more than the OT had for itself, and gains our allegiance none the less readily because of their absence from its unaffected pages, from first to last quotes from the OT and defers to it as a treasury of literal oracles of God. The reader of it does not need to recall particular references of Jesus to the authority of the Bible of His people whose 'Scripture cannot be broken' (Jn 10[35])—ignorance of which and of God's power is a cause of error (Mt 22[29])—an authority which was common ground for the strangely different interpretations of it made by Him and by His enemies. The 'oracles of God,' as Paul calls them (Ro 3[2]), are as truly the basis of Christ's teaching, and, as in the Temptation and the Transfiguration, the strength of His life, as they are the source of the language and imagery in which the Apostolic writers set forth His teaching and His life and character. The most consummate scholarship of our time is only coming to realize fully the minute and profound dependence of the NT upon the OT, Gospels and Epistles, Master and disciples alike. For one and all the OT was the Infallible Book, God's own Word and Revelation through inspired seers, singers, thinkers, statesmen, and annalists, every word of which was authoritative for the soul, if rightly understood.

The composition and publication of the Apostolic writings was necessarily followed by an almost immediate extension of the Canon, the infallible rule of faith and life. For, apart from their intimate connexion with the Lord Himself as veracious records and expositions of Him composed by men belonging more or less closely to His earliest following, they have a spiritual tone, power, and distinction, and they proclaim a message, which not only raised them at once to the exalted level of the OT, but made them in sober truth its completion and perfection, the crown of its hopes and promises, the light that in earlier days had projected moving shadows as it drew near the world. If the OT was inspired, much more the NT. If the OT formed a Canon, with or without the late Apocrypha, much more the NT, also with or without the later writings, which were painfully marked by waning power. Detailed examination, sentence by sentence, of these newer writings only served to vindicate the comparison. They preserve, to this day, the same inexhaustible edification and stimulus for religious minds which Israel and the first Christians found unfailingly in the reverent perusal and study of the older Bible of their race. Both Testaments remain inextricably bound up together as the Bible and Common Rule of the whole of Christendom. Greek, Roman, and Protestant alike use it, and cherish it, as the fountain of sacred truth, the unfailing and inerrant source of Christian instruction, God's literal Word for all time, dictated by His Spirit and phrased by his chosen servants to be an eternal possession of the faithful in His Church. For the Greek and Latin Fathers, for the Schoolmen great and small, for all branches of the divided modern Church, the unmistakable teaching of the Bible is infallible. 'It is written,' for them as for the first Christians, is officially final proof, where the Scripture is at

one and its sense correctly reached, just as 'Thus saith the Lord' is final on the lips of a true prophet.

Then how comes it that there are so many Churches, and so many Biblical theologies at their foundation, it may be asked, if the Bible is one, and infallible, and accepted by all Christians? The answer is twofold.

(*a*) While the Bible is one, its contents are far from homogeneous, representing many historical strata of religious experience and many types of religious temperament; so that a Book which comes to us from so many minds may very naturally appeal to men very differently, some responding to one element in it, others to others, no single individual and no Church, it may be, ever being capable of appreciating all alike. It lends itself, not unintentionally, to as many interpretations as it finds interpreters. The rival Church theologies are neither wrong in themselves nor, as we are apt to judge in haste, destructive of the unity of Holy Writ, any more than the rival tendencies within its own pages, as, for example, of priest and prophet or of Paulinism and Petrinism, are subversive of it. Scholarship and common sense have come to doubt the wisdom and the justice of making the Bible into a code, or a quarry of materials for a code, of statute law which must be rigorously administered if justice is to be done to it and to the lieges. The letter killeth; the spirit giveth life. Faith cannot be legislated; it has to be 'inspired.' Unity or conformity may become a fetish, and its cult a superstition, if it is not comprehensive enough to admit of a certain play of freedom and spontaneity in the faith which inspires it. The division and subdivision of the Church in all lands, far from disclosing a merely schismatic spirit, is in great measure a proof that the Christian mind has been alive and awake, that it has demanded a wider catholicity than orthodoxies would acknowledge, and that the many-sidedness of the Christian Scriptures has received recognition in spite of all legalistic repression and restraint. Bossuet's controversial use of the variation of Protestant doctrine rests on a grotesque misconception of the nature of unity, and consorts very ill with the spirit of his native Gallicanism. Christianity itself was at first known as a sect, a *αἵρεσις*, because it rested upon an interpretation of the Hebrew Scriptures which was contrary to that of the accepted schools. The Sermon on the Mount, with its 'It was said of old time . . . but I say unto you,' is a perfect illustration of the mingled reverence and independent discrimination of Jesus' attitude to the OT. The conflict of texts in the threefold temptation in the wilderness, some being rejected as lower and worldly, others accepted as spiritual, is another proof of the critical position which He took up towards the letter and details of the Book whose inherent infallibility He invariably assumes. And, far from discouraging a like reverent freedom in His followers, He was at no pains to preclude variation in Christian thought, and prescribed no dogmatic interpretation either of the OT or of His own words and ordinances, although the daily conversation of His immediate disciples, even the inner circle, revealed with unmistakable clearness the grave differences of opinion which were inevitable in the future. It may, indeed, be part of the moral vocation and intellectual responsibility of every Christian to form his own best judgment as to the message of the Word of God, and Christian unity may find expression less in identity of opinion than in identity of attitude, less in finding a uniform doctrine than in finding the truth for oneself, whatever others may seem to find. Certain it is, in any case, that from the very outset of its career Christianity has expressed itself through diverse interpretations of its common Scriptures, retaining its sense of their divine authority notwithstanding unimpaired.

Moreover, the infallibility of Scripture was not incompatible with a varying Canon. At first the Canon was simply the accepted OT, but it existed in both its Hebrew and its Greek form, each of which was authoritative, and was, in fact, employed as the textual basis of quotations in the NT. An artificial identity of Hebrew text was secured by rabbinical care, greatly to the loss of later scholarship; but, though the legend of the Septuagint credited the work of the seventy Greek translators with miraculous identity in a similar interest, the same miracle-loving Providence omitted to supply an identical text or even an identical number of books to the received Hebrew and to the received Greek Canons, suggesting thereby that infallibility was to be found in something higher than the hireling work of the copying scribe and the selective judgment of the Canon-former. It was not otherwise with the Christian Bible when by degrees the NT drew together as the complement of the OT. No doubt it was comparatively easy to set aside inferior aspirants to a place in the completed Canon, though some writings ultimately included and some excluded hung in the balance for a considerable time. But, as time went on, and versions into the vernaculars of Christian Europe, Asia, and Africa were made and recognized for use, and the process of manuscript reproduction steadily increased the distance between the current copies and the lost originals, the difficulties which beset the natural ideal of a single interpretation of the Bible were greatly multiplied. Rome in its own practical and not over-scrupulous fashion cut the knot by ordaining that the Greek and Hebrew texts should retire into academic seclusion as antiquarian matter, and that a standard revision of Jerome's Vulgate should for all time coming be the only Bible for doctrinal and disciplinary and liturgical use. Even that Vulgate has come to need textual revision and standardization by a Biblical Commission. The Scriptural infallibilist who desiderates a single authentic text as the basis of his scholarship and dogma might well despair. But it is clear that the kind of infallibility which Jesus Christ and the early Church recognized in Scripture was not textual or linguistic or historical in character, but spiritual, and the Roman Catholic or Protestant controversialist who flees for refuge to an arbitrarily selected version and text as his infallible Canon, or postulates an infallible authority to be its interpreter, has succumbed to an unchristian panic, and has failed to recognize the true nature of the inerrancy of Holy Writ. It must be acknowledged without reserve that scholarship has made it simply impossible for any man or any church to point to one text, or one rendering, or one interpretation of the Bible and say, 'This is the one true Word of God, infallible and exclusive.' It is self-delusion, and in the strictest sense superstition, to set up any authority, whether amateur or expert, and appeal to it to settle controversy either temporarily or finally. We may make increasing approximation to the true answer, but nothing is more certain than that a certainty upon it which is beyond question can never be reached. Can Christendom, however, not be content to take up its Lord's position in the matter? He lays down no rule for posterity about the Massoretic text or the Septuagintal rendering. He frames no rules for exegesis. He proclaims the establishment of no court to settle such disputes. The inerrancy of Scripture for Him was compatible with its inclusion of much that was or had become imperfect. He distinguished weightier from minor matters of the Law (Mt 23). For Him there were Messianic elements in it so misleading and seductive as to be satanic, and there were encouragements to what in a Christian would be vice and sin. The divine kernel of Scripture was what alone concerned Him, the Canon within the Canon, the element which reached and held fast the Christian conscience and satisfied the demands of the Holy Spirit operating in the Christian soul.

(*b*) There are many divergent schools of Christian opinion and many types of church life for this further reason, that, apart from the differences of text, rendering, and interpretation just considered in relation to the Bible as one and infallible, traditions external altogether to the Scriptures have been taken as a conjunct and co-ordinate basis of faith and duty. No Church, however devoted or however servile in its Biblicism, has succeeded in eliminating the authority of tradition altogether, for in the sphere of interpretation it makes its presence universally felt. But in no Church is a tradition hostile to the plain sense of Scripture welcome in itself. Roman Catholic dogma expressly co-ordinates tradition with Scripture as a source of revealed truth and duty. 'This [saving] truth and [moral] discipline,' says the Council of Trent in its 'Decree concerning the Canonical Scriptures,' 'are contained in the written books and the unwritten traditions, which, received by the Apostles from the mouth of Christ Himself, or from the Apostles themselves, the Holy Ghost dictating, have come down even unto us, transmitted as it were from hand to hand: the Synod, following the examples of the orthodox Fathers, receives and venerates with an equal affection of piety and reverence all the books both of the Old and of the New Testament—seeing that one God is the author of both—as also the said traditions, as well those appertaining to faith as to morals, as having been dictated, either by Christ's own word of mouth, or by the Holy Ghost, and preserved in the Catholic Church by a continuous succession.' And in the 'Decree concerning Original Sin' it professes to follow 'the testimonies of the sacred Scriptures, of the holy Fathers, of the most approved councils, and the judgment and consent of the Church itself.' But conflict between them is not conceived as possible, the function of tradition being to make explicit as need arises what has lain implicit in the treasury of ecclesiastical authority and Scriptural truth. But any addition of Church tradition to the letter of Scripture on equal terms must increase the room for divergence in men's interpretation of the Bible viewed as an infallible document. Great as is the opportunity for honest difference of opinion on the teaching of Scripture, it is as nothing compared with the opportunity provided by accumulated custom and convention in the Church. It may be difficult to determine the harmony or 'consent' of Scripture, but will any one seriously maintain that a *consensus patrum* or a *consensus traditionum* with any approach to unanimity could be produced for a similar range of doctrine?

The infallibility of Scripture consists of no absolute immunity from error in matters of historical and scientific fact. Even the Gospels defy the harmonist in some details, misquote at least one passage from the OT (Mk $1^2$, Lk $7^{27}$, where 'thy' is substituted for 'my,' and the whole meaning of Malachi altered), and misattribute another passage (Mt $27^9$, where 'Jeremiah the prophet' should be 'Zechariah'). The OT, in its cosmogony and in its history, fails again and again to satisfy an exact standard of accuracy and to consist with modern knowledge, while its statistics are not seldom inconsistent in detail. Many of its lapses are covered up by the kindly offices of textual tradition and translation, though every scholar knows them familiarly. Others have been smoothed over by the indulgent resources of an ingenious interpretation. It is now a commonplace of

Biblical learning that God has been at no pains to prevent errors of history and knowledge and defects in the text and its transmission from finding an entrance into the sacred pages of His written Word. The marvel is, in truth, that detected errors are so few. The devout reader of Scripture may indeed accept them as there, if not from accident, on purpose, to protect him from the sin of Bibliolatry, and to chasten the religious instinct which demands infallibility of a literal sort and insists on revelation as an *opus operatum* and on inspiration as a finished fact. Add together the sum of Biblical inaccuracies and flaws, and, while they do disprove the notion, formed *a priori* of all divine instruments, that the Book contains no blemish, the aggregate is so slight as to be practically negligible. It merely serves to admonish us that Biblical infallibility is not to be sought in the letter, and proves to the discomfiture of our instinctive literalism that jots and tittles can pass away without disturbance of the spirit of the Book. No one will suspect the Westminster divines of disloyalty to the doctrine of Scriptural infallibility, and there is therefore a peculiar impressiveness in their discriminating conclusions regarding it. Speaking, as they do, the last dogmatic word of the older Calvinism, they devote a great part of the opening chapter of their Confession to the subject as the key to their whole doctrine.

'The authority of the holy Scripture, for which it ought to be believed and obeyed, dependeth not upon the testimony of any man or church, but wholly upon God (who is truth itself), the Author thereof; and therefore it is to be received, because it is the Word of God. We may be moved and induced by the testimony of the Church to an high and reverent esteem of the holy Scripture; and the heavenliness of the matter, the efficacy of the doctrine, the majesty of the style, the consent of all the parts, the scope of the whole (which is to give all glory to God), the full discovery it makes of the only way of man's salvation, the many other incomparable excellencies, and the entire perfection thereof, are arguments whereby it doth abundantly evidence itself to be the Word of God; yet, notwithstanding, our full persuasion and assurance of the infallible truth, and divine authority thereof, is from the inward work of the Holy Spirit, bearing witness by and with the Word in our hearts. . . . Those things which are necessary to be known, believed, and observed, for salvation, are so clearly propounded and opened in some place of Scripture or other, that not only the learned but the unlearned, in a due use of the ordinary means, may attain unto a sufficient understanding of them. . . . The infallible rule of interpretation of Scripture is the Scripture itself; and therefore, when there is a question about the true and full sense of any Scripture (which is not manifold, but one), it must be searched and known by other places that speak more clearly. The Supreme Judge, by which all controversies of religion are to be determined, and all decrees of councils, opinions of ancient writers, doctrines of men, and private spirits, are to be examined, and in whose sentence we are to rest, can be no other but the Holy Spirit speaking in the Scripture.'

Thus, in Calvinistic as in Lutheran orthodoxy, rooted though each is in a thoroughgoing Biblicism, a spiritual principle of dogmatic authority was resorted to in distrust of all external infallibility. The infallible in Scripture was not to be learned by scholarship nor by application to Church Councils in their wisdom.

As A. B. Davidson says in *The Theology of the OT* (Edinburgh, 1904), p. 206, 'When we speak of the infallibility of Scripture, we must remember it is not a scientific or philosophic infallibility, but the infallibility . . . of common-sense.'

It could be divined by the simple through the illuminating grace of God's Spirit. It concerned not secular knowledge but salvation. In the Thirty-nine Articles of the Church of England there is no formal reference to Scriptural infallibility, but, instead, to 'the sufficiency of the Holy Scriptures for Salvation.'

'Holy Scripture containeth all things necessary to salvation: so that whatsoever is not read therein, nor may be proved thereby, is not to be required of any man, that it should be believed as an article of the Faith, or be thought requisite as necessary to salvation' (Art. VI.). 'The Church hath power to decree Rites or Ceremonies, and authority in Controversies of Faith: and yet it is not lawful for the Church to ordain any thing that is contrary to God's Word written, neither may it so expound one place of Scripture, that it be repugnant to another. Wherefore, although the Church be a witness and a keeper of Holy Writ, yet, as it ought not to decree any thing against the same, so besides the same ought it not to enforce any thing to be believed for necessity of Salvation' (Art. XX.).

In both these articles the authority of Scripture is drawn upon only so far as relates to the great practical needs of religious life and experience.

3. **Infallibility of Creeds and Confessions, of dogma.**—The dogmatic symbols of Christendom, on any view of them, invite discussion in this connexion as a sequel to Holy Scripture and as a preliminary to the Church in the series of accredited authorities; for, on the one hand, like the Bible they are written documents, scriptures, and they are also canonical in their own degree; and, on the other hand, they owe their official authority to the consent of the Church and to unbroken tradition. They are regarded as inspired, but only in a secondary and derivative sense; not as delivered by prophetic men by whom the Holy Spirit uttered fresh truth, but as compiled from Scripture or deduced from Scripture by saints, scholars, and churchmen under the guidance or illumination of the same Spirit. In high theory they are all subordinate to Scripture, and unmistakably sprung from it. To the primary Canon of Apostolic writings they form an appendix of ecclesiastical dogma. But in practice they came to receive a liturgical, disciplinary, and didactic deference hardly inferior to Scripture. Not seldom, indeed, in their character as authoritative summaries of its contents and definitions of the sense in which a Church accepted and construed God's Word, they effectively supplanted Scripture. Scripture, by its many-sidedness, its informality, its popular speech, its unconventional freedom, and its infinite suggestiveness, everywhere prompted men to think for themselves and fashion systems of doctrine for themselves. All the heresies, great and small, appealed to it. Each of the Churches was convinced that it was founded on it, and could cite a wealth of passages palpably in its favour. Thus, if uniformity was to be secured in Christendom, Scripture was seen to be inadequately narrow and exclusive as a standard of orthodoxy, and Creeds and Confessions (*qq.v.*) with growing elaborateness were employed by supreme ecclesiastical authorities, ostensibly to condense and supplement it, but in effect, for disciplinary purposes, to replace and supersede it. That has been a virtually universal process throughout Christendom. There is much to be said for it. Much of it was salutary. It represented a long-continued endeavour not only to exclude grave error and to keep the faith pure by the help, where possible, of Scripture itself, but also to define the essence of Christianity as a faith. The ancient Creeds have a character and a venerableness all their own, so impressive as well-nigh to disarm criticism. Yet even the simplest of them is scarred by controversy. The Apostles' Creed, the Nicæno-Constantinopolitan, the Athanasian, or Quicunque Vult, and the Te Deum form a monumental group of dogmatic symbols, owing less of their authority to formal acceptance by councils and enforcement by discipline than to their willing and, indeed, proud acceptance by the devotion and the scholarship of the Christian centuries. But, different as they are in character, origin, form, and popularity, they are alike acts of faith in Scripture, human responses to the initiative of revelation rather than inspired objects of faith. Their authority is Scriptural in so far as their clauses are borrowed from Scripture with all the advantages and the limitations of mere quotation. If they gain by leaving out much that can be dispensed with in Scripture, they necessarily lack its comprehensiveness, catholicity, and intimate touch with life and experience. What they add to Scripture is controversial in its

origin, and as majority-opinion claims only a questioned immunity from error. What they gain through their approbation or imposition by councils is but a ministerial and, as compared with Scripture, a secondary authority. Fashioned by the Church—for the most part quite obscurely, since even the Nicæno-Constantinopolitan largely consists of pre-conciliar materials—the Creeds differ from formal decrees and definitions like the Confessions, inasmuch as they represent a more spontaneous growth and wield an authority less widely resented; but ultimately the question of their infallibility is the same as that of the infallibility either of the Scriptures from which they are drawn or of the Church which gave them birth, shelter, and recognition. Whether one has regard to the Scriptural elements within them or to the theological additions made in the varied interests of orthodoxy, comprehensiveness, and precision, they are one and all to be interpreted historically; their language, vocabulary, topics, and scope must all be understood in the light of their particular times. What Scripture owes to the affectionate patience of Christian scholarship dare not be withheld from the Creeds and Confessions, if they are either to be understood or regarded with affection. No Creed, not even the Apostles', has the universal currency of Scripture. No Confession has the ecumenicity of the Bible. The same agency which produced dogma is at any time competent to emend, augment, or unmake it. The same authority which gave it sanction is at liberty, if duty should demand it, to set it aside. Few such documents make any claim to be infallible, except in so far as conviction of their truth may be taken to imply infallibility; and those which do—the Athanasian Creed, the appendix to the Nicene, and, for example, the Decrees and Canons of Trent—betray on close inspection no generic difference, no theological elevation, no religious genius, to warrant such distinction. Though Newman and his school counted it a point in favour of the title of the Roman Catholic Church to be the exclusive representative of the infallible Church Catholic that it persistently and deliberately claimed to be such, nothing can exempt the products of the human intellect from the conscientious scrutiny of a living and enlightened scholarship, or from the practical but never completed test that by their fruits they shall be known. Most of them, it may freely be acknowledged with gratitude, served their original purpose admirably, and were faithful to the assured results of the learning and experience of their time.

But, as W. Sanday says in *Christologies Ancient and Modern* (Oxford, 1910), p. 237, although they are 'great outstanding historical monuments of the faith of the Church,' which we cannot but regard with veneration, and to which we desire in loyalty to conform our opinions, 'it is impossible that the thought and language of those centuries should exactly coincide with the genuine, spontaneous, unbiased, scientific . . . language of the present day. We must modernize, whether we will or no.'

4. **Infallibility of the Church.**—(*a*) *The Universal Church.*—Christian faith in the infallibility of the Church has expressed itself in a protean variety of ways. Some of these verge closely upon the theories which have already been considered. All of them rest on principles which have already been touched upon.

'Whatever various modes,' says W. Palmer in *The Church of Christ*, London, 1838, ii. 123 f., 'of treating the authority of the church there may have been, I believe that scarcely any Christian writer can be found, who has ventured actually to maintain that the judgment of *the universal church, freely, and deliberately given, with the apparent use of all means*, might in fact be heretical and contrary to the gospel.'

At their foundation is a common appeal to the promises of Christ regarding His Church, and an *a priori* theory or presumption as to the means which Providence must needs employ to have them fulfilled. Undeterred by the scantiness of Christ's allusions to the Church as an organization, by His silence regarding its government, and by the unmistakable immediateness of the communion which He taught and promoted between the individual believer and the Father and Himself, churchmanship has fastened upon a few allusions in the Gospels, and erected upon their slender basis an imposing doctrine of the duty of the Christian, in all matters of faith and morals, to trust and obey the Church. Appeal is made to the dictum of Augustine: 'Ego vero Evangelio non crederem, nisi me Catholicae Ecclesiae commoveret auctoritas.' The Church, it is urged, is a living institution, linking all the Christian generations together, nourishing and fostering the faith of individuals, bringing the Scriptures and other means of grace to bear upon them, and investing those saving instruments with authority, whereas the Bible is a mere book, holy but inanimate in itself, requiring the attestation of the Church, requiring authoritative interpretation by the Church, itself indeed originally a product of the Church's experience and self-utterance as well as a compilation made and adjusted by its care. In the nature of the case, the Church, as the Society which was founded to promote God's Kingdom, preceded the NT, just as Israel, the older theocracy, preceded the Hebrew oracles, and, as it preceded it, also ushered the Canon into being and opens its mysteries to view. Plausible as this theory appears, its inadequacy to fit the facts of history and to bear the inferences which have been drawn from it is becoming more and more evident. It is valid only against a doctrine of Scripture as a book, a mere record and compilation as distinct from the utterance and activity which it records. Thus, for example, though the Gospels as books were composed by members of the Church, and were preserved by the Church from loss, the Church did not utter the words of Jesus which they record. We have to thank the Church for recording and transmitting them, not for their authority. The words and acts of Jesus founded the Church, not *vice versa*. He preceded both Church and Scripture. No matter how accurate and honest the Apostolic writers were, no matter how careful and trustworthy the transmitting and explaining Church, it would avail nothing but for the ulterior authority of the voice which they echo. The Protestant preference of Holy Writ to tradition and Church authority rested upon the simple conviction, derived from sorrowful observation and painful experience, that the two mandates differed, and that the Christ of Scripture was unspeakably superior to the Christ who, they were commanded to believe, spoke through the tainted lips of the Renaissance papacy, or through the very human and variable opinions of Schoolmen and Fathers. And it is significant that Rome itself betrays an unmistakable preference for Biblical authority where texts can be cited in favour of its views with any show of exegetical warrant. It will not do to set Scripture over against Church tradition as a dependent and apologetically inferior authority, and then to proceed to prove the superiority of Church and tradition by appeal to Scripture texts. Both sides in the long controversy have erred. If Protestantism has tended to harden its doctrine of Scripture and to evade the duty of discriminating between its contents in the light of the mind and spirit of Jesus Christ, Roman Catholicism, while guilty of the same error, has added to it a grave exaggeration of the independent value of tradition. The Bible itself is tradition at its highest, supremely valuable and authoritative because of its intimate proximity to Jesus Christ, and its undimmed reflexion for all time of His image. The Bible is not a person, it is true; but

neither is the Church. The Bible is not more 'dead' than the words of pope or Council, once they are spoken. Its divine spirit and power are deathless. When ecclesiastical tradition is invited to make an inventory of all the truth in Jesus Christ which it has stored up in its treasury apart from Scripture, the aggregate is ludicrously meagre and painfully at variance with Biblical tradition. At once, in fact, the ecclesiastical claim is driven to shrink into a mere office of interpretation. It cannot, it is said, pretend to new revelations. Its inspiration is scholarly, its authority is rabbinical, its office is hermeneutic. Scripture is there. Scripture is God's undeniable Word. But it is in places obscure, and its testimonies are at times divergent. The Church must save the unity of faith by possessing and by exercising the prerogative of definition. It can say, and it must say, what Scripture means upon any point of controversy. And what by the grace of God it is pleased to say, the faithful ought, without question, to receive as God's very Word. There must be in every age, in every generation, at any moment, some voice on earth, whether single or conjunct, which can allay mortal questionings by the sincere and lawful use of the formula of the Apostolic Council: 'It seems good to the Holy Spirit and to us.'

Leaving out of account OT passages which have been brought to bear upon ecclesiastical infallibility, such as Is $59^{21}$, quoted in the Preface to the Vatican Decrees, where the prophecy of the coming of a Redeemer to Zion is followed by the divine covenant, 'My spirit that is upon thee, and my words which I have put in thy mouth, shall not depart out of thy mouth, nor out of the mouth of thy seed . . . from henceforth and for ever,' ecclesiastical infallibility in general is founded upon the following Scriptural warrants: Mt $16^{18.19}$ $28^{18-20}$, Jn $14^{16-26}$, and 1 Ti $3^{14.15}$. In Mt $16^{18.19}$, immediately after Jesus' acceptance of Simon Peter's confession of Him as the Christ, which He declares to have been revealed, not by 'flesh and blood,' but by His Father in heaven, He continues: 'And I also say unto thee, that thou art Peter (Πέτρος), and upon this rock (πέτρᾳ) I will build my church; and the gates of death shall not prevail against it. I will give unto thee the keys of the kingdom of heaven: and whatsoever thou shalt bind on earth shall be bound in heaven: and whatsoever thou shalt loose on earth shall be loosed in heaven.' In Mt $28^{18-20}$ the risen Jesus says to the Eleven: 'All authority hath been given unto me in heaven and on earth. Go ye therefore, and make disciples of all the nations, baptizing them in the name . . . teaching them to observe (τηρεῖν) all things whatsoever I commanded you: and, lo, I am with you alway, even unto the end of the world.' In Jn $14^{15-26}$, after the words 'If ye love me, ye will keep (τηρήσετε) my commandments,' Jesus says: 'And I will pray the Father, and he shall give you another Paraclete, that he may be with you for ever, even the Spirit of truth: whom the world cannot receive; for it beholdeth him not, neither knoweth him: ye know him; for he abideth with you, and shall be in you'; and in $14^{26}$: 'But the Paraclete, even the Holy Spirit, whom the Father will send in my name, he shall teach you all things, and bring to your remembrance all that I said unto you'; and in $16^{12-14}$: 'I have yet many things to say unto you, but ye cannot bear them now. Howbeit when he, the Spirit of truth, is come, he shall guide you into all the truth: for he shall not speak from himself. . . . He shall glorify me: for he shall take of mine, and shall declare it unto you.' In 1 Ti $3^{14.15}$ Paul writes: 'These things write I unto thee, hoping to come unto thee shortly; but if I tarry long, that thou mayest know how men ought to behave themselves in the (a) house of God, which is the (a) church of the (a) living God, the (a) pillar and ground (στύλος καὶ ἑδραίωμα) of the truth.'

The passages in the Gospels belong to portions of the NT which have not escaped controversy as to their authenticity and historicity. The two passages in Matthew have not unnaturally been subjected to the same kind of doubts as the Johannine narrative regarding their fidelity to the mind and words of Jesus, and the inherent nature of the teaching they contain, the acute differences of opinion they have ever since occasioned, their divergence from other teachings in the NT, and the silence of the other Gospels upon their momentous affirmations have lent confirmation to those doubts. But we may accept the passages as they stand and consider them as a group. They belong to the same order of utterance as the sayings: 'Heaven and earth shall pass away: but my words shall not pass away' (Mk $13^{31}$, Lk $21^{33}$), 'The words that I have spoken unto you are spirit and are life' (Jn $6^{63}$). Their common aim is to proclaim the eternity of Jesus' message, and the security of the guarantees for its continuance after His departure from visible fellowship with His disciples. 'This gospel of the kingdom shall be preached in the whole world for a testimony unto all the nations; and then shall the end come' (Mt $24^{14}$), and 'Behold, I send unto you prophets, and wise men, and scribes' (Mt $23^{34}$), are also cognate passages. The same message which upon Jesus' lips gave rest to the souls that laboured and were heavy-laden under the bondage of the scribes and Pharisees, and replaced a hard and heavy yoke and burden of teaching by one that was easy and light, since it was imposed by a Master who was not proud and self-righteous, but meek and lowly, was not to fail upon the lips of His Apostles who were to carry on His earthly work and mission and be His 'prophets, wise men, and scribes.' It is to be remembered that 'binding' and 'loosing' were rabbinical technical terms current at the time, which denoted 'forbidding' and 'authorizing' a practice or an opinion; so that, when the Apostles, Peter and his fellows, were empowered to 'bind and loose,' it was signified that, whereas the Jewish Synagogue had its wise men and scribes, the Apostles would be the corresponding teachers in the Church, very different in spirit and in message, exercising an altogether different type of authority, shunning claims to precedence, avoiding the title of Rabbi, Master, or Teacher, not lording it over one another or over the flock entrusted to their care, but remembering that they had one Master or Teacher only.

When these passages are taken in conjunction it seems clear that Jesus was confident, and intended to assure His disciples and Apostles, that His gospel would never cease to be proclaimed while the world endured; that faith like Peter's, or the utterance of faith like Peter's, or men of faith like Peter, would be the rock-foundation of His Church against which the powers of death and decay would war in vain; that His bodily withdrawal would neither terminate nor impair His mission; that a substitute for His bodily presence would be provided, to teach His followers His truth, to remind them of His words, to lead them into all needed truth—in a word, to 'glorify' the Son by fulfilling the purpose for which He came, and revealing His divine person and mission. In the exercise of His 'full authority' He bids His disciples make disciples of all nations, baptizing them and teaching them to 'keep' all his 'injunctions'; and He promises them, what is manifestly the same assistance phrased in two alternative ways, first, His own unfailing and everlasting presence—'I am with you alway even unto the end of the world,' that is, His positive help and approval; and secondly, in

answer to His prayer to the Father, the Spirit of Truth, as it is in Christ Jesus. In Mt $10^{19, 20}$ the Spirit of God their Father is promised to the Twelve Apostles to give them utterance when they are arraigned by their accusers and persecutors, so that they are not to be anxious how or what they are to speak. In Lk $10^{16}$ Jesus says to the Seventy Apostles: 'He that heareth you heareth me; and he that rejecteth you rejecteth me; and he that rejecteth me rejecteth him that sent me'; and in Lk $11^{13}$ He says: 'If ye then, being evil, know how to give good gifts unto your children, how much more shall your heavenly Father give the Holy Spirit to them that ask him?'

As to the passage in 1 Timothy, it is far from certain that 'a pillar and ground of the truth' refers to the 'household of God' which is the 'church of the living God.' Gregory of Nyssa and Gregory of Nazianzus make it refer to Timothy, while Bengel links it with the 'mystery or revelation of godliness' which immediately follows it in the text. But, assuming that it does refer to the Church, God's household, and that ἑδραίωμα means 'ground' rather than 'stay' or 'support,' the passage teaches simply that the Church is a pillar and ground or base of revealed truth, just as individuals like James, Cephas, and John are called 'pillars' by Paul in Gal $2^{9}$, and in Rev $3^{12}$ 'he that overcometh' is to be made 'a pillar in the temple' of God. There is no suggestion that the 'house of God' is the only 'pillar' of the truth, or that the temple of truth is so ruinous as to have only one column and base.

It seems clear, upon a review of the evidence of the Gospels, that Jesus gave His disciples to understand that, as His words would never pass away, but would live on in the world by the power of the Spirit of truth, so His Church, built as on a rock upon Apostolic faith in His Messianic Sonship to the living God, would never perish, the gates of death would never close upon it. Faith in His followers' mission was the necessary complement to faith in His own. Faith in their teaching was essential to faith in the future of His own. He would inspire and teach them unseen as He had inspired and taught them in the flesh. His Spirit would lead them aright to the truth which they required. But of the teaching that His Church would never err, would never have to learn through experience of misjudgment and occasional error, would be able through certain Councils or officials to command immunity from mistake or fault in matters of faith and morals, there is no trace. History lends no sanction to any such interpretation of the mind of Jesus. As the prayer of Jesus that Peter's faith might not fail (Lk $22^{32}$) was followed by Peter's desertion and denial before it was fulfilled through his 'turning again' and subsequent fidelity so that he could stablish his brethren, so the 'ultimate' or the 'essential' guidance of the Church into all truth may satisfy the requirements of its Lord's promises. The Providence which makes all things work together for good does not preclude the incidence of evil in the experience and conduct of God's saints. The Church may by the grace of God withstand the gates of death and be guided into all truth, in spite of many partial and temporary and local defections and mistakes. It will not help the Church to walk circumspectly if it is convinced *a priori* that it enjoys infallibility at every step that is precarious or debatable. What it needs is to know itself fallible in detail, to be ready to confess error and to profit by experience, and to maintain a steadfast faith that the Spirit of God is leading it, however deviously, to the truth that it needs. Further, the gift of the spirit of truth is not promised to the Church and denied to the individual. Each of the Seventy, as we saw, was identified with his Lord, so that those who heard them heard Him. The Father in heaven will no more withhold the Holy Spirit from individual believers than an earthly father will deny good gifts to his children. Is the Holy Spirit unable, or unwilling, to bestow the same immunity from error upon the individual Christian that He confers upon the Church? *Ubi Spiritus ibi ecclesia. Ubi Spiritus ibi veritas.* The same promise of guidance is given to the individual as to the Church; the same assurance belongs to each. The faith that can move mountains, the believing prayer whose persistence will prevail, is not vouchsafed to the Church and withheld from the Church-member. The High Churchman or the Roman Catholic and the Quaker are on the same ground when they claim infallible guidance for the Church or the pope or the individual Christian through the inner light or illumination of the promised Spirit, except that the preponderance of authority derived from the Gospels lies unmistakably in favour of the Friends. All Christians are agreed that the Spirit of God can and will guide God's believing children, the humblest not less than the most exalted or the most learned; but experience has taught most Christians to beware of constructing that faith into an assurance of particular infallibility. History deepens the conviction that on man's part a lively sense of liability to err, and a willingness to be corrected and to acknowledge fault, are an indispensable pre-requisite and guarantee of ultimate arrival at the goal of truth.

(*b*) *The universal consent of Christendom.*—Few minds would hesitate to acknowledge the impressiveness and authority of the unanimous consent of Christendom in favour of any matter touching faith and morals. We are all so profoundly indebted to authority, voicing the lessons of long experience external to ourselves, that the strongest presumption arises that what all Christians are agreed upon must be right and true. The *consensus Ecclesiæ Catholicæ* counts for Christian faith as the *argumentum e consensu gentium* counts for theistic faith. 'De quo omnium natura consentit,' says Cicero (*de Nat. Deorum*, I. xvii.; cf. Seneca, *Ep.* 117), 'id uerum esse necesse est.' It is the principle, urged by Augustine against the Donatists, which appealed so powerfully to Newman: *securus iudicat orbis terrarum.* It is the principle also which finds expression in the Vincentian Canon of faith and practice: *quod semper, ubique et ab omnibus creditum est.* Unquestionably the moral unanimity of all types of Christian belief in every land and in every period of the Church's history could not fail to inspire trust in a doctrine or a usage, and would go far to protect it in advance against any onslaught of scepticism or criticism. But in practice the rule fails us lamentably. Outside the Holy Scriptures, and indeed outside the cardinal elements in their narrative and teaching, it is exceedingly difficult to point to any extensive group of universally accepted traditions and usages. Even the great Creeds and the great Festivals and the great Sacraments fail to satisfy a demand so exacting. Catholicity so complete is the attribute of few things in the Christian system.

But short of an extreme form of the Vincentian Canon of infallibility the principle of a 'common sense' of Christian people still asserts itself in all Christian lands. Even the Churches which elevate the clergy as authorities high above the laity and use 'church' and 'clergy' as almost equivalent terms, assign, when it suits them, no small virtue to the consent of the people. If the clergy have authority as teachers, their teaching gains added force when it carries the people with it, for they

can bring experience to reinforce and vindicate the experts who are their guides. To a far greater degree than is generally credited the determination of orthodoxy has rested with the popular mind. What appeals to the people, helps their life, stirs their imagination, inspires their faith or satisfies their credulity, or calls forth their good works and piety, is naturally regarded by their instructors as demonstrably good and right and therefore inherently true. Very often there is divergence between the churchman and the theologian because of the different attitudes which they tend to adopt towards popular ideas and experience. The ecclesiastic may value as a help to piety and obedience what the scholar distrusts as promoting superstition and servility. The ecclesiastic may be suspicious of the scholar's 'truth' and 'open-mindedness' as savouring of scepticism and private judgment. The *vox populi* not only enthroned an Ambrose in the cathedral of Milan and procured for a Newman the red hat of his ambition, but it has, not less wholesomely though less obtrusively, controlled the selection of many a form of dogma and many a pious usage. When true to itself our religion has always cared for the poor, the simple, the humble, the masses of the people, the 'little ones,' the 'babes and sucklings,' as Jesus called them. It has founded universities, but no university founded it or fashioned its forms of thought and speech and piety. The people may be easily led astray. They may make a poor judge, but they form the best of juries. Like the first Apostles, who represent them in their strength and weakness, they are apt to confound poetry with prose, parable with fact, myth with truth. But their heart is essentially as sound, and their instinct as reliable, to-day as when they heard Jesus gladly and gave Him His first followers and friends. It is from their ranks that the Christian priesthood and ministry are still mainly recruited. It is for their minds that Christian dogmas and devotions are still principally framed.

(c) *Particular representatives of the Church; the Episcopate; general Councils.*—Impressive as the consensus of Christendom is, and weighty as is the authority of Christian common sense and popular feeling, their movement and utterance are too slow and unwieldy to enable them to be employed for the speedy solution of faith's problems, perplexities, and controversies. Accordingly, infallible direction has been sought in the consensus of office-bearers of the Church. The testimony of the Apostles, or the Fathers, or the Councils deemed Œcumenical, or the Episcopate, or the papacy, has been regarded and proclaimed in certain relations and at certain times as the final organ of infallibility. Even in these groups of official representatives a perfect consensus is in every case lacking; as between the groups it is equally hard to find. But the assertion of their claims to implicit credence interestingly illustrates the determination of humanity to leave no stone unturned in its search for an infallible oracle of divine truth. One might have supposed that the Old Dispensation would have taught the Christian Church to beware of trusting either the official or the hereditary transmission of hierarchical authority or prophetic vision or interpretative insight or governing power. But, as time advanced and the interval which separated each generation from the historical person of Christ steadily widened, it was natural and inevitable that men should cherish with augmented force the conviction that their Lord had constituted the Apostles and their successors in some definitive sense the heirs to His own divine authority and infallibility. Had He not laid His ordaining hands upon them, bestowing His Holy Spirit upon them for the discharge of their sacred responsibilities, and had they not transmitted to successors the ordination and the gift of the same Spirit? Further, since the Apostles had differed from one another upon occasion and had met in council at the chief seat of the infant Church to confer upon their differences and difficulties, and had issued authoritative decisions for the guidance of the local churches, what more natural than that their successors should do likewise with results as binding upon the Christian conscience, especially if they were similarly unanimous in their decisions? Thus reliance came to be placed on the conjunct mind and unanimous consent of the Episcopate met upon occasion in duly convened universal councils, or acting through the administration of common creeds and ritual and discipline, or accepting the doctrine of certain great teaching Fathers or Doctors on faith and morals. Faith was turned into dogma; a mission into a hierarchy; a brotherhood into a group of federated but rival monarchies. Unanimous consent became majority-finding raised to the dignity of a conceded or a coercive uniformity. The Canon of Scripture was reinforced by a Canon or rule of faith constructed by authority out of creeds hitherto voluntarily cherished by local churches. The Church insensibly became an empire after Constantine's adhesion. The patriarchs, spiritual overlords of subject groups of bishops and dioceses, received among themselves an order of precedence, partly through unsolicited court influence, partly through general consent and usage, partly through deliberate and unashamed arrogation. At length through the vicissitudes of history Rome emerged as the sole vigorous survivor of the patriarchal family, practically untouched by the Arab conquests, at the centre of the culture, the art and architecture, and the politics of the western world.

It is not necessary to dwell at length upon the limitations of the graded office-bearers and courts of the Church as organs of infallible utterance. The summoning of local and general Councils, the party differences in each, the variations of their findings according to their time, place, and racial composition, are sufficient evidence that spontaneous unanimity in doctrine was not to be found in the Episcopate or in the hierarchy. Bishops were seldom selected for purely theological or doctrinal eminence: their business called for other qualities more urgently. It was an extremely distinguished representative of the Episcopate who, according to Lord Acton ('The Vatican Council,' in *North British Review*, liii. [1871] 208), said at the beginning of the Vatican Council:

> 'We bishops are absorbed in our work, and are not scholars. We sadly need the help of those that are. It is to be hoped that the Council will raise only such questions as can be dealt with competently by practical experience and common sense.'

They were often not so much leaders as mouthpieces of religious opinion, chosen by their clergy to administer rather than to receive illumination. For that reason they may justly be claimed as representative men, living epitomes of the faith and common sentiment of their people. If they were incapable of securing freedom from controversy throughout their dioceses, and in crises had recourse to Councils in which to confer upon their difficulties, they were at once confronted with the problem of method. The gathering which in theory was an ideal instrument for the determination of the Church's belief and practice appeared in a very different light at close quarters. Councils convened by princes and intended to be ecumenical were seldom, if ever, attended by bishops from all parts in geographical, racial, or populational proportion. Nicæa, the first meeting-place, was con-

venient enough for Constantinople, the Emperor's own seat, but the prelates who came at the Emperor's summons were almost to a man Easterns or Greeks, the bishop of Old Rome himself being absent though the occasion was one of extreme gravity for the peace of Christendom. And so it has always been. Ecumenical in name, general Councils have invariably assumed the complexion of the region of the Christian world in which they chanced to be held. Not seldom the locality was selected with a definite view to secure certain results. Moreover, they were increasingly restricted through the abstention or exclusion of particular Churches, the Oriental first, and the Greek Orthodox next, until the claim of the latest Councils of Trent and the Vatican to be ecumenical was reduced to the verge of the farcical by the absence of the Greeks, the Protestants, and all but Roman Catholic delegates. The conciliar illusion was yet further disturbed by the problem of a common language in which effective debate and controversy might take place without substantial disadvantage to any section of the membership, by the problem of rules of debate, of the determination and preparation of the subjects to be propounded, of the method of voting, and the means of securing 'unanimity.' The breakdown of the conciliar apparatus of infallibility was evident in the long-drawn-out and continually interrupted proceedings at Trent, when the prestige won at the close of the Great Schism by the Council of Constance (A.D. 1414–18), the unmaker and maker of popes, was dissipated under papal and Jesuit influence, and it was remarked that the 'inspiration' of the Council, in which, as always, Italian bishops and abbots predominated, was strangely affected by each arrival of the courier from the Vatican. In 1854 the publication by Pius IX., before a mere congress of assembled cardinals and bishops, of the dogma of the Immaculate Conception as a papal decree, and in 1870 the preliminary determination of the business and method of the Vatican Council by the same pope, the adoption of the principle of the sufficiency of majority-findings, and the final supersession of Councils by the dogma of papal infallibility were signs that, so far as the Church in communion with Rome was concerned, the age of Councils was at an end. Christendom had scarcely ever derived prestige from the meeting and proceedings of a Council. Wire-pulling, manœuvring, wrangling, recrimination, and acute division of sympathies had almost always been unconcealable features of their sessions.

Under the rhetoric and polemical exaggeration of James Martineau there is a solid foundation of fact when he says ('Catholic Infallibility,' ch. ii. of his *Rationale of Religious Enquiry*, London, 1836): 'When you tell me of an infallible *assembly*—an inspired parliament, whose decrees are nevertheless liable to error, till confirmed by the signature of a certain bishop, I try in vain to conceive where the divine agency can take place, of what separate atoms of inspiration the collective miracle is made up, from what distribution of influence on the faculties of the several parties the elimination of error results. Every individual member in his separate capacity, and before he entered the assembly, is perfectly fallible; when there, he utters the very opinions which he brought thither, and tenders the vote which he previously designed; yet the aggregate of these fallibilities is inspiration. . . . When I remember the motives which actuate the members of such assemblies, and of the vehement operation of which no reader of ecclesiastical history can doubt; the anxiety for imperial favour, or dread of popular displeasure;—the love of display, the passion for influence, the ambition of promotion;—the dread of episcopal molestation, and the hope of party triumph, and the horror of the reputation of heresy,—I look in vain for the resting-place of the divine and guiding light; it escapes me like an *ignis fatuus*, quitting every point on which I gaze; and goes out at last in those mists and marshes of human corruption.' And again (*Seat of Authority in Religion*, London, 1891, p. 67), 'No crowd of pigmies can add themselves up into a God.'

Whatever might be said of the value of their decisions—and there is to this day no ecclesiastical agreement as to which of them are genuinely ecumenical—it was impossible to pretend that the speeches and votes were invariably free and disinterested, or that their 'unanimity' in the Holy Ghost was cordial and voluntary. Each Council could determine in the plenitude of its constitutional authority which of its predecessors were to be regarded as ecumenical, and as a matter of fact they differed among themselves in their verdicts on the question. They were unwieldy, unmanageable, insubordinate, polyglot, costly, inconvenient, and inefficient. They disturbed discipline in the effort to promote it. They took men away from the administration of their dioceses and ecclesiastical offices, in many cases to a work which was uncongenial and outside the range of their individual competence. And, within the Roman Catholic regime, they had no freedom of initiation or of action or of utterance. Over against a settled and continuous system like the papacy, with its administrative bureaucracy and its gradation of offices culminating in the autocratic head, the spasmodic and intermittent and heterogeneous authority of Councils was bound to lose ground. When they ceased to command absolute loyalty to their decisions, and could not obtain a disinterested unanimity in their decrees, they were reduced to employing something of the same coercive force of excommunication that Rome was accustomed to use. The logical outcome of that conception of authority and infallibility is the papal system, close-knit, outwardly homogeneous, imperial, imposing, and continuous. It is difficult to conceive how this method, conciliar or papal, can be harmonized with the teaching of the Gospels or with the practice of the Apostolic Church. How it appeared to so gifted and so loyal an observer from within as Döllinger on the eve of the Vatican Council may be gathered from the closing section of the work entitled, in its English version, *The Pope and the Council*, by 'Janus' (p. 419 ff.):

'The experiences of the non-Italian bishops at the Council of Trent, its results, which fell so far short of the reforms desired and expected, the conduct of Rome in strictly prohibiting any explanations or commentaries on the decrees of the Council being written and reserving to herself the interpretation of them, while she quietly shelved many of its most important decisions (*e.g.* on indulgences, and many others), without even any semblance of carrying them out—all this led to the call for a new Council, so often repeated previously, being silenced from that time forward. In countries subjected to the Inquisition, the mere wish for another Council would have been declared penal, and have exposed to danger those who uttered it. The Roman See had no doubt suffered considerable losses of privilege and income in consequence of the Tridentine decrees, and still more from the opposition of the different Governments; but, on the other hand, those decrees, the activity of the Jesuits, and the establishment of standing congregations and of the nunciatures, which had been previously unknown, had very materially increased the power and influence of Rome. But at Rome Councils were always held in abomination; the very name was strictly forbidden under penalties there. When in the controversy about grace in 1602 the Molinists spoke of its being decided by a Council, the Dominican Peña wrote that in Rome the word Council, at least in matters of dogma, was regarded as sacrilegious, and excommunicated.

And thus it has come to pass that three centuries have elapsed without any earnest desire for a Council making itself heard anywhere—a thing wholly unprecedented in the past history of the Church. It is commonly taught in theological manuals, schools, and systems, that the Councils of the Church are not only useful but necessary. But this, like so much else in the ordinary teaching, was held only in the abstract. It was at bottom universally felt that Councils as little fitted into a Church organized under an absolute Papal monarchy as the States-General into the monarchy of Louis XIV. The most faithful interpreter of the Roman view of things, Cardinal Pallavicini, put this feeling into words when he said, "To hold another Council would be to tempt God, so extremely dangerous and so threatening to the very existence of the Church would such an assembly be." In that point, he thinks his History of the Council of Trent will make the same impression on the reader as Sarpi's. Even National Synods, he says, the Popes have always detested.

But the chief reason why nobody any longer desired a Council, lay in the conviction that, if it met, the first and most essential condition, freedom of deliberation and voting, would be wanting. The latest history showed this as much as the theory. In the Papal system, which knows nothing of true bishops ruling independently by virtue of the Divine institution, but only

recognises subjects and vicars or officials of the Pope, who exercise a power lent them merely during his pleasure, there is no room for an assembly which would be called a Council in the sense of the ancient Church. If the bishops know the view and will of the Pope on any question, it would be presumptuous and idle to vote against it; and if they do not, their first duty at the Council would be to ascertain it and vote accordingly. An œcumenical assembly of the Church can have no existence, properly speaking, in presence of an *ordinarius ordinariorum* and infallible teacher of faith, though, of course, the pomp, ceremonial, speeches, and votings of a Council may be displayed to the gaze of the world. And therefore the Papal legates at Trent used at once to rebuke bishops as heretics and rebels who ever dared to express any view of their own. Bishops who have been obliged to swear "to maintain, defend, increase, and advance the rights, honours, privileges, and authority of their lord the Pope"—and every bishop takes this oath—cannot regard themselves, or be regarded by the Christian world, as free members of a free Council; natural justice and equity requires that. These men neither will nor can be held responsible for decisions or omissions which do not depend on them. There have certainly been the weightiest reasons for holding no Council for three hundred years, and avoiding such a "useless hubbub," as the infallibilist Cardinal Orsi calls Councils.

Complete and real freedom for every one, freedom from moral constraint, from fear and intimidation, and from corruption, belongs to the essence of a Council. An assembly of men bound in conscience by their oaths to consider the maintenance and increase of Papal power their main object,—men living in fear of incurring the displeasure of the *Curia*, and with it the charge of perjury, and the most burdensome hindrances in the discharge of their office—cannot certainly be called free in all those questions which concern the authority and claims of the See of Rome, and very few at most of the questions that would have to be discussed at a Council do not come under this category. None of our bishops have sworn to make the good of the Church and of religion the supreme object of their actions and endeavours; the terms of the oath provide only for the advantage of the *Curia*. How the oath is understood at Rome, and to what reproaches a bishop exposes himself who once chooses to follow his own conviction against the tradition of the *Curia*, there are plenty of examples to show.

In Rimini and Seleucia (359), at Ephesus (449), and at Vienne (1312), and at many other times, even at Trent, the results of a want of real freedom have been displayed. In early times, when the Popes were as yet in no position to exercise compulsion or intimidation upon Synods, it was the Emperors who sometimes trenched too closely on this freedom. But from Gregory VII.'s time the weight of Papal power has pressed ten times more heavily upon them than ever did the Imperial authority. With abundant reason were the two demands urged throughout half Europe in the sixteenth century, in the negotiations about the Council,—first, that it should not be held in Rome, or even in Italy; and, secondly, that the bishops should be absolved from their oath of obedience. The recently proclaimed Council is to be held not only in Italy, but in Rome itself, and already it has been announced that, as the sixth Lateran Council, it will adhere faithfully to the fifth. That is quite enough—it means this, that whatever course the Synod may take, one quality can never be predicated of it, namely, that it has been a really free Council.

Theologians and Canonists declare that without complete freedom the decisions of a Council are not binding, and the assembly is only a pseudo-Synod. Its decrees may have to be corrected.'

Döllinger's words are deliberate, and are based on unrivalled knowledge. But they provoke a still deeper reflexion than they intend, for they expose to view the weakness of both papacy and Councils. In neither is true freedom, such as he desiderates and demands, conceivable. To bind the conscience of Christendom is the motive and the office of both institutions. Neither in reality is at liberty to claim the freedom it would withdraw from its subjects. The binder need not complain if he finds himself in bonds. Admit the principle of coercive authority in your Council and you will not be able to deny it to the permanent officials of your Church. Better on such principles a living pope than a dead Council, or a Council yet unborn. You cannot indulge in Councils very often. The pope is always with you. He need not act arbitrarily. He has advisers innumerable, informants innumerable, and access, presumably, to the mind of the vast dominion over which he rules. May not God be trusted to give none but the best popes to His confiding Church, and none but the best advisers to His confiding Vicegerents, and pour out His Holy Spirit upon them all to save them from error and lead them to truth? The theory is plausible, and valid as against Councils for those who believe in a hierarchy endowed with corporate infallibility. But, as we have seen, there is nothing in our Lord's teaching to suggest that God values the Church or watches over the Church with a more fatherly solicitude than over the individual. On the contrary, individual infallibility through perfect faith in God's readiness to bestow His Holy Spirit has a much stronger and more explicit warrant in the Gospels.

If it be assumed, though none but Roman Catholics are prepared to acknowledge it, that the Vatican Council of 1870 was ecumenical and ecumenically binding, its results are interesting in the present connexion. For it, a valid Council, decreed, in assent to the mind of the pope, that the pope is, when pronouncing on faith and morals *ex cathedra*, infallible. It follows that, if the pope is not infallible, neither is the Council which pronounced him immune from error. It does not follow that Councils are henceforth set aside for ever. They remain infallible instruments of authority, obsolete but revivable at any time. Princes or popes may still convoke them, though it would be strictly unnecessary to do so in the lifetime and health of a supreme pontiff, and might be construed as an insult and act of treason to the office and prerogative of the occupant of St. Peter's throne. But henceforth, unless the Council of 1870 is ruled out as merely Roman Catholic and therefore provincial and sectarian, or as morally lacking in unanimity, or as devoid of genuine freedom in voting, debate, and business, it may be maintained that, while a Council is infallible only when its decrees enjoy the adhesion of the Roman See, when it acts in communion and harmony with its chief bishop, the infallibility enjoyed by the reigning pope does not depend upon any consent of future Councils. It may, however, be observed that in a great autonomous institution no law or convention can absolutely fetter the resources of corporate freedom, or destroy its initiative in great crises of its existence. The Council of Constance may serve as an example of an extreme emergency calling out into active service extreme and scarcely contemplated methods of procedure. The Vatican has not yet decreed that henceforth Councils are incompetent, lacking in infallibility, and therefore prohibited. It is one thing to supersede them, and to prevent their resumption; quite another to forbid them altogether or to pronounce them for all time defunct.[1]

(*d*) *Papal infallibility*.—The Church of Rome is but one of the sects of Christendom, but it is outwardly at least the most catholic of Churches. The most exclusive in its communion, it is the most comprehensive in geographical diffusion and in racial distribution. The most complex in its organization, it is the most rigorously unified in its discipline. Its history, its service to Christian life, piety, and tradition, and its numerical strength lend a peculiar importance to the theory of infallibility with which it has come finally to be identified. The term 'Papist,' which might formerly have been resented throughout Roman Catholic lands, is now, since 1870, at least as accurate a designation as the term 'Roman Catholic.' Since that date the doctrine that the pope is infallible, which had hitherto been repudiated in the strongest terms by the Roman Catholic authorities and manuals in Great Britain and in Ireland, has become a dogma of faith, part of the distinctive working creed of the Church. Its evolution is one of the most interesting and, in certain aspects, one of the most significant episodes in Church history. Thanks to the voluminous literature which arose out of the controversy in which the completion of the dogma was involved, the story can be studied with

[1] For the Roman Catholic view see artt. CHURCH, DOCTRINE OF THE (Roman Catholic), PAPACY.

unusual thoroughness and ease. In the present article a review of its broader features and main facts must suffice.

It is beyond dispute that the dogmatic infallibility of the bishop or patriarch of Rome stands in the closest possible relationship to his general authority as a ruler in the Church.

In a letter to Lady Simeon, of date 1867, quoted in W. Ward's *Life of John Henry Cardinal Newman*[2] (London, 1912, ii. 193), Newman writes: 'I say with Cardinal Bellarmine whether the Pope be infallible or not in any pronouncement, anyhow he is to be obeyed. No good can come from disobedience. His facts and his warnings may be all wrong; his deliberations may have been biassed. He may have been misled. Imperiousness and craft, tyranny and cruelty, may be patent in the conduct of his advisers and instruments. But when he speaks formally and authoritatively he speaks as our Lord would have him speak, and all those imperfections and sins of individuals are overruled for that result which our Lord intends (just as the action of the wicked and of enemies to the Church are overruled), and therefore the Pope's word stands, and a blessing goes with obedience to it, and no blessing with disobedience.' And in a letter to Pusey (*ib.* ii. 217) in the same year he writes: 'Any categorical answer would be unsatisfactory—but if I *must* so speak, I should say that his jurisdiction (for that I conceive you to mean by "powers") is unlimited and despotic. And I think this is the general opinion among us. . . . There is nothing which any other authority in the Church can do, which he cannot do at once—and he can do things which they cannot do, such as destroy a whole hierarchy. . . . As to the question of property, whether he could simply confiscate the funds of a whole diocese, I do not know—but I suspect he can. Speaking generally, I think he can do anything, but break the divine law. . . . But such a jurisdiction is (1) not so much a *practice* as a *doctrine*—and (2) not so much a *doctrine* as a *principle* of our system.'

In an institution which rests faith upon authority or tradition and makes belief a duty of obedience, the right to prescribe or decree dogma is naturally included within the wider right to rule *in spiritualibus*. Much of the wide-spread reluctance on the part of Protestants to regard with seriousness the dogma of papal infallibility is due to their instinctively different attitude towards faith and the means by which it may be secured; they find it difficult to conceive of faith as a product of obedience, as an activity to be ordered. In Roman Catholicism, under the demands of ecclesiastical discipline, the principle has broken down that obedience to the supreme earthly head of the Church is to be restricted in any way so as to exclude the authoritative interpretation of revealed doctrine, and the definition of the sense in which Holy Scripture, the Creeds, and the Conciliar Decrees are to be understood and applied.

On the Roman Catholic view our Lord bestowed upon Peter, after his great confession and again after the Resurrection, a unique authority and office as His peculiar representative in the Apostolic company and in the Church. 'Peter' and 'Cephas' mean 'rock,' it is urged, and Peter is the rock-foundation of the imperishable Church; not simply his confession, or his faith, but he himself, the living Apostle, the utterer of his faith in the Christ. Not a doctrine, not a belief, but a living person is the basis of a standing Church. The gift or charge of the keys of the kingdom denotes his authority as a teacher; what he 'binds or looses,' *i.e.*, in rabbinical language, 'affirms or denies,' in teaching spiritual truth is 'in heaven,' *i.e.* 'divinely,' affirmed or denied. In Lk $22^{32}$, though the context and sequel are painfully adverse to the Roman Catholic theory, it is said by Christ that He has prayed for Peter that his faith 'fail not,' from which it may be deduced that the prayer has been answered; and the command is laid upon Peter: 'Do thou, when once thou hast turned again, stablish thy brethren.' The risen Lord, moreover, commissions the forgiven Peter to feed His lambs, to tend His sheep, and to feed His sheep (Jn $21^{15ff.}$). It is inconceivable, it is urged further, that our Lord intended such a charge to terminate with Peter's individual tenure of it. Each successive generation would require at least the same guaranteed infallibility in a living inspired instructor. A living rock-foundation cannot have been withdrawn on Peter's decease; his faith cannot be allowed to fail in any age; his brethren still need stablishing; the sheep of Christ still need not only to be fed but to be shepherded, which implies guidance and protection from error. The need grows greater rather than less with the passage of time, since faith tends to cool as distance from its objects is increased.

On the face of them, these passages in the Gospels cannot be so construed with any confidence. Simon Peter is anything but a model of infallibility either in the Gospels or in Acts or in the Epistles of the NT. To the same person who received the words 'Thou art Peter' came all too soon the words 'Get thee behind me, Satan.' The 'Rock' of the Church's foundation became in a few hours a 'stumbling-block,' a rock of offence. The same Apostle who confessed the Christ not only denied Him, but endeavoured to deter Him from going to His death, and, as mistakenly though as naturally, tried to defend Him with the sword. It is the faith he utters that fits him for our Lord's beatitude, since it is recognized by its recipient as divinely revealed; yet that faith did soon 'fail,' Satan did 'have' him. If he has infallibility in any sense, it is ultimate or practical infallibility, and it does not render him immune from particular failure of judgment in faith and duty. Further, it is brethren that he is to stablish, not subjects, after his restoration, and the duty of stablishing is plainly enough a duty that each Apostle owed to the others, however their gifts might vary (cf. the parallel use of στηρίζειν with reference to Paul and others in Ac $14^{22}$ $15^{32.41}$ $18^{23}$, Ro $1^{11}$). 'Binding and loosing' is not a prerogative conferred upon one man alone; it is given to all the Apostles as such, the Seventy as well as the Twelve, as an essential of authoritative proclamation of Christ's message. There is no indication that particular infallibility was given to every Apostle, or that Peter's gift differed in kind from that of the others. It is also unfortunate that Lk $22^{31.32}$ should follow immediately Christ's rebuke to the disciples in their contention on the very subject of precedence, and His warning to them not to be like Gentile princes who lord it over their people, and assume grandiloquent titles such as 'benefactor.' Peter's final commission, thrice repeated, contains no single unique element; it is simply a pastorate, whose triple injunction refers to his threefold denial and repudiation of his Master. As for the claim that Peter's office could not die with him, it proves too much for papal theory, since no pope has ever claimed an apostolate identical with his; but it contains a kernel of truth. Apostolic faith, and faithful Apostles, are needed by the Lord of the Church in every generation, and we are justified in believing that they will not fail. But we are still in total ignorance, as was the general Church in the first four centuries, of any evidence that our Lord desired to have Peter's faith and Peter's prerogative confined to one man, and in particular to the bishop of Rome.

'Of all the Fathers,' writes Döllinger (*op. cit.* p. 91 ff.), 'who interpret these passages in the Gospels (Mt xvi. 18, Jn xxi. 17), *not a single one applies them to the Roman Bishops.* How many Fathers have busied themselves with these texts, yet not one of them whose commentaries we possess—Origen, Chrysostom, Hilary, Augustine, Cyril, Theodoret, and those whose interpretations are collected in catenas—has dropped the faintest hint that the primacy of Rome is the consequence of the commission and promise to Peter! Not one of them has explained the rock or foundation on which Christ would build His Church of the office given to Peter to be transmitted to his successors, but they understood by it either Christ Himself, or Peter's confession of faith in Christ; often both together. Or else they thought Peter was the foundation equally with all the other Apostles, the Twelve being together the foundation-stones

of the Church (*Apoc.* xxi. 14) . . . they did not regard a power first given to Peter, and afterwards conferred in precisely the same words on all the Apostles, as anything peculiar to him, or hereditary in the line of Roman Bishops, and they held the symbol of the keys as meaning just the same as the figurative expression of binding and loosing.

Every one knows the one classical passage of Scripture on which the edifice of Papal Infallibility has been reared, "I have prayed for thee, that thy faith fail not: and when thou art converted, confirm thy brethren." But these words manifestly refer only to Peter personally, to his denial of Christ and his conversion; he is told that he, whose failure of faith would be only of short duration, is to strengthen the other Apostles, whose faith would likewise waver. It is directly against the sense of the passage, which speaks simply of faith, first wavering, and then to be confirmed in the Messianic dignity of Christ, to find in it a promise of future infallibility to a succession of Popes, just because they hold the office Peter first held in the Roman Church. No single writer to the end of the Seventh Century dreamt of such an interpretation; all without exception—and there are eighteen of them—explain it simply as a prayer of Christ, that His Apostle might not wholly succumb, and lose his faith entirely in his approaching trial. The first to find in it a promise of privileges to the Church of Rome was Pope Agatho in 680, when trying to avert the threatened condemnation of his predecessor, Honorius, through whom the Roman Church had lost its boasted privilege of doctrinal purity.

Now the Tridentine profession of faith, imposed on the clergy since Pius IV., contains a vow never to interpret Holy Scripture otherwise than in accord with the unanimous consent of the Fathers—that is, the great Church doctors of the first six centuries, for Gregory the Great, who died in 604, was the last of the Fathers; every bishop and theologian therefore breaks his oath when he interprets the passage in question of a gift of infallibility promised by Christ to the Popes.'

Human nature and political analogy can supply many reasons for vesting in the single holder of an eminent office a monarchical authority in faith and morals as in government, but we turn in vain for any warrant in the words of Jesus Christ for such a claim. Think what one may about the limitations of argument based on silence, it is a grave omission indeed on the part of an infallible and divine Teacher and Legislator to have left His infant Church entirely without authorization and explicit instruction in so vital a matter, and entirely without a single allusion either to Rome or to its Episcopate. Think what one also may about the legitimacy of a doctrinal 'development,' the postponement till 1870 of a revelation of dogma so momentous to Christendom seems to call for delicate explanation.

The fact is that, while all the world deferred in many ways, especially after Constantine's accession, to the See of Rome, while the frequent dependence of lesser sees upon its guidance and direction prepared for the Western Church's ultimate submission to its authority, and while the bishop of Rome was a great power to reckon with in any ecumenical interest, the ancient Church betrayed no sign of any recognition of his infallibility. A patriarch among patriarchs, bishop of a diocese which came to overshadow and usurp the Empire itself since it proved itself more lasting and more trustworthy, heir to traditions of office without rival in historical prestige, it was inevitable that the Roman pope should be given, and should accept, a rank of his own as the centuries attested the permanence and the power of his office. No competent student of history would desire to detract from the dignity of the papal name as a historic fact. But it is plain that neither the early popes themselves nor the rest of the world credited their office with infallibility. The unapostolic See of New Rome erected by Constantine in his Eastern capital never acknowledged its authority as overruling its own. Councils, deemed ecumenical by East and West alike, were convened and issued their decrees without submitting them to the separate or final approval of the ruling pope. No one suggested that the existence of the Roman See made Councils unnecessary, much less presumptuous and incompetent. How much trouble might have been saved to the Christian world if direct appeal to an oracle in the Eternal City had been recognized as sufficient to decide all controversies in faith and morals! But, as Döllinger (*op. cit.* p. 64 ff.) says:

'None of the ancient confessions of faith, no catechism, none of the patristic writings composed for the instruction of the people, contain a syllable about the Pope, still less any hint that all certainty of faith and doctrine depends on him. For the first thousand years of Church history not a question of doctrine was finally decided by the Pope. The Roman Bishops took no part in the commotions which the numerous Gnostic sects, the Montanists and Chiliasts, produced in the early Church, nor can a single dogmatic decree issued by one of them be found during the first four centuries, nor a trace of the existence of any. Even the controversy about Christ kindled by Paul of Samosata, which occupied the whole Eastern Church for a long time, and necessitated the assembling of several Councils, was terminated without the Pope taking any part in it. So again in the chain of controversies and discussions connected with the names of Theodotus, Artemon, Noetus, Sabellius, Beryllus, and Lucian of Antioch, which troubled the whole Church, and extended over nearly 150 years, there is no proof that the Roman Bishops acted beyond the limits of their own local Church, or accomplished any dogmatic result. . . . In three controversies during this early period the Roman Church took an active part,—the question about Easter, about heretical baptism, and about the penitential discipline. In all three the Popes were unable to carry out their own will and view and practice, and the other Churches maintained their different usage without its leading to any permanent division. . . . In the Arian disputes . . . Julius and Liberius (337-366) were the first [Popes] to take part in the course of events, but they only increased the uncertainty. Julius pronounced Marcellus of Ancyra, an avowed Sabellian, orthodox at his Roman Synod; and Liberius purchased his return from exile from the Emperor by condemning Athanasius, and subscribing an Arian creed. . . . The apostasy of Liberius sufficed, through the whole of the middle ages, for a proof that Popes could fall into heresy as well as other people. . . . During all the fourth century Councils alone decided dogmatic questions. If the Bishop of Rome was ever appealed to for a decision, it was understood that he was desired to call a Synod to decide the point at issue. At the second Œcumenical Council in 381, which decreed the most important definition of faith since the Nicene, by first formulizing the doctrine of the Holy Ghost, the Church of Rome was not represented at all; only the decrees were communicated to it as to other Churches. . . . Pope Siricius (384-398) declined to pronounce on the false doctrine of a bishop (Bonosus) when requested to do so, on the ground that he had no right, and must await the sentence of the bishops of the province, "to make it the rule of his own."'

It is impossible in an article like the present to trace in minute detail the long course of the development of the papal claims, and of the resistance to them; but the following historical facts are of interest, and in various ways have a significance of their own. They are set down almost as a miscellany in a roughly chronological sequence, and they reflect the varying attitude adopted by popes, Councils, and teachers of the Church.

In the middle of the 3rd cent., Stephen, bishop of Rome, in controversy with Cyprian of Carthage on the validity of heretical baptism, asserted his claim to a superior authority as the occupant of Peter's chair, and claimed for Roman tradition a supreme value as having been delivered by Peter and Paul; but Cyprian rejected the notion of the existence of a bishop of bishops, and appealed to the Apostolic Scriptures as a higher authority, and Eastern bishops at once supported his attitude.

'None of us,' he writes (cf. G. Salmon, *Infallibility of the Church*[2], London, 1899, p. 407), 'sets himself up as a bishop of bishops, or by tyrannical terror forces his colleagues to a necessity of obeying; inasmuch as every bishop, in the free use of his liberty and power, has the right of forming his own judgment, and can no more be judged by another than he can himself judge another.'

In the 3rd cent. the Church was still a federation of bishoprics in communion with each other, each with its own distinctive influence and prestige, Rome manifestly the most powerful, but all together in a fraternal parity. But in 343 the Council of Sardica, from which the Eastern bishops had departed in indignation, made the pope, in certain circumstances, a court of appeal for aggrieved bishops in the West. This step was taken in the interest of security of episcopal tenure in

times of heated controversy and frequent depositions.

It provided that 'as due to the honour of St. Peter, the Roman bishop Julius shall be informed . . . by letter, in order that, under the presidency of a presbyter sent by him, a new trial may be held by bishops of a neighbouring province' (cf. K. von Hase, *Handbook to the Controversy with Rome*, Eng. tr., London, 1906, i. 226).

In the 5th cent., Augustine's much abused saying in a sermon (cxxxi. 10), 'Rome has spoken; the case is ended,' had reference to local African controversy, and does not contradict his reiterated adherence to Cyprian's position. For him, Councils as well as bishops were fallible, though venerable, and appeal might be taken as need arose. To give his words an ecumenical application is unhistorical. But the pontificate of Leo the Great enhanced the dignity and power of the Roman See in all eyes. In 445 the Emperor Valentinian gave supreme judicial and legislative power to it over the bishops of Italy and Gaul. Leo's Epistle to Flavian in 449 was the first doctrinal utterance of a pope to be accepted ecumenically; but it did not receive dogmatic force until it had been submitted to the Council of Chalcedon, and examined by the bishops therein assembled, and ratified by them—a procedure whose necessity its author acknowledged. But Leo's successors quickly dissipated the authority which his powerful personality and successful enterprise had won. Vigilius in 546 pronounced orthodox the 'Three Chapters' of Theodore, Theodoret, and Ibas, which had been accused of Nestorianism; a year later he condemned them, though he had formally anathematized their accusers; later still he reversed his judgment a second time, only to be condemned himself by the Fifth Ecumenical Council, to whose decree he bowed in 554, saying, very sensibly, that it was no disgrace to perceive and recall a previous error. Even more serious was the fate of Honorius I., who in 638, in two public letters to Eastern patriarchs, had endorsed the Monothelite heresy, and after his death was solemnly condemned as a heretic by the Sixth Ecumenical Council without any dissentient voice, in presence of the legates of his successor—a sentence which his own successors carried out, expunging his name from the liturgy.

Until the fabrication of the Isidorian decretals nothing more than an episcopal and patriarchal primacy was effectively claimed by the popes or conceded to them: that primacy no one in Church or State seriously disputed. The bishop of Rome could not summon Ecumenical Synods: he had to petition the Emperor to do so. It was not his right to preside over them in person or by legate. Rome was not their usual place of meeting. The Pope's signature was not required as a final formality to validate their decrees. His legislative, administrative, and judicial powers, *i.e.* his sovereign authority, did not extend beyond his own province; neither Africa nor the East acknowledged it. No counsellor and no arbiter enjoyed the same acceptance or the same influence; but as yet there was no Curia or sovereign Court, no tribute, no granting of sovereign dispensations from the obligations of ecclesiastical law. Of the power of the keys, the power to bind and loose, the power to excommunicate, Rome had no monopoly, either claimed or conceded. But there was a spirit at work which operated steadily in the direction of securing these things. The Sardican canons, the name, prerogative, and throne of Peter, the social influence and appellate counsel of Rome, were steadily turned to increasing account. As the Empire weakened, the papacy found its opportunity and became heir to its secular methods and spirit as well as to its dignity and power. The sixth canon of the First Nicene Council had recognized the rights of the Roman See over part of the Italian Church, but had assigned similar rights to the bishops of Alexandria and Antioch over their patriarchates; but the local Sardican canons were speedily confused with it in the West, and the resultant claims were advanced by Innocent I. as recognized by 'the Fathers' and the Synod. At the Council of Ephesus it was affirmed by the Roman legates that Peter lived and judged in the persons of his successors in the Roman throne. Leo I. reiterated the same plea. But the Council of Chalcedon, in its 28th canon, maintained that Rome owed its primacy to the decision of the Fathers in view of the political eminence of the city, and, in spite of Leo's opposition, it recognized Constantinople as a patriarchate of the highest rank, second only to Rome in precedence, and equal to Rome in rights. When Leo declined to recognize that canon, he did not base his action upon any complaint of injury to his own bishopric, or on the lack of his consent, but only on the injustice done to the older patriarchates of the East, especially those of Alexandria and Antioch—the one founded by Mark, Peter's disciple, the other by Peter himself before he went to Rome—and on the alteration of the Nicene canon. When dealing with other than Eastern bishops, he made much of the 'merit of St. Peter' as a ground of Roman dignity, and strengthened his disciplinary hold upon the West. But nothing demonstrates so clearly the long distance which the papacy had yet to travel, before it reached its final claims, as the rebuke of Gregory the Great addressed formally to the patriarch of Constantinople, who assumed the title of 'Ecumenical Bishop' (lib. v. ep. 18; lib. vii. ep. 33; cf. von Hase, *op. cit.* i. 225; Salmon, *op. cit.* p. 423).

'It is with tears that I say that a bishop, whose duty it is to guide others to humility, has himself departed from it. Paul was unwilling to suffer that any one should call himself after him or after Apollos. What art thou prepared to say to Christ, the Head of the universal Church, at the last day, when thou seekest to bring all members of the Church into subjection to thee by means of the title of the universal ruler? This haughty name is a copying of Satan, who also exalted himself above all angels. . . . Far from Christian hearts be that blasphemous title, in which all priests have their honour taken away, while the one foolishly usurps it.'

Gregory did not hesitate to contrast his rival's pretensions with those of St. Peter, who, although first of the Apostles, did not place himself in a superior rank to his brethren—a piece of historically sound pleading which was to prove subsequently embarrassing to the pope's successors.

The subsequent course of the papal development is matter of common knowledge. The decretal forgeries, beginning about the middle of the 9th cent., many of them motived by provincial, not primarily Roman, ambitions, assisted powerfully the extension of the papal primacy into an absolute monarchy combined doctrinal with disciplinary powers, required papal confirmation for the decrees of every Council, and elevated the bishop of Rome into the sovereign bishop, from whose hands all other bishops receive their authority in matters of faith as well as government and order. It was assumed that the extension of papal dignity and authority over bishops would liberate them from secular control and jurisdiction—a policy which survives at the present time in full vigour. But, in liberating the provincial bishops from one yoke, another yoke was imposed. Secular authority was avenged. The bishops found themselves in the grasp of a power once spiritual, now both secular and spiritual. The power from which they shrank in the dioceses laid its firm hand upon them in the Vatican. For a papacy which wielded temporal power as a spiritual prerogative it was impossible to exclude dogma from the sovereign function. The papacy accordingly assumed control of synods

greater and lesser; it alone could convene, accredit, and dissolve them. It assumed the appointment and institution of bishops; dealt with vacant sees; made subjects of princes and kings; and claimed the right to overrule Councils and the teaching of the Fathers. The theocratic achievements of Gregory VII. made it easy for the most extreme views of papal authority to impress the imagination of Christendom as a realizable ideal. He did not hesitate to claim personal sanctity as the successor of Peter, and to make the supernatural holiness of popes the foundation of their absolute power. 'In Peter' they had 'power to bind and loose on earth and in heaven.' They were subject to no man's judgment, but answerable alone to God. The forged decretals of Isidore and Gratian were eagerly employed by an age already prepared for them; and in good faith mediæval Schoolmen, like Aquinas, drew from them, and frequently from corrupted texts of conciliar decrees and writings of the great Fathers, materials which confirmed their confidence in papal autocracy. In the 13th cent. the rise of the great monastic Orders, under vows of obedience through their generals to the pope, and exempt from episcopal authority, increased yet further the exaltation of the papal dignity, while the Reunion Council of Florence, 1439, short-lived though its recognition of the Roman primacy proved, revealed the extent to which dignitaries of the Eastern Church were prepared to abate their claims and their rivalry, under pressure of that growing Muhammadan peril which was so soon to cripple them, and leave Rome without an effective rival in the ecclesiastical world. Unfortunately, however, for the papal regime, access of temporal and spiritual authority brought with it no guarantee of a noble employment of its perilous privileges. Instead there ensued a swift deterioration of the papal personnel, and even more of the curial entourage. At length Christendom was amazed and shocked by the spectacle of rival popes, and disgusted and revolted by the gross luxury and unconcealed immorality of the Vatican. The secularization of the Roman bishopric was responsible for both scandals. Both combined to make the work of reformation not only an urgent and clamant need, but by their notoriety a thing possible for part at least of Europe. In an age of new learning and kindled imagination—an age which explored the Apostolic past as enthusiastically as it thought about the future—the papacy proved incapable of supporting its triple crown. The lofty theory of a working infallibility and a practical autocracy broke down abjectly before the Great Schism and the Great Scandal. With three claimants of the heritage of Hildebrand in power, the common sense and the reserved energies of Christendom asserted themselves in the Reforming Councils of Constance and Basel. Whatever popes in their majesty had asserted, their subject bishops, met in Council and supported by the conscience of the Christian world, dealt sternly with their rival overlords. The Church's necessity knew no refinement of law. The Council pronounced deposition. The rivals, one after another, submitted. For a brief period the Council came to its own again as a supreme authority in the Church. In its 4th and 5th sessions the Council of Constance decreed that

'every lawfully convoked Ecumenical Council representing the Church derives its authority immediately from Christ, and every one, the Pope included, is subject to it in matters of faith, in the healing of schism, and the reformation of the Church.'

Without protest, the painfully elaborated doctrine and practice of papal infallibility and monarchy was cut down to modest proportions by a lawfully convoked Council, which appointed the new pope, Martin V., as well as deposed his predecessor or predecessors, and thus gave practical illustration of conciliar authority. The Council of Constance, indeed, decreed that Councils should meet every ten years. In 1431 the Council of Basel met, and, in spite of dissolution by Eugenius IV., who viewed with misgiving its energetic assertion of the principles of Constance, it persevered with its work and secured the withdrawal of the papal dissolution, the pope acknowledging that the Council had been justified in proceeding, promising to adhere to it 'with all zeal and devotion' as 'the holy Ecumenical Council,' and renouncing his claim as pope to the right to suspend or dissolve any Council. Reaction followed, intensified by the natural reluctance of the remnant of the Fathers of Basel to dissolve and to lay aside their power. The very name of Council became a by-word. The opportunity of the papacy returned. Reform had been accomplished neither by Council nor by pope; but the papacy had at least continuity, whereas the Council had none. In 1516, Leo X. issued the bull *Pastor Æternus*, with the approval of the Fathers of the fifth Lateran Synod, in which he asserted the authority of the pope over general Councils, including the right to convoke, transfer, and dissolve. In the Council of Trent the papal view was powerfully strengthened by the new Jesuit Order, itself built upon the absolutist theory of authority, and dedicated from the first with unquestioning devotion to the service of the mind and will of the sovereign Father. It would have been too much to expect that an Order whose conspicuous talent was prostrated in the cause of the needful counter-reformation before the papal throne would encourage independence either in faith or in morals on the part of the secular clergy. It was inevitable that in the absence of the Reformers, who had no faith in papal infallibility, the restorers of the residual Church should use every instrument in their power to strengthen its disciplinary unity and homogeneity. The lessons of recent centuries were still so freshly impressed upon all minds that a decisive victory was impossible in the Council for either side. National feeling asserted itself in the deliberations, and the bishops were too gravely exercised concerning the condition of the Church to be willing to abdicate their own responsibility. The influence of the Vatican was so strong as to give point to the wit of the French ambassador when he remarked that the Holy Spirit appeared to arrive every Friday from Rome in the mail-bag; but no decree of papal infallibility was then procurable. The Tridentine Catechism is content to affirm that the Church cannot err in matters of faith and morals, without defining the particular organ of that infallibility. But it was significant that the administration and interpretation of the decrees of the Council, with the completion of the ecclesiastical manuals other than the Catechism, were entrusted to the Vatican. In France, Bossuet's *Declaration of 1682* represents the attitude of the Gallican clergy towards the papal prerogative. Its four propositions deny the pope's authority in secular affairs, assert its inferiority to that of Councils in accordance with the decrees and action of the Council of Constance, and subject it to the judgment of the Church (see art. GALLICANISM, vol. vi. p. 161 f.). Not until the alarms and vicissitudes of Pius IX.'s troubled reign did the papal and Jesuit policy of the rigorous centralization of all ecclesiastical authority find its final opportunity. On the eve of the loss of the temporal power, the Vatican Council met to compensate a venerated pope for the withdrawal of a worldly crown by the bestowal of a spiritual (see art. COUNCILS AND SYNODS [Christian], vol. iv. p. 201). Ever since Pius IX., in his own exile from Rome, had turned

for help to the then proscribed Society of Jesus, his policy had been more and more closely identified with the principles for which that Order had worked and had suffered. His first great experiment in dogma—the proclamation of the Decree on the Immaculate Conception of the Blessed Virgin Mary in the bull *Ineffabilis Deus*, read before a Concourse of Cardinals and Bishops in St. Peter's, in Dec. 1854—acknowledged no other authority than 'that of our Lord Jesus Christ and the blessed Apostles Peter and Paul and . . . our own.' Though it was preceded by a formal epistolary consultation of the individual bishops throughout the Church, the Decree was uttered without conciliar assistance, and, with the long succession of dogmatic judgments which were gathered together to form the *Syllabus of Errors*, 1864, it signalized the practical advent of a consummated infallibility. Nothing was left for the Vatican Council of 1870 to do but to add the ceremonial form of a conciliar sanction, and to furnish the already operative principle with a definitive form of words. For good or for evil, the vision held out before the eyes of a long line of pontiffs seemed to be realized in accomplished fact. The work of Isidore and Gratian, of Loyola and Lainez, of Cajetan, Bellarmine, and Torquemada, appeared to have been justified. In faith as well as morals and discipline the pope was at last declared, in his own person, as the official teacher of the Christian world, supreme and infallible.

The terms of the Decree and of some portions of its setting, in Manning's rendering, are as follows (*Petri Privilegium: Three Pastoral Letters to the Clergy of the Diocese*, p. 214 ff.; they occur in the *First Dogmatic Constitution on the Church of Christ*, chs. iii. and iv.):

'We teach and declare that by the appointment of our Lord the Roman Church possesses a superiority of ordinary power over all other Churches, and that this power of jurisdiction of the Roman Pontiff, which is truly episcopal, is immediate; to which all, of whatever rite and dignity, both pastors and faithful, both individually and collectively, are bound, by their duty of hierarchical subordination and true obedience, to submit, not only in matters which belong to faith and morals, but also in those that appertain to the discipline and government of the Church throughout the world; so that the Church of Christ may be one flock under one supreme pastor through the preservation of unity both of communion and of profession of the same faith with the Roman Pontiff. This is the teaching of Catholic truth, from which no man can deviate without loss of faith and of salvation. . . . Wherefore they err from the right course who assert that it is lawful to appeal from the judgments of the Roman Pontiffs to an Œcumenical Council as to an authority higher than that of the Roman Pontiff.

Moreover, that the supreme power of teaching is also included in the apostolic primacy, which the Roman Pontiff, as the successor of Peter, Prince of the Apostles, possesses over the whole Church, this Holy See has always held, the perpetual practice of the Church confirms, and Œcumenical Councils also have declared, especially those in which the East with the West met in the union of faith and charity. . . .

To satisfy this pastoral duty our predecessors ever made unwearied efforts that the salutary doctrine of Christ might be propagated among all the nations of the earth, and with equal care watched that it might be preserved genuine and pure where it had been received. Therefore the Bishops of the whole world, now singly, now assembled in synod, following the long-established custom of Churches, and the form of the ancient rule, sent word to this Apostolic See of those dangers especially which sprang up in matters of faith, that there the losses of faith might be most effectually repaired, where the faith cannot fail. And the Roman Pontiffs, according to the exigencies of times and circumstances, sometimes assembling Œcumenical Councils, or asking for the mind of the Church scattered throughout the world, sometimes by particular Synods, sometimes using other helps which Divine Providence supplied, defined as to be held those things which with the help of God they had recognised as conformable with the Sacred Scriptures and Apostolic Traditions. For the Holy Spirit was not promised to the successors of Peter that by His revelation they might make known new doctrine, but that by His assistance they might inviolably keep and faithfully expound the revelation or deposit of faith delivered through the Apostles. And indeed all the venerable Fathers have embraced, and the holy orthodox Doctors have venerated and followed, their apostolic doctrine; knowing most fully that this See of holy Peter remains ever free from all blemish of error, according to the Divine promise of the Lord our Saviour made to the Prince of His disciples: I have prayed for thee, that thy faith fail not: and, when thou art converted, confirm thy brethren.

This gift, then, of truth and never-failing faith, was conferred by Heaven upon Peter and his successors in this Chair, that they might perform their high office for the salvation of all; that the whole flock of Christ, kept away by them from the poisonous food of error, might be nourished with the pasture of heavenly doctrine; that, the occasion of schism being removed, the whole Church might be kept one, and, resting on its foundation, might stand firm against the gates of hell.

But since in this very age, in which the salutary efficacy of the apostolic office is most of all required, not a few are found who take away from its authority, we judge it altogether necessary solemnly to assert the prerogative which the only-begotten Son of God vouchsafed to join with the supreme pastoral office.

Therefore, faithfully adhering to the tradition received from the beginning of the Christian faith, for the glory of God our Saviour, the exaltation of the Catholic Religion, and the salvation of Christian people, the Sacred Council approving, we teach and define that it is a dogma divinely revealed: that the Roman Pontiff when he speaks *ex cathedra*, that is, when in discharge of the office of Pastor and Doctor of all Christians, by virtue of his supreme apostolic authority, he defines a doctrine regarding faith or morals to be held by the Universal Church; by the Divine assistance promised to him in blessed Peter, is possessed of that infallibility with which the Divine Redeemer willed that His Church should be endowed for defining doctrine regarding faith or morals: and that therefore such definitions of the Roman Pontiff are irreformable of themselves, and not from the consent of the Church.

But if any one—which may God avert—presume to contradict this our definition, let him be anathema.'

It is not necessary to enter into a detailed discussion of the somewhat painful features of the process through which this definition came to light, and of the policy which issued in this long-desired result. Nothing would be easier for a future Council more representative of ecumenical Christianity than on technical grounds to pronounce the Vatican Council no true and Ecumenical Council, *e.g.* because of its lack of freedom and autonomy in debate, in conference, and in final vote, or because of papal interference and dictation, or because of its lack of voluntary unanimity. The result is not a Decree of a Council, but a Decree of the pope, with the approval or submission of the Council. The papal correspondence with the bishops of the Church had tested their attitude beforehand, and confronted each as an individual with the prospective displeasure of the Vatican as an inevitable consequence of dissent from the policy of their venerable Head. Eminent theologians, like Döllinger and Newman, known to be hostile, were not officially invited to attend. Eminent prelates of the same mind who had to be invited *ex officio* were harassed throughout the proceedings by papal remonstrances. The proceedings were anything but reassuring to contemplate (cf. Lord Acton's account in the *North British Review*, liii. [1871], art. 'The Vatican Council'). But, while it is true that learning and ecclesiastical statecraft were in irreconcilable opposition, the opponents of the dogma were in an impossible position from the first. For 'Decrees' are essentially matters of statecraft, not of learning, science, or philosophy, and are proverbially fashioned with reference to expediency and opportunism, not with reference to truth. The ground on which alone they dared or desired to fight the issue out was that the Decree, though true, would be untimely. They were Inopportunists, whose intense feeling in debate and in controversy threw grave doubt upon the genuineness of their faith in the doctrine itself. Probably the failure both of pope and of Council to trust the divine illumination and guidance in serious and free deliberation and conference was never more distressingly displayed. For purposes of dogma, for *ex cathedra* utterance, the majority were entitled to brush aside questions of mere timeliness. They knew their own mind; they knew the mind of their beloved and compassionated pope; they were smarting under an acute sense of injustice and humiliation inflicted upon him and upon the Church by the times; they

were practical men bent upon drawing tighter the bonds of unity and discipline; and they, not their more brilliant antagonists, were the true representatives of the genius of the Roman Catholic Church. Without being philosophers, they grasped the logic of the system to which they belonged more accurately than such academic minds as Newman and Döllinger. No one can survey the past of the papacy without recognizing that, however undignified and desperate the method was by which the definition was secured, it was profoundly consistent with the traditions of the papal Church. A Church which gave authority so exalted a place in faith as well as government, whose bishops were bound by oath to obey the bishop of Rome and accept his conscience and his judgment as their own, a Church which made external unity one of its vital notes and counted coercion when necessary a duty, could not be accused of betraying its past by crediting its visible Head with that infallibility, that absolute assurance of divine guidance, without which unquestioning obedience to him was manifestly a crime. In von Hase's words (*op. cit.* i. 251), infallibility is 'the supernatural condition of the unlimited power.' From one standpoint the Decree of 1870 is the *reductio ad absurdum* of the venerable Roman method of securing unity, a method as old as the desire of the Apostles that Jesus should forbid those who followed not with them, as old as the contention of the Apostles concerning precedence. From the opposite standpoint it was the consummation of the system, the crown or climax of its development. For once Newman's dialectic failed him when he opposed the dogma; he had forsaken one *via media* only to be discovered plodding along another. In 1867 he had urged to Pusey (Ward, *Life of John Henry Cardinal Newman*, ii. 222):

'Our feeling as a *fact* . . . is this:—that there is no use in a Pope at all, except to bind the whole of Christendom into one polity; and that to ask us to give up his universal jurisdiction is to invite us to commit suicide.'

In 1870, in the famous letter to Ullathorne (*ib.* ii. 288 f.), he counted the threatened Decree a 'calamity':

'As to myself personally, please God, I do not expect any trial at all, but I cannot help suffering with the various souls that are suffering. I look with anxiety at the prospect of having to defend decisions which may not be difficult to my private judgment, but may be most difficult to defend logically in the face of historical facts. What have we done to be treated as the Faithful never were treated before? When has definition of doctrine *de fide* been a luxury of devotion and not a stern painful necessity? Why should an aggressive and insolent faction be allowed to make the hearts of the just to mourn whom the Lord hath not made sorrowful? . . . If it is God's Will that the Pope's Infallibility should be defined, then it is His Blessed Will to throw back the times and the moments of that triumph He has destined for His Kingdom; and I shall feel I have but to bow my head to His Adorable Inscrutable Providence.'

But the fact is that the Decree was not substantially in advance of the theory and practice of the Church. In 1862 at Whitsuntide the bishops had addressed the pontiff in these words: 'Thou art the centre of unity, thou art the Divine Light prepared by the Divine Wisdom for the nations, thou art the rock, thou art the very foundation of the Church.' He had taken them at their word. He desired, in fact, his official apotheosis in the Decree for the same reason that alone made Newman eager for his Cardinal's hat, viz. to protect and guarantee his teaching in the future, and to prevent it from being set aside. He had made no secret, as Lord Acton points out (*op. cit.* p. 186), from the first of his policy:

'In his first important utterance, the Encyclical of Nov. 1846, he announced that he was infallible; and the claim raised no commotion. Later on he applied a more decisive test, and gained a more complete success, when the bishops, summoned to Rome, not as a council but as an audience, received from him an additional article of their faith. But apart from the dogma of infallibility, he had a strong desire to establish certain cherished opinions of his own on a basis firm enough to outlast his time. They were collected in the Syllabus, which contained the essence of what he had written during many years, and was an abridgment of the lessons which his life had taught him. . . . The Syllabus was not rejected; but its edge was blunted and its point broken by the zeal which was spent in explaining it away. . . . In private he said that he wished to have no interpreter but himself.'

What the divine right of anointed kings meant for past ages this divine right of popes to decree or interpret faith means for the papal Church. Its strength lies in the fact that it forms a focus of institutional loyalty and unity. The breast of the pope is, as a mediæval pontiff put it, 'the shrine of all rights,' as in the State the hand of the sovereign is the source of all authority. Every one knows that a king is fettered, even though the fetters be of gold, by the custom of his predecessors and by the law and the circumstances of his time. So with the pope—his infallibility is not unlimited, though he is answerable to none and there is none to limit him. In wise and holy hands the decreed right need do no harm. In unwise, in worldly, in selfish hands such as have often held the office, and in times of panic and unrest, the power may be employed to the Church's hurt. In normal circumstances its attribution to the Vicar of Christ may intensify the care with which his peers in the Sacred College select him from their number. It is questionable whether the dogma conferred any really new power. A distinguished Cardinal prophesied that, as worded finally, it would be such as to prevent any substantial exercise of the power to innovate. Newman's own fears were considerably allayed when he read its terms. In the historical introduction of the authoritative publication, prepared by Fathers Franzelin and Kleutgen (Ward, *Life of John Henry Cardinal Newman*, ii. 307), occurs the statement:

'The Roman Pontiffs, as the state of things and times has made advisable, at one time calling Ecumenical Councils or finding out the opinion of the Church dispersed through the world, at another by means of particular Synods, at another using other means of assistance which Divine Providence supplied, have defined those things to be held which by God's aid they had known to be in agreement with sacred Scripture and the Apostolic traditions, for the Holy Ghost was promised to the successors of Peter, not that by His revelation they should disclose new doctrines, but that by His *assistentia* they might preserve inviolate, and expound faithfully, the revelation or deposit of faith handed down by the Apostles.'

Newman recognized all that, but based his fears less upon the risk of papal vagaries or arbitrariness than upon the fact that 'there will necessarily always be round about the Pope second-rate people who are not subjects of that supernatural guidance which is his guidance' (*op. cit.* ii. 635). The trouble also is that no one but the ruling pope can authoritatively determine what is and what is not *ex cathedra* definition and *de fide*. Newman, Manning, and a host of theologians tell us, each in his own fashion, what are the tests of this august qualification, and unlimited ingenuity has been expended upon the problem. One by one the awkward instances of historical misdemeanour on the part of popes in the definition of doctrine have been taken in hand with a view to their elimination by hook or by crook. When misdemeanour has to be admitted, it is pleaded that the act was an indiscretion and less than *ex cathedra*, or that the intention was good, but that the pope was under compulsion, and so on. The result has certainly been to curtail, as far as subordinate opinion can curtail, the limits of the pontifical power; but the real foundation for legitimate anxiety lies in the fact that in any crisis the personal will of the pope must prevail by virtue of his unbounded claim to obedience in faith, morals, and discipline. It is obvious that matters which pertain to morals and the discipline of the Church, not to speak of faith, may touch at a thousand points the private conscience and the prerogative and interests of the civil powers. Gladstone in his powerful and impressive attack upon the

dogma has no difficulty in exposing this danger, and in espousing the legitimate cause of the threatened State. But in the statesman for once he forgot or sank the churchman, and his argument is open to the retort that the Church has the same need for autonomy, the same right to legislate for itself with sovereign authority, as the State. By all the principles which fence about the jurisdiction of the Crown, the tiara may equally be guarded by its cassocked defenders. With no consistency can civil power reproach ecclesiastical power for copying its own methods and invoking the same instruments of order. The churchman is subject to no temptation whose counterpart the statesman has not to encounter; his fault is the greater because the King of his allegiance sanctioned no coercive discipline, deprecated precedence and titular dignity, and authorized no legislative apparatus to pass laws for human faith and conscience. Short of the complete renunciation of the life-long tradition and policy of Rome, it is difficult to see how the Roman Catholic Church could have laid aside the manifestly unworkable and unmanageable instrument of world-wide Councils either for the determination of doctrine or for the exercise of discipline, without vesting in the papacy the right and duty of using all proper means of consultation, learning, and prayer to ascertain the will of God by His Spirit for the instruction and edification of the flock entrusted to its charge. There is no need to vindicate this faith in divine providence by appealing, with an old-time Jesuit professor and theologian of Mainz, to OT Scripture and urging that 'a thoroughly ignorant Pope may very well be infallible, for God has before now pointed out the right path by the mouth of a speaking ass.' Trusting the Church, trusting the Episcopate, and trusting the 'assisted' head of the Church on earth are co-ordinate duties for the Roman Catholic mind. They rest on the same order of faith in the Holy Spirit which animates every individual Christian, and they are subject to the same order of limitations. But it will not fail to impress the reflective student of history as a singular fact that in the cycle of its progress the Church which condemns private or personal judgment in things of faith should now anathematize those who distrust the personal or individual judgment of popes 'apart from the consent of the Church.' Even Rome cannot evade the awkward circumstance that, after all, our acceptance of the pope as in any character and capacity infallible depends in the last resort upon an exercise of individual conscience and private judgment. 'How otherwise,' wrote Mivart to Cardinal Vaughan in 1900, 'could we know that authority had spoken at all, or what it had said?' Before the soul has any right to fling itself into arms extended to receive it in its quest of truth and peace, it must first convince itself that the arms are everlasting and that the proffered bosom is divine. If even popes have justified the withdrawal of their pledges by reason of their having been extorted under fear, is the individual faith which is yielded on pain of spiritual anathema to be accounted any whit more valid? Most readers of the history and proceedings of the Vatican Council, and, for that matter, of the Tridentine Council also, will rise from their occupation with a profound sense of the soundness of the papal conviction that ecumenical Councils are not to be trusted any longer, if they ever were, that the spirit guiding them is not infallibly holy, that they are subject to a multitude of infirmities inherent in their nature. But it is not every reader who will be guided by these histories to the further conclusion that the Sacred Breath which has been withdrawn from the Chamber of Council is now both assured and restricted to the apartments of the Vatican.

**5. Infallibility of Jesus Christ and His Spirit.**—It was indicated above that, while Scripture has been authoritative for all types of Christian faith, the infallibility it possesses for them resides, even within the Gospels, in the person of Jesus Christ. The Bible is for Christianity the record of a Life and its setting.

(1) Objectively, Jesus Christ is the authority which lends it its unique impressiveness. His life, His teaching, His character, His person, and His attested influence upon the world around Him constitute a fact of history to which the human heart and mind go back again and again, to test it and anon to bow before it. System follows system of doctrine, mode succeeds mode of piety and devotion, but Jesus Christ, learned from history and tried by experience, remains the same yesterday, to-day, and for ever. Other foundation can no man lay. Back to Him, down to Him, up to Him, are the watchwords of reviving faith. Age after age rediscovers Him behind the veil of tradition and convention and religious pedantry. To enjoy His sanction or authority is the highest boast of any Christian usage, ordinance, or teaching. Amid all their differences of sectarian opinion and sectarian life, Christians are at one in acknowledging His historical life to be their ideal and their example, not only an incarnation of the divine, but at the same time a complete embodiment of human excellence. Though there is no agreement in the Christian world as to the details of His teaching, there is in progress a steady approach towards a common understanding and exegesis of His words. No year passes without bringing some new light upon the record of that holy and sublime life, and, instead of taking Him further from us into the past, time seems but to define His character and genius and message more sharply. Faults have been found in His character by hardy critics. He has been adjudged too stern, too gentle, too visionary, too ascetic, or not ascetic enough. Scholarship has recast traditional notions of the meaning of His words and of the composition of the Gospels. To some extent the halo and the Fact which it encircles and illumines have been distinguished. The mind of the Master and its interpretation by His disciples stand out with a new distinctness. But, in spite of all, the Figure and the Countenance form a Presence which decomposes but to recompose, and without wincing abides the unsparing scrutiny of every passing generation. Philosophy, history, science, poetry, art, and devotion show no signs of faltering in their interest in Him. Their acknowledgment of His greatness and all-sufficient perfection has not grown fainter. There is no sign that Christendom has discerned an example more appealing, a message more arresting, an authority more commanding, an ideal more exacting, a goodness, truth, and beauty more satisfying to the soul.

(2) Subjectively, Jesus Christ and His Spirit experienced in the soul have proved the unfailing authority before which Christian people without compulsion and without humiliation are content and glad to kneel. To contemplate Him from without is sooner or later to admit Him within, and to admit Him within is to surrender to His influence and guidance without a murmur. Christ and His indwelling Spirit are for Christian experience the source of power from above, yet from within. Something more than a memory, however tender, however sacred, possesses the believer. A Power demonstrates a Presence. Faith says from age to age: 'He is not dead: He is risen.' History has not enclosed Him within a niche. Experience

does not exhaust Him. His words have not passed away, but are still spirit and life to those whose ears are gladdened and solemnized by them. His Church has not succumbed to the gates of death. He has never been so intimately realized by men as at the present time. Social life is reckoning with Him on a scale never previously attempted. He is transforming the world more radically than science and invention can. In all that constitutes spiritual influence the infallibility of Jesus Christ and His Spirit is the common faith of Christendom. By the fruits of His contact with us we know Him. Every evidence of His divinity is testimony to His infallibility in thought, word, and deed. He is not only flawless but unfailing.

6. **Infallibility of the Christian conscience.**—The Christian conscience or consciousness, human conscience stimulated, educated, transformed, transfigured, possessed by the Spirit of Christ, is, for the individual, the nation, the Church, the world, the final arbiter of all duty and all faith. Whether we speak of Christ dwelling in the soul, of the soul at one with Christ, or of the Christian conscience, our meaning is essentially the same. The seat of judgment on earth is that tribunal within the heart. The Spirit of Christ, the Christian Spirit, is the common denominator of all Christian authorities. It is the power that animated the Christian Scriptures and breathes from them still, that inspired the Creeds and Confessions, that prompted the heroism of the faithful, that enlightens the judgment of clergy and laity, of pope, bishop, presbyter, and deacon alike. It is invoked to constitute and sanctify and overrule the deliberations of Synods and Councils. It is divinely promised to the two or three met in the name of Christ, and promised to the solitary believer whose isolation it ends not less than to the world-wide fellowship of the Faith. It is not the monopoly of the individual, nor is it the monopoly of the organization. Its authority is as universal as truth, as various in its embodiments. All mechanical or official oracles of the Christian Spirit are to be regarded with distrust. Our *a priori* assumptions of the modes in which God *must* have provided for our need of guidance and enablement are very liable to be overturned in the school of daily experience. The letter of Scripture does not more surely kill or deaden faith and discernment than would unreasoning reliance upon the mere word of an official or a caste or an organization, however devout and well-intentioned. The Church which vests infallibility exclusively in an order of office-bearers who are human, humanly trained, and humanly appointed fetters the very liberty of God to choose His instruments as of old from every class, every race, and every type of men. One may honour the faith in divine providence and divine predestination which can bind together a great communion of believers, yet recognize the dangers, which inhere in it, of superstition, arrogance, and illusion. To err is human: not to err is a divine perfection. To learn through error is our lot, both Churches and men. Therefore it is essential to a reverent faith, on the part of both, while believing that God's Spirit will not fail us, to avoid the presumption of believing that we shall never fail God's Spirit. Timorous mistrust and reckless arrogance are equal enemies to faith. To trust majority-findings in all cases is as fatuous as to trust no one but oneself. Genius is greater than majorities or averages. An inspired priest is a higher guide than a commonplace and conventional prelate or pope. God has sanctioned and hallowed many forms and instruments of authority in the Church as in the world. The teaching of history, which is the sphere of His providence, seems to admonish us to learn from all, to give all their just place in our confidence, to be loyal to their dictates according to our conscience. The promise stands that the Church will not perish, but the promise also stands that the Spirit will not fail the individual believer. The heart of the Master-shepherd goes out to the one sheep even more than to the ninety and nine. One with God is a majority. Where the Spirit is, though there be but two or three, there is the Church. Where the truth is, there alone is infallibility, a revelation that is divine. Every Christian is a vicar of Christ, representing Him and His Spirit in the world. The servant is not greater than his Master. If Christ disclaimed or deprecated the name of 'good,' assigning it to God, and if Christ disclaimed or deprecated titular dignity and precedence, interpreting His Masterhood in terms of service, there is surely danger and disloyalty in any claim of particular human infallibility. Earthly authority, even the best, is intended to educate its subjects into independence of its help and its restraint. Every historic authority, as Sabatier justly says, demands at once respect and criticism. One may be loyal without being obsequious. One may be obedient without being a slave. It is as dangerous for obedience as for authority to be blind. For both there is no organ of vision save an open eye, no organ of truth save a reverently open mind.

'There have always been,' wrote W. E. Gladstone in his *Vaticanism* (London, 1875), 'and there still are, no small proportion of our race, and those by no means in all respects the worst, who are sorely open to the temptation, especially in times of religious disturbance, to discharge their spiritual responsibilities by *power of attorney*. As advertising Houses find Custom in proportion, not so much to the solidity of their resources as to the magniloquence of their promises and assurances, so theological boldness in the extension of such claims is sure to pay, by widening certain circles of devoted adherents, however it may repel the mass of mankind. There are two special encouragements to this enterprise at the present day: one of them the perhaps unconscious but manifest leaning of some, outside the Roman precinct, to undue exaltation of Church power; the other the reaction, which is and must be brought about in favour of superstition, by the levity of the destructive speculations so widely current, and the notable hardihood of the anti-Christian writing of the day (p. 46). . . . There are those who think that the craving after an infallibility which is to speak from human lips, in chapter and verse, upon each question as it arises, is not a sign of the strength and healthiness of faith, but of the diseased avidity of its weakness. Let it, however, be granted for the sake of argument that it is a comfort to the infirmity of human nature thus to attain promptly to clear and intelligible solutions of its doubts, instead of waiting on the Divine pleasure, as those who watch for the morning, to receive the supplies required by its intellectual and its moral trials. A recommendation of this kind, however little it may endure the scrutiny of philosophical reflection, may probably have a great power over the imagination and the affections of mankind (p. 106).

One thing is clear: Between the solid ground, the *terra firma* of Infallibility, and the quaking, fluctuating mind of the individual, which seeks to find repose upon it, there is an interval over which he cannot cross. Decrees *ex cathedra* are infallible; but determinations what decrees are *ex cathedra* are fallible; so that the private person, after he has with all docility handed over his mind and its freedom to the *Schola Theologorum*, can never certainly know, never know with "divine faith," when he is on the rock of infallibility, when on the shifting quicksands of a merely human persuasion' (p. 108).

WILLIAM A. CURTIS.

**INFANCY.**—The period of individual life immediately following birth. In law, human infancy extends to the attainment of one's 'majority,' usually the age of twenty-one years. In other than legal usage the term signifies, according to convenience, any number of years from one to seven. The present article concerns a period of about five years during which, in an unusually complete sense, the family is the child's educator.[1]

**1. The relation of infancy to moral evolution.**—John Fiske has shown[2] that the extreme unripeness of the human child at birth and the extreme length of his immaturity are crucial points for intellectual and moral evolution. (*a*) Life begins with fewer 'sets,' and fewer of them are formed early, than is the case with other species of animals. Here is the opportunity for accumulating experience in an individual way—for originality, individuality, and progress. Applying this to morals, we may say that the prolongation of infancy in the human species makes character possible. (*b*) The peculiar and prolonged helplessness of the human child has been the chief factor in producing, first, maternal affection, and then the stable monogamic family. It is chiefly from the family, in turn, that regard for others has radiated into the wider social groups. Human infancy, then, is a hinge on which both the moral growth of the individual and the moral evolution of the race have turned.

**2. The physical basis of the beginnings of character.**—At two points the body of the infant has the closest relation to his start in the moral life. (*a*) In the absence of the habits and inhibitions of later life, incidental physical conditions, whether good or ill, have a peculiarly pervasive effect. Wrong feeding, *e.g.*, is a potent cause of depressed states, such as peevishness. Inadequate care, or overstimulation, produces nervousness. The significance of nervous poise and of physical comfort or their opposites reaches far beyond the date of their occurrence, for all of them tend under the law of habit to become fixed as disposition. (*b*) The acquisition of muscular co-ordinations constitutes the earliest will-formation, which includes self-control and self-direction. Hence each of the following conditions is unfavourable to moral growth: swaddling the body so as to prevent free movement of any part; lack of objects to handle (though toys can easily be too numerous or too complicated); repression of free movement and experimentation; failure of the parents to play with the infant.

**3. The moral endowment of infants.**—The individual begins life neither moral nor immoral, but pre-moral. Yet is there not a moral nature or hereditary endowment that favours the attainment of a positive moral character? In view of the moral evolution of the race, it cannot be that the endowment of individuals is, on the whole, either unfavourable or neutral. Two questions, however, remain.

(*a*) Specifically where, among the instincts and other unlearned tendencies, do we find the infant's *moral nature*? The answer, in general, is that a complex of unlearned tendencies towards truly voluntary social reactions is the moral nature. One of these tendencies, the sexual instinct, does not appear in infancy. But even in infancy we can discern gregariousness, imitation, sympathy, and rudiments of the parental instinct in attitudes toward babies, pet animals, and even toys. These do not of themselves constitute a genuinely moral endowment, however; there must be provision, also, for the growth of an individual will that may erect into deliberative, discriminative, and generalized ideals the otherwise fitfully exercised social motive. Without individual wills there is no true society. We include, therefore, in the infant's moral endowment his enjoyment in being a cause, his curiosity, his instinct for collecting and hoarding, and certain instinctive self-assertions, as jealousy, and what Thorndike calls 'mastery and submission' and 'approving and scornful behaviour.'[1] Granted this whole complex of original tendencies, together with a human environment in which they may find expression, the individual tends to become deliberately as well as instinctively social. That is, he has a moral nature.

(*b*) But a moral nature grows into *moral character* only under some sort of stimulus. What, then, is the special condition or stimulus under which an otherwise fitful social motivation becomes the principle of a socialized will? The answer is that character is formed through conflict within the very tendencies that have just been described as constituting the moral nature. Moral growth does not pursue a straight line such as might represent a single instinct, but a zigzag from predominant self-regard to predominant other-regard and back again. This inherent conflict of impulses is intensified by the pains and pleasures incident to the child's membership in a regulated group. Thus arises conscience. In its earlier forms, which clearly appear in infants who live in well-regulated families, conscience is simply the coincident experience of egoistic and social impulses which have not yet found their unity. Yet the resolution of the conflict may begin very early. Even in infancy, wherever wise nurture prevails, we behold genuine efforts at self-control in the social interest, and genuine victories over mere egoistic desire. That such victories bring a heightened sense of individual self-realization is an added evidence that a genuine moral nature is growing into moral character.

The common impression that the conduct of every infant is purely egoistic arises from the relative immediacy of his objects, *i.e.* his lack of consideration. Such impulsive action on the part of an adult would, indeed, connote selfishness, since adult society depends upon the pursuit of remote ends; but the ends of infant conduct are often social in the sense of pleasure in the pleasure of others, and even, as we have just seen, in the sense of preferring the social good even when it conflicts with egoistic desire.

**4. The infant's life in the family.**—Not only has human infancy produced the human family; but this is the only social organization that is inherently adapted to the infant's moral needs. The family develops individuality; the members cannot be dealt with as classes or impersonally. Yet the intimacy that prevails among its members, based partly upon natural affection, partly upon the smallness of the group and the physical conditions of home life, is the most powerful socializing influence in the world. Institutional care of children, as in orphan asylums, can provide the

[1] The art. GROWTH (Moral and Religious) contains a systematic description of the stages of growth, infancy included. See also CHILDHOOD.

[2] *The Meaning of Infancy*, *passim*.

[1] E. L. Thorndike, *Education*, New York, 1912, ch. v., also *The Original Nature of Man*, do. 1913, ch. vii.

conditions of physical health, but not the individualizing and socializing influences that are essential to normal moral growth. It is now an axiom among social workers that a child who is deprived of his natural family connexion should be placed, as promptly as possible, in another family, not in an institution.

Even the intellectual growth of the infant is best fostered by the same individualizing intimacy. The reason is that genuine intimacy between parent and child becomes reciprocal—the parent fondles and plays with his child, but also grants him access to mature thoughts, attitudes, and activities. The soundest educational practice provides a rich environment for the child, never fearing that he will partake too freely or extend his interests unduly as long as fellowship with mature mind is part of the situation. To answer a child's questions in a serious way, to create situations in which his curiosity will lead him to ask important questions, to cultivate his imagination, and to enjoy with him mutual intellectual discovery—this is the proper method of promoting intellectual progress in infancy. Children who have an early intellectual development without forcing or abnormality are generally those who are admitted to such intellectual intimacy with their parents.

These considerations, to say nothing of freedom as included in the individual's moral destiny, make against the popular belief that the first virtue to be inculcated in infants is absolute obedience. What parent, moreover, is wise enough to prescribe rules that deserve such obedience? The first moral need of an infant is to act consciously as a member of the family group. This conscious mutuality involves law and obedience, but it gives content to the moral will as 'absolute' obedience does not, and it begins at once the process of acquiring freedom.

5. **The infant and religion.**—No one at the present day looks for innate ideas of God, but there is a common notion that infantile thinking is spontaneously animistic. If the term 'Animism' is used in Tylor's sense of belief in spirits, then Animism is not spontaneous in the infant, for he acquires the notion of spirits just as he acquires other concepts. On the other hand, the abstractions that characterize adult thought have not yet been made; the infant thinks in wholes, and these wholes are of the sense order. Yet emotional thinking still prevails with him, and this gives an anthropomorphic tinge to his objects. The reason is simply that the emotionality of a whole mental situation still inheres in particular objects as they appear in it; *i.e.*, a strictly objective point of view, which implies abstraction of the object experienced from the experience itself, has not yet been attained. The infant's mind moves freely within stories that attribute language and motives to any object of his experience. As early as the age of four there is delight in dramatic 'make-believe,' which, helping the infant to make himself and other persons definitely individual, helps also to differentiate persons from things. At this age, and even younger, one easily believes in God; but the nature of this belief appears in the acceptance of fairy stories, and stories of the 'black man,' so unwisely used by nurses to secure obedience.

This god-belief is not yet distinctly monotheistic, for neither the thought-problem nor the moral problem underlying monotheism has yet arisen. The infant's belief may be polytheistic, or simply vague. (Concerning its relation to the child's scientific and religious growth respectively, see CHILDHOOD, § 4.) Further, the idea does not necessarily have any specifically religious value. The writer has a drawing, made without suggestion or guidance, by a child of four years and eight months, in which a toy railway train, a house, a Christmas tree, Santa Claus, and God all figure, evidently on terms of approximate equality. This child's interests have not been much differentiated; the idea of God is on substantially the same plane as that of Santa Claus. Another child of about the same age invented during the Christmas season a play in which he himself impersonated God, and brought in the star of Bethlehem, a crude device made of sticks that he had fastened together. The infant's possession of an idea of God, then, is not of itself an evidence of religion.

Does the infant mind show traces of a religious instinct? The fact that religion is not altogether a deliberate device or a product of logical thinking has led to the assertion that it is instinctive. This use of the term 'instinct' is too broad and indefinite. In strictness an instinct implies a definite motor response in a type of situation that is objectively definable. The readiness of infants to believe in God and to perform religious acts requires no special instinct as its cause. These ideas and acts originate in the same way as those that concern a human relative as yet unseen, or those that concern Santa Claus. The ideas are acquired on authority; they are made real through imagination, and the acts are imitative.

The springs of real religion are present, however, in what we have just described as the moral nature. As the Christian religion, broadly taken, is an idealized expansion of family relationships, Christians should regard infants as religious to the extent that they idealize parenthood in the direction of a universal Divine Fatherhood, and childish goodwill in the direction of universal brotherhood. Under instruction and example, infants do, in fact, make idealizations of this kind that become potent in conduct. To focalize one's social ideals in the thought of a Heavenly Father; to talk to this Father in prayer; to submit one's impulses to this superior will—this is religion, and it is easily produced in infants under Christian nurture.

LITERATURE.—John Fiske's essay on 'Infancy,' originally published in his *Outlines of Cosmic Philosophy*, London, 1874, pt. ii. chs. xvi., xxi., xxii., is now available in briefer form, together with 'The Part played by Infancy in the Evolution of Man,' in a booklet bearing the title, *The Meaning of Infancy*, Boston, 1909. The best brief analysis of unlearned tendencies is ch. v. of E. L. Thorndike's *Education*, New York, 1912. For a full, critical discussion of this subject see his *The Original Nature of Man*, do. 1913. The line of the child's social growth is traced most fully in E. A. Kirkpatrick, *The Individual in the Making*, Boston, 1911. Help in getting the small child's point of view will be found in Patterson du Bois, *Fireside Child-Study*, New York, 1903, and *Beckonings from Little Hands*, do. 1900. E. P. St. John, *Child Nature and Child Nurture*, Boston, 1911, is a series of simple studies for parents with respect to the moral and religious nurture of children. It contains useful reading lists. On child religion see, further, CHILDHOOD, § 4, and Literature appended. See also G. Compayré, *L'Evolution intellectuelle et morale de l'enfant*[2], Paris, 1896; J. Sully, *Studies of Childhood*, new ed., London, 1896; A. F. Chamberlain, *The Child*, do. 1900; W. E. Urwick, *The Child's Mind*[2], do. 1910; W. B. Drummond, *An Introduction to Child-Study*[4], do. 1912; and art. FAMILY (Biblical and Christian).

GEORGE A. COE.

**INFANT BAPTISM.**—See BAPTISM.

**INFERENCE.**—All attempts at logical science assume that inference is a source, distinctive, effective, and authoritative, of knowledge. It is in view of these three characteristics that schemes are framed for the self-conscious revision of it, and that mutual criticism goes on between different logical systems.

1. **Distinctiveness of inference.**—Inferential knowledge is distinctive because of its dependence on other knowledge the security of which is differently founded and cannot be helped or hindered in the same way by revision. At the first beginning of logical science, the Hindu Gotama distinguished inference from the deliverances of sense-perception, the recognition of likeness between things, and doc-

trine intrinsically worthy of belief or commended to us by the good and wise (see artt. LOGIC, NYĀYA). On these inference is dependent. From its obvious dependence, Aristotle, in his theory of science, argued to the independence of other knowledge, though he could not for science, as he did for mere debate, appeal to the opinion of the good and wise; and he left in some obscurity the share in the complete function of intelligence which should be assigned to sense-perception and intellectual intuition respectively—these being the independent faculties which he mentions. Modern epistemology has raised the latter question more definitely. Kant's logical teaching seems to accept as independent the whole interplay of the two faculties, sensibility and understanding, which are required by his epistemology, until it sunders into the distinct moments of reason and consequent, and then it becomes inference (*Introduction to Logic*, tr. Abbott, London, 1885, § vii.). Modern psychology has encouraged a more definite list, such as that given by Mill: perception, conception, memory, belief—the forms of 'immediate consciousness' by reference to which inference may be viewed as dependent. Dependence may also be treated as a mere matter of degree. Even the 'irreducible datum' contained in perception exists only through qualifications imposed by judgment, and judgment itself is nascent or implicit inference, while inference owes its stability to its place in total knowledge; so that the paradox which Aristotle wished to avoid by his theory of independent sources of knowledge is accepted as a truth, and the system of our inferences is one that returns into itself like a circle (B. Bosanquet, *Essentials of Logic*, London, 1895, § ii., and *Logic*, Oxford, 1888, ii. 7). But this still allows a dependence that is relative.

2. **Effectiveness of inference.**—Inference becomes worthy of its special theory through its effectiveness in enriching our endowment with truth. Mill acknowledges it only when we 'believe a fact or statement by reason of some other fact or statement' (*Logic*[8], 1872, ii. 1. 1). Kant defines it as 'that function of thinking by which one judgment is derived from another' (*Logic*, § 41). Hamilton, consistently with the stress he lays on the concept as an instrument of thought, requires merely a new recognition of the relation of whole and part between one concept and another. While Hamilton's requirement, as Mill urges (*Exam. of Hamilton's Philosophy*, London, 1872, ch. 19), is too slight, in view of the countless riches of truth open to us beyond immediate consciousness, Mill's own demand for belief in new facts is too stringent. It sterilizes both immediate inference and the syllogism taken apart from an inductive foundation, and perhaps even scientific induction taken apart from deductive applications in detail. And it might well excuse the logical paralysis affected by Meno in Plato's dialogue (*Meno*, 80 D) when he was invited to proceed to knowledge out of conscious ignorance: 'How will you know, when you light on a result, that this is what you did not know?' Aristotle, with this affectation in mind, required merely that the 'manner of knowing' should be new: 'We possess knowledge after a certain fashion before induction or the assumption of a syllogism, but in another manner not' (*Anal. Post.* i. 1). And a recent writer remarks: 'Much of inference consists in demonstrating the *connection* of matters that as facts are pretty familiar' (Bosanquet, *Essentials of Logic*, p. 138).

3. **Authoritativeness of inference.**—The despair of Meno in regard to novelty was a sequel to the demand of Socrates for cogency; and the union of these two requirements constitutes the crisis in pursuing any systematic logical theory. Mill's insistence on new 'facts' hampers him throughout a long labour to show a satisfying authority. He unites the two requirements, as the primitive logic of Gotama did, in the 'recognition of signs.' And he perverts incidentally the scholastic axiom of intensive reasoning to suit this conception and to mean that whatever possesses any significant attribute possesses the significate of which it is a sign. But that one thing can be a sign of another is not a truth that can be left in this primitive crudity; and Mill only slightly softens the crudity when he appeals to empirical or causal laws. These do, indeed, confer signification on facts, but, being themselves inferences from facts, they appear to have no more title to do so than facts have to assume it for themselves. Signification remains a mere shadow from the unseen. In contrast with Mill, Hamilton's choice of the minimum in his requirement for novelty allows inference to carry with it the full authority of the conceptual faculty, but at the expense of effectiveness. With Kant it has the authority of a law of the understanding imposing the relationship of reason and consequent, while other logicians, with doubtful success, attempt some formula which pledges reality more definitely than a reference to understanding can do.

'The logical forms and the laws of their application are the conditions through the fulfilment of which thought satisfies its own requirements, and brings the connection of its ideas with one another into that form, which for it, for thought itself, is truth' (H. Lotze, *Logic*, Oxford, 1884, § 334).

And it is sufficient for the reassurance of philo sophic doubt that the Kantian principle of rational consequence 'is but the side, normally turned towards empirical thinking, of the fact that there is in the thought-content itself such an immanent inter-connexion that if something is true then something else is true and something else not true' (W. Windelband, in *Encyclopædia of the Philosophical Sciences*, vol. i. p. 25; see also Losskij, *ib.* p. 240 ff.).

4. **Immediate inference.**—If the same fact, understood through the same concepts, nevertheless comes to be known in a new way without a new reference to independent sources, there is immediate inference as distinguished from mediate. In speech or in writing, the transition from one judgment to another appears as a change in the order of ideas, 'A is B,' 'B is A'; or in the use of one rather than the other of a pair of contradictory ideas, 'A is B,' 'A is not other than B'; or in what may be described as the logical self-consciousness of judgment, 'A is B,' 'It is false that A is not B.' To Mill such 'ways of knowing' are merely schemes for the use of whatever equivalent expressions may be available for the same fact. To Kant they suggest distinct plans of synthesis in the interplay between sensibility and understanding, of which one may be a reason for the other; and he names them syllogisms of the understanding. And other logicians recognize an internal development of the concepts employed in a judgment, which alters the judgment in 'type,' but not in 'substance.' There may thus be a change from a historical import to a scientific, or *vice versa*: 'Some sovereigns are tyrannical, A tyrant may have sovereign power.' Or a contradictory idea may arise as a species complementary within an implicit genus: 'Lovers are prone to jealousy, Lovers are not indifferent to each other's friendships'; though the formula for this, 'A is B, A is not other than B,' is considered meaningless by Kant.

5. **Mediate inference.**—Where the new way of knowing is through a concept new in substance and boundaries, 'X is P,' 'S is P,' the authoritativeness is due to some mediating idea, and the inference is entitled 'mediate.'

A scheme of expressions with letters as symbols for concepts has been inherited by current Logic from Aristotle, to which nearly all examples of mediate inference can by ingenuity be made to conform. As a personal discipline in making clear the mediating idea that is employed in any example, this scheme has been almost universally commended; but it fails to make clear the ground and hazard of the mediation. And its rules can justify only the classifications or the intensive subordinations of concepts which accompany inferential belief. That 'All men are mortal, and the king is a man and therefore mortal,' reveals 'the human' as mediating idea, and arranges king, man, and mortal in a classificatory or conceptual hierarchy. That 'Alexander, Muhammad, and the other persons of history have died, and these are men, and therefore man is mortal,' reveals the list of historical persons as mediating idea, correlates the list with 'man' as a class concept, and subordinates this to 'mortal.' Nature, however, as Mill contends, has not arranged all the objects of the universe into definite *a priori* classes (*Logic*, people's ed., London, 1884, ii. 2, § 2), and we might add that neither does the universe present itself as a museum of permanently assorted attributes. And it is only inferential predication already accomplished that enables us to systematize our concepts either in extension or in intension, or to correlate a list with a concept.

**6. Interpretative deduction.**—A more material value may be given to such schemes, as representing a plan of co-operation between different minds in building up a common inferential system. The insight transforming incident into generalization or law, 'Man is mortal,' may be accomplished by one mind; and concrete expectation may be framed accordingly, 'The king is mortal,' by another. The rules of the deductive syllogism mark a dividing line between originative and interpretative thought in their co-operative function, whether the personality requiring the distinction be that of teacher and disciple, audience and orator, legislator and magistrate, earlier and later self, or otherwise. Mill considered that deductive interpretation does not amount to inference unless there is a reference back to the original datum for the authoritative rule itself (*Logic*, ii. 3, § 4). If, however, the formula of authority be not merely understood as a meaning, but also adopted by the interpreter as a conditioned rule for his own beliefs, and then developed into a specific belief according to the rule, there really arises in the passage from rule to instance a 'new way of knowing.' The traditional maxim for the deductive syllogism—whatever is predicated concerning a class distributed may be predicated in like manner concerning anything contained therein—does not express this. But Kant's maxim does: Whatever fulfils the condition of a rule falls under the rule itself (*Logic*, § 57). And it is relatively to such inference that Gotama's inclusion of extrinsic authority, as an independent source of knowledge, along with perception and intuition may be still approved.

**7. Demonstrative deduction.**—Independently of authority as a source, the deductive intersubordination of concepts also represents inference when the 'conditions' of a rule are fixed and their fulfilment exemplified, intuitively, that is to say, when the occasion of inference is what has been known in widely separated epochs of philosophy under such phrases as 'intrinsic worth of a doctrine' (Gotama), primary scientific principle (Aristotle), *a priori* synthesis (Kant). Mill as an empiricist in epistemology would reduce this kind of inference to the same level as the interpretative—a treatment which is the less plausible in logic because the class extensions so natural and useful in the interpretation of experiential knowledge are here a superfluous gloss on the demonstration. It is as easy to see that a triangle ABC, constructed in Euclid's first proposition, is equilateral, without referring to anything outside that figure, as with the aid of generalizations.

Where intuition fails us, and, according to empiricists, in all knowledge, the ultimate occasion of inference that is not merely interpretative must be the coincidences and sequences of experience, and the 'new way of knowing' converts special features of these into a 'conditioned rule' for our expectations. The universality of the rule is not the 'logical' or *a priori* universality conferred by intuition (Kant, *Logic*, § 81), but analogous to it—a reaching towards 'the thought by which all things through all are guided' in the flux of Heraclitus. Inference here is 'belief' in contrast with strict knowledge (cf. art. BELIEF [Logical]); and Kant entitles it 'syllogism of reflective judgment.'

**8. Enumerative induction.**—Where many experiences repeat the connexion of some attribute with the instances of a given concept, we infer the concept as the condition for a rule as to predicating the attribute. The concept may be simple, 'Yellow is the brightest colour'; or it may be composite, 'Metals conduct electricity.'

'From perception memory results, and from repeated recollections of the same phenomenon comes experience; from experience, or from the entire universal which is retained in the soul . . . comes the elementary principle of art and science' (Arist. *Anal. Post.* ii. 19).

Recurrence has no meaning except when environments or specific determinations change, but it is the recurrence, and not the change, that appeals to our inferential activity. The maxim followed is: Many things do not agree in one characteristic without a reason (Kant, *Logic*, § 84). The numbering of recurrences is, for progressive intelligence, the primitive mode of inference; and Mill considers that out of it scientific analysis grows as an effort to sustain or correct a narrower enumerative induction by a wider (*Logic*, iii. 3, § 2). And, converting this psychological precedence into a logical one, he declares that the distinctive maxim of scientific analysis, the Law of Causation, can 'have no better foundation' than our wider faith in uniformity as mere recurrence (iii. 21, § 2). But, while faith in recurrence is an indispensable factor in our expectations if these are to meet the requirements of concrete life, its authority is less secure than that of inference from change of environing circumstances or in specific determinations. Bacon describes it as 'puerile, precarious, and exposed to danger from contradictory instances.' Aristotle's doctrine that 'the universal becomes evident out of a plurality of particulars' must be supplemented by Bacon's, that the evidence depends on 'rejections and due exclusions' (*Nov. Org.* i. 105). Current logic prefers to justify enumerative induction as a nascent causal analysis, and so reverses the order of precedence assigned by Mill.

**9. Eliminative induction.**—Where the instances of a concept differ in their environing circumstances or in their specific determinations, variations that are concurrent with each other may become condition and rule. Friction between flint and steel is an incident that concurs with heat; minute grooving and iridescent colour are specific determinations of surface that concur in mother-of-pearl. Mill's two types of elimination, entitled 'Method of Agreement' and 'Method of Difference,' are ways of isolating and defining such concurrences. With Agreement, the relation becomes isolated by repeating itself throughout several instances while any passing concurrence of its terms with other circumstances or determinations is inconstant. The condition for iri-

descent colouring of a surface cannot be the peculiar chemical composition of mother-of-pearl, for the colouring appears also on grooved wax or metal; nor can it be molecular consistence, nor weight. With Difference, on the other hand, an instance or species of the concept is found where the concurrence is isolated even as a passing one. Only friction and heat distinguish the moment of use from the moment of rest, in flint and steel.

Because eliminative induction infers a rule of change or variation, that is to say, a causal or determinative relationship rather than a class attribute, its influence on our concrete life is distinguishable from that of enumerative induction. The latter enables us to select from among means provided by Nature the best for our end—*e.g.*, the camel for desert transport. The former subserves the invention of new mechanisms for an end—*e.g.*, the conversion of electric strain into light, heat, or movement. But neither of the two ventures of our reason can thus pass freely into practical wisdom without the co-operation of a further venture which constitutes a distinct species of inference—the analogical.

**10. Analogy.**—In connexion with environments or specific determinations that remain unchanged or are repeated, the partial exemplification of a concept is the condition for a rule that completes it. Mars is habitable, because it is so like our habitable earth. Such a venture of belief fulfils the same function in practical wisdom as the *a priori* construction of examples fulfils in demonstrative science. And it is in view of this function that Aristotle submerges it in a double syllogism which he entitles 'Example.' War between Athens and Thebes would be calamitous, as being a border war, like that between Thebes and Phocis. Gotama classes the 'recognition of likeness,' not as an inference, but as an independent source, like perception, that may contribute to inference. Modern Logic allows it as a kind of inference, or at least as an independent source of inductive hypothesis, co-ordinate with enumerative induction (C. Sigwart, *Logic*, Eng. tr., London, 1895, § 83).

Within a sphere of belief where environments and specific determinations are sustained by purpose or by the power of organic life—*e.g.*, when we follow judicial precedents or recognize physiological functions—we may justify analogy by a maxim corresponding to Kant's maxim for induction: since the many characteristics do not unite in one thing without a reason (cf. Kant, *Logic*, § 83). But even where the finality which unifies a collocation is not definable in terms of purpose or of life, our conceptual faculty still demands, in the spirit of the ancient realism, that destiny shall pre-ordain the repeated exemplification of limited conceptions, and that the impending shall not be infinite in surprise (see art. CONCEPT; and cf. J. Venn, *Empirical Logic*[2], 1907, ch. 4). It is not sufficient that the world of facts follows, as Mill describes it, 'from laws of causation together with a primeval collocation of forces that is inexplicable' (*Logic*, iii. 5, § 9).

'It is necessary to suppose that not merely do general laws hold good in the world, while the arrangement of facts on account of which a definite form of actuality flows from the laws is . . . given over to chance, uncontrolled by any principle; but rather that in the arrangement of the aforesaid facts also, a principle (that is to say, an 'Idea') is effective, and that this principle fixes beforehand . . . the whole system of the future phenomena which are to be actualized' (Lotze, *Outlines of Logic*, Eng. tr., Boston, 1887, § 62).

LITERATURE.—This is co-extensive with systems of Logic. Among recent writers, in addition to those quoted above, may be mentioned as specially important on the nature of inference: T. H. Green, *Lectures on Logic*, London, 1886 (*Works*, ii.); F. H. Bradley, *Principles of Logic*, do. 1883; L. T. Hobhouse, *Theory of Knowledge*, do. 1896; J. Dewey, *Studies in Logical Theory*, do. 1909; *EBr*[11], art. 'Logic'; and the several contributors to the *Encyclopædia of the Philosophical Sciences*, vol. i., Eng. tr., London, 1913. Among recent German writers, W. Schuppe, H. Lotze, W. Wundt, and C. Sigwart are most frequently referred to. There are numerous monographs and essays on species of inference specially connected with philosophy or with particular sciences.

J. BROUGH.

**INFINITY.**—The problem of infinity is one of considerable complication and difficulty; and all that it is possible to do in such an article as this is to give some account of the place of the conception in the development of human thought, to indicate some of its chief difficulties, and to suggest methods by which they may be met.

**1. The meaning of the term.**—There are two senses in which the term tends to be used, and it is very important to distinguish them. It may mean simply that which is *endless*, or it may mean that which is *complete* or *perfect*. One of the simplest illustrations of infinity in the former sense is to be found in the series of cardinal numbers. When we arrange the numbers in order—0, 1, 2, 3 . . .—it is evident that no point can ever be reached at which the series can be regarded as complete. However large the number may be that we have reached at any point, it is always possible to add one more. Hence this series is infinite, in the sense that it never reaches an end. On the other hand, the circumference of a circle may be said to be infinite, in the sense that it is complete. It seems clear that these two senses of the term are not identical, and are even in some respects opposed to one another. Yet they are apt to be confounded.

A simple mathematical instance may serve to bring out the reason for this. The series $1, \frac{3}{2}, \frac{7}{4}, \frac{15}{8}$ . . . is infinite in the former of the two senses. Each member of the series is of the form $\frac{2n-1}{n}$, and the value of $n$ is doubled at each successive step. Here, again, however large $n$ may be made, it is always possible to double it. But, in this case, when $n$ is made very large, the value of $\frac{2n-1}{n}$ is very little different from that of $\frac{2n}{n}$. Hence it may be said that 2 is the ultimate value to which the series is approximating. This is sometimes expressed in the form that, when $n$ becomes infinite, the value is 2. Here the series is represented as becoming completed when it reaches infinity. The endless series is thus regarded as reaching an end, in which it is completed. A more concrete illustration of this is found in one of the puzzles that were put forward by Zeno with regard to motion—

If a body moves from the point A to the point B, it is evident that it must first traverse half the distance, AC, and that in order to do this it must first traverse the half of that, AD; and so on, indefinitely. Hence it may be said that, in the motion from A to B, an infinite series is completed. In such instances the two notions of endlessness and completion, which appear to be opposed to one another, are somehow brought together.

Another illustration, from the sphere of religion, may now be given. God has sometimes been represented as infinite, in the sense of having no assignable end as regards duration of existence in time or possibility of action. He has been said to be Eternal and Omnipotent. These attributes may be interpreted as meaning simply endlessness with respect to two characteristics. They may be taken to imply that, however far we may go back in His history, there is something prior to the point that we have reached; and, however far we might go forward, there would be something to come after; and, again, that, however great may be the action that is performed by Him, there is something greater that He might do. Here we have simply the conception of endlessness. But God has also been represented as infinitely wise and infinitely good; and it is clear, on the face of it, that these are qualitative conceptions. They do not mean endlessly wise and good, but completely or perfectly wise and good. We can hardly suppose, in these cases, that what is meant is that, however wise or good God may be at any particular point, He has always the possibility of being still wiser or better. The meaning would seem to be rather that at every point His wisdom and goodness are complete or perfect. But, as perfection with regard to duration and action tends to be thought of as implying endlessness, perfection with regard to wisdom and goodness is apt to be vaguely conceived in a similar way.

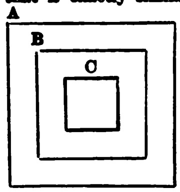
How far the term 'infinite' is rightly applied to any form of perfection is a question for further consideration. In the meantime it may suffice to note that the conception of endlessness appears to be applicable only to things that consist of numerable parts. If there are any things that do not

consist of numerable parts, they cannot be said to be either finite or infinite, in the purely quantitative sense of the word. This appears to be true of goodness, wisdom, beauty, colour; and, in general, of all things that are essentially qualitative rather than quantitative. But it is common to apply the term 'infinite' to such things when they have a high degree of perfection—as in such phrases as 'infinite penetration,' 'infinitely pure,' and the like. As the term means primarily 'endless,' it may be best to use it only in this sense; but, as the two meanings are not always easy to disentangle, the more qualitative sense of the term must also be taken into account.

2. **History of the conception.**—At a very early period in Greek speculation we find traces of the conception that the universe is to be regarded as formed from a material that is in some sense boundless. Anaximander, in particular, took this as his starting-point, and thought of the different forms of existence as having been 'separated out' from a vague and chaotic mass to which no definite bounds could be assigned. What we have here is perhaps rather the conception of the indefinite than that of the infinite; but the transition is easy from the one to the other, and we seem to see it being made most clearly in the development of the Pythagorean school. It would appear that the fundamental view of the early Pythagoreans was that a boundless material, described as τὸ ἄπειρον, received definite form through the imposition of limits. This may be regarded as the earliest form of the doctrine that 'determination is negation.' Against this may be set the Eleatic doctrine, which involves the denial of negativity. According to the view of Parmenides, reality is to be thought of as always definite, and not boundless. It is compared to a well-rounded sphere. Here we may perhaps recognize the first statement of the conception of a perfect whole, as opposed to that of a chaotic mass. Melissus, however, appears to have urged that this perfect whole should be conceived as infinitely extended both in time and in space, thus bringing together the two conceptions of the complete and the endless. But it was apparently Zeno who first realized the difficulties involved in the conception of the infinite. Reference has already been made to the way in which he brought out the difficulty involved in the recognition that the space through which a body moves may be regarded as capable of indefinite subdivision. His familiar paradoxes—that 'the flying arrow rests,' and that 'Achilles could never overtake a tortoise'—were evidently intended to emphasize the same difficulty. The service which Zeno rendered to exact thought by the statement of such difficulties can hardly be exaggerated. The Atomists, however, whose views were developed from reflexion on the points brought out by the Eleatics, do not seem to have taken much account of the problems of Zeno when they postulated an infinite space and, apparently, an infinite number of atoms moving in the void, though, no doubt, they gained something by avoiding the conception of the infinitely little. In the later developments of Greek thought, especially under the influence of Socrates and his school, the conception of endlessness becomes relatively unimportant; and its place may be said to be taken by the thought of perfection. This change is perhaps partly due to Parmenides, but appears to be more directly traceable to the speculations of Anaxagoras. The view that Mind is to be taken as the principle of order was readily interpreted as implying that determination is not merely negation or limitation, but is due rather to the effort after perfection. The 'Form of Good' thus comes to be the central conception, as it is especially with Plato; and the material tends to be thought of only as something by which the working out of the Good is in some way limited. This may almost be said to involve the inversion of Pythagoreanism—an inversion which comes out most definitely in the philosophy of Aristotle. The Form has now become the positive aspect, and the Matter is the negative by which it is limited; and that which is thus limited is no longer the boundless, but the perfect.

This brief sketch must suffice as an account of the way in which the conceptions of endlessness and perfection first came into prominence in European speculation. The most definite attempt to combine the two conceptions is found in the doctrines of the Cartesian school. The most fundamental doctrine of the Cartesians is that the absolutely perfect must be thought of as existing. The grounds on which this is maintained cannot be considered here. It is enough to say that the absolutely perfect is regarded as the standard by reference to which all other things are determined. But this standard tends to be thought of as boundless. Space is conceived as an infinite whole, and all other realities are thought of on the analogy of space. This is most definitely the case in the philosophy of Spinoza, in which the fundamental conceptions of the Cartesians are most logically developed. Thus the perfect comes to be identified with the boundless, and everything determinate is regarded as involving negation. Leibniz corrected this tendency by treating space as a confused mode of thought, and by definitely re-introducing the Platonic conception of the Good. On the other hand, he sought to give a positive significance to the conception of the infinitely little, and thus revived those problems which had, on the whole, lain in abeyance since the time of Zeno.

The difficulties involved in the conceptions of the infinitely great and the infinitely little were strikingly set forth by Kant in his first two antinomies. The main point there urged is that the conceptions of infinite extent and infinite division involve the recognition of a completed endlessness, which is self-contradictory. Reflexion on this led Hegel[1] to regard the simply endless (*schlecht unendlich*)[2] as an incorrect conception to take as the opposite of the finite. The positively infinite, according to him, means that which is complete; but he urged further that the complete should not be simply opposed to the incomplete, but should rather be regarded as including it. The perfect whole necessarily includes parts which, regarded in abstraction from the whole, are imperfect. It is in this way that his conception of perfection differs from those of Plato and Leibniz. Thus conceived, however, the perfect is not, it would seem, to be regarded as boundless.



More recently the conception of infinity has been largely dealt with from the more purely mathematical side. It is impossible here to enter into any full consideration of the work that has been done in this direction. The most important result would seem to lie in bringing out the fact that the conception of infinity, as employed in mathematics, is not that of simple endlessness, but rather that of a definite kind of endlessness, due to the formal working out of some system of relations. The infinite thus comes to be sharply distinguished from the indefinite. Every infinity that has mathematical significance is a definite infinity; and there

[1] Hegel's distinction was partly anticipated by Spinoza and, more definitely, by Leibniz.

[2] Sometimes, not quite happily, translated 'bad infinite.' *Schlecht*, as Hutchison Stirling pointed out (*Secret of Hegel*, new ed., Edinburgh, 1898, p. 553), has here its original meaning of 'simply'—as it still has in *schlechthin*. Stirling translates it 'downright.' But Hegel seems to have been punning. He intended the term to convey the implication of 'bad' or 'vicious' as well. He calls it also 'negative.'

are as many different infinities as there are systems of relations that can be worked out without limit.

A simple case of this is found in the conception of a part that is exactly similar to the whole of which it is a part.

Thus, if the small square B is exactly similar to the large square A, its similarity implies that it also will have a part C which is exactly similar to itself and to A. C also must have a similar part, and so on without end. The endlessness arises here from the constant repetition of the same relation of similarity; and the constant repetition is necessitated by the statement of the first relation. This particular case has a special interest from the way in which it has been applied by Royce to the relation between the universe and its parts.

3. **Critical summary.**—We may now consider more definitely the exact significance which the conception of infinity has for us at the present time. In doing so, we may set aside the conception of perfection and also the conception of simple endlessness, and concentrate our attention on the definite conception of an endlessness that is involved in the working out of a system of relations.

It seems clear that certain systems of relations do lead us into an infinite series. The instance already referred to is evidently such a case, and it seems to have a large range of possible applications —*e.g.*, to the parts into which the path of a moving body may be subdivided, and the like. It is important, therefore, that we should consider the exact significance of this conception.

There are three main ways in which it may be regarded. It may be contended (1) that such mathematical determinations are essentially subjective, and need not be supposed to have any objective validity; (2) that they express definite characteristics of existing things; or (3) that they are hypotheses having a certain objective significance, but not necessarily having any direct application to particular existences. To discuss these views thoroughly would involve a metaphysical investigation of the meaning of reality, and of the place of mathematical determinations in it. It must suffice to say here that the first view at least appears to be erroneous. It connects with such theories as those of Berkeley and Hume and the modern pragmatists; and it falls to the ground along with the general doctrines of subjective idealism. The arguments of Frege and others have probably convinced most people that mathematical determinations cannot be regarded as purely subjective. Hence we are left to choose between the other two views. The former of them appears to err by overlooking the distinction between the possible or hypothetical and the actual or existent, or, in other words, between what is formally valid and what applies to particular concrete objects. Any hypothesis, or (in Meinong's language) 'Annahme,' is no doubt, in a certain sense, objective. It is a real meaning, and is subject to the conditions that are involved in that meaning. The thought of a centaur, for instance, is subject to the determinations that are implied in a definite union of certain characteristics of horse and man. Nevertheless, so far as we know, centaurs do not exist and never have existed; or, if a mathematical mode of expression is preferred, we may say that the number of existing centaurs is zero. Similarly, it may be asked, with reference to any other hypothetical determination, how far it can be applied to any existing things. In some cases undoubtedly a direct application can be made, whereas in other cases this is not legitimate. For instance, any number is capable of subdivision; and there are some numerable things to which such subdivision is immediately applicable. A flock of 100 sheep, for instance, can readily be divided into two halves; and each half can again be subdivided into two. But the flocks thus formed could not again be cut into two equal portions without destroying some of the sheep. Yet the conception of such a subdivision has a real meaning; and, though it is not directly applicable to the sheep, it may be applicable to some special aspect of them (*e.g.*, their price). Similarly, the conception of an endless number has a real mathematical significance; but the question remains to what particular objects, if any, that conception is directly applicable.

Some illustrations may serve to make this clear. Take the case, previously referred to, of an object that contains a part exactly similar to itself. It is clear that in this case we are led to the conception of an endless series. The meaning of this is quite definite and objective. But the question remains whether we can point to any existing object that contains a part exactly similar to itself. It has been suggested that such an object would be provided if within any country a perfectly accurate map of that country were constructed, showing every detail. For such a map, being perfectly accurate, would contain, among other things, a representation of itself; and the map of the map would, of course, contain another similar map within it, and so on without end. But this is manifestly an unreal illustration. A picture always represents something other than itself. Further, no materials could be provided by which such a detailed map could be constructed. At the same time, the conception is, no doubt, objective, in the sense that it conveys an intelligible meaning. Again, it has been said that, if it is true to hold that when I know anything I know that I know it, then it must also be true that I know that I know that I know it, and so on *ad infinitum*. This is a better illustration; for, in this case, there is no definite limit that can be set to this knowledge of knowledge. The knowledge is actual, however, only in so far as we produce it by reflexion; and, as a matter of fact, we should soon tire of this reflective process. Another illustration that has been given is that of two mirrors facing one another. Each mirror contains a reflexion of the other, and in this reflexion there is an image of itself, and so on without end. But this also is unreal. The conditions of the reflexion of light would not allow the process to go on beyond a certain point. Another ingenious application of the conception of endlessness has been given by B. Russell in his statement of the problem which he has called 'the Tristram Shandy':[1] 'Tristram Shandy, as we know, took two years to write the first two days of his life, and lamented that, at this rate, material would accumulate faster than he could deal with it, so that he could never come to an end. Now, I maintain that, if he had lived for ever, and not wearied of his task, then, even if his life had continued as eventfully as it began, no part of his biography would have remained unwritten.' This seems to be a clear case of a *reductio ad absurdum* of the attempt to apply the mathematical conception of infinity directly to a concrete problem. For, however convincing the mathematical reasoning may be, it is surely obvious that the conclusion must be wrong. The longer Tristram Shandy lived, the more would he be behindhand with his biography. It would, indeed, be difficult to find a clearer instance to show that the mathematical conception of infinity has only a formal validity, and that its applicability to any concrete case must be tested by other considerations. Every existing thing excludes certain abstract possibilities. This is at least one of the senses in which we may interpret the saying that 'determination is negation.'

With this general view in mind, we may now consider briefly some of the chief cases to which the conception of endlessness has been thought to be applicable.

4. **Infinite extension.**—The conception of infinite extension is commonly thought to be applicable to things in space[2] and to events in time, and also to the series of conditions (whether temporal or not) upon which existing things are dependent. It might be supposed to be applicable also to series of degrees and qualities (*e.g.*, degrees of heat or shades of colour). From a formal point of view, it is evident that there is no reason for stopping short anywhere in such relations as that of before and after, side by side, greater and less in degree, more and less of particular qualities, or causal antecedent and consequent. However far we may proceed in the application of these relations, it appears to be always possible to think of a further extension; and it seems quite arbitrary to stop at any particular point. It does not follow, however, that there is an endless number of existent cases that can be determined by these formal relations.

[1] *Principles of Mathematics*, London, 1903, p. 358.

[2] Jonathan Edwards has an ingenious argument against the application of infinity to spatial objects. But it does not appear to be convincing. See *Works*, London, 1840, vol. i. p. ccxii.

In the case of the alphabet, B comes after A and before C, but there is no letter prior to A. Here the limitation is arbitrary; *i.e.*, it is dependent on a human convention. On the other hand, grey is darker than white and lighter than black, but there is nothing darker than black or lighter than white. The fact that this particular scale of qualities has two ends is not arbitrary, like the similar limitation of the alphabet; but the limitation seems to be quite as definite. Similarly, red and blue appear to present themselves as end-points in a scale of colour-qualities. May it not, in like manner, be the case that there is some occurrence that has nothing before it, that there is some star that has nothing due west of it, that there is some happening that has no determining antecedent, and so on in other instances? There are, no doubt, difficulties in conceiving any such end-points. The difficulty in the case of spatial extension was vividly stated by Lucretius.[1] He supposed himself to stand at an extreme end of the physical universe—say, at its extreme western verge—and to shoot an arrow outwards. What, he asks, is to prevent him from doing so? The answer seems clearly to be that there is nothing in the formal constitution of space to prevent him; but, on the other hand, it might be physically impossible for him to get to the extreme verge or to shoot his arrow outwards. Though there is nothing in the form of space to prevent him, there may be something in the general conditions of the Cosmos. A more serious difficulty was urged by Kant in the case of time. He contended that we could not suppose a first occurrence in time, because there could be no reason for it to happen at one point in time rather than at any other. It seems clear, however, that this is not a difficulty with regard to the temporal series as such, but rather with regard to the causal series. If causation is conceived, as Kant conceived it, as temporal sequence, the first member in the series of causes would be unexplained. If, however, the causal series is thought of in a different way—*e.g.*, teleologically—this difficulty would disappear. In a teleological series there may be a reason for beginning at one point rather than at another. What is necessary is only that something should be taken as self-explanatory or *causa sui*. It does not, of course, fall within our present scope to consider whether this is a legitimate hypothesis. It is enough to urge that it is a conceivable one. If this is granted, all the series to which reference has been made might be supposed to be finite, *i.e.*, not endlessly extended.

But, of course, this does not prove that they *are* finite. It may still be asked whether there is any real objection to the supposition that they may be endless. The chief objection appears to be the one that was urged by Kant with reference to the particular case of time—viz. that the supposition of an endless series which is actually completed seems to be self-contradictory. If we say that, however great anything may be, there is always something else that is greater, we seem to be in effect stating that there both is and is not something which is greatest. If there is a greatest—viz. the infinitely great—the series is not endless; if there is not a greatest, the series is incomplete. Similarly, if we say that every ground has another ground, we seem to be saying both that there is and that there is not an ultimate ground. But, it may be urged, does not the conception of a limited whole involve difficulties quite as great? Not, it would seem, if some real ground can be assigned for the limitation. In most cases of limitation, the limits seem arbitrary or imperfectly explained. Why, for instance, it may be asked, are there only three dimensions in space as commonly conceived in the interpretation of the physical system? Why is there only a limited number of possible colour-experiences? Perhaps grounds could be given for such limitations. At any rate, there seems to be no reason for assuming that no ground could be given for the limitation of any particular series of concrete things. The conception of limits to existence in time is perhaps the most difficult. For some considerations bearing upon this, reference may be made to art. ETERNITY.

5. **Infinite division.**—The objections to endless division are even more apparent than those to endless extension. It involves the same difficulty of the completion of an endless series; but it has a further difficulty with respect to the limiting conception that is involved in it. When we think of anything as being divided without end, the ultimate parts have to be conceived as infinitely little. Now the infinitely little seems to be indistinguishable from zero; and zero seems to be indistinguishable from the non-existent. On the other hand, the grounds that lead us to postulate endless division are in some respects more cogent than those that lead us to the conception of infinite extension. We start in this case with a completed whole, so that at least its completion cannot be questioned; and yet there seems to be no reason for stopping at any point in its subdivision. Hence Kant urged that, in the case of division, the series must be supposed to be actually infinite, and not merely indefinitely extensible. But it is to be observed that Kant's argument depends upon the homogeneity of the whole that is to be divided. And this is where the weakness of the argument lies. If we assume that a given whole is homogeneous throughout, we are assuming that it is divisible throughout. The real question is whether any given whole *is* homogeneous. Now, this at least is clear, that we are not entitled to make any such assumption in the case of degrees and qualities. An intense heat does not appear to be made up of a number of smaller heats; nor does it seem legitimate to say that the distinction between any intensity and the next intensity below it is the same as the distinction between any other intensity and the next below it. Nor are we entitled to say that the distinction between blue and green is the same as that between green and yellow. Hence in such cases we do not seem to have any ground for the postulation of an infinite series of homogeneous units within a given whole. Moreover, if we confine ourselves to recognizable distinctions in degrees and qualities, it seems certain that the number is finite. Similarly, modern physical science tends more and more to throw doubt on the view that physical bodies can be indefinitely divided into homogeneous parts. Rather it seems at least probable that physical bodies consist of parts which cannot themselves be described as physical bodies. If so, the argument from homogeneity is not cogent. There may be parts that are not capable of further subdivision. Similarly, it may be doubted whether any such conception is applicable to conscious states. An experience of pleasure, for instance, does not appear to be capable of subdivision into a number of homogeneous parts.

The strongest case is probably that of motion, to which reference has already been made. When any body moves from one point to another, it is certainly natural to think of it as passing through an indefinite number of intervening positions; and it is here that we come upon the paradoxes of Zeno. With regard to Achilles and the tortoise, however, it seems clear that the motion does not

[1] *de Rerum Natura*, i. 968–973.

consist of homogeneous parts. Both of these moving bodies would presumably advance step by step. This suggests the question whether it may not be the case that all motion is discontinuous. If so, we, of course, come upon one of the other paradoxes of Zeno, viz. that 'the flying arrow rests.' If the flight of the arrow is discontinuous, this may be interpreted as meaning that it *is* successively at the points A, B, C, etc., but is never moving between them. But is this a serious objection? If it occupies these points successively, it *does* move from one to another. Its motion would not be made any the less real by the fact that it did not occupy any intervening positions. The fact that there is no cardinal number between two and three does not make the transition from two to three any the less real. Considerations of this kind may serve to show that there is no real reason for denying that the number of parts in the subdivision of any concrete thing may be finite.

6. **Infinite attributes.**—The conception of infinity—especially in the Cartesian school, where it was most freely applied—has been specially used as a determination of the idea of God. In this use it is generally regarded as being applicable to certain attributes, of which the chief are knowledge, power, and goodness. Temporal and spatial infinity have also been frequently ascribed to God; but with these it is not necessary to deal further. The other three forms of infinity call for some notice. As regards the first, it may be observed that, if infinite is interpreted as meaning boundless, infinite knowledge would seem to mean the knowledge of an endless number of things. Now, there is evidently a sense in which any one who has a clear apprehension of number at all does know an infinite number. A competent mathematician may be said to know all conceivable numbers, since the formation of numbers depends upon a single principle; and, if it be allowed that an infinite number is conceivable, the mathematician knows that. But he does not know all the relations that might be ascertained as holding between different numbers. Infinite knowledge would presumably include this. It would also include a full apprehension of the temporal, spatial, causal, intensive, and qualitative orders, and of all the different kinds of existences, and of all the relations that could be ascertained as holding within or between these various types; and this kind of knowledge might be held to be boundless. As regards particular existences, the knowledge of these would not be boundless, unless the things to be known are boundless—which is at least doubtful; but it would include the apprehension of every particular thing that actually does exist. In this respect it would be all-inclusive, but not endless.

Infinite power is more difficult to interpret when infinity is understood in the sense of endlessness. Some writers have interpreted it in a way that seems to lead to absurdity. J. M. E. McTaggart,[1] for instance, takes it as meaning the possibility of bringing about anything, however self-contradictory it may be—of making black white, good evil, the existent non-existent, the infinite finite, $2+2=5$ or 100, and so forth. This, however, seems meaningless. A being infinitely powerful in this sense might evidently also be lacking in all power. Such a being would be, in the fullest sense, unconditioned or indeterminate. We might, however, interpret infinite power as meaning the possibility of accomplishing whatever is chosen. It would then be limited by the condition that what is chosen is not evil or absurd—*i.e.*, it would be taken in conjunction with the conceptions of infinite goodness and knowledge. Infinite power, thus interpreted, would be boundless, if there is an endless number of things to be chosen.

Infinite goodness, again, interpreted as boundless, would seem to mean the choice of what is best in every case. If the number of cases is endless, the choices would be endless. In dealing with goodness, however, it is certainly better to regard the attribute as essentially qualitative. The attitude of always choosing the best seems to be in itself a simple determination of will or character. It does not really consist of a number of distinct things. The endlessness lies only in the number of cases to which the one principle of choice may be applied. Hence it seems better to speak of *perfect* goodness than of *endless* goodness.

And this suggests the question whether the same is not really true of the other attributes as well. If infinite power means the possibility of bringing about what is chosen as best, this also does not seem necessarily to involve in itself anything that is endless, though there may be an endless number of things in which the potentiality is displayed. Similarly, infinite knowledge might be interpreted as meaning complete insight into the conditions on which anything is to be known. A thoroughly skilled mathematician might in this sense have infinite knowledge within his own domain, and yet not have an endless number of facts present to his mind. It may be urged, therefore, that it is better to apply the conception of perfection, rather than that of endlessness, in the interpretation of all these attributes.

It is perhaps partly the difficulty in the application of the conception of endlessness that has led some writers to postulate the existence of a 'finite God.'[1] If an infinite God exists, it seems clear that such a being must be thought of as complete; yet it is difficult—if not self-contradictory—to think of anything that is endless as being complete. It is, however, mainly from the point of view of perfection that the conception of a finite God has been brought forward. It is urged that what we know about the imperfections of the world forces us to believe that, if there is a God at all, He is either not perfect in goodness or not perfect in knowledge or in power. But the consideration of this question lies beyond the scope of the present article.

7. **The infinity of the Cosmos.**—It is evident that, in a certain sense, the Cosmos includes the endless; for it includes number, and number is endless. This does not necessarily imply, however, that the Cosmos contains an endless number of existences. This distinction has been partly brought out in the present article; but to explain it fully would require a careful consideration of the distinction between existence and reality. It must suffice to say here that existence seems to present itself as a selection from a larger realm of possibility. If we mean by existence that which occurs in the time order, within which our own conscious experience falls, it seems clear that some things—*e.g.*, perfect knowledge, goodness, and power—may be real, though they do not in that sense exist. Again, there is a sense in which anything that is conceivable may be said to be real. If it is conceivable, it is *really* conceivable; and the conditions of such conceivability would seem to be contained within the structure of the Cosmos.[2] In this sense it may be said that endlessness—inasmuch as it has a real meaning—is contained in the Cosmos. But it does not appear to be correct to say that the Cosmos itself is endless. Rather it

[1] *Some Dogmas of Religion*, London, 1906, ch. vi.

[1] One of the best statements of this view is to be found in H. Rashdall's *Theory of Good and Evil*, Oxford, 1907, ii. 237-244; cf. also McTaggart, *Some Dogmas of Religion*, ch. vii., and J. Ward, *The Realm of Ends*, Cambridge, 1911, especially p. 443 f.

[2] Reference may be made to an article on 'The Meaning of Reality,' in *Mind*, Jan. 1914.

would seem that, if there can properly be said to be a Cosmos at all, it must be supposed to be a complete whole. But it may be infinite, in the sense that it is perfect and all-inclusive. Indeed, to say that it is a complete whole seems to imply that it is perfect and all-inclusive; but whether it is to be really so conceived, and, if so, how, is a problem that cannot be adequately dealt with in such an article as this. Nor is it possible to discuss here how far the conception of such a perfect Cosmos would agree with or differ from the conception of an infinite God referred to in the preceding section.

J. S. MACKENZIE.

**INFORMERS.**—One who has knowledge that a crime has been committed is morally, and frequently legally, bound to lodge information of such crime in order that justice may be done. This holds both in the strictly legal and in the religious sphere; indeed, in many strata of civilization there is no demarcation between the two. The duty is binding, moreover, not only upon the official classes, whether civil or religious, but upon every one who has cognizance of the crime. Morally speaking, he who conceals his knowledge of, *e.g.*, a murder, and thereby assists the murderer to escape detection (to give the least possible consequence of his dereliction), is *particeps criminis*. This principle is recognized in primitive codes, as when, among the Aztecs, one who had cognizance of treason and did not divulge his knowledge was enslaved (H. Post, *Grundriss der ethnolog. Jurisprudenz*, Oldenburg, 1894–95, ii. 314, 324, with further instances and lit.). At the same time, there may be limits to this obligation. Thus Chinese law forbids a kinsman or a slave to lodge information, and even punishes with death anonymous informers, if their identity is established, while the African Kru regard as a culprit one who divulges information concerning a crime in which he has no concern (Post, ii. 314 f.).

The important assistance rendered to justice by the informer receives recognition in the usage of giving him a substantial reward, generally from the fine which the convicted must pay, this reward being a ninth among the Kalmuks; and the same code also recognizes the principle of 'king's evidence,' so that he who deserts a robber band and lodges information regarding them escapes punishment (Post, ii. 315 f.).

Such is the ideal theory of the informer, whose importance in aiding the ends of justice must be frankly recognized. Yet the informer is a hated creature, often despised by those who profit by what he tells. The code of Manu, for instance, places him in the same category as madmen and scoffers at the Veda; no Brāhman may eat food proffered by an informer; and the lodging of (false [?]) information is equivalent to the most heinous sin of killing a Brāhman (iii. 161, iv. 214, xi. 56). In Europe any private citizen who, with the most unexceptional of motives, seeks to secure evidence of the violation of the laws of the land, such laws, for example, as those governing the sale of liquor or those regulating houses of ill-fame, may, indeed, further the ends of justice, but will too often be exposed both to the more or less concealed contempt of the official service and almost certainly to the contumely of the public, even of the more enlightened and thoughtful of its members.

This attitude, too, has its justification. The informer may be the most honourable of men; but he may also be a thoroughly despicable creature, serving not for the promotion of the welfare of society, but for the mere money that he can make, or he may be influenced by personal hatred. This is why the informer is loathed, with the added factor that all peoples of even moderately advanced ethical development have a predilection for fair play and for open fight, if fight must needs be.

To summarize the ethical aspect of the informer, we may say that in many cases he undoubtedly advances the cause of law and justice where without his aid crime could be perpetrated and flourish. That by his means many an instance of unjust punishment has been inflicted does not in the least militate against the use of his services; it merely signifies that his motives and evidence need to be tested with more rigidity than in the case of official guardians of the law. Indeed, he is a check upon these guardians, who may err on the side of leniency (and not always from disinterested motives), just as he may be guided by undue severity (and sometimes from motives at least equally interested). As regards the ethical position of the informer, each case is to be judged separately. If he is convinced that the offence concerning which he lodges information is indeed wrong and that it should be punished, his act is commendable and in the interests of society, even though he may have a sub-motive of personal hate (perhaps in consequence of injury which he has suffered either from the system of crime as a whole or from the person or persons involved in the particular offence). If, however, his motive is merely to gratify personal resentment or to secure the pecuniary or other reward offered, then, while his act may be to the welfare of the social organism, he himself is ethically to be condemned.

The informer does not seem to have become a real problem until the days of the late Republic and early Empire of Rome. By the former period he must have become a peril, for Cicero urges (*de Offic.* ii. 14) that his statements must be received only for cogent reasons and in infrequent cases, and then with caution. Yet under the worst of the emperors the evil side of the *delator* waxed luxuriant. Tiberius 'decreed special rewards to accusers, and sometimes to witnesses; credence was refused to no informer' (Suetonius, *Tib.* lxi.); and probably the rhetoric of Pliny the Younger was not very far beyond the mark when he said (*Panegyr.* xxxiv.):

> 'Vidimus delatorum agmen inductum, quasi grassatorum, quasi latronum. Non solitudinem illi, non iter, sed templum, sed forum insederant. Nulla iam testamenta secura, nullus status certus: non orbitas, non liberi proderant. Auxerat hoc malum principum avaritia.'

While the system of *delatio* flourished in all its worst forms, repeated efforts were made to curb it. Nero reduced to a fourth the rewards offered by the Lex Papia (Suetonius, *Nero*, x.), and in his reign was passed the Senatusconsultum Turpillianum, by which assistance of informers by procuring evidence or supporting unjust charges was penalized (Digest, XLVIII. xvi.; Cod. Justin. X. xi.). Women, 'viri clarissimi,' veterans, etc., were absolutely forbidden to act as informers, while soldiers and guardians could do so only in special cases (Dig. XLIX. xiv. 18). But despite every effort, as S. Dill

remarks (*Roman Soc. from Nero to Marcus Aurelius*, London, 1904, p. 35 f.),

'the profession grew in reputation and emolument. It is a melancholy proof of the degradation of that society that the delator could be proud of his craft and even envied and admired. Men of every degree, freedmen, schoolmasters, petty traders, descendants of houses as old as the Republic, men from the rank of the shoemaker Vatinius to a Scaurus, a Cato, or a Regulus, flocked to a trade which might earn a fabulous fortune and the favour of the prince. There must have been many a career like that of Palfurius Sura, who had fought in the arena in the reign of Nero, who had been disgraced and stripped of his consular rank under Vespasian, who then turned Stoic and preached the gospel of popular government, and, in the reign of Domitian, crowned his career by becoming a delator, and attempting to found a juristic theory of absolute monarchy.'

After scourging delators, Titus either sold or exiled them (Suetonius, *Tit.* viii.); every possible impediment was placed in their way (Dig. XLVIII. ii. 7. 1; Cod. Justin. IX. i. 3, ii. 17, iii. 2); in 319 Constantine imposed the death penalty on any delation (Cod. Theodos. X. x. 2); and in 365 Valentinian and Valens forbade anonymous delations (Cod. Justin. IX. xxxvi.); but all these measures proved ineffectual.

Yet in all these enactments attention was evidently directed to the suppression of the abuses of the system rather than to the abrogation of the system itself. It is true that Trajan banished the delators (*Panegyr.* xxxiv.-xxxvi.); but, at least in the provinces, they were not merely tolerated, but their evidence was received. This is admirably attested by Pliny's famous letter (xcvii.) regarding Christians and the Emperor's reply.

Certain individuals were denounced (*deferebantur*) to Pliny as Christians, and he tried each case strictly upon its merits. To this course the Emperor replies approvingly, directing that 'they [the Christians] are not to be sought out; if they are denounced and convicted, they must be punished' ('conquirendi non sunt: si deferantur et arguantur, puniendi sunt').

The early Christians must frequently have suffered from the zeal of informers, whether honest or not (doubtless both types were to be found). It was not, however, until the early 3rd cent. that the Councils of the Church took official cognizance of them. The 73rd canon of the Synod of Elvira (305 or 306)—a canon incorporated in the Canon Law (C. 6, causa v. qu. 6)—enacts that

'Delator si quis extiterit fidelis, et per delationem eius aliquis fuerit proscriptus vel interfectus, placuit eum nec in finem accipere communionem: si levior causa fuerit, intra quinquennium accipere poterit communionem; si catechumenus fuerit, post quinquennii tempora admittetur ad baptismum.' The 13th canon of the Synod of Arles (314) requires the degradation of all ecclesiastics who had delivered over (*tradidisse*) sacred vessels, copies of the Scriptures, or 'names of the brethren.' 'But this penalty was only to be inflicted in case the offence of *traditio* was proved, not merely by private denunciations (*verbis nudis*), but by the public laws, by writings signed by officers of justice (*ex actis publicis*), which the Roman officers had to draw up in executing the Emperor's edict' (C. J. Hefele, *Hist. of the Christian Councils*, Eng. tr., i.[2] [Edinburgh, 1894] 192). The ordinations previously performed by bishops who had turned delators were, however, valid. The following canon of the same Synod excommunicates until they die ('usque ad exitum') those 'who falsely accuse their brethren' (cf. Hefele, i.[2] 191 f.).

If, however, the Church condemned those who delated against her, she encouraged those who informed for her, and even bade them do so. In her efforts to suppress all manner of heresy in the Middle Ages, the informer was called into service. To further the extirpation of the Cathari, penitents were obliged to denounce all whom they knew or suspected to be heretics of that type, and delation was regarded as necessary proof of conversion.

'How useful this was is seen in the case of Saurine Rigaud, whose confession is recorded at Toulouse in 1254, where it is followed by a list of one hundred and sixty-nine persons incriminated by her, their names being carefully tabulated with their places of residence for immediate action. . . . Delation was so indispensable to the Inquisition that it was to be secured by rewards as well as by punishments. Bernard Gui tells us that those who voluntarily come forward and prove their zeal by confession and by betraying all their associates are not only to be pardoned, but their livelihood must be secured at the hands of princes and prelates; while betraying a single "perfected" heretic insured immunity and perhaps additional reward. . . . It became, in fact, a settled principle of law that either husband or wife knowing the other to be a heretic and not giving information within a twelvemonth was held to be a consenting party without further evidence, and was punishable as a heretic' (H. C. Lea, *Hist. of the Inquisition of the Middle Ages*, London, 1906-11, i. 409, 432).

Where it was possible to take vengeance on the informer, he was not spared. This is clearly exemplified by the history of delation among the mediæval Jews. Under Arab dominion, information was rife in Jewry, as when, about 1089, Khalfa ibn al-A'jāb and his son Ḥayyīm drove Isaac al-Fāsī from N. Africa to Spain; and after the expulsion of the Moors from Spain, the informer continued to harass the Jews under Christian rule, as was the case throughout Europe generally. No new principles appear, but the penalty of death was not merely pronounced upon the delator, but was actually carried into effect, often with the consent of the King, notably in the cases of Joseph Pichon, royal farmer of taxes, beheaded at Seville, 21st Aug. 1379, and of a notorious delator executed by royal authority at Barcelona about 1280. So heinous was the offence of an informer deemed that he might be seized and condemned to death forthwith, and the penalty might even be imposed in his absence. In Germany the tribulations brought upon the Jews by the informer (מסר, 'traditor,' דילטור, 'delator,' מלשן, 'slanderer') were especially severe, as in the expulsions from Augsburg, Nüremberg, and Regensburg; and in Poland, where, with government sanction, an informer's tongue or ears might be cut off, the death penalty is said to have been inflicted as late as the close of the 18th century.

'As a survival of that gloomy phenomenon of mediæval history, there had long existed in the Ritual of Congregations a prayer, which was repeated on Mondays and Thursdays and at other times, against this social evil, and which in various lands was extant in manuscript for the use of the readers of congregations. Excommunication and execution had thus yielded to prayer and imprecation' (D. Kaufmann, *JQR* viii. 228).

LOUIS H. GRAY.

# INHERITANCE.

INHERITANCE (Primitive and Savage).—I. **Primitive property and the conception of inheritance.**—Among primitive races, both religious beliefs and social organization are such as to hinder rather than favour the origin and growth of the conception of the transfer of estate, by regular succession, to a representative of a former possessor. This is especially the case with material property. In-

dividual possessions are confined to a few weapons, implements, ornaments, and utensils. At death these are buried with the owner or destroyed by breaking or burning, either that they may serve for his use in the future life, or because of the pollution of death which has made them useless to the living. The hut is pulled down or allowed to decay.

Even when the principle of inheritance is recognized, this custom of destroying property is continued, and may seriously diminish the estate, although not unnaturally there is a tendency to limit the practice to articles of little value.

In Savage Island the heir receives only what remains of the material possessions of the deceased after the greater part has been destroyed in his honour.[1] The Nāgas of Manipur seriously reduce the value of the inheritance by placing a number of articles in the grave—usually those most closely associated with the deceased in his lifetime—though as a rule the custom is confined to articles of small value.[2] Death among the Bathonga is regarded as a great pollution, and is followed by elaborate purificatory ceremonies: part of the property of the deceased, such as rugs, clothes, mats, and old earthen pots, is placed in the grave; articles of value are purified and the hut is crushed.[3]

It is clear that the practice, whether based upon the idea of continued ownership after death or upon pollution, did not, in the earlier stages of development, allow for any rights of the heirs. Nor are the conditions of land tenure such as either to originate or to foster such rights. Among nomad hunters, even if their sense of possession is strong enough to lead them to guard their hunting grounds from trespass by their neighbours (which is not invariably the case), rights of individual ownership, which might be inherited, are, as a rule, not recognized; and the same applies to lands in the occupation of primitive pastoral tribes such as the Yakuts, while among agricultural peoples, where transmission of land to heirs is from the nature of the case of greater moment, it frequently happens that the conditions of tenure and the custom of periodical redistribution are such as to indicate a communal tenure, not entirely superseded, rather than an absolute individual ownership. The right to hunt or pasture over certain lands, however, although belonging to the individual in virtue of his membership of a certain group, is hereditary in a somewhat vague and undefined manner, inasmuch as it is in fact transmitted from father to son.

It is said of the tribes of the Lower Hunter River that the males inherited the hunting grounds of their fathers.[4] Probably it would be more correct to say that the rights were transmitted to them as members of the local group to which their fathers belonged. An initiation custom practised by the natives of Cape York in reference to territorial rights seems to stand midway between this form of transmission in virtue of group membership and inheritance in the stricter sense. Inheritance is through the mother, or a man's heirs are his uterine nephews, but the country over which the youth who is being initiated shall have the right of hunting and collecting roots and fruits is determined at one stage of the ceremony when one of his teeth is knocked out by repeated blows with a bone. At each blow the operator names the 'country' of his mother, his mother's father, or one of her relatives. The country named as the tooth falls out is the one over which he has rights.[5] He has been admitted to a group to which the country belongs; at the same time it is a group with which he has a hereditary and not merely a local connexion.

**2. Origin of inheritance.**—Although custom and religious belief operate in this way to prevent personal property from passing to those who might be regarded as the heirs of a deceased person, it is, nevertheless, probable that the practice of inheritance and the rules of succession first grew up in connexion with this rather than with land, rank, profession, or calling, and the like, which, though

at this early stage transmitted by other means, are inherited at a higher level of culture (see below, 3 (*d*)). This seems clear from the fact that inheritance of personal property is recognized while the tenure of land continues to be communal, or subject to rights originating in communal tenure; the chieftainship or headship of a group is wholly or partly elective; and a profession, such as that of the medicine-man, or an industrial calling is assumed by association rather than by relationship. Further, it arises out of the action of the living rather than the dead. Testamentary disposition appears at a comparatively late stage of development, and gifts *inter vivos* are frequently rendered void by death. It is the desire of the living to possess some specially valuable weapon or ornament which has overcome religious scruples, rather than the wish of the owner to benefit those who come after him.

Among the Arawak it is not uncommon for the hammock in which the body is laid in the grave to be withdrawn afterwards if it is new and good.[1] In New Guinea, among the Koita and Motu tribes, although the house of a dead man is allowed to decay, the floor beams, which are valued on account of their fine workmanship, are not allowed to suffer the same fate, but are regarded as the most important part of the inheritance.[2]

The familiar custom of substituting ceremonial objects or models for objects of utility or value, and avoiding the sacrifice of slaves and wives, which is found in its most highly developed form in the burials of ancient Egypt, is probably due to the wish of the heir to prevent too serious a reduction in his inheritance rather than to the desire of the owner to pass on his estate intact. It may also be noted that an important or a chief part in the rites accompanying the burial ceremony, which would afford the opportunity of withholding any of the personal property from destruction, is frequently entrusted to a near relative, who at a later stage is either the heir or takes a considerable share of the estate.

In Samoa only the sister or the sister's child had the privilege of sitting at the head of the grave and breaking the bottle of scented oil to pour over the uncovered face of the dead man,[3] while among the Bathonga the younger brother, who inherited the chief wife of the deceased, entered her kraal, of which he became the master, performed the 'rite of the twig,' and delivered the address to the ancestors.[4] If a Kikuyu son refuses to assist in digging his father's grave, he is disqualified from receiving a share in the estate.[5] The sons or grandsons chosen by the Baganda clan to perform the burial ceremonies each took a widow from the inheritance, and the sister's son received a woman for performing the ceremonies which brought the mourning to an end.[6]

**3. The inheritable estate.**—(*a*) *Personal property.*—Material things, such as weapons, implements, utensils, and ornaments, would be among the earliest kinds of articles to be regarded as falling by succession to a man's connexions at his death. In ordinary circumstances these are affected by no special rule, but follow the regular line of succession, although certain articles may be by custom assigned to a particular person or class of persons.[7]

The Tube-tube tribes of New Guinea distinguish two categories of personal property. Drums, lime-pots, lime-spatulæ, and canoes go to the sister's children, even if they are girls, but in this case for their children. If the sister has no children, this class of property would pass to the maternal uncle, but with a reversion at his death to a man's own brothers and sisters. Property of the second category, such as arm-shells and the like, and also pigs, was divided between a man's own children and those of his sister. Among the Waga-waga tribes, ornaments given to a wife by a husband are regarded at his death as the heritage of his *gariauna*, a man who performs certain ceremonies

at the grave, or his brothers.[1] Among the Bathonga, of the two assegais which are a part of a man's regular equipment, one, the larger, passes to the son, the other to the uterine nephew; the nephew has first choice, but by custom leaves the big assegai to the son.[2] A regular classification of inheritable property among the Kayans and Kenyaks of Borneo allots all or most of the domestic utensils to the widow; old beads, cloth, bead-boxes, and female slaves to the daughters; and war-coats, weapons, and canoes to the sons.[3]

(*b*) *Land*.—Inheritance of land is closely bound up with the system of land tenure. Individual ownership is a late development, and even among civilized races communal ownership still affects the terms upon which land is held. In the more primitive types of society—the hunting, pastoral, and early agricultural stages—it is the right of user and not the absolute ownership that is transmitted. Indeed, in the case of a nomadic community of hunters ranging over a wide tract of country, the term 'inheritance,' as has been stated above, is hardly applicable in the strict sense to the methods by which members of the tribe enter into or are admitted to the territorial rights of their group. They obtain and hold their rights primarily in virtue of birth in a group, and not in virtue of their relationship to an individual. The same applies in a less degree to the conception of land held among pastoral tribes, except that the group tends to be smaller or a subdivision of a larger group, such as the *sib*, or the family, among the Yakuts and the mediæval Basques. The land descends through the head of the family as a joint possession and not as the property of a single individual. The strong gentile organization of the tribes of the north-west coast of America points to group tenure as the origin of the custom whereby the hunting grounds of the Western Dénés and other tribes of that region are the hereditary property of the chiefs or the nobles.[4]

In an agricultural community, some degree of recognition of individual right of ownership with power of transmission to heirs is usual.

Uganda affords an instance to the contrary. All the land, with the exception of the clan burial-grounds, belongs to the king. The holdings cultivated by a man's wives are granted him by the chief or directly by the king, who gives estates to the nobles holding office in various districts of the country. These estates are not inherited, and, on the promotion of the official, pass to his successor without allowance for improvements.[5]

It is more usual, however, where all land is regarded as the property of the chief, for the custom to be modified by what is practically a grant in perpetuity from the chief, either with or without an annual payment, the land then being transmitted as hereditary property, but being inalienable by sale.

This form of tenure was found in ancient Mexico, where, among the Nahua races, the property of the nobles was held directly from the king by the individual, but the land of the common people was the property of the clan, and held from it as inalienable but inheritable property by the individual.[6]

In Nigeria, land was granted in perpetuity subject to an annual rental and occupation. Although the grantee had no power to alienate, at his death it did not revert to the chief, but descended to his heir, usually a son,[7] who held it on the same conditions as his father. Similar rules of tenure and succession are found among the Bathonga, with the exception that the grants are made by the chief in the first instance to the local headman by whom the lots are apportioned among the members of the village, without, however, affecting the right of transmission to heirs.[8]

The mode in which land may be inherited sometimes varies in the same community, the variation being based upon a distinction between group and individual ownership, with the result that the right to inherit is vested in two distinct classes of persons.

Among the Mafulu, each man has a house site in the village, which at his death ceases to be the property of his family and reverts to the village; it is, or may be, then allotted to another member of the group. In addition, he possesses garden land and bush land, which are his absolute property, but in the latter case subject to a right of the villagers to pass over it. This land descends to his sons, but is held in common by them and their heirs; it is never divided, so that the number of individuals holding a plot of such land in joint ownership in time may become very large. Any house built upon this site remains the property of the family.[1] In Melanesia an analogous distinction is maintained. There, however, the ancient garden lot (because, it may be assumed, it was originally cleared by the labour of a group of settlers organized on a kinship basis) descends to the members of the owner's kin, his sisters' children, but bush land cleared by the owner himself and made into a garden lot descends to his children and continues to be inherited in the direct line so long as the origin of the clearing is remembered.[2] In Fiji, though the bush land was held in common, and the tenure of arable land, descending according to a fixed law of inheritance, was little more than a grant of user from the chief, land in the Rewa province, consisting of tracts reclaimed from the delta of the river, was appropriated by individual families, and as such was subject to ordinary chattel law, alienable, and inheritable by the eldest son in the first instance, and not by the eldest brother.[3] An interesting point arises in connexion with the tenure of trees as apart from land tenure in Melanesia and the adjacent area. Property in the trees being distinct from property in the land on which they stood, they might, and, indeed, frequently did, descend to an entirely distinct class. Trees planted with the consent of the owner of the land were inherited by the planter's sons; and trees planted on his own land might be declared to be the property of his sons instead of the members of his kin.[4]

As the principle of individual tenure becomes more generally recognized, the custom regulating its transmission at a break in continuity of ownership caused by death tends to approximate more nearly to the rules of inheritance characteristic of a highly developed type of civilization, and to ignore claims outside the direct line. If any traces of the more ancient system remain, they may be sought in the rules for the disposal of the house and the house site, this being the part of the land in which the individual first makes good his claim to absolute ownership, and as such tending to preserve the original form of transmission.

In New Guinea the house site formed an important part of the inheritance, although the house itself was usually allowed to rot. It passed either to the son (Koita, Motu) or to the brother's sister or sister's son (Waga-waga, Tube-tube, Bartle Bay).[5]

(*c*) *Women as inheritable property*.—Many primitive peoples, especially in Africa, regard wives and daughters as an important part of the estate, to be transmitted in accordance with the regular rules of inheritance with the rest of the property. The explanation is to be sought partly in the economic value of women either as workers, or, in the case of daughters, as potential wealth in the shape of a bride-price; partly in the solidarity of group feeling which tends to regard everything over which the head of the group has authority as his absolute possession, and, as such, to be transferred to his successor; and partly in the necessity, where the independent status of women is not recognized, for every woman to be attached by some definite relation to a male protector. As a rule the heir married the widow, except when she was his own mother, and received the bride-price for the daughters on their marriage.

Among the Akikuyu the son, if adult, inherits his father's widows, but, as a rule, takes as his own wives only those in excess of three; as it is usual for a man not to marry more than three wives until his son has been received into the tribe, these widows would be of about the same age as the heir.[6] In Nigeria (Kagoro) the son takes any of the widows not taken by his paternal uncles.[7] According to the rule of the Wa-Sania, the wives become the property of the eldest brother of the deceased; but, if he already has three wives, or if the number inherited would give him more than three, the number allowed,

he hands them over to other men, while their children remain his property.[1] Among the Bahima, if the brother already has two wives, the eldest son takes charge of the widows, although they are looked upon as the property of his uncle.[2] The Araucanos assigned the widows to the eldest son, but in default of a son they were either given to the eldest brother or distributed among all the brothers in the order of their marriage.[3] Among the Arunta the wife passes to the younger brothers.[4]

(*d*) *Chieftainship, rank, status, etc.*—Although the tendency is for the chieftainship or headship of a group to be hereditary, this is by no means a matter of course, and among many primitive peoples other considerations are taken into account in choosing or accepting a leader of the group.

In the Australian tribes the office is elective; though the choice usually falls on a son of the previous headman, he must have distinguished himself as an orator or bard, and as a rule be skilled as a medicine-man and qualified to perform magic rites at initiation ceremonies.[5] Among the Salish of the upper waters of the Fraser River the office is elective, but among the tribes who live lower down the river social conditions become less democratic until the coast is reached, when the chieftainship becomes purely hereditary in the normal course.[6] The hereditary principle is so clearly recognized by the Halkōmélem tribes that the daughter of a headman transmits the chieftainship to her husband, though ineligible to hold it herself,[7] while the headship of the Roro-speaking and Mekeo groups of New Guinea is not only hereditary, including in the latter case the war chieftainship, but may be held by a daughter of a deceased headman.[8] On the other hand, personal prowess may be all-important, and may delay or prevent recognition of a regular line of descent. In most American tribes the office of *sachem* was hereditary in a family or clan, but elective within that group. When a war chief existed side by side with the *sachem*, the office was conferred in virtue of personal prowess, while among the Tlingits election was dependent upon wealth.[9] The war chieftainship of the Araucanos in the time of the Spanish wars was elective; now the chieftainship is hereditary in the families claiming to be descended from the founders of the local groups.[10] Both election and hereditary succession were found among the ancient inhabitants of Central and South America. In the royal line of Peru, in Ecuador, and in Colombia, hereditary succession was the rule.[11] The Nahua monarchy at Tescuco and Tlacopan was hereditary and lineal, while in Mexico it was collateral and elective, the election falling upon the king's brother. Among the Jakun of the Malay Peninsula, the eldest son of the deceased headman is presented for election, while among another group of jungle tribes of the Peninsula, the Sakai, the office is hereditary.[12] In Cumana, on the other hand, it is the youngest son of the head wife who inherits the chieftainship.[13] In Borneo, among the Kayans, the office of chief is elective, with a bias in favour of the son, who, if not of mature age, is held to have a strong claim to election after the death of his father's successor; but among the Kenyahs, where the chief has greater authority, the heir (a son or a nephew) is recognised during the lifetime of his father, and given a certain amount of authority as a preparation for the duties he will have to perform later.[14] In Uganda the chieftainships of the various districts were not hereditary, but in the disposal of the king. As a rule the son of the deceased chief, especially if he was killed in battle, was appointed, as being by upbringing and training most fitted to hold the position. The principle of office being subject to appointment but hereditary in a limited group also appeared in Uganda in the appointments to the great offices of State, which by custom were frequently assigned to members of the clan of the previous holder, and even in the royal succession; the three great officers of State chose as the successor to the throne the prince whom they considered the most suitable, without necessarily paying regard to the nomination customarily made by the previous king at the time of his death.[15] The lucrative village offices of the Nāgas, which are the most valuable part of an estate, are hereditary in the male line,[1] but among the neighbouring Lushei Kuki tribes both elective and hereditary offices exist, sometimes side by side in the same village.[2] The great offices and the accompanying grants of land of the Mayas and peoples of ancient Mexico and Central America either were hereditary or, when in the gift of the monarch, tended to become hereditary, while the nobles about the person of the king formed a hereditary caste.[3] Hereditary castes or classes are found in many parts of the world, the most noteworthy examples perhaps being in British Columbia, where hereditary social distinctions are most strictly observed.[4] In Samoa the office of councillor was hereditary in certain families, descending to the next eldest brother.[5]

The position of medicine-man of a group or tribe, although, like the chieftainship—an office with which in the early stages it is usually combined—not originally hereditary, but the result of a real or supposed mental or physical peculiarity, becomes in the course of development an office which is transmitted in accordance with a rule of inheritance. This may be due partly to the influence of association.

In New Britain, on the death of the chief, who is regarded as a powerful sorcerer, his brother frequently assumes the position on the strength of a declaration that his brother's powers have passed to him—a declaration in full accordance with the Melanesian conception of *mana*, and its power of affecting persons or objects with which it comes into contact.[6]

On the other hand, those who are closely associated with the medicine-man by ties of kinship may be held not only to be infected with his powers, but to have special opportunities of acquiring a knowledge of magical rites and incantations—an idea which would be fostered by a not unnatural desire to keep a position of power and profit for children and relatives.

Not only is the Baloki medicine-man succeeded by his son, to whom he imparts the secrets of his powers, but it is extremely difficult for any one who is not a member of his family to become a medicine-man.[7] At Bartle Bay, in New Guinea, the headman, who is also a kind of medicine-man, is succeeded by his brother or sister's son, to whom he has passed on his knowledge.[8] The inheritance of the priesthood either by individuals or by families or groups, as among the Chibcha of Colombia [9] or among the ancient inhabitants of Central America—at Yopaa the office of priest was hereditary in the family of the Wiyatao [10]—may be assigned to an origin in similar ideas.

In connexion with these sacred offices may be mentioned the inheritance of special functions, privileges, and objects in connexion with religious matters.

The Arunta sacred objects, including the *churinga*, and the privilege or duty of performing certain parts in the religious ceremonies are the property of individuals. As such they form part of the property transferred by inheritance, but not otherwise alienable. The women may also own *churinga nanja*, though they may never see them; these are inherited, but not according to the ordinary rule, passing to the women's younger brothers and not to the other half of the tribe, as they must not leave the local group. The same conditions are found in other tribes of the region.[11] Among the Kwakiutl of the north-west coast of America the right to wear a certain crest, to perform certain duties, to sing certain songs, to eat human flesh, to have certain *manitous*, and the membership of secret societies (after initiation) are hereditary in the clan or the family, and may be acquired for the children by marriage to an heiress or by killing the possessor. It may be noted that the position of the owner of these privileges is defined by the fact that only one person at a time is regarded as the representative of the ancestor from whom they are ultimately derived.[12] Names and crests in the British Columbian tribes are regarded as family property, and as such are transmitted to the heir.[13]

For the inheritance of the totem and of tabus, reference must be made to the special articles dealing with these subjects.

Mention may be made, however, of an inheritance of a food tabu which is found among the Bangala of the Congo, whereby a man who may be forbidden a certain food by the medicine-man, as part of the course of treatment for a disease, transmits the disability to his descendants,[1] while among the Bambala a hereditary class, wearing a distinctive head-dress and a bracelet which passes at death to the uterine nephew but cannot be purchased, also inherits a tabu against eating human flesh or fowls.[2]

(*e*) *Debt.*—Inheritance usually connotes the acquisition of property by the heir. It may, however, on occasion involve the reverse, as among the Bangala[3] and the Ba-Yaka,[4] where a man's heir is responsible for his debts, even if there is no property, or as among the Johor Jakun, where the heirs must pay one half of the debt, irrespective of the size of the inheritance.[5]

4. The heir.—(*a*) *The kin and its members.*—As inheritance tends by custom to follow the line of descent, in a matrilineal society the heirs to a man's estate will be not his own children, but the members of his kin either as a whole or as represented by those members who are more immediately related to him (see art. FAMILY [Primitive], § 12). There is ground for believing that inheritance by the kin was far more wide-spread than it is at present, even if it was not at one time universal. It still survives, with or without modification, in a considerable number of instances, of which the following may be regarded as typical.

Among the Melanesians the normal heir to a man's property is his nephew, the son of his sister.[6] So also among the Kurnai.[7] The Arunta rule is that a man's property shall pass to that half of the tribe to which he himself does not belong, *i.e.* to his mother's brothers or his daughters' husbands.[8] In the Louisiades, land is inherited by the owner's brothers, sisters, and sisters' children, *i.e.* by the members of his kin. Among the Waga-waga tribes of New Guinea, garden land passes to the sister's children, or, if these are too young, to the maternal uncle, or the owner's mother, with reversion to the sister's children. On the other hand, a woman's garden property, including coco-nut trees, descends to her children, while her personal property, such as ornaments not given her by her husband, is divided between her children and her sisters.[9] Among the North American tribes this rule was followed in the majority of cases. Property was shared among the clan, and chiefly by the kin.[10] It sometimes occurs in Africa, *e.g.* among the Bambala [11] and some of the tribes of the Great Lakes.[12] The Selangor Sakai choose the successor to a deceased headman from among his sister's children,[13] and among the Orang Berlanus the chieftainship falls to the sister's son.[14] Among the Chibcha of Colombia, as already mentioned, the priesthood was hereditary in the female line. In New Britain, land, it is said, could not pass to a son because descent was traced in the female line.[15]

Only certain classes of property may be hereditary in the female line.

Among the Zagháwa, succession to the headship passes to the son of a sister or, failing him, the son of a maternal aunt, though property descends to the children,[16] and among the Picts a sister's son likewise succeeded to the chieftainship.[17] Among the Nairs, personal effects pass to a sister's children, and land belonging to the wife is inherited by a daughter or sister.[1]

Property may pass exceptionally to a sister or her children when direct heirs fail.

Among the Bathonga a sister holds the property in trust for her own children, if her brother should leave no direct heirs—in this case if no brothers survive him.[2] In New Guinea the Koita rule of inheritance of the clan chieftainship is that, failing sons, or if the sons are too young, the property passes to the sister's sons. In the latter case it would revert to the sons if they were grown up when their uncle died.[3] The heir among the Congo tribes, failing a brother, is the sister's son [4] (see, further, below, (*d*)).

Some instances of the privileged position of women and of those related in the female line seem to point to an earlier system which has been superseded in general usage.

The peculiarly close relation between maternal uncle and nephew existing in the Torres Straits and in Fiji (where it is known as *vasu*), which allows the nephew to treat his uncle's property with the greatest freedom, suggests that, although now patrilineal, these people were once matrilineal, and the nephew was the uncle's heir.[5] A similar relation in dealing with property as between maternal uncle and nephew (and to a limited extent between paternal uncle and nephew) is found among the Nandi and the Masai. In this case it is reciprocal: an uncle may claim any article from the father of his nephew, and the nephew must buy it for him. The nephew, on the other hand, may claim any property belonging to his uncle.[6] In Savage Island, where the people are in a transition stage, though the son inherited his father's property, the daughters had a claim on their maternal uncle.[7] In Uganda the fact that one of the queens is the king's sister and that princesses are not allowed to marry and have children suggests that at one time the kingship was transmitted in the female line.[8]

(*b*) *Transition from kin to family.*—It is not surprising to find that, with the growth of family, as opposed to kin, feeling, an attempt should be made to avoid this law of inheritance by various means, either by gifts *inter vivos*, as among the Melanesians, or the Buntar of South India, among whom, however, these gifts become null and void at death,[9] or by adoption of the heir, a common device among the Iroquois, in order to perpetuate the chieftainship in their family,[10] or by marriage of the heir—the sister's son—to the daughter, as among the Carriers (Déné).[11]

Evidence of what appears to be a transition stage is afforded by arrangements such as that which prevails among the people of Tiga Loeroeng, whereby the inheritance is divided equally among the children of the man himself and of his sister.[12] A similar compromise between the maternal and paternal branches among the Wolaroi of Australia divides the boomerangs, waddies, etc., between a man's sons and his brother-in-law.[13] Among the Koita, personal property, such as canoes, spears, etc., is divided among the *nana* (elder brother, sister, or cousin) and *rora* (younger brother, sister, or cousin) by the eldest son, but a portion is put aside for any young children, while the garden land, assigned out of the clan holding, descends to the children, and the house site descends rigidly in the male line.[14]

(*c*) *The family and its members.*—In addition to the father's increasing desire to benefit his own children rather than those of his sister, as the family ties gradually assume an ascendancy over those of the kin, two influences are at work which would tend to divert the line of inheritance to sons in preference to nephews. As the sense of property in land grows stronger, increased importance is attached to residence as a factor determining the heir. Even in Australia, where, as has been mentioned, in the case of the chieftainship the idea of inheritance is not highly developed, and the hunting grounds are regarded as the common property of the tribe and not of the individual, hunting

rights descend from father to son, because the patrilocal organization, providing a residence for the sisters and daughters with their husbands' tribe, makes any assignment of these rights to another than the sons an impossibility.

This cause underlies the Nāga custom, in case of default of sons, of assigning immoveable property to the deceased man's brothers, and moveables to his daughters;[1] among the Lusheis, the son who is to inherit the paternal house and land—usually the youngest—remains with the parents, while the other sons at their marriage leave the parents to found a village of their own.[2]

The substitution of an agricultural for a pastoral life, with the consolidation of individual property in land, strengthens this tendency. Further, where the cultivation of the ground is the duty of the men, the inheritance of land is, as a rule, confined to the male members of the family.

Among the Basques, while pastoral pursuits predominated, the estate passed to the eldest child, whether male or female; but with an increased practice of agriculture, of which women were unsuited to take charge, and the gradual obsolescence of land tenure based upon the communal idea, male inheritance tended to become the rule exclusively.[3] In Nigeria, where security of land tenure depends upon the land being kept under cultivation, women cannot inherit it, because they are regarded as unable to comply with this condition.[4]

The second set of circumstances which supports the patrilocal organization in diverting inheritance from the female collateral to the male collateral or direct line, but affects moveable as well as immoveable property, is that which is connected with the payment of the bride-price. This custom not only frees the woman from the claims which the family or tribe may have over her, but at the same time, by effecting her transfer to her husband, cuts off herself and her children from participating in the estate of her father or brothers (see art. FAMILY [Primitive]). It is found, accordingly, among most of the African races, *e.g.*, where the bride-price is a regular institution, that inheritance in the male line is commonly the rule. Exceptions, however, are to be found among races in a state of transition or who retain some traces of the institution of mother-right (see below, p. 294).

When once the predominance of the female line has broken down, it does not follow that the inheritance will fall to the sons as a matter of course, nor that the eldest son will take precedence over his brothers. Indeed, there is ground for believing that, in some regions at least, the course of development has been from the female collateral to the male collateral rather than from the female collateral to the direct line; that is to say, the principle of group inheritance continues to hold good, but it is organized on a basis of male relationship rather than female. This is suggested by the priority or prominence given to the brothers of the deceased. A factor of importance which also helps to support the claim of the brothers or other adult members of the group as against the children is that only those are allowed to inherit who are able to hold the property, by force if necessary, or to take their share in the affairs and the defence of the group if required. This leads to the exclusion of women and minors.

The custom among the tribes of Manipur, that a clan should take a part of the estate when daughters inherit in default of male heirs;[5] the trace of clan tenure of burial grounds in Uganda, the only land which is not regarded as belonging to the king, and for which at the death of the holder, who is a tenant for life rather than owner, a successor is chosen by the clan subject to the king's sanction, as well as to the control exercised over the inheritance of personal property by the clan;[6] the fact that in Ashanti the king is theoretically the heir of all his subjects, though in practice he receives only a certain quantity of gold dust on the death of chiefs;[7] the family tenure of burial lands in Korea;[1] and other analogous customs of which instances could be adduced—suggest that the place of the kin as collective heir was taken by the clan, and that this group was later narrowed to the more immediate relatives, the brothers. Among the Ba Kwere the heir is a brother; among the Bathonga all the brothers must hold the inheritance before it can fall to the heir, the son.[2] In Nigeria (Kagoro) a grown-up son inherits such of the wives as are not taken by his paternal uncles.[3] The Buduma of the Chad assign the wives to the eldest brother, while personal property is divided into two equal parts between the children and their uncle.[4] The ceremony performed by the Kamba heir before he can assume possession of his father's property, in the course of which he throws a branch at his paternal uncle, saying, 'I pay you before the elders,' and the ceremonial cohabitation of the uncle with the wives of the deceased, seem to be a form of compensation or propitiation of the uncle, either, as is suggested by Hobley, as the representative of the deceased, or, more probably, as an heir whose claims have been superseded. In either case it implies the solidarity of the family group.[5] The Wa-Sania chieftainship is inherited by the eldest brother and by the son only in default.[6] In Samoa the legitimate heir was the next eldest brother.[7] In Fiji the succession to the chieftainship depended upon a limited election for which the son was eligible only in default, firstly of brothers, and secondly of sons of the late chief's paternal uncle. The normal heir to the house site is the eldest brother.[8] Among the Nahua, Maya, and other races of Central America, where the succession was strictly hereditary, it descended to the son, but, where there was a limited election, choice was made from among the brothers.[9] The uncle, if the children are minors, is usually regarded as the natural holder of the estate until they are of age, when, in some cases, as with the Suk, he shares it with them,[10] and sometimes hands it over to them as a whole.

[7] A. B. Ellis, *Tshi-speaking Peoples*, London, 1887, p. 277; cf. Post, ii. 184 f.

When the inheritance passes to the children, the eldest son being normally the strongest, primogeniture is a common but not an invariable rule;[11] but, should the eldest son be unsuitable, he may be set aside by his father, or, in the case of a chieftainship, by those in authority. A chieftainship may descend in a family while the actual member to hold office is chosen by election. A rule of inheritance may definitely set aside the eldest son.

Among the Nāga tribes, especially among the Maos, the youngest son, as already mentioned, inherited the house. Sometimes, as among the Suk, the eldest son inherited the father's, the youngest son the mother's property, or, according to the En Temusi rule, the eldest takes all the mother's property and the largest share of the father's.[12] An interesting parallel in a civilized community is afforded by the custom of 'Borough English,' still in existence in certain parts of England, whereby certain classes of property descend to the youngest son.

When primogeniture is the rule, it is generally an obligation on the eldest son to look after and provide for his brothers out of the estate, as among the Akikuyu, where each son ultimately receives about an equal share.[13] In some Nāga villages the eldest son has to maintain his brothers; among the Quoirengs he supports the rest of the family;[14] at Ladak, when the eldest son marries for himself and his brothers, the paternal possessions are transmitted on the understanding that he maintain his brothers.[15] Sometimes the younger brothers acted as the eldest brother's assistants, or were virtually his slaves, as among the Bahima.[16] A rule which places a further restriction on primogeniture, not uncommon, especially among the Bantu tribes, confines the inheritance to certain of the children only. In Uganda the eldest son of the king, who acted as his brothers' keeper or guardian, was expressly debarred from inheriting. The successor to the throne must be chosen from 'children of the drum,' *i.e.* children born after the accession of the father.[17] Frequently only the children of the chief or principal wife are eligible to succeed to the father's position, as among the Nandi[18] or the Zulus,[19] the chief wife in the latter case being the first of the wives for whom the bride-price was paid with cattle from the father's estate and not from cattle earned by the man himself. In ancient Mexico at Tezcuco only children born of the

principal wife, generally a princess of blood royal, or at Tlascala of a wife married according to certain rites, could succeed.[1] Except in the last-named case, this disability has no reference to the question of legitimacy.

At the stage of development where the value of the individual as adding strength to the tribe is the chief consideration, children of free and slave women are treated equally, while those of doubtful paternity are regarded without question as members of the putative father's family. As already mentioned, adoption is practised for the purpose of inheritance, though sometimes the adopted child is disqualified from sharing the estate of his adopted parents.

In Korea, where only the eldest son can hold the family estates, it is a frequent practice, in a family without sons, to adopt the second son from another family.[2]

Even slaves are permitted to inherit in certain circumstances.

The Bangala might free slaves after long service, and allow them to receive a portion of the estate.[3] Among the Ba Yaka, in default of heirs a slave may inherit the estate, thereby becoming a free man.[4]

(*d*) *Women as heirs.*—Notwithstanding the importance attached to female descent and the part it plays or has played in determining the disposal of property, women are, among many peoples, debarred from inheritance.[5] This is due partly to the unstable conditions of a primitive society mainly based on physical force, and partly to the fact that, where the economic value of women is high, it tends to keep them in a subordinate position, without rights to hold or receive property apart from their male relatives or connexions. Throughout the greater part of Africa not only is a woman incapacitated from receiving a share of the property of her husband or father, but she frequently constitutes the most valuable part of the estate.

(α) *Widows.*—The custom of regarding the widow or widows as part of the responsibility or part of the property falling to the heir, which arises from the fact of their close incorporation into the group by marriage, secures a provision or a protector for them after the death of the husband. Where the wife holds a position of greater independence, she may return to her own relatives when she is left a widow. In neither case, generally speaking, would it be consonant with primitive modes of thought that she should hold property belonging to her husband's group. A woman may, however, sometimes be allowed at the death of her husband to retain such articles, especially clothes, utensils, or ornaments, as have become closely associated with her by use, although her right of ownership during her husband's lifetime has not been recognized.

Among the Arunta, a man's widows are allowed to take nothing but the yam sticks.[6] The Mafulu widow takes the current season's crop, which she has helped to plant, unless she has returned to her own people.[7] On the other hand, among the Waga-waga tribes of New Guinea, valuable shell ornaments given to a wife revert to the husband's brothers at his death.[8] In Nigeria the widow appears to have an interest in the house if she has no grown-up family and no relatives by marriage. In this case she may marry again, taking her husband to the house.[9] Among the tribes of the Baringo district of East Africa, the property given to the wife at marriage is divided among the children on the death of the husband.[10] Among the Nilotic Kavirondo, each widow receives a certain number of cattle, which, at her death, pass to her sons.[11] Among the Wagiriama and the Kikuyu, personal ornaments are distributed among the female members of the family of the deceased.[12]

It sometimes happens that, in cases where there is apparent transmission of property to a female, it is held upon terms resembling a trust.

The Mafulu widow, on the death of her husband, receives a pig from the estate, which does not, however, become her property, but is kept by her for the mourning rites which take place at the end of a year.[1] Among the Dinkas the property of a man who dies without a son passes to his widow, the reason being that it is her duty to perpetuate the family; she must provide an heir to the property by taking a second husband, whose children are regarded as children of the first husband.[2] Among the Akikuyu, each of the widows at the death of the husband retains the plantation and the hut which were hers during his lifetime, together with the goats which lived in her hut, to enable her to provide for her children; but they are in no way regarded as her absolute property, and, as her sons marry, a portion of the land is cut off and transferred to the first wife of each.[3]

Even where there is a distinct tenure of lands, as among the Tube-tube tribes of New Guinea, and the husband and wife work side by side on their respective plots, the wife has to give one half of her first year's crop after her husband's death to his relatives as the product of his labour.[4]

(β) *Daughters.*—Although it is generally true to say that among primitive races of to-day women do not inherit, there is evidence to suggest that at an earlier stage, and in a community organized on matriarchal and matrilocal lines, women were regarded not only as heirs, but as even taking precedence of men (see art. FAMILY [Primitive], § 6).

In the island of Kythnos the eldest daughter inherited the house,[5] and in Telos she inherited all the property.[6] The Cantabrians, on the authority of Strabo,[7] are, like the Lycians,[8] said to have transmitted property to their daughters, while among the Basques property descended to the eldest child, whether a son or a daughter.[9] The Iroquois bride stayed in her own house at marriage, as the heiress.[10] The influence and predominant position occupied by women among the American tribes are shown by the customs affecting inheritance among the tribes of the south-western region of the United States. Among the Hopis, the Zuñis, the Spokanes, and other tribes, the house and its contents belong to the woman, and are transmitted in the female line.[11] Among the Navahos, a woman's property descended to her nieces.[12] The peculiar social organization of the Nairs extends to the tenure of property. All land belongs to the women, and the heir is the eldest daughter or the sister.[13] In Egypt, a daughter had an equal, or in early times a preferential, right to a share in her father's property.[14]

In some cases, when the daughter does not inherit, she may transmit the inheritance to her husband or to her children; this is especially frequent when the husband takes up his residence with the family of his wife.

Among the Puyumas of Formosa, the son-in-law resides with his wife's parents, and on their death takes possession of the house and property.[15] In Japan the man who marries an only daughter may be adopted as a son, and his children inherit the grandfather's property.[16] Among the Bororo the husband, after the death of his wife's parents, takes up his residence in the family house and becomes head of the family.[17] An analogous transmission through a woman is found among the Salish (Halkomélem) and among the Kwakiutl of North America, where the husband transmits the hereditary name, crest, and privileges of his wife's father to his own children.[18] In those cases where, as in the Malay *ambil-anak* system, a man on marriage sustains no further relation to the family in which he was born, he naturally forfeits all rights to inheritance from it. His rights as regards the family into which he marries range widely according as his status there varies from that of a slave, as in Kaur and the Ranau districts of S. Sumatra, to that of a son of the house, as in Kroë, where his property passes to his children or the nearest female relatives of his wife, while he himself can have the usufruct of inherited property only so long as he resides with his parents-in-law.[19]

It is also possible, in exceptional circumstances, for an estate to fall to a woman, among a people who do not, as a rule, recognize female inheritance.

Among the Bangala, failing male heirs, a man's sister will inherit his property. Married daughters, however, among the Bangala usually take from the estate of their deceased father the women who were paid as bride-price for themselves, and hand them to their brothers, who thereafter make presents periodically to their brothers-in-law.[1] In Samoa, land might be held by females when all the males in the family were dead.[2] The inheritance may be in the nature of a temporary provision. Among the Nandi, the daughters received the mother's utensils and ornaments as well as a share in her plantation until their marriage, while the eldest son of the principal wife, who inherited the chief share of the property, was expected to give a cow to each widow.[3] Clan or kin rights may be revived to emphasize the exceptional circumstances, as in the customs followed at Laiyi and Liyai among the Maos, whereby, in the event of the inheritance falling to girls through lack of male heirs, the clan, the male relatives, or a paternal uncle took a share of the inheritance, usually the house.[4]

Where it is generally recognized that women may hold property, the inheritance is frequently shared among all the children,[5] subject to any regulation as to a larger or special share being allotted to any one or other of them.

The Mafulu woman can hold as property only clothes and personal ornaments, which, at her death, go to her husband, or are divided equally among her children.[6] Among the Benua Jakun of the Malay Peninsula, one-third of the property is assigned to the daughters, two-thirds to the sons, and the Jakun of Johore make an equal division among all the children.[7] The Tuareg children divide equally all lawful property, *i.e.* property acquired by labour.[8] Among the Koita and Motu tribes of New Guinea, coco-nut trees are divided equally between boys and girls, while the latter inherit a life interest in the land which is commonly extended to their children.[9] Among the Kenyahs and other jungle tribes of Borneo, there is a customary allocation of the different classes of property to the widow, sons, and daughters, the latter obtaining old beads, etc.; while among the Dayaks the Chinese jars, which are highly valued, are divided equally among all the children.[10] Artificial brotherhood and kinship frequently involve the rights and obligations of inheritance.[11]

**5. Testamentary disposition of property.**—It is evident from what has already been said that inheritance to the primitive mind depends upon a rule or custom, invariable outside certain limits, over which the deceased person has no control. Property, in so far as it is not required by the owner in the life after death, is at the disposal of the living, originally the group-kin—family, village, or the like—of which he was a member, and subsequently the limits of this group are restricted until it is composed only of his children or more immediate relatives. Virtually the disposal of the property is with the living; but by usage it comes about that those to whom it shall fall stand in certain relations to the former owner. In these circumstances it is not surprising to find that it is not usually possible for a man to dispose of his property by will. It is definitely stated in most cases that no such power exists. On the other hand, it is clear that in some cases the desire to modify the regular line of succession does exist, and attempts are made to evade the rule. This is a frequent cause of gifts *inter vivos*.

Reference has already been made to the gifts presented by the Melanesian father to his sons in his lifetime to keep property in the family, or, in the case of a chief, to secure the chieftainship for them, and the marriage of a daughter to the heir among the Salish. Among the Veddas, the gifts made to a daughter on her marriage are counted against anything she might inherit at her father's death. But it was also usual for a man on his death-bed to give to his unmarried nephew—the man allotted by custom as the husband of his daughter—the land which he would not otherwise have received until his marriage, and also to divide his land and property among his children in preparation for death, handing to each the tokens of possession—usually a stone, a tooth, flint and steel, and a lock of hair—to be produced as title-deeds in the event of dispute.[12] In this case the wishes

of the dying man seem to be regarded with more respect and to carry more force than is usual. In Uganda, the king designated his successor, but his wishes might be disregarded if, in the opinion of the officials who made the selection from among the sons, the one designated was not suitable. The clan in determining the apportionment of an estate might also disregard the wishes as to its disposal expressed by the owner before his death.[1] It is usual among the Akikuyu for a man to call his family together and express his wishes as to the disposal of the property; the heir-at-law is expected to carry out those wishes in making provision for the members of the family. Theoretically the owner had absolute power of appointment; practically the demise was dictated by custom. Although it is customary for a woman to keep the goats and land which she has tended in her husband's lifetime, she might, if not on good terms with him, be assigned a smaller share. It was also possible, by means of the *kirume*, or dying curse, to 'tie up' a particular piece of property, such as a cow, so that it could not be alienated, but must remain a family possession.[2] Among the Kenyahs and Kayans of Borneo, property was divided among the women and children at the death of the father. The division, however, was frequently made before death to avoid disputes.[3] In Samoa, part of the property was sometimes apportioned by the owner on his death-bed. In New Britain, a dying man would call together his relatives and tell them what to do with his property; but his directions would, as a rule, be strictly in accordance with custom, except that he might assign a small portion of *diwara* to his children and wives.[4] In Savage Island, house, land, and such personal property as would not be destroyed out of respect to the memory of the deceased was transmissible by testamentary disposition;[5] so also in Tahiti.[6] The limitations usually imposed upon the wishes of the owner are perhaps best indicated by the custom among the Tube-tube peoples and in the Louisiades, where, though the property fell in the one case partly to his sister's children, partly to his own, and in the other to the kin, a man might suggest to his heir-at-law that certain ornaments or personal possessions should be given to particular children. In the latter locality, gifts *inter vivos* did not revert to the estate for division, nor were they counted as part of an individual's share.[7] Melanesian customs also paid considerable deference to an owner's wishes as to the disposal of his property. In Florida he might direct that his canoe be given to his son. In Banks Island he might ask his heir to allow his sons to remain in possession of his land, and this might be permitted on payment by the sons, while personal property could be disposed of by an *ante mortem* declaration which held good on the same terms.[8]

Among the Basques there was a limited power of testamentary disposition, the individual being permitted thus to dispose of any property acquired by himself, but not of that acquired as part of the family inheritance.[9]

An ingenious method of evading the laws of succession has been devised by the Bangala. The dying man sent for the one whom he wished to benefit and committed a technical assault upon him; after the death had taken place the assaulted man then claimed compensation from the heirs. Another method was to promise that the property should pass to the individuals whom it was desired to benefit and to hand them tokens in the presence of witnesses. After the death of the owner, the property was handed over to the heir on production of the tokens.[10]

E. N. FALLAIZE.

**INHERITANCE (Babylonian).**—We must be careful not to assume the implications in English law of words used to translate into our tongue the legal terms occurring in Babylonian and Assyrian documents. The Assyrian civilization and customs were so entirely the same as those of Babylonia that they may be treated as one. The sense in which the verb 'inherit' is here used implies a right on the part of another to take possession, on the death of the possessor, in virtue of a personal relation between the 'inheritor' and the deceased. The nature of that relation constitutes for our purpose the 'law of inheritance.'

The prime source of information as to inheritance in Babylonia is the Code of Ḫammurabi, which appears to have remained in force from the close of the 3rd millennium B.C. down to the

6th century. The almost endless legal documents which deal in some way or other with the practice of which the Code records the theory may be noticed as illustrations and occasional exceptions.

The rules as to inheritance differed with the status of the deceased possessor.

1. **Father's estate.**—On the death of a father his children divided his estate equally. But real estate was often kept together and enjoyed in common. It thus constituted the *bît abishu*, 'his father's house,' on which a son had claims of revenue and which he was bound, if possible, to preserve intact and redeem if sold. When portions had been parted with by the family, by way of sale, lease, pledge, or inheritance, to distant branches, it was redeemable, and an heir had a right to exercise this power of redemption to the prejudice of another claimant's power to sell. If one son sought to sell his share, another had power to stop the sale by buying it in.

All estate was divided equally by agreement among the heirs, who executed documents asserting that they were satisfied and pledging themselves not to dispute the settlement. Each took a signed and sealed document setting out the items of his share and giving attestation of acceptance. In the case of real estate which could not be conveniently divided, as a house, pond, or even a right to revenue from office, etc., the division was often stated formally and liquidated on some convenient sale, or one heir paid off the others. The division was subject to some reservations. A father might give a favourite child real or personal property by executing a deed of gift explicitly defining its extent. In such a case the gift was not brought into 'hotchpot,' and the son so favoured could claim to share equally with the other children in the residual estate.

A father was bound to provide every son with a bride-price, or means to procure a wife, and usually set him up with his 'portion,' which would include both real and personal property. At the division of the residual estate an attempt was made to allow for this portion already received in estimating the share then to be taken, unless exempted by deed of gift as above. But, if a son was still unmarried at his father's death, the others had to reserve him a bride-price and then share equally with him.

A father was bound to provide a dowry for each daughter, on her marriage, or on taking vows, if this were done with his consent or at his instigation. Apparently a daughter might take vows without his consent. In that case she was entitled to her dowry on his death. If a daughter was left unmarried, she was entitled to receive her dowry from her brothers and sisters, and in addition they were expected to find her a husband. The daughter's dowry was her portion, but her right in it was only for life, unless she had children, when it passed to them. If she died childless, it reverted to her family—brothers in the first instance, and their heirs after them. A deed of gift might convey real property as well as personal, the dowry usually consisting of the latter. In the case of vowed women the brothers were usually stewards to their sister; but, if not satisfied with their administration of her estate, a votary might appoint her own steward.

The sons and daughters, having grown up, been married, and therefore portioned off during their father's lifetime, were bound to maintain him in his old age. But for various reasons this duty might be burdensome to them or their ministrations unsatisfactory to the father. It was in his power to adopt a son by deed, leaving to him all his residual estate and usually specifying the maintenance to be given (cf. ADOPTION [Semitic], vol. i. p. 114 f.). On such an adopted son devolved the funeral rites so important in the Babylonian's eyes (cf. DEATH AND DISPOSAL OF THE DEAD [Babylonian], vol. iv. p. 444). This arrangement excluded the other children from any further share in the father's estate, but also relieved them of further responsibility. Hence they usually appear as parties, or at any rate witnesses, to the deed of adoption. It is not clear that they could object to or veto such a settlement, but there is often an express statement that they shall have no claim on the adopted heir. There may here be an indication that the son adopted was a natural son by a slave woman on whom the legitimate children might have a claim, but, as such sons were freed at their father's death, it could in any case be pressed only during his life. It is more likely to refer to a claim to share in the property left by the father to the adopted son.

But sons were not always adopted solely because the earlier children had grown up and left the paternal roof. A wedded pair might adopt a child while they still cherished hope of a family. In such a case, they might stipulate in the deed of adoption that the child now adopted should rank as elder brother to the family, if they should have other children.

If a man acknowledged his natural sons by a slave woman during his lifetime, at his death they shared equally with his legitimate sons; but these took first choice at the division of property on his death.

2. **Mother's estate.**—The same things held *mutatis mutandis* for mothers and daughters. In fact, more evidence is available of cases where women, widows or vestals, nuns or votaries, adopted daughters to care for them in their lonely old age and succeed to their estate and property. As a rule, women could not transmit estate which had come to them from their own family, but only what was given by their husbands, or purchased with their own money, although the Ḫammurabi Code expressly gives to a votary of Marduk power of testamentary disposition of whatever estate she received from her father. In some cases, a votary of some other god did so dispose of real property, which she had received by will from another votary, who had in turn received from yet another. In these cases, however, there was a blood relationship between the women, as aunt and niece, etc.

In the case of a married woman her children inherited or divided what had come to her from her father on marriage, what she had been given by her husband, and whatever she had otherwise acquired during her life.

If, after her death, her husband married again, the children of such a second marriage had no share in her property, nor had the natural sons of her husband by a concubine or a slave wife, even though he acknowledged them as his. If she married again and had a second family, both her families together shared in her estate; except that the second family had no claim on her first husband's gift to her on marriage, which was divided among his children by her. This expressly applied only to her 'dowry,' *nudunnu*, or gift on marriage, but may not have touched presents made to her afterwards, which seem to have been hers to dispose of as she pleased among her children. But the *nudunnu*, what he 'paid' her, was the price of the children, and she must leave it to them. The husband also paid her father a price for her—the bride-price, or *terkhatu*—which the father usually handed over to her. The presents which as suitor a man had made to his prospective parents-in-law, and which he forfeited to them if he jilted the girl, seem to have been retained by them on her marriage, although they often formed part of her

property. In every case half-brothers and half-sisters shared in the estate of their common parents, but not in that of a step-parent.

If a woman died childless, all she had received from her father went back to his heirs, except the 'bride-price' which her husband had paid for her to her father. If her father had given her that, her husband could keep it; if not, her father or his heirs had to repay it to her husband. But, if her father had given her the right of disposal, she could dispose of it where she chose.

A widow would be left in possession of what her father had given her on marriage, but had only a life interest in it. She could not leave it away from her children. She had the right to live on in her husband's house, which, however, she could not dispose of, as it must go to her children. If her husband gave her a gift on marriage, she continued to enjoy it; and, if not, she took the same share of his property on his death as a child of his would do, but it reverted to their children. If, however, she preferred to leave her husband's house, she could return to her own family, but must leave her children the wedding gift she had from her husband, and could carry off what her father had given her on marriage and re-marry if she chose. But her children by the first husband, if any, retained the right to share equally with her children by the second marriage in her father's gift to her on the first marriage. So long as she lived she would enjoy it as her child's portion of her father's estate; on her death all her children shared equally. If she had no children by either marriage, it reverted to her family.

3. **Slave marriages.**—If a man married a slave woman, or, being married to a free wife, had natural sons by another woman, he could acknowledge them in his lifetime by the same formula as that of adoption. In any case, they were free on his death, and the slave wife obtained her freedom also. But, unless so acknowledged by the father, these sons would not inherit his property. If he made them heirs, they shared equally in his property with the legitimate sons, but took second choice.

If a slave married a free woman, as well-to-do slaves often did, their children were free. They, of course, inherited their mother's property and half their father's, the other half going to his master.

The children of two slave parents were, of course, slaves. It appears that custom allowed them to inherit, as if free, from their parents and under the same laws, but probably the master had a large share also.

4. **Vowed women.**—Some special features attached to the cases of women who were vowed to a religious life. It is doubtful if these were ever temple prostitutes, but they did include vestals who were expected to be childless. A woman who was vowed by her father to a religious life was given her portion as if on marriage, and her brothers were constituted her trustees. If her father chose, he could by deed make it her absolute property and she could devise it as she willed; otherwise it went back to her brothers, like the portion given to a married daughter who proved childless. If her father died without giving her a portion as for marriage, she, like an unmarried daughter, would take an equal share with her brothers, and, whether she subsequently married or not, this would be her brothers' on her death unless she had children to inherit it.

It is not altogether certain how the various classes of votaries should be distinguished, but in some cases where the father had not given a vowed daughter a share before his death she came in for only one-third of a son's share at his death. Of this she had the life interest, and on her death it reverted to her brothers.

The votary of Marduk had a special treatment. If her father had not given her a share during his lifetime, she was entitled only to one-third of a son's share of his personal estate. But she had always the disposal of it at her death; it did not revert to her brothers. Further, she was not responsible for the State obligations which such property usually carried with it. By deed of gift her father might give her both real and personal property, over which she had absolute power.

5. **Concubines.**—The children of concubines were free, but did not inherit unless acknowledged. A father might give his daughter to be a concubine, and he might give her a marriage portion and also a deed of gift. But she had no share in his property on his death. If the father, however, made her no provision, her brothers were bound to give her a proper marriage portion.

6. **Disinheritance.**—Sons might be disinherited, but only by legal process. If a father intended to disinherit a son, the judges were bound to look into the story of the disagreement, and, if the son had not committed a serious crime such as could be held to justify disinheritance, they would forbid it. Even if the crime was bad enough to justify such a penalty, they were bound to reconcile the father and son on the first offence; but, if repeated, disinheritance was permitted. The exact nature of crime which would be held sufficient to deserve this penalty is nowhere stated, nor is the exact nature of the consequences. It would, however, certainly imply exclusion from share in the father's estate at his death.

The child adopted to care for a parent's old age was usually bound to perform certain duties of maintenance and personal care. These were specified in the deed of adoption, and a failure to perform them involved the annulment of the deed. This was a cutting off from sonship which amounted to disinheritance.

The adopted son might be repudiated by the adoptive father. In the old Sumerian Family Laws this was most heavily penalized. The father forfeited all his estates and the adopted son took them over. Whether this rule continued into the time of Ḥammurabi is not yet certain. The Code deals with a different case. A man might take a child to adopt as a son, and repudiate him when he grew up. If he did so, the young man had no claim, probably on account of the advantages he had already received. But, if a man had so adopted and reared a child and afterwards acquired a family of his own, he was not allowed to send away the young man empty-handed. He must give him one-third of a son's share, but not of real estate. An artisan who adopted a son was bound to teach him his trade or handicraft, and there his obligation ended. But indentures of apprenticeship were often entered into which strictly defined the obligations of both parties, so that this form of adoption may be merely a legal fiction for apprenticeship.

A man who committed incest was cut off from his father's house. This, of course, involved disinheritance, but was always more; it was outlawry also.

C. H. W. JOHNS.

**INHERITANCE (Celtic).**—As has been already indicated in artt. FAMILY (Celtic) and CRIMES AND PUNISHMENTS (Celtic), one of the chief features of Celtic society in ancient times was the prominence therein of the social factor, and this feature is conspicuous in the case of Celtic inheritance. The

succession to property is here essentially the continuity, with any necessary readjustments on the death of one or more of its members, of a society of joint-owners and tillers. For this purpose, Celtic society, as known to us from Irish and Welsh law in historic times, had been articulated and organized into distinct family groups within the wider group of the tribe (Ir. *cenél*, Welsh *cenedl*). In theory the land of the tribe belonged to the tribe as a whole, and doubtless originally the land was so held as a matter of fact; but in course of time, through the evolution of the definite family groups in question, the land of a tribe had come to be allotted in a regular customary manner, and, though inheritance still continued to be regarded from the collective standpoint, cases of liability through contract had often arisen which required the emphasizing of individual responsibility. In mediæval times, side by side with the older system, much of the land even of Ireland had come to be held by individual owners. Since the Celtic legal system of Scotland was that carried over by the Dalriad Scots from Ireland, the essential features of Scottish land tenure can best be studied in the Irish laws, especially in some of its earlier phases, such as the original exclusion in Ireland of women from any right to succession. When the Dalriad Scots entered Scotland, the few concessions afterwards made to women in Ireland through the influence of the Church had not been made, and, in the custom of the Highlands, never were made under Celtic law.

I. *IRELAND*.—1. **General.**—Lands of inheritance were in Ireland technically called *orba* lands. These belonged in theory to the tribe (*cenél*), and were subdivided into *coibne* and *díbad* lands. The tribal land had upon it the dwellings of its members, the share of the chief, which was tilled by his special tenants, portions in exclusive ownership (made as grants), and the portion cultivated by common tillage. The portions cultivated by common tillage would be divisible into those held by members holding through recognized family groups, notably the *gelfine*, and those held under the chief, as representing the tribe, by others. For the present purpose, the important portion of the land was that held by the recognized family groups (see FAMILY [Celtic]), called the *gelfine*, the *derbfine*, the *iarfine*, and the *indfine* respectively. The *gelfine* consisted of the group of agnates or male kinsmen comprised in the series father, son, grandson, great-grandson, and great-great-grandson; the *derbfine* was a similar and wider group commencing with the grandfather; the *iarfine* with the great-grandfather; and the *indfine* with the great-great-grandfather. Of these, the most important group in practice was the *gelfine*. This consisted essentially of a group formed of a father with his sons and their descendants, the father occupying until his death the main dwelling of the group, while his sons, beginning with the eldest, would, as they came of age and married, occupy dwellings of their own, until at last, on the death of the father, the youngest son occupied the original family dwelling.

On the extinction of the *gelfine* division, $\frac{3}{4}$ of the property passed to the next in point of exclusiveness, viz. the *derbfine* division, while the other quarter was divided between the *iarfine*, which received $\frac{3}{16}$, and the *indfine*, which received $\frac{1}{16}$. On the extinction of the *derbfine*, $\frac{3}{4}$ of its property went to the *gelfine*, while the other quarter went to the *iarfine* and the *indfine*—the *iarfine* had $\frac{3}{16}$, while the *indfine* had $\frac{1}{16}$. On the extinction of the *iarfine*, $\frac{3}{4}$ of its property went to the *derbfine*, the other quarter to the *gelfine* and the *indfine*, i.e. $\frac{3}{16}$ to the *gelfine*, and $\frac{1}{16}$ to the *indfine*. On the extinction of the *indfine*, $\frac{3}{4}$ of its property went to the *iarfine*, and the other quarter to the *derbfine* and the *gelfine*, the *derbfine* receiving $\frac{3}{16}$, the *gelfine* $\frac{1}{16}$.

The land was held by the *gelfine* as land held by a community, or, to use the Irish technical term, as *coibne*-land. The *gelfine* family-group owed its stability largely to the fact that it was a union not of individuals, but of householders with separate homesteads.

The right of hereditary succession in the *gelfine* was not transmissible beyond the fourth generation of the descendants of the original acquirer of the plot of ground on which the *gelfine* was settled; the sons of the fifth chief or head had no right to allotments; and no more independent households could be formed. The youngest son of the fourth occupier had to divide the original holding. The land of the family was broken up among the members of the various independent properties. It is this that explains a reference to covenants relating to *coibne* property, which the sixth chief could not confirm, while the power of confirming them was allowed his five immediate predecessors. He was disqualified, because the sixth chief of the family, in whatever way elected, would be the first who was not a representative of the rights of the original acquirer of the property.

It naturally followed from this system of tenure that a close restraint was placed on the alienation of property; and so we find that the head of a family who owned property could not part with it for his own purposes, to the injury of his descendants. A person's sons, even in their father's land, had a sufficient right to restrain the latter's power of alienation. While the *gelfine* was in existence, assent of the *gelfine* chief was necessary for the validity of contracts dealing with *coibne* property and with the head of the main tribe (*cenél*). Great importance was attached to correct conduct on the part of members of the family groups in the matter of contracts.

Inheritance lands (*orba*), outside those which the *gelfine* had occupied, were called *díbad*-lands. The latter term is a very difficult one, since it appears to be also used for the property that passed from a deceased person to the persons entitled to succeed him; and, in the latter sense, it is clearly used to describe the share of a deceased co-owner in *coibne*-land, when land of that kind passed by succession.

The term *díbad* seems to stand in opposition to *coibne* rather than to describe any specific class of lands. It appears to call attention to the divisible character of land among various persons as tenants in common, and not as members of an associated group. The same land might conceivably be classed as *coibne* or *díbad*, according to the standpoint from which the rights of the individuals holding it were regarded.

2. **Tanistry.**—This term (in Ir. *tánaisteacht*) comes from the Irish *tánaise* ('next'), and refers to the Irish system whereby a king's successor was not his eldest son, but the oldest member of the family, or possibly one from another family. The term *tánaise* was used for the heir-presumptive of a king.

3. **Inheritance of fuidir-tenants.**—These tenants were mainly recruited from those members of the tribes who had lost land and kinship, and who were settled on the chief's share of the tribe-land. In the tribal system they were supposed to form a portion of the *fine*, or family group, of the chief; but they appear, at an early period, to have formed artificial family-groups, based on the principle of reciprocal liability, and among them the custom of the hereditary transmission of property came to be established. They do not appear to have been originally regarded as kinsmen for the purpose of paying compensation for crimes; but, if there were five houses of *fuidir*-tenants, each householder having a stock of a hundred cattle, and all under one chief, they formed an association recognized as a part of a tribe. Each in that way shared in the common tribe-land (*díbad*), and paid compensation for the crimes of the other members of their separate organization. In their case, too, it was said that the father sold nothing to the prejudice of his sons, grandsons, great-grandsons, or great-great-grandsons.

4. **Inheritance of an adopted child.**—An adopted child (*mac foesma*) could not inherit without the consent of the family. If the *gelfine* or the *derbfine* had concurred in the verbal act from which the

adoption resulted, and if the distant branches had not objected, the consent was presumed.

5. **Inheritance through the mother.**—Originally in Ireland a woman could receive only a dowry (*tinól*), but no inheritance. At the same time, a sister or a daughter of a member of the agnatic group who was married to a stranger with the consent of the tribe could obtain tribal rights for her son (see H. d'Arbois de Jubainville, *La Famille celtique*, Paris, 1905, p. 72). Among the Pictish kings there appears to have been a tendency for the crown to be transmitted to a sister's son (W. F. Skene, *Chronicles of the Picts*, Edinburgh, 1867, p. 7), and in the Welsh Mabinogi stories of Branwen and Math ab Mathonwy there are apparently echoes of such a practice even in Wales. The evidence is not sufficient to warrant us in seeing in this custom the vestiges of a decayed matriarchal system. It is possible that the marriage of an acceptable stranger into the tribe was regarded as an accession of strength, and, accordingly, it would not be unnatural to see provision made for the incorporation of his sons in the tribe. The will was the instrument adopted in Ireland by fathers for enabling their daughters' sons to succeed them in the inheritance technically known as *orba cruib ocus sliasta*. The property, however, which a daughter owed to a father's will was not indefinitely transmissible by her to her heirs, and, in Irish law, there was a maxim that 'the property of a woman returns.' As a matter of fact, the daughter had to give a security in such cases that the property would in future be restored to her father's kinsmen on the male side, *i.e.* to her father's agnates. When property passed from a mother to her son, care was taken to see that there was a guarantee of concurrence in the payment of the composition for crimes, and also of the share in the private wars waged by the family.

II. *WALES.*—1. **General.**—The Welsh evolution of the tribe (*cenedl*) was essentially parallel to that found in Ireland, and, consequently, it is clear that a form of the family group has been developed which was practically identical with the *gelfine* of Ireland. This family group was known as a *gwely* (lit. 'bed'), and the land occupied by it was called *tir gwelyog*. The members of these family groups were called free tenants in contradistinction to the *taeogiaid*, or unfree tenants, of Wales.

On the death of their father the daughters took nothing, unless there was a failure of male heirs; the sons divided the land among them in the following manner:

'When brothers share the patrimony between them, the youngest is to have the principal homestead and all his father's buildings and eight acres of land, his boiler, his fuel hatchet, and his coulter; because a father cannot give these three to any one but to the youngest son; and though they should be pledged, they never become forfeited. Then let every brother take a homestead with eight acres of land; and the youngest son is to share, and they are to choose in succession from the eldest to the youngest' (Aneurin Owen, *Ancient Laws of Wales*, London, 1841, i. 543; Wade-Evans, *Welsh Medieval Law*, Oxford, 1909, p. 199).

When the inheritance had been thus divided among the first generation of descendants, it was again divided among the grandsons, and again among the great-grandsons, after which time there was no further apportionment. The re-sharing had to be so arranged that no one should remove from his homestead to another, because the homesteads were of such a number that no one was obliged to be a builder for another.

The right to inherit the share of any deceased relative was not held by any one as a collateral heir of the deceased, but as a direct descendant of the original ancestor. The inheritance, however, stopped short at the fourth generation of descendants. The descendant of the fifth degree had no hereditary claim derived from his ancestor to any portion of the lands of inheritance. Consequently, kinsmen more distantly related than third cousins could not be heirs to each other in the matter of shares in lands of inheritance. On the failure of relatives within this degree, the land escheated to the king. According to the *Venedotian* (or North-West Wales) *Code*, the division between cousins-german and their children took place only if they wished it.

It will be seen from the foregoing statement that the Welsh equivalent of the Irish *gelfine* did not take into account the great-great-grandson; otherwise the two groups are identical, and are a clear proof of the parallel development of the tribal institutions of the two countries. In Wales there were special provisions for inheritance beyond the sixth degree in the case of the descendants of an exile. The process was called *dadanhudd*.

2. **Succession through the female.**—In Wales, as in Ireland, the son of a woman who was married to a stranger that joined her tribe was allowed, under certain conditions, to become a member of his mother's father's tribe, and to inherit along with the tribesmen. In N. Wales, the brothers had a say in the case of a daughter's marriage to a stranger, while in S. Wales (according to the *Dimetian Code*, II. cxxiii. art. 7) a woman might inherit in the absence of a son. In a system of tribal law there was an obvious objection to female succession, in that it naturally tended to alienate the lands of the family, and, by marriage with strangers, to transfer them to members of foreign tribes. When the idea of female succession enters into a social system, it is usually a clear sign of the emergence of the principle of absolute ownership, in place of the older conception of collective agnatic tenure. In Welsh law, the woman's counterpart to succession was her dowry (*gwaddol*).

'As a brother is rightful heir to his patrimony, so is his sister rightful heir to her *gwaddol*, through which she may obtain a husband entitled to land: that is to say, from her father, or from her co-inheritors if she remain under the guidance of her parents and co-inheritors' (Aneurin Owen, *op. cit.* i. 545).

3. **Succession to a kingdom.**—The heir-apparent to a kingdom is called in the Welsh laws *edling*, a term borrowed from the English 'etheling.' He had to be either the king's son, his brother, or his nephew (brother's son).

LITERATURE.—See Literature under FAMILY (Celtic).

E. ANWYL.

**INHERITANCE (Egyptian).**—*Introductory.*—The sources from which we gather our knowledge of this subject are of several kinds: (*a*) mural inscriptions (or isolated stelæ) from private tombs, hypogees of the feudal lords of the provinces, sepulchres of high Theban dignitaries, and funerary temples; (*b*) indirect information furnished by the official temple-inscriptions; (*c*) *graffiti*; and (*d*) papyri, referring more especially to the six last centuries of Egyptian history—a more abundant source than any of the other three. Generally speaking, the sources known to us cover a period extending from the end of the IIIrd dynasty (Amten inscription) to the Græco-Roman period (to which belong the Greek texts, which have enabled Revillout to find the exact equivalent for numerous Egyptian legal terms). As a matter of fact, however, we have no positive information on our subject till about the Saite period. Before that, except in the case of the XIIth dynasty, we have only conjecture and analogy to help us, rather than positive sources of information. Discoveries like the Kahun papyri and the more assured interpretation of Memphite inscriptions allow us to hope for better things in the future.

In spite of the inequality and the restricted number of our sources, and the many differences of opinion among authors on this difficult subject, we may give a certain number of sufficiently well-

founded details concerning inheritance (1) in the succession of the nobility belonging to the provinces or 'nomes'; (2) in the priesthood; and (3) in private family law. As a preliminary, we might note that, as is the case with everything connected with Egyptian property, the question is dominated by a general principle: more or less fictitiously, yet theoretically, all land of the 'eminent' property belongs to the Pharaoh.[1] Even the cessions that he has made by special act from his nominal right of property may always be recalled. This is a principle which we find frequently in other Oriental civilizations, with the same consequences.

**1. Inheritance among the feudal nobility.**—The largest amount of information regarding the laws of feudal inheritance is gained from some inscriptions belonging to the Middle Empire, the theory of investigation being founded on the idea that the laws of the old nobility would preserve more clearly than the laws relating to ordinary private individuals visible traces of the rules of primitive society, and thus furnish a means of guessing what the Egyptian family was like in its origins.

Feudal inheritance must be divided into several different categories. The succession to the exercise of the law and to the position of head of the province, from an administrative point of view, is hereditary from father to son, but is subject to the royal investiture.[2] It bears with it also the inheritance of the priestly prerogatives or laws peculiar to the feudal province.[3] Such a succession is entirely distinct from the inheritance of goods or lands constituting the lordly domain. In this case, as is seen from the 'Contracts of Siut,' for example, Egyptian law distinguishes between two kinds of property for which the hereditary rights are different: (1) the private domain, and (2) the feudal fief.[4] In spite of the lack of agreement on this subject resulting from the obscurity or the small number of the sources at our disposal, it would appear that the feudal fief is regarded as forming part of the succession to the dignity of head of the province, and is, consequently, handed down to the one whose investiture is confirmed by the Pharaoh.[5] As for the private domain, the rule seems to have been equal shares for each of the children, carrying with them the same rights for sons and daughters, and again in turn for their sons and daughters.

It should be added that the patrimony of a daughter is never fused with that of the man she marries, but passes intact to her child at birth.[6] The child inherits separately from its father and from its mother—a characteristic which we find again in the laws relating to private inheritance (see below).[7] This peculiarity of Egyptian law clears up a great deal of the mystery surrounding the difficult feudal inscriptions of el-Bersheh and Beni-Hasan, which have sometimes been interpreted (not without hesitation, however)[8] as signifying that in ancient Egypt there were traces of an inheritance passing to the son of the eldest daughter. This, however, is a confusion arising from the fact that sisters have the same hereditary rights as their brothers, and can pass on these rights after their marriage to their own children.[9] It is a mistake, then, to suppose that there is, in this connexion at least, any text which would suggest the existence of a matriarchate in ancient Egypt. On the other hand, all the acts and other documents known to us establish the independence of the woman in the disposal of her hereditary share, her equality with man in all laws, and the high rank that she holds in the Egypt of history.[1] This generosity towards the woman, which is so apparent in feudal law, is found again in everything regarding succession in private family law.[2]

**2. Inheritance of priestly functions.**—These do not pass to the eldest son by law. As a matter of fact, no charge or function of a priestly character constitutes a property which an individual can dispose of in another's favour *de jure*.

A mistake has been made in taking as a legal assertion of the exercise of this right a series of formulæ like the following: 'I shall leave my son in my place after me.' This assertion is frequently made, but is merely an euonymous expression.[3] An even more definite case would seem to be the office left to a son 'between his hands, as an inheritance for ever,'[4] but it is simply another example of the preceding. This is seen more clearly if we consider the case of the dead, who in their formulæ of adjuration make exactly the same promise to those who are faithful to their memory or to their funerary cult. They promise them that 'you will transmit your offices to your children as an inheritance for ever'—a thing over which they have obviously no control whatsoever.[5]

Legally, the 'titularization' in a priestly charge belongs to the king, as it does in the case of public functions. What really takes place in practice, however, is that the priestly functions are transmitted *de facto* to the members of the same family, and generally from father to son. The Pharaoh considered that this transmission was desirable, and regarded it as the legitimate reward for services rendered by the father.[6] All the same, it remained a favour, even though the favour came to be the general rule. The formal proof of this lies in inscriptions like those of the priest Roy mentioning that Siphah is handing over his father's charge to him.[7]

It is of importance to distinguish carefully here between the priesthood properly so called and the 'perpetual revenues' instituted in connexion with some priestly group or body in return for a funerary cult or some other favour. In the case of these revenues, it may be stipulated in the contract that the benefice is to form part of the inheritance (always supposing, of course, that the priestly function is to remain in the family). In the same way, the benefits attaching to the possession of a priestly charge may be disposed of in an act of cession ([illegible]), so that they pass to one of the children, to several of them, to a collateral relation, to a stranger,[8] in return for certain payments, or, again, to the eldest son on condition that he will provide a maintenance for his father[9] (literally: so that he may be his father's 'staff of old age'). This is, however, not a real hereditary transference. These priestly functions might be compared in a summary fashion with the modern professions of lawyer, summoner, recorder, or notary, the office and benefices of which may be sold or transferred to another, but never without the sanction of the head of the State.

**3. Inheritance in family law.**—The law relating to private individuals offers numerous difficulties, principally as a result of the scarcity of legal documents belonging to the ancient period of Egyptian history. The time of Amasis and the following periods, on the other hand, abound in testamentary acts or acts connected with inheritance, and the untiring work of Revillout on the demotic papyri has thrown a great deal of light on these times.[10] For the preceding centuries, no definite statements can be made without the greatest reserve. The discovery by Petrie, however, of the splendid Kahun documents (XIIth dynasty) enables us to give a far greater cohesion to the fragmentary indications furnished by certain stelæ and certain passages of the tomb inscriptions. The combina-

tion of these, already connecting, to a certain extent, the laws of the XXVIth and following dynasties with those of the Theban and even the proto-Theban period, enables us to interpret the Memphite monuments far more clearly than formerly, at least in their essential points.

The initial principle that the 'eminent' property always belongs (at least theoretically) to the sovereign (or to the lord of the province, or to the provincial god of the temple) lies at the foundation of every interpretation of the laws regulating inheritance. It explains the registering of testamentary or similar acts in the presence of representatives of the sovereign,[1] the forms of publicity, the ratifications given by officers of the crown,[2] and also the mutation taxes collected by them. Revillout has proved at great length the ancient and permanent character of these taxes.[3] As constant characteristics of these laws, we have: (1) the absolute equality of the rights of men and women to will and to inherit, (2) the equal rights of inheritance of all children, whether male or female, (3) the preference given to the eldest, but *only as administrator of the real estate*, (4) the *hæres sui* character of each of the children, and (5) their right of intervention, even in the lifetime of the *paterfamilias*, in the acts disposing of real estate, either gratuitously or under burden of certain conditions.

The act disposing of an inheritance is known by the general name of *amitpi* (lit. 'what belongs to a *domus*,' taking the Latin word to mean what constitutes 'the family estate'—buildings, gardens, lands, etc.). The exclusive meaning of 'will,' suggested by Chabas, and accepted by Griffith, Maspero, and Revillout, was afterwards extended by the three last-mentioned to include various acts of donation, cession, constitution of usufruct, etc. The antiquity of the terminology of the *amitpi* itself and the legal expressions referring to it have been established by tracing it back from the Saite period to the XIIth dynasty, and even up to a certain point of the Memphite period.

The formality of registering the *amitpi* attested by the demotic contracts is proved to have existed as early as the Theban period by a passage of the great Rekhmara inscription. It is called *hobsu*. An examination of the Kahun documents shows that it was in existence even in the XIIth dynasty. This registration of wills is often accompanied by an attestation to ensure the carrying out of the will and to prevent future lawsuits. It consists in a copy or an extract from a copy being placed in the funerary temple of the king or prince to whom the testator is bound, on the one hand, by some function which he performs for him or by a royal pension, or, on the other hand, by a religious endowment (analogous to the Arab. *waqf*). A good example of this is found in the Sonames stela, placed in the funerary chapel of Uadzmâsu.[4] The copy may also be placed in the testator's own tomb.

The act regulating inheritance ought to be completed, if it is to have its full value, by the production of family registers (*uaprotu*), which are necessary to put the heir in legal possession of the property. These registers give an account of relationships, the origin of the property, and the legatee's right to inherit. They are submitted to legalization by competent magistrates, and at the same time the Exchequer is enabled to levy the mutation taxes. The Ptolemaic custom of (1) proving one's right to inherit by authentic documents, (2) paying the ἀπαρχή, and (3) registering

the transaction, on public tablets, on pain of a fine of 10,000 drachms, is a prescription from the time of the Pharaohs, going back at least as far as the XIIth dynasty, which is as far as our present research can follow it.[1]

The pre-eminence of the eldest son, which has been definitely proved for the whole of the last period of history, from Amasis onwards, is supposed, and not without reason, to have existed from the earliest times,[2] or at least from the time of the Kahun papyri.[3] Revillout and Maspero have shown that this peculiarity of Egyptian law persisted in modern Egypt, especially in Coptic families, until the introduction of the civil law emanating from Europe.[4] Later, in the time of Nepherites, we find that the shares to be inherited are regulated by the father, who deals exclusively with his eldest son. He, in his turn, has to settle the claims of his younger brothers and sisters. It is he that administers the hereditary domain for the common good.[5] He is responsible for the dividing of the revenue, as his father's will has decreed, into the shares due to his brothers and sisters and the usufruct instituted for his mother's benefit,[6] whether by will, marriage contract, or act registered during wedlock, before or after the birth of the children.[7] The eldest, as representing his mother, brothers, and sisters, is legally bound to defend their inheritance against strangers. He acts as *nib*, or 'master.' Revillout's opinion is that he had even the right to prevent the family property from being disposed of by his father in any way contrary to family law.[8] This last point, however, has not been definitely proved. Generally speaking, the eldest seems to have taken the place of *paterfamilias* at the death of his father, administered the estate, pleaded in the law courts, and been generally responsible for the family estate to each of his brothers and sisters and other members of the family, including his mother, his aunts, and any children who were still minors. At his death the inheritance passed to the second oldest son,[9] who must observe the clauses regarding usufruct for the benefit of the testator's wife, which he accepted as binding by registered act. The share to which the eldest was entitled does not seem to have been in any way larger than that given to the rest, and the principle of equal shares seems to have been the rule down to the Ptolemaic period, when a law was made entitling the eldest to a larger share than his co-heirs.[10]

In these rules regarding inheritance, we find the same Egyptian characteristic as in everything relating to property in general—the permanence and fixity of the domain (*nuit*) is set above the claims of individuals. The estate, as we find from the stelæ, is often preserved intact with the same name, personality, and boundaries for several centuries.[11]

Two examples of wills belonging to the XIIth dynasty will give us a good idea of the general scheme:

'The last will and testament of . . . surnamed Ankhranu. All my goods, in the gardens or in the town, are for my brother the priest . . . Uahu. Everything connected with them belongs

to this same brother. This was registered at the office of the second conservator of Acts for the South canton, in the year 44, in the 2nd month of Shomu, on the 18th day.'

The above is an example of an elder brother's will, giving his younger brother full possession *post mortem* of all that he had as administrator of the common estate. The following is the will of Uahu himself:

'The last will and testament of the priest . . . Uahu. To my wife . . . surnamed Teti, I bequeath all that was left to me by Ankhranu, all moveable estate which I inherited from him, so that she may give it to any one she likes of the children she has borne me. I leave her also the four slaves bequeathed to me by my brother, so that she may give them to any of the children she likes. With regard to the sepulchre where I shall be laid with my wife, let no one, whosoever he may be, take away any part of it. Touching the buildings which my brother constructed for me and where my wife resides, let no one dare to evict her from there. The *Wakil* Sibu will be my son's guardian.' (Then follows a list of witnesses.)[1]

Hereditary patrimonies always seem to have been kept quite separate. The daughter has the same rights as her brothers. At her marriage, her share remains distinct, as far as we can gather from the contracts known to us. She still has the administration of it and bequeaths it, separately and with entire independence, to her children. The husband may pass part of his property over to his wife, but only in the name of the children born or to be born of the marriage[2] (see MARRIAGE [Egyptian]). The children then have two distinct inheritances, one from the *paterfamilias* and one from the *materfamilias* (Egyp. *nibitpi*). The woman's right to will away her own personal estate has been attested by many different texts. The marriage contracts published up to date lead us to suppose that the widow might receive a usufruct decided by marriage contract or after marriage (by will, etc.). The acquisitions to the joint property during marriage were not subject to the rigorous rules affecting the family estate. In this case (as we find, *e.g.*, in contracts of the time of Psammetichus) these acquisitions are registered in the name of the children that the husband will have or has had by his wife.[3]

All that has been said so far concerns the inheritance of family estate exclusively, and has nothing to do with the transference of an income from any employment or office. This is regulated by a far more complicated law, of which we get some idea from inscriptions of the Memphite period, like the *mastabas* of Nikônkhu[4] and Sanuônkhu.[5] Generally speaking, the divisible revenue from the fixed or casual income coming from the employment is equally divided, wherever possible, among all the children; if not, the benefice goes to the eldest son to divide among his younger brothers and sisters. The remarks concerning the priesthood (see above) apply to the inheritance of the dignity or functions of office properly speaking (distinct from its material advantages).

The double formality requiring (1) a warrant from the central power (the king, the feudal lord, or the temple administrations), and (2) the presence of the children interested at the signing of the act of partage, has given rise (as, *e.g.*, in the case of testamentary acts or *ante mortem* acts of cession in connexion with the family estate) to *abrégés* which describe the event, in a conventional way, in the form of frescoes or bas-reliefs, and may serve, in case of future dispute, to bear witness to what really took place. The conferring of an emblem or insignia by the *paterfamilias*, or the holding of a baton, a *sistrum*, a sceptre (*ḥikū*), etc., or the wearing of some special article of dress by the inheriting son or daughter, serves in these cases as a sort of résumé of the solemn ceremony gone through in the past. There is still a great deal of work to be done in the way of interpreting a number of Memphite and Theban stelæ and frescoes of this kind.

Of lawsuits or disputes concerning inheritance, the best example is found in the long inscription discovered by Loret, in 1898, in the tomb of Mes, a scribe in the treasury of Memphis under Ramses II. This functionary claims and finally obtains a piece of land, his right to which was disputed by relatives. It had been given to one of his ancestors more than a century before by the Pharaoh, who stipulated that it should be the common property of the whole family. The series of lawsuits over this lasted several generations, and exhausted every kind of trial and all the different methods of jurisdiction. An epitome will be found in Maspero, *RC* (Nov. 1905, p. 342), of the masterly publication of these texts by Alan H. Gardiner (see Literature).

GEORGE FOUCART.

**INHERITANCE** (Greek).—The general unity of Greek law is seen in the rules governing inheritance, adoption, and participation in the blood-feud.[1] Rights of property and succession were universally based upon the principles regulating the life of the family, in its extended form as γένος (*gens*, clan); they were the outcome neither of caprice nor of policy directed by a legislator or Assembly, being, in fact, prior to the State, and religious in origin. These primitive ideas, and the rules to which they gave birth, were only slowly subjected to reconstruction as society developed. The general course of this evolution consisted in the discovery or creation of the individual as the unit with which the State had properly to deal. In some departments the substitution of the individual for the group was carried out with logical completeness, but in others the older ideas were very tenacious of life and led to strange results. Naturally, our knowledge is chiefly confined to the details of Attic family law, but the Athenian rules were not necessarily in all respects the most admirable and enlightened.

I. The family property and family cult were conceived as forming a whole, which, as far as possible, remained stable in the hands of successive generations of male representatives. Under such a conception intestate succession within the family (οἶκος) was necessarily the rule, for there was no place for a personal expression of will to direct the devolution of a body of rights and duties which could proceed only along lines sanctioned by immemorial, and

[1] Maspero, *Journal des Savants*, Feb.–March, 1898.

[2] This was separate from the indemnity, consisting of moveable estate (*hanmu*), money, or income, decided upon in the marriage contract, to be paid in the case of desertion or divorce. There was also a resolutory clause for the case of adultery on the part of the woman (see MARRIAGE [Egyptian]).

[1] See Mitteis, *Reichsrecht und Volksrecht*, p. 72: 'es ist nicht eine Summe einzelner Stadtrechte, sondern das Recht einer grossen, weltbeherrschenden Nation.'

therefore sacred, usage. Even when testation became possible, the will was for long but a precarious means of regulating succession, because generally in conflict with the cupidity of relatives who could always fall back upon the traditions of intestate succession. 'At Athens a will was thought fair game' (Wyse, *The Speeches of Isæus*, p. 650).

According to the letter of the Solonian law, a man with a legitimate son of full age could not make a will at all, the devolution of his estate being entirely beyond his control (Is. vi. 28). Whether he could by any legal means disinherit his son is at best uncertain—at any rate not by will.[1] Nor could he disregard his daughter's rights (Is. iii. 42: *οὔτε γὰρ διαθέσθαι οὔτε δοῦναι οὐδενὶ οὐδὲν ἔξεστι τῶν ἑαυτοῦ ἄνευ τῶν θυγατέρων, ἐάν τις καταλιπὼν γνησίας τελευτᾷ*). Isæus certainly speaks too strongly, as he practically asserts that the testamentary power permitted to a man whose only legitimate descendants were girls, still unmarried, meant simply the appointment of their husbands, and did not include the right to bestow legacies outside his family. Usually, if a man wished to divert his estate from his next-of-kin, he would adopt the legatee in his will, with the essential proviso that he must marry the daughter; but it seems clear that he might, if he wished, bequeath her and the estate together, without adopting.[2] The original significance of a will being to enable a man without a son to adopt one, thus in effect also enabling him to defeat the anticipations of the next-of-kin, a will which adopted any other than the next-of-kin himself, and *a fortiori* one bequeathing both daughter and estate without at the same time adopting the devisee, challenged assault; and a perfectly legal will was always liable to be annulled by the omnipotent jury on grounds of equity.[3] If the estate was worth powder and shot, the girl would inevitably become *ἐπίδικος*, claimed at law as 'heiress' (*ἐπίκληρος*) by the next-of-kin. Anyhow, the law was explicit that the estate could not be willed away from daughters, but must go 'with them' (Is. iii. 68). It was generally futile for a man to try to divert his estate from his legitimate offspring on the one hand, or from his next-of-kin on the other. But custom, if not law, allowed him to give by will a special legacy to a son, even an illegitimate son, or to non-relatives or religious bodies, such bequests often being of considerable magnitude. Only the childless man of full age and in full possession of his faculties was at liberty to choose his own heir; and even he was powerless to thwart the application of the traditional rules of inheritance *ab intestato* if the cupidity of the next-of-kin tempted him to try his luck against the will.[4]

The right of inheritance of legitimate male descendants, including the son adopted *inter vivos* (see ADOPTION [Greek]), was indefeasible, and was placed on a different footing from all other claims; for collaterals and testamentary heirs must claim before the Archon (*ἐπιδικάζεσθαι*), and get an order of him, or ultimately of a *δικαστήριον*, before taking possession of the estate; *i.e.*, they must submit their claim to public challenge (Is. iii. 59). Sons of the body, or one adopted *inter vivos*, entered on possession at once without this process, and had as against a third party in actual possession an 'action of ejectment' (*ἐξούλης δίκη*). On the other hand, lineal heirs could not escape the inheritance with all its encumbrances, whereas for all other heirs declinature was possible.[5] Rights of primogeniture were unknown in Greece, although an eldest son had by courtesy, as *primus inter pares*, a privilege of choice (*πρεσβεία*). The law asserted the principle of equal division (Is. vi. 25: *τοῦ νόμου κελεύοντος ἅπαντας τοὺς γνησίους ἰσομοίρους εἶναι τῶν πατρῴων* [whether the sons were by the same mother or not was immaterial]). If a married son predeceased his father, his sons were entitled to his share in equal parts; *i.e.*, distribution was *per stirpes*.[6]

[1] At Sparta in the 4th cent. B.C., if the story of the law passed by the Ephor Epitadeus is true (Plut. *Agis*, 5), this was possible.

[2] Cf. Aristoph. *Vesp.* 583.

[3] Cf. Is. i. 41: *χρὴ δέ, ὦ ἄνδρες . . . ὅπερ ποιεῖτε, τοῖς κατὰ γένος ψηφίζεσθαι μᾶλλον ἢ τοῖς κατὰ διαθήκην ἀμφισβητοῦσιν.* It was a symptom of the moral collapse of Bœotia in the 3rd cent. B.C. that childless men left their property by will away from collaterals, while many who had children left the bulk to their clubs (Polyb. xx. 6).

[4] Hence the Speeches of Isæus, being all about claims to property, turn not upon evidence of its legal transfer, and the like, but upon proofs of kinship. For the statute of limitations, which only partially protected the will, see Is. iii. 58.

[5] Cf. Dem. xxii. 34: *κληρονόμον καθίστησιν ὁ νόμος τῆς ἀτιμίας τῆς τοῦ πατρός.* In the Gortynian Code the son is not *heres necessarius*, as at Athens.

[6] The principles of equal shares to all of the same degree, and of representation and distribution *per stirpes*, seem to have been applied also to collaterals and when the estate passed through daughters.

At Athens daughters had absolutely no rights of inheritance by the side of their father's sons; but their brothers were under obligation to provide them with a suitable dowry and to give them in marriage (Dem. xlv. 74).[1]

Failing lineal heirs, or a valid and undisputed adoption by will, it was necessary to fall back upon the rules of intestate succession.

The law, obscure already in the 4th cent. B.C.,[2] ran as follows: 'Whosoever dies without a will, if he leave behind him daughters, [the next-of-kin] with their hand [shall inherit]. If he do not [leave daughters], the following shall be masters of his estate. If there be brothers of the same father [as the deceased, they shall inherit]; and if there be legitimate children of brothers, they shall take their father's share. If there be no brothers or brothers' children, [sisters, of the same father as the deceased, and children][3] of them, shall inherit, in the same way. But males and the issue of males shall have precedence [over females and the issue of females], if they have the same origin [as the said females], even if [such males] be in degree more distant. If there be none on the father's side as far as children of first cousins, the collaterals on the deceased's mother's side shall in like manner inherit. But if there be no descendants on either his father's side or his mother's side, within the prescribed limits, the nearest in descent on his father's side shall inherit. But an illegitimate son or illegitimate daughter cannot claim as next-of-kin either family cult or family estate, if born after the Archonship of Eukleides.'[4]

Succession at Athens, therefore, was arranged according to a series of stocks: (*a*) lineal descendants of the deceased; failing these, an heir must be sought in (*b*) that inner circle of relatives constituting the deceased's *ἀγχιστεία*: (1) descendants of his father; (2) descendants of his paternal grandfather; (3) descendants and collaterals of his mother; (4) failing all these, the nearest kinsman of any degree discoverable on the father's side.[5] The downwards and outwards limit, which was also the limit of the *ἀγχιστεῖς*, was given by the deceased's first cousins once removed, *i.e.* children of his first cousins (cousins-german). That is to say, ultimately any great-grandson could claim as heir-at-law to succeed any grandson of a common ancestor; with respect to that inheritance a new succession began at this point, so that second cousins, as such, had no claim upon one another's estate, but each found his heir, failing a son, in the circle of his own *ἀγχιστεῖς* as aforesaid.[6] The *οἶκος* included four generations, down to great-grandsons (second cousins to one another).[7] Such an one could not inherit from any below the third generation, being himself, as heir (=son), the fourth. That is to say, the third generation could call upon the fourth to undertake the duties of sonship—in primitive times doubtless without escape.

'Whether we look at the rights of succession, or at the duties of the blood-feud, or at the honours owed to the dead, we discover on all sides signs that the *ἀγχιστεία* was not a conception that could be extended indefinitely' (Wyse, p. 566). It is an archaic classification, one of the oldest facts of Greek social

[1] There was no legal definition of a suitable dowry. A father in Lys. xxxii. 6 stipulates in his will the amount to be given; but this probably could not bind his heirs as a matter of law. Inscriptions seem to prove that at Mykonos (*BCH* vi. [1882] 590), and at Ephesos (Dittenberger, *Syll.*[2], Leipzig, 1898–1901, no. 510, l. 55), the law was the same as at Athens.

[2] Cf. Aristotle, *Ath. Pol.* 9: *διὰ τὸ μὴ γεγράφθαι τοὺς νόμους ἁπλῶς, μηδὲ σαφῶς, ἀλλ' ὥσπερ ὁ περὶ τῶν κλήρων καὶ ἐπικλήρων, ἀνάγκη πολλὰς ἀμφισβητήσεις γίγνεσθαι.* Solon, who perhaps really was the first to redact these laws, was, of course, simply formulating the practice of immemorial antiquity. The law is paraphrased by Isæus (xi. 1).

[3] But the gap here may be much larger (see J. H. Lipsius, *Att. Proc.*[2], Berlin, 1887, p. 584).

[4] The text of the law, clearly not complete, is quoted in [Dem.] xliii. 51.

[5] Nothing is known about the disposal of *bona vacantia* at Athens. Perhaps the case never arose; at any rate there is nothing like the Roman *usucapio pro herede*.

[6] Strictly, the term *ἀγχιστεία* did not embrace sons or grandsons, but meant those who succeed on failure of lineal heirs, and must, therefore, prove their title (Is. iii. 59).

[7] Cf. Cic. *de Off.* i. 17: 'Prima societas in ipso coniugio est; proxima in liberis; deinde una domus, communia omnia . . . sequuntur fratrum coniunctiones, post consobrinorum sobrinorumque, qui cum una domo iam capi non possint, in alias domos tanquam in colonias exeunt.'

organization, perhaps designed to apply not originally to the transmission of property, but to distinctions of religious obligation towards the dead, and community in blood vengeance.

The effect of the maxim *κρατεῖν τοὺς ἄρρενας* was to split each stock into two sections, the male excluding the female. Sons and sons' sons inherited before daughters and daughters' issue. Similarly, a brother's son, though a step further from the common ancestor (the deceased's father in this case), excluded his own aunt, the deceased's sister. This principle governed all successions, whether in the direct line or as between collaterals. But it held only within each in turn of the orders or stocks of succession, so that a female in stock (1) excluded a male of stock (2). Thus, a sister of the deceased by the same father (*ἀδελφὴ ὁμοπατρία*) ranked before his male cousin on the father's side (*ἀνεψιὸς πρὸς πατρός*), because, the condition *ἐκ τῶν αὐτῶν*, or issue from the same point on the stem, not being realized, male preference did not here operate; a female cousin on the father's side (*ἀνεψιὰ πρὸς πατρός*) would, on the same principle, exclude the uterine brother (*ἀδελφὸς ὁμομήτριος*). The law called to succession the paternal kindred down to and including first cousins once removed before admitting the relatives on the mother's side. And these in their turn ranked as follows: (1) uterine brothers, and issue; (2) uterine sisters, and issue; (3) maternal uncles of the deceased, and issue; (4) maternal aunts, and issue. The limit here also was first cousins' children. The symmetry of the table of orders of succession is intelligible; the real difficulty is to understand how precedence of males was combined with the principle of representation.[1]

Greek family law does not exemplify the *levirate*, or marriage of the widow by the deceased's brother for the purpose of perpetuating the line. The wife, as such,[2] could not inherit from her husband, whose estate, failing lineal heirs, must pass to his father's or mother's relatives. An analogy to the levirate is perhaps to be found in Sparta, where a wife might be commissioned by her husband to bear children to another (Xen. *Resp. Lac.* i. 7; see M. P. Nilsson, 'Die Grundlagen des spartanischen Lebens,' in *Klio*, xii. [Leipzig, 1912] 325 ff.).

Did Attic law recognize the 'melancholy succession' of parents to the estate of deceased children? A passage in Isaeus (xi. 30) seems to assert that under certain conditions a mother might succeed her son, and perhaps in his time the law was interpreted as containing an implicit recognition of her right; but this contradicts another passage in the same speech (xi. 17). That a father ranked before all collaterals has been deduced from the obligation of sons to maintain parents and grandparents (Is. viii. 32); but this would prove too much, if it will bear any inference at all (cf. J. H. Lipsius, *Das attische Recht und Rechtsverfahren*, ii. 550).

If a man, having no son of his body, died without adopting an heir, leaving only a daughter (or daughters), she was in a peculiar position, in that she could not claim her father's estate, but was herself liable to be claimed at law (*ἐπίδικος*) by collaterals as an appendage thereto (Is. x. 5). She was an *ἐπίκληρος* 'on the estate,' and became the object of a claim at law (*ἐπιδικασία*), in which a court[3] decided who was next-of-kin and entitled to take her to wife (*συνοικῆσαι τῇ γυναικὶ κύριος*, Is. viii. 31) with the estate.[4]

The rules of succession to an *ἐπίκληρος* followed those of intestate succession to the estate (*κλῆρος*) itself, with the obvious modifications, the general principle being that she was the prize of that male relative (*ἀγχιστεύς*) who would have inherited the estate *ab intestato* had she not existed. Claimants fell into stocks as before. Within each stock the rule of *seniores priores* may have been followed. As the primitive aim had been to continue the male line, descendants and collaterals of the deceased's mother were perhaps not originally admissible; the tendency would be to enlarge the list of claimants when property was at stake, and in the 4th cent. B.C. the mother's relatives had a legal claim to the *ἐπίκληρος* just as they had to the *κλῆρος*.

The next-of-kin could not be compelled to marry the girl if she was poor; he had the choice of bestowing her in marriage with a portion on a scale fixed by law according to his own property-classification, and it was the Archon's duty (on which see Is. vii. 30) to see that he adopted one or other course (law in [Dem.] xliii. 54: *τῶν ἐπικλήρων ὅσαι θητικὸν τελοῦσιν*, κτλ.). The decision of the next-of-kin would generally turn upon the size of the estate, and a rich 'heiress' was naturally a coveted prize. If he was himself below the third property-class, he was apparently free of obligation to dower. Contumacy was probably construed as *κάκωσις ἐπικλήρου*,[1] the penalty for which was serious. Her enforced dowry would probably make it worth the while of a more distant kinsman to take the girl. In the case of a rich *ἐπίκληρος*, waiver by the first kinsman entitled to her opened the door to the next in succession. In Sparta apparently the next-of-kin gained the right to bestow in marriage an *ἐπίκληρος* upon whom he pleased, and this was one cause of the gradual concentration of wealth (Aristotle, *Pol.* ii. 9. 1270a; see W. L. Newman, *Pol. of Ar.*, Oxford, 1887, ii. 327).

The estate to which an *ἐπίκληρος* was appended did not pass to the next-of-kin who married her, but to the son (*θυγατριδοῦς*) or sons on attaining majority—their father in the meantime being controller (*κύριος*) of the estate, and enjoying the usufruct (Is. iii. 50). The *ἐπίκληρος* was thus not strictly an 'heiress,' but an intermediary through whom the estate passed to her father's heir (Is. viii. 31).[2] Whether her first son had an exclusive right to his grandfather's estate is not clear ([Dem.] xlvi. 20: *καὶ ἐὰν ἐξ ἐπικλήρου τις γένηται, καὶ ἅμα ἡβήσῃ ἐπὶ διετές, κρατεῖν τῶν χρημάτων, τὸν δὲ σῖτον μετρεῖν τῇ μητρί*—not in accord with Is. viii. 31: *οἱ γενόμενοι παῖδες*, κτλ.; see Wyse, p. 361). It is obvious that it might indeed be little to the advantage of the boy to pass out of his father's *οἶκος* into that of his maternal grandfather by posthumous adoption, leaving his brothers to inherit the paternal estate. One thing, however, is certain—that primitive family law or custom took no account whatever of personal likes or dislikes; it was left to *esprits forts* and the lawyers of a later age to defy or evade its rules, pending their abrogation by the emancipated community.

Interest in the *ἐπίκληρος* culminates when the complications of previous marriage are considered. What happened if she had been given in marriage by her father to one[3] who was not also next-of-kin? Isaeus is explicit that the next-of-kin had an absolute right to compel her to abandon her husband and to marry her himself (Is. iii. 64: *πολλοὶ συνοικοῦντες ἤδη ἀφῄρηνται τὰς ἑαυτῶν γυναῖκας*). In practice, doubtless, she might escape by sacrificing the estate, if the next-of-kin would be satisfied with that; but such bargains can hardly have been legalized, and what fiction was in use to prevent the next in succession from asserting his claim upon waiver by the first is not known (cf. Is. iii. 74; And. i. 121: *Καλλίας λαγχάνει τῷ υἱεῖ τῷ ἑαυτοῦ τῆς ἐπικλήρου, ἵνα μὴ ἐπιδικάσωμαι ἐγώ*). Perhaps the existence of male issue of the marriage may have extinguished the claims of the next-of-kin, as at Gortyn. General considerations of equity are quite inapplicable to the problem. 'All the rules

[1] Would representation be possible when the division was amongst cousins' children, and so bring in the fifth generation, which fell outside the *ἀγχιστεία*? When Isaeus (vii. 18 f.) says that male preference really began only with first cousins, he is simply dishonest (see Wyse, p. 560).

[2] She might be, and in fact perhaps generally was, related to him by blood.

[3] At Sparta it was the duty of the kings *δικάζειν πατρούχου παρθένου πέρι, ἐς τὸν ἱκνέεται ἔχειν, ἣν μή περ ὁ πατὴρ αὐτὴν ἐγγυήσῃ* (Herod. vi. 57). This power of decision was important, and sometimes entailed serious consequences for the body politic (cf. Aristotle, *Pol.* 1304a: *καὶ περὶ Μυτιλήνην ἐξ ἐπικλήρων στάσεως γενομένης*, κτλ.; and so in Phokis, *ib.*). At Sparta, king Kleomenes having died *ἄπαιδος ἔρσενος γόνου*, his daughter Gorgo was married by her uncle Leonidas (Herod. vii. 205).

[4] The law in respect of girls not yet marriageable is not known. The Gortynian Code permits the 'heiress' (*πατρωιῶκος*) to be married when she is twelve. If Blass has rightly restored Aristotle, *Ath. Pol.* 56. 7, fourteen was the lower limit at Athens.

[1] It must be borne in mind that a female, married or unmarried, without brothers or grandfather became *ἐπίκληρος* on her father's death, though she had not a penny in the world (and whatever her age), and had a claim as such upon the next-of-kin. The intention of the institution was not to discover who should receive a windfall, but upon whom lay the sacred duty of perpetuating the dead man's line. Naturally, as the older religious ideas at the basis of the family decayed, the purely financial aspect of the situation tended to become paramount.

[2] Hence she is never called *κληρονόμος* (cf. Dem. lvii. 41: *ἐπικλήρου κληρονομήσας*).

[3] If he had been adopted, in lifetime or by will, he was, of course, 'son,' and his wife did not become *ἐπίκληρος* on her father's death. If the will or the act of adoption were contested and declared invalid, she would at once become *ἐπίκληρος* and be subject to claim.

concerning the *ἐπίκληρος* are a violation of equity' (Wyse, p. 609).

It seems that a man, on becoming entitled to an *ἐπίκληρος*, could put away his wife, or at least bestow her on another, in order to take advantage of his good fortune (cf. Dem. lvii. 41: *ἐπικλήρου κληρονομήσας εὐπόρου*).

II. The interest of the Attic law of inheritance lies largely in its application of the rules governing primitive society to a democratic organization steadily drifting away from the old point of view. The Gortynian Code[1] exhibits these principles as modified in a Dorian oligarchical society.

At Gortyn intestate succession is the rule, for testamentary power is unknown, so that the Code in this respect is more archaic than Solon's laws. Male precedence is in force, as at Athens. The estate passes to the following series of heirs: (1) the deceased's children, grandchildren, or great-grandchildren; (2) his brothers, their children, or grandchildren; (3) his sisters, their children, or grandchildren; (4) failing these, it goes to 'those entitled' (*οἷς κ' ἐπιβάλλῃ ὀπῶ κ' ᾖ*, i.e. the next-of-kin); (5) failing a kinsman, to 'those constituting the family lot' (*τᾶς Fοικίας οἵτινές κ' ἴωντι ὁ κλᾶρος*, i.e. the serfs on the estate, who are thus a man's heirs in the last resort).[2]

The Code is in advance of the Athenian law in its treatment of women, for (1) although sons have sole right to the town-house and its furniture, and the cattle, daughters share in the rest of the patrimony, a daughter's share being fixed at half that of a son;[3] (2) a woman has rights of several property absolute during her lifetime against both husband and children; (3) her property is transmitted in the same way as a man's estate.

The Code contains elaborate rules about the *πατρωιῶκος* (=*ἐπίκληρος*). Clearly the original idea of providing male succession to the deceased has come to be felt less strongly than at Athens, and the pecuniary interests of the relatives override the conception of duty to the dead; in especial, the institution conflicts with the right of inheritance given to women by the Code. The Gortynian *πατρωιῶκος* is, in fact, a true 'heiress,' retaining her inheritance in severalty for life, and is not, as at Athens, a mere vehicle of the estate to her son.[4] The right to marry the heiress belongs to (1) her father's brothers according to seniority—if there are several *πατρωιῶκοι*, the second brother is entitled to the second sister, and so on; (2) if there are no living brothers of the dead man, the sons of the senior uncle claim their cousins in order of seniority; but any living uncle excludes his nephews, sons of a predeceased elder brother. There is nothing to show that the right to marry the 'heiress' passes beyond these to the other collaterals; i.e., the conception of the *ἀγχιστεία* is looser than at Athens. The rule is that each claimant lays his account with one *πατρωιῶκος* only (v. 27: *μίαν δ' ἔκεν πατρωιῶκον τὸν ἐπιβάλλοντα, πλίαδ δὲ μή*); i.e., if a compromise is accepted by him, he cannot go on to assert a claim to the next sister; and, conversely, compromise with the senior claimant frees the *πατρωιῶκος* from all. But, if there are no next-of-kin, she is required to find her husband among her tribesmen, if possible—giving them the chance by public advertisement.

[1] The date of the actual Code is perhaps not earlier than the 5th cent. B.C., but its basis is very much older. The sections concerning inheritance and heiresses seem to give the whole law on their subject, and to belong to the newest section of the Code.

[2] But on this see Kohler-Ziebarth, *Das Stadtrecht von Gortyn*.

[3] A daughter previously given in marriage with dowry by her father has no further claim, the dowry being fixed in amount by law as half a son's share in the intestate estate. Ephoros (quoted by Strabo, p. 482: *φερνὴ δ' ἐστίν, ἂν ἀδελφοὶ ὦσι, τὸ ἥμισυ τῆς τοῦ ἀδελφοῦ μερίδος*) makes this the universal rule in Crete.

[4] This is marked as an innovation in the Code by the fact that a retrospective limit of its working is given. The definition of a *πατρωιῶκος* is the same as at Athens.

The Code deals with the situations arising when one or other of the parties is too young to marry, or is unwilling to do so. Neither is, in fact, compelled to marry the other; the next-of-kin may simply waive his claim, in which case it is open for the next in succession to claim, or he may accept the legal indemnity of half the estate (which frees the *πατρωιῶκος* from further claims of next-of-kin). It rests solely with the *πατρωιῶκος* to decide whether she will marry or indemnify the claimant.

The Code lays down definite rules for the following interesting cases: (*a*) when a woman who is already married becomes *πατρωιῶκος* by the death of her father and (or) her brother, and (*b*) when a *πατρωιῶκος* becomes a widow. In each case the liabilities turn upon the presence or absence of children. (*a*) The married *πατρωιῶκος* is not compelled, but is at liberty, to separate from her husband: (1) if there are children (*τέκνα*), the rights of all claimants are extinguished, and she may remain *in statu quo*, or, by surrendering one-half of the estate to her husband,[1] regain her freedom to re-marry within her tribe; (2) if there are no children, the rights of the next-of-kin operate, but, at the price of half of the estate paid to him who has first claim, she can either remain *in statu quo* or separate from her husband and re-marry within her tribe. (*b*) In the case of a *πατρωιῶκος* who becomes a widow: (1) if there are children, rights of relatives lapse, and she may re-marry, if she pleases, within her tribe, without penalty; (2) if there are no children, the first marriage is of non-effect, the rights of relatives revive, and she must either marry the next-of-kin or indemnify him, as before. The 'heiress' must, therefore, marry under any circumstances; she is not free from that obligation either through failure of next-of-kin or by indemnifying. Again, it is not until she has borne a child that she has fulfilled her duty wholly, and is thenceforth free. On the other hand, she cannot, as at Athens be forced into a distasteful union.

III. An interesting inquiry is as to what happened when this body of Hellenic legal principles came into contact with other systems—those of the East and Egypt, and finally with that of Rome. Especially interesting must have been the relations established in the great Hellenistic foundations of the Seleucids. As regards Ptolemaic Egypt, the answer is being given by the Papyri (cf. Mitteis, p. 46 ff.). In the East the Syrian Code shows how the social structure was modified by the combined working of Hellenic tradition and Roman legal ideas in the early centuries of the Empire.

The Syrian Code, in its rules of intestate succession, exhibits the following chief analogies with Hellenic law: (1) natural right of legitimate children to inherit the patrimony;[2] (2) a succession of stocks; (3) male precedence;[3] (4) equal distribution within the stocks; (5) rights of inheritance given to relatives of the deceased's mother on failure of the paternal side.

On the other hand, the Code exhibits the following departures from the Athenian rule: (1) daughters rank with sons, and sisters rank with brothers of the deceased, for equal share; (2) his mother ranks with his brothers and sisters for an equal share with them; (3) yet issue of daughters and sisters inherit *after* the agnates,[4] i.e. after his uncles and their sons, but before his aunts and their issue. A fourth divergence would lie in the fact that, by the Syrian rule, the father inherits before brothers and sisters of the deceased—if it were proved that at Athens he could not inherit from a son.

The right of daughters to some share in the patrimony was already recognized in the Gortynian Code; but it seems probable that these divergences from the general Hellenic practice are due to the influence of Roman law, and perhaps to definite interference on the part of Constantine (see Mitteis, p. 342 ff.).

[1] The law says simply, 'parting the estate as laid down by law' (*διαλακόνσαν τῶν κρημάτων ᾇ ἔγραπται*); and this might mean that in this case also the indemnity goes to the next-of-kin (see *Recueil des inscr. jurid. grecques*, i. 474). The next-of-kin might, of course, already be her husband.

[2] Cf. Varro: 'Venio nunc ad alterum genus testamenti quod dicitur physicum, in quo Graeci belliores quam nostri' (fr. quoted in F. Schulin, *Das gr. Testament verglichen mit dem römischen*, Basel, 1882, p. 16).

[3] The Code gives a reason for this: 'Denn die Gesetze suchen den reinen Samen heraus, und wer der Nächste ist, den bringen sie der Erbschaft nahe' (quoted in Mitteis, 326).

[4] i.e., daughters and sisters cannot be represented, as in Attic law, by their children; but sons are represented by their sons.

W. J. WOODHOUSE.

**INHERITANCE** (Hebrew).—Our word 'inheritance' has no exact equivalent in Hebrew. The various terms which denote possession may be used when the possession comes in the way of succession to a person deceased. But, if this is the case, the context must show how the possession came about. When we inquire of the documents in the Canon how this succession was regulated, we find no answer until we come to the latest period of the history. The oldest code of laws is silent on this point, and the patriarchal narratives reflect later conditions. The Biblical writers evidently supposed matters of this kind to be regulated by well-known family and tribal customs.

For Israel's nomadic stage, therefore, we are left to conjecture. Fortunately the customs of the desert are much the same in all ages, and conjectures based on the analogies of nomad life may claim a considerable degree of certainty. Individual ownership of land is unknown in this state of society, and personal property is small in amount. The man owns his arms, the woman her ornaments. The cattle, while nominally the property of the shaikh, are really common to the whole clan. The spoils of war are divided among the able-bodied men. At a man's death his arms are seized by the next-of-kin, or are divided, like the spoils of war, among the men able to bear arms. Women do not inherit, because they are themselves the property of their husbands and pass to the heirs with the rest of the estate. This was the rule in Israel even after the settlement in Canaan. Muhammad's regulation, giving a daughter half as much of the estate as went to a son, was an innovation on the earlier custom, according to which none could be heirs who did not take part in battle.[1] In the nature of the case Hebrew custom must have been the same.

Israel established itself in Canaan partly by conquest, partly by amalgamation with the older inhabitants. So far as the arable land was acquired by conquest it was treated like other spoils of war. Each family group assigned portions for tillage to its able-bodied men, but without relinquishing title. On the other hand, we must suppose the Canaanites to have had private property in land. The cultivation of the vine and olive is hardly practicable under any other system. Light on the state of things in this period may be got from present custom in Palestine. Here we find private ownership of part of the land, and along with it communal ownership of another part. The land of the commune is laid out in portions of equal value, and then assigned by lot to the cultivators.[2] The frequency with which the *lot* is spoken of in the OT indicates some such system of allotment. But private property in land is also indicated. Naboth refuses to sell his vineyard, and the narrative shows that there were no restrictions on his title.[1] The patriarchal stories represent Abraham and Jacob as buying land from the earlier inhabitants.[2]

[1] Qur'ān, ii. 12; W. R. Smith, *Kinship and Marriage in Early Arabia*, Cambridge, 1885, p. 64.

[2] F. Buhl, *Die sociale Verhältnisse der Israeliten*, Berlin, 1899, p. 57 ff.

While we suppose that private property in land was fully recognized in this period, it is probable that the right of inheritance was limited to male kinsmen. There is no clear case of women owning land before the Exile, though they had personal property. The mother of Micah saved a considerable sum of money, and her title was recognized by her son.[3] Abigail brought five slaves to David, though this seems to have been the whole of her fortune. Rachel and Leah each received a slave girl from her father.[4] The case of Achsah, who is said to have received territory from Caleb,[5] forms no exception, for Achsah is only the eponym of a clan. Laban's daughters, just referred to, say quite frankly that there is nothing for them in the house of their father, and that he has sold them and eaten up the price. The language shows conclusively that at the time when the account was written daughters had no claim as heiresses, and that the most they could hope for from a generous father was some part of the price that he had received for them. The persistency with which the Hebrew writers represent the widow as an object of charity indicates that widows were without claim on the estates of their husbands.

The dormant rights of the clan may have re-asserted themselves when a man died. But in the period of the monarchy it probably came to be recognized that the sons were the rightful heirs. Gifts by the father during his lifetime were recognized as valid, if we may argue from the conduct of Abraham towards the sons of his concubines.[6] But the inheritance went to all the sons—there was no difference between the son of a wife and the son of a concubine. The sons of Zilpah and Bilhah are on the same footing with the sons of Rachel and Leah.[7] Probably this was always the theory, and we may venture to adduce the Babylonian parallel. Here we read that, if a man recognizes the son of a slave woman by calling him 'my son,' that son is entitled to a share of the estate. In Hebrew practice the son of a slave woman often suffered injustice. The expulsion of Ishmael is an illustration, and so is the banishment of Jephthah by his brothers.[8]

The first-born son had special rights.

The law in Deuteronomy, which probably reproduces ancient custom and guards it from abuse, is as follows: 'When a man has two wives, one beloved and the other hated, and they bear him children, if the firstborn belong to the hated wife, then in the day in which he gives the inheritance to his sons he shall not be allowed to treat the son of the beloved wife as the first-born instead of the son of the hated. He shall recognize the firstborn (son of the hated) by giving him a double portion of whatever he has; for he is the firstling of his strength and the right of the firstborn is his.'[9]

The birthright seems to have been originally connected with the chieftainship of the clan. That some sort of priestly prerogative also belonged to the oldest son seems clear from the Pentateuchal narrative, which makes the tribe of Levi a substitute for the first-born sons of the people, and this prerogative was probably connected with the worship of the clan ancestors.

The sharpness with which the law forbids the transfer of the birthright to any but the actual first-born indicates that earlier the matter had been in the power of the father. This also is illustrated by the patriarchal story where Isaac is induced (unwittingly, to be sure) to give the

blessing to Jacob, and where Jacob in turn prefers Ephraim to Manasseh. The Chronicler believes that the birthright was taken from Reuben and given to Joseph.[1] All these stories are the reflexion of tribal relations, but they show that the transfer of the birthright was not a strange conception to the writers. We are nowhere told that the double portion given to the oldest son was to enable him to support the widow and the younger children, though this has usually been assigned as the reason. That the dependent members of the family passed into the care, or rather into the possession, of the heir, we have already had occasion to note. The right of the first-born son of a king to succeed to the throne was not necessarily a part of his prerogative, as we see in the case of Solomon.[2]

In default of sons the patriarchal system makes the brothers inherit, and after them uncles, that is, father's brothers. Next come cousins in the various degrees, always on the father's side; for, the women being excluded, their descendants have no rights. The Hebrews, however, always felt it to be a misfortune that a man should have no son to succeed him. The root of this feeling must be sought in the animistic stage of religion. The spirit of a man is left without sustenance and honour if he has no son to pay these dues. To prevent the name from being blotted out, custom early enjoined the levirate marriage, and, as in other cases, the custom was finally embodied in the written law. Deuteronomy is specific on this:

'When brothers dwell together, and one of them dies leaving no son, the wife of the deceased shall not be given to a stranger. Her brother-in-law shall come to her and take her to him for a wife and perform a brother's duty. And her first-born son shall succeed to the name of the brother who is dead, and his name shall not be blotted out from Israel.'[3]

How seriously the brother's duty is taken is made clear by the story of Tamar in the book of Genesis,[4] where the reason given for Onan's early death is his refusal to raise up seed to his brother, and where, also, it is held that Tamar, when refused another husband, is justified in taking a substitute by deception. In Deuteronomy the recalcitrant brother is put to open shame by the ceremony of pulling off the shoe.[5]

The arrangement under discussion is a survival from the time when a man's wives went to the next-of-kin. In fact, the levirate was the duty, not of the brother alone, but of the next-of-kin, whoever he might be. So Judah was the one upon whom the duty devolved when his son was in default. This is also the theory of the book of Ruth. Ruth offers herself as wife to Boaz in the belief that he is next-of-kin to her deceased husband. Boaz informs her that there is a nearer kinsman, and he takes her only after this other has refused. Here the connexion with the right of inheritance is made clear by the statement that the kinsman has the right of redemption of such real estate as belonged to the deceased, the wife going with it. The book is not altogether clear, because it does not give the first-born son to the deceased; but in its general conception it agrees with what we know elsewhere of the levirate. At the present day it is Jewish custom to release the brother from his duty. The subject has a place here only so far as it throws light on the Jewish ideas of inheritance. The levirate was in force so long as it was thought necessary for a man to have a male heir. When the right of daughters to inherit was recognized, the law forbade the marriage of a woman to her brother-in-law.

The device of adoption, by which a man who has no heir of his body begotten takes a child from another family to be his son, seems not to have been much in use among the Hebrews. Where Abraham expects his slave to become his heir, however,[1] we think of the slave as having been made a 'son' of the clan. In the patriarchal period we find also the recognition of Ephraim and Manasseh by Jacob,[2] which may be called an adoption; and the reception of Moses into the family of Pharaoh[3] shows the idea not to have been unknown to the writers of these stories. At a later date one of the genealogists tells of a Hebrew who had no son, and who gave his daughter to his Egyptian slave to wife, and the children were counted in the Hebrew line.[4] None of these cases can be called historical; and Esther, who was brought up by Mordecai, came to him not by adoption, but as his ward by the ordinary law of inheritance.[5] The declaration of the book of Proverbs, that a maid may 'inherit' from her mistress, is too slight to build upon.[6]

We come to a time, finally, when daughters are allowed to inherit. It would not be strange to discover that the idea of women holding property arose in connexion with the clan sagas. When the clans were brought into genealogical relations, those which had feminine names appeared as daughters of the eponym heroes of the whole people. As all the clans had territory in the land of Israel, it was believed that the patriarchs had given portions to daughters as well as to sons. The story of Achsah, already mentioned, is in point.[7] So is the statement that a daughter of Asher has a place in the genealogy. Further, we find an explicit declaration in the book of Joshua that the daughters of Manasseh took possession along with his sons.[8] The genealogy in Ezra knows of a certain Barzillai who received that name because he married the daughter of Barzillai the Gileadite.[9] We must suppose the daughter to have been an heiress, and the case naturally leads up to that of the daughters of Zelophehad. We read in the book of Numbers that, when Israel was about to take possession of the Promised Land, the daughters of Zelophehad came to Moses informing him that their father had died, leaving no son. In consequence they fear that his name will be blotted out, for he will receive no portion in the coming division of the land. On consultation with the oracle, Moses is directed to grant their implied request, and to assign them the portion which should fall to their father. The conclusion of the paragraph is a specific direction that hereafter daughters shall inherit where there are no sons. The law, however, is amended, or supplemented, in another chapter by the requirement that, where daughters succeed to landed property, they shall marry within their own tribe; otherwise the land of their father will be lost to the tribe of which he was a member.[10] The regulation here given shows how precedents for new laws were sought in the history of the people. When it was seen to be an injustice that daughters should be shut out of the inheritance in favour of remoter relatives, a precedent was found in the tribal traditions. If females inherited in the patriarchal age—which seems to be shown by the narratives—why should they not now have the privilege? The answer to the question is given in the law here promulgated. But along with the desirability of giving these rights to daughters was a sense of the inviolability of the tribal boundaries as fixed in the Mosaic age. On this account the regulation was supplemented, as we have seen. The arrangement by which the

daughters are obliged to marry within their own tribe could not have seemed a hardship—perhaps it hardly seemed an innovation—because from the earliest times a kinsman was thought to be the most desirable suitor for a young woman's hand. Arab custom in this matter is well known, and as late as the time of Tobit the cousin had a presumptive right as against other suitors.

In the post-Exilic period, therefore, the idea of women holding property and inheriting it became thoroughly established. Job gave his daughters portions along with his sons, and the author of the last chapter of Proverbs found it natural that a capable woman should buy a field with the earnings of her own hands.[1] Written testaments are nowhere spoken of in the OT, but it is assumed that a man about to die will dispose of his estate by word of mouth. So Ahithophel 'gives orders concerning his house' before committing suicide;[2] and Hezekiah, when dangerously ill, is advised to regulate his affairs.[3] The last words of a father to his sons would naturally couple advice and admonition with directions concerning property. Hence the character of the testament (though not so called) put into the mouth of Jacob. Ben Sira recommends that one distribute his goods at the end of life, but not earlier.[4] It is not certain that a written will is intended in any of these passages, or in the passage in Tobit sometimes cited in this connexion.

The latest portions of the Pentateuchal legislation aim at limiting the right of testamentary disposition in accordance with the theory of divine ownership. The land being Jahweh's, and assigned by Him to the various tribes, it should be kept in perpetuity in possession of those tribes. To this end no man was to have the right of disposing of his share to any one but the next-of-kin. Moreover, in case he were driven by poverty so to dispose of it, he could give only a lease for the time to the next Jubilee year, when it would revert to him or his direct descendants. The basis of this regulation is probably the old clan order by which the individual held only what was assigned him by the commune. We learn from Jeremiah that, when land was sold, it was offered first of all to a kinsman.[5]

Whether a criminal forfeited his property rights is nowhere specifically told us. When Naboth was executed for blasphemy,[6] his estate was seized by the king; but this may have been simply an act of tyranny, and without authority of law or custom. If we may argue from Achan's case,[7] the man guilty of sacrilege had his property destroyed with himself. What became of his lands when he had any is not clear. We should expect them to be forfeited to the temple, as 'devoted' to the divinity.

LITERATURE.—The Hebrew law as understood by the traditional authorities is formulated in the Talmud treatises *Baba Bathra* and *Yebamoth*. The most thorough discussion, and one still valuable, is J. Selden's *De Successionibus ad Leges Hebræorum in Bona Defunctorum* (1638), in his collected works, London, 1726, vol. ii. 1-76; J. D. Michaelis treats the subject with his usual learning in his *Mosaisches Recht*, Frankfort, 1770 (Eng. tr. *Commentaries on the Laws of Moses*, London, 1814), §§ 78-80 and 98; L. Lévy, *La Famille dans l'antiquité israélite*, Paris, 1905, and T. Engert, *Ehe- und Familienrecht der Hebräer*, Munich, 1905, give good summaries of what is known on the subject. On the levirate, see S. R. Driver's commentary on Dt $25^{5-10}$, where other literature is cited. The custom of release among modern Jews is described by J. Buxtorf, *Synagoga Judaica*[3], Basel, 1661, § xxx., and by J. C. G. Bodenschatz, *Kirchliche Verfassung der heutigen Juden*, Erlangen, 1748, pp. 148-158. Reference may be made also to the articles 'Heir,' in *HDB*, 'Erbe,' in Hamburger, 'Inheritance,' in *JE*, and 'Familie und Ehe bei den Hebräern,' in *PRE*[3], vol. v. (1898), condensed as 'Family and Marriage Relations,' in Schaff-Herzog, vol. iv. (1909).

**INHERITANCE (Hindu).**—The rules of succession, as developed by the Brāhman lawyers of India, may be described as to some extent a spiritual bargain in which the right to succeed to another depends on the successor's capacity for benefiting that person by the offering of funeral oblations (*śrāddha*). Thus the term *sapiṇḍa*, which is commonly used to denote a heritable relation, means literally a relation connected through funeral oblations of food, such as a ball of rice (*piṇḍa*). The more remote ancestors, viz. the great-grandfather, his father and grandfather, who are offered only the fragments of that ball of rice which remain on the hands of the offerer, were therefore called 'partakers of the wipings' (*lepabhāgin*, Manu, iii. 216). Still more distant is the relationship of *samānodakas*, or kinsmen, connected by the mere offering of water, said to extend to the fourteenth degree. In a decision of the Judicial Committee of the Privy Council, it was declared that 'there is in the Hindu law so close a connexion between their religion and their succession to property, that the preferable right to perform *śrāddh* is commonly viewed also as governing the preferable right to succession of property.' Dubois (in India, 1792-1823) observes (*Hindu Manners*[3], p. 374) 'that the right of inheritance and the duty of presiding at the obsequies are inseparable one from the other. When, therefore, a wealthy man dies without direct descendants, a crowd of remote relatives appear to dispute with each other the honour of conducting the funeral rites. The contest is occasionally so tumultuous and prolonged that the body of the deceased is in a state of complete putrefaction before a definite settlement of these many pretensions is arrived at.' And so an old Sanskrit authority says, 'He who inherits the wealth presents the funeral oblation,' and 'A son shall present the funeral oblations to his father, even though he inherit no property' (*Institutes of Viṣṇu*, xv. 40, 43). The doctrine of spiritual efficacy was further developed, and relied on as a corroborative argument in favour of certain expositions of the texts on inheritance, in the *Dāyabhāga* and other leading works of the Bengal School of law. The *Mitākṣarā*, on the other hand, which is the leading authority on the law of inheritance for the majority of the Hindus, explains the term *sapiṇḍa* as denoting one of the same body, *i.e.* a blood relation, and does not give countenance to any other principle than propinquity, or proximity of birth, as regulating the order of succession. Nevertheless, the connexion between the right of succession and the obligation to offer the customary *śrāddhs* may be supposed to have been constantly present to the Hindu mind. The widow, in particular, who succeeds to her husband's property on failure of male descendants, is enjoined to offer up the regular oblations to him at stated times.

The religious element enters largely into the Indian law of inheritance in other respects besides the general rules of succession. Thus civil death, *i.e.* the exclusion of a man from his caste on account of some offence or breach of caste rules, has the same consequences as natural death, and causes the property of the person out-casted (*patita*) to devolve on his heirs, and himself to lose the capacity to inherit any property devolving on him. Civil death is now inoperative, as loss of caste, according to an Act of 1850, does not affect a man's civil rights. Spiritual relationship is recognized as well as blood relationship, the pupil succeeding to his spiritual teacher and *vice versa*. No relative can, as a rule, claim any property acquired by a man during the time he was a *sannyāsī* (ascetic). It is taken by one of his disciples, who should perform the funeral rites according to custom. The succession goes either by nomination by the previous

*sannyāsī* or by election after his death. The *sannyāsis* are, in many cases, heads of a *maṭha* (*mutt*), *i.e.* of a religious institution founded and endowed for the purpose of maintaining and spreading the doctrines of some religious sect. These monastic institutions were endowed with considerable grants of land by Hindu princes and noblemen, their property being vested in the preceptor or head for the time being, generally called *mahānt*. Though many of these *mahānts* have become worldly, or are not even versed in the first principles of their religion, the acquirement of wealth by trade being their great object, the old rule of succession remains, and the property passes by inheritance to no one who does not fill the office. It is devoted to the maintenance of the establishment, but the superior has large control over it and is not accountable for its management. The two principal Sanskrit treatises on inheritance and succession on which the law as administered by the British Courts of India is supposed to be based are the *Mitākṣarā* and the *Dāyabhāga*. Colebrooke's English translation of these two works was first published in 1810.

J. JOLLY.

**INHERITANCE** (Jewish).—The Jewish law of inheritance based itself on the Biblical regulations (on which see W. H. Bennett, art. 'Heir,' in *HDB* ii. 340). In the Rabbinic Code these regulations were systematized, and the accepted principles are given in the Codes of Maimonides (*Hilkhoth Naḥaloth*) and Joseph Qaro (*Ḥoshen Mishpaṭ*, §§ 250–258 and §§ 276–289). In modern times, Jewish practice naturally conforms to the civil laws of the States in which Jews are domiciled. So far as the older Rabbinic laws are concerned, the rule of inheritance may be summarized as follows:

'The order of succession in intestacy is: first, sons (eldest son taking a double portion), their descendants; daughters, their descendants. Failing issue, the father succeeds, then brothers (Mishn. *Baba Bathra*, viii. 2). Sisters come after brothers and their descendants (*ib.*). If a son dies in his father's lifetime, grandchildren succeed to their father's share in the estate of their grandfather (Bab. *Baba Bathra*, 122*b*). A man is his mother's heir, the husband is the wife's heir, but the wife is not her husband's heir. She has, however, her dower. Illegitimacy is no bar to inheritance or transmission. Recognition by father is accepted as proof that children are his (*ib.* viii. 6). Hotchpot was not recognised in Jewish jurisprudence (*ib.* viii. 8)' (M. Hyamson, *Mosaicarum et Romanarum Legum Collatio*, London, 1913, p. 161; cf. J. H. Greenstone, in *JE* vi. 583).

The owner of property could not depart from this order in bequeathing by way of inheritance, though he could do so if he bequeathed by way of gift.

'The law of testamentary succession, as laid down in the Bible (Nu 27[8-11]), is unalterable; and any attempt made by the owner of property to bequeath it as an inheritance to those who would not naturally inherit it is null and void. No one can be made an heir except such persons as are mentioned in this Biblical law; nor can the property be lawfully diverted from the heirs by the substitution, either orally or in writing, of some other person as heir (Mishn. *Baba Bathra*, viii. 5); but the owner of property has such control over it that he may dispose of it by sale or gift to any person, to the exclusion of his heirs. This important distinction, therefore, must be noted, that a bequest by way of inheritance to persons other than the legal heirs is null and void, whereas a bequest by way of gift is valid' (D. W. Amram, in *JE* iii. 43).

Such procedure was, however, regarded with much disfavour by the Rabbis (Bab. *Baba Bathra*, 133*b*; *Kethuboth*, 53*a*), and it was very unusual for the owner to depart through bequest by way of gift from the order of succession (see L. N. Dembitz, in *JE* xii. 522). One important point deserves special mention. The Pharisaic Law denied to daughters any share in the inheritance if there were sons, though the Sadducees (Bab. *Baba Bathra*, 115*b*) and later on the Qaraites (J. Fürst, *Gesch. des Karäerthums*, Leipzig, 1865, i. § 9) gave the daughters equal rights with their brothers. Nevertheless, in the Pharisaic scheme the daughter had ample rights for maintenance while unmarried. Very significant is the decision of Admon (first half of 1st cent. A.D.)—a decision confirmed by Gamaliel:

'If a man die, leaving sons and daughters, and his estate be large, the sons inherit it and the daughters are maintained by it; but if the estate be small, the daughters are maintained by it, and the sons may go begging' (Mishn. *Kethuboth*, xiii. 3).

The Court might set aside a part of the estate in trust for the maintenance of the daughters (on all these matters see D. W. Amram, in *JE* iv. 448). In general, it must be remembered that the family solidarity (see art. FAMILY [Jewish]) and sense of good-will among its members secured an equitable distribution of the family goods, which were to a large extent enjoyed in common.

As to the extra-legal ideas associated in Jewish thought with the idea of inheritance, the Rabbis were concerned to combat the view that the Israelite *inherited* the Law. He had to acquire his part in the Torah by his active study and performance of it. R. Josê (Mishn. *Aboth*, ii. 12) said: 'Set thyself to learn Torah, for it is not an heirloom unto thee.' This, at first sight, may seem contradictory of Dt 33[4] 'Moses commanded us a law, an inheritance for the assembly of Jacob.' But the Sifrê (§ 345, ed. M. Friedmann, Vienna, 1864, p. 143[b]) interprets the text to mean that the Law is not an aristocratic possession; it belongs to all Israel. The Rabbinic attitude closely illustrates the saying of Goethe: 'What thou hast inherited from thy fathers, be sure thou earn it, that it may be truly thine.' This is enforced in another saying: 'Pay special regard to the sons of the poor, for from them the Torah goeth forth' (Bab. *Nedarim*, 81*a*), the point being, as the Talmud remarks, that a learned man's offspring are not always learned, lest it be believed that the knowledge of the Torah is an inheritance. On the other hand, the children of the unlearned might be among the active promoters of the knowledge of the Law (*Sanh.* 96*a*). All Israel (and the righteous of all nations were included in the boon [Tosefta *Sanh.* xiii.]) had its share in the future life (Mishn. *Sanh.* x. 1), in accordance with the Rabbinic exegesis of the text (Is 60[21]), 'thy people also shall be all righteous, they shall inherit the land for ever.' So, for a while Israel may forsake the law, but, when he seeks to return, he need feel no shame; it is his ancestral inheritance that he resumes possession of (*Exod. Rabbah*, xxxiii. 7). This combination of confidence in Israel's future and demand for Israel's present effort is a unique quality in the Rabbinic system of morality. Yet another way of meeting the difference between the two points of view may be cited. The Torah is Israel's *communal* inheritance, but the *individual* has to win for himself the right to share (cf. Comm. of W. Einhorn to the passage cited from *Exod. Rabbah*, ed. Wilna, 1878, p. 123).

Turning to another aspect of the idea of inheritance—it was considered a misfortune for a man to leave no son to inherit his estate. Such misfortune was sometimes regarded as due to the father's misconduct; witness such sayings as: 'If one destroys by fire his neighbour's produce, he leaves no son to be his heir' (Bab. *Soṭah*, 11*a*). Absalom (*loc. cit.*) was childless at his death; his three sons and his daughter predeceased him as a punishment for his having set fire to Joab's grain (2 S 14[30]). The pious Israelite was also considered to have neglected one of his main duties unless he married with the hope of leaving issue (Bab. *Berakhoth*, 10*a*; *Yebamoth*, 63*b*, and often). The idea went beyond the desire to continue the race. Almost mystically the divine presence dwelling in a man was carried over to his children (*Yeba-*

*moth*, 64), or—and this is significant—to a disciple (cf. Bab. *Baba Bathra*, 116*a*). In particular, it was the father's duty to ensure that the inheritance of fidelity to God was carried on through the generations. This thought was based on the example of Abraham. 'I have known him, to the end that he may command his children and his household after him, that they may keep the way of the Lord, to do justice' (Gn 18[19]). And, further, he who teaches his son's son is esteemed as though he had himself stood at Mt. Sinai, a personal participator in the original revelation (Bab. *Qiddush.* 30*a*). From the text in Genesis just cited was derived the custom of Jewish fathers writing for their children an ethical testament containing moral and pious directions; and these testaments were an honoured heirloom (see I. Abrahams, art. 'Jewish Ethical Wills,' in *JQR* iii. [1891] 436). For the part played in Judaism by the conception of the child's inheritance of the father's merits see S. Levy's volume on *Original Virtue and Other Studies*, London, 1907.

LITERATURE.—This is given throughout the article.

I. ABRAHAMS.

**INHERITANCE** (Roman).—As compared with the Greek, two features in chief distinguish the Roman laws of inheritance taken as a whole: (1) the very early, and relatively extended, power of devising, by the *testamentum calatis comitiis* or the *testamentum in procinctu*, i.e. the recognition of the individnal will as a decisive factor in the activity of the group; and (2) the peculiarly Roman conception of the paternal relationship, the *patria potestas*.

In the regal period the estate of a *paterfamilias* was inherited by such of his descendants as were 'under his power' (*in potestate*) at the time of his death and became by that event *sui iuris*. Such were his sons and grandsons (unless they were no longer subject, through emancipation), his daughters (unless they had passed by marriage *in manum* of their husband, *i.e.* into another family), and his wife *in manu*, and, therefore, standing *loco filiæ*. All these were styled *sui heredes*, 'self-heirs,' as having an inherent right dormant during the father's life. All, including the widow, took an equal share. Failing *sui heredes*, the *gens* of the deceased inherited. Of primogeniture there is no trace. But from the first the father was able to regulate the succession by testament, if he cared to do so, within such limits as recommended themselves to his peers in the Curies.

Succession of agnates, as such, was perhaps established by the XII Tables, so as to bring both plebeians and patricians under the same law as far as possible.[1]

Strictly, a man's agnates were those of his collaterals who were under the same *patria potestas* as himself, or would have been had the common ancestor been alive. His children (whether of the body or by adoption) *in potestate*, and his wife *in manu*, being *loco filiæ*, were mutually agnates; but a wife not *in manu*, or a daughter who had passed *in manum mariti*, or emancipated children, were not their agnates, nor were they *sui heredes* to the father—for the tie of the *potestas* was broken (and in the case of the wife not *in manu* had never been created). So a man was agnate to his brothers and their children (assuming that there had been no *capitis minutio* on either side); but not to his sister married *in manum* or to her children, for they were not of the same *familia* (having become agnates of her husband's relatives).

In the absence of a will, succession was now open to the agnatic heirs *ab intestato* (law: 'si intestato moritur cui suus heres nec escit, adgnatus proximus familiam habeto'). How far the agnatic circle extended is not clear. The order of succession established by the XII Tables was, therefore, as follows: (1) *sui heredes*; (2) the nearest agnate or agnates; (3) the *gens* as a body—this last possible only in the case of a patrician. The law was interpreted in the sense that only the nearest agnate[1] (or agnates of the same degree) could claim, so that, if they declined, the next in degree could not take the estate, and, further, that no female agnate more remote than a sister could inherit.

*Sui heredes*, whether instituted by will or taking *ab intestato*, could not decline the inheritance however burdensome (hence they are called *heredes necessarii*); but a stranger instituted by will, or an agnate heir *ab intestato*, could reject the inheritance.

The interpretation put upon the clause in the XII Tables—'uti legassit super pecunia tutelave suae rei, ita ius esto'—together with the growth of that form of testament called *per aes et libram* (originally not a testament, but a fictional substitute for one) made the testator's will supreme, even to the extent of disinheriting his *sui heredes* in favour of a stranger, if he expressly mentioned the disherison (*exheredatio*). In the later Republic, owing to the decline of religion and family morality, children were often disinherited, or cut off with a mere fraction of the estate, for the benefit of a stranger. This led to the recognition of the *querela inofficiosi testamenti*, or the challenge of the will by a *suus heres* capriciously treated. Under the early Empire this developed the rule of the legitim of children, giving them a right to at least one-fourth of the father's estate in spite of the will, except for good grounds.

Very important was the effect of the *bonorum possessio* (*secundum tabulas*), by which the Prætor gave provisional enjoyment of the estate to the heir named in a will *prima facie* valid, pending possible claim by heirs-at-law.[2] A year's undisturbed possession gave him full ownership by usucaption. The ultimate effect of the Prætorian action, in granting *bonorum possessio* in relief of various classes of petitioners, was to establish the following Prætorian order of intestate succession: (1) in place of the *sui heredes* of the old *ius civile*, they put descendants (*liberi*), including the wife *in manu*, sons and daughters of the body whether *in potestate* or emancipated, and representatives of predeceased sons and adopted children who were *in potestate* of the deceased when he died; (2) *legitimi heredes*, i.e. the nearest collateral agnates; (3) cognates, this class not being precisely defined; (4) survivor of husband and wife. It was open for these classes in turn to petition for *bonorum possessio*; but it was for them to maintain the grant against any who claimed as heir according to the *ius civile*.

The above changes were in part the outcome of the doctrine of the *ius naturale* as embodying a higher ideal of justice than the old *ius civile*. The process was carried further in the Tertullian *senatusconsultum* in Hadrian's reign. This gave preference to the mother over all agnates of her deceased child, except father, brother, or sister—father and brother excluding her; but with a sister, and failing father and brother, she shared equally. This right was confined to women with the *ius liberorum*, i.e. free women who had three children, or freedwomen who had four. In A.D. 178 the Orphitian *senatusconsultum* gave legitimate or illegitimate children a prior right over all her agnates to succeed a mother. The Code of Justinian made a mother's right of succession independent of the *ius liberorum*, and extended that of a daughter or sister to her descendants. In his 118th and 127th *Novellæ*, Justinian wiped away the rights of agnates entirely, except as regarded adopted children, and settled the orders of succession purely on a basis of blood-relationship: (1) descendants of the intestate, male and female alike taking

[1] Ulp. fr. xxvii. 5: 'legitimae hereditatis ius . . . ex lege Duodecim Tabularum descendit.'

[1] Division between agnates was *per capita*, not *per stirpes*. In the case of a freedman his *patronus* and his children took the place of agnates.

[2] There were two other forms of *bonorum possessio*—*contra tabulas*, practically setting the will aside, and *ab intestato*.

*per capita* if of the same degree, *per stirpes* if of different degrees; (2) the nearest ascendants, concurrently with full brothers and sisters and children of predeceased brothers and sisters (division equally *per capita* when there were ascendants and brothers and sisters, or brothers and sisters only; *per stirpes* when children of a deceased brother or sister participated; if there were only ascendants, the estate was divided equally to the paternal and maternal sides of the account); (3) half-brothers and half-sisters, and their issue, and grandchildren of full brothers and sisters, dividing on the same principle; (4) all other collaterals of all degrees, those nearest akin excluding those more remote, and dividing *per capita* between all of the same degree.

In his 119th *Novella*, Justinian laid down the principle that a child had an indefeasible right to some share at least as an heir of his father, and conversely, and enumerated the legal grounds of disherison. It followed, therefore, that a will to be valid must state the reasons for disherison; and, further, that it was liable to challenge upon the facts. A child not given some share, however small, could have the will nullified; and, if not given his legitim (at least one-third of the estate, and under certain circumstances one-half), he could claim to that amount; but nullification could not extend to any accessory provisions of the will.

W. J. WOODHOUSE.

**INHERITANCE** (Teutonic).—For the last sixty years this subject has been a prolific source of controversy, which at present shows no sign of abating. Thus, it is not decided whether the right of inheritance was originally limited to the near family, or whether the wider kindred reserved it for themselves. The organization of this wider kindred is still a matter of debate, and scholars are not yet agreed as to whether matrilineal inheritance prevailed at the beginning of our era among the Teutons, or whether inheritance fell exclusively to males descended through males. A few facts, however, stand out clearly. Tacitus (*Germ.* 20) tells us that the Germans had no system of testamentary dispositions, but that they had rules of intestate succession; and his statement holds good of almost all Teutonic countries until far into the Middle Ages. The heir, as some of the laws tell us, is born, not chosen. Adoption during lifetime is the only way of selecting an heir, and this proceeding is hedged about by restrictions. It is permitted only if the adopter is without near kinsmen of his own, as in the case of the Frankish *affatomy* and the Langobardian *thinx*; or else the amount which may be bequeathed to an adopted son is limited and subject to the consent of the legal heirs or kindred (Scandinavia).

Wills, which were introduced by the Church under the influence of Roman law, made their way very slowly, though encouraged by ecclesiastical institutions, which would otherwise have been debarred from receiving bequests of land. In most Teutonic countries such bequests were of the nature of a *donatio post obitum*, and were subject to the consent of heirs or kindred. Among the Frisian inhabitants of the little island of Wangeroog, testamentary dispositions were almost unknown far into the 18th cent., the children, or, in their absence, the nearest kinsmen, succeeding automatically to the inheritance, which they divided among themselves by agreement, disputes being very rare. Certain mediæval laws will not admit disputes as to inheritance among kindred in the ordinary courts of law, regarding them as a matter to be settled by the 'common kinsmen' of the parties concerned.

The principle of primogeniture appears to have found no place in ancient Teutonic society. Tacitus says (*loc. cit.*) that the children inherit, and in later times (with the exception of the feudal nobility) all the sons, at least, had an equal claim to inheritance. Where there are two heirs, the division of the shares usually devolves on the elder, the younger having the right of choice between them. In the case of a number of heirs, the matter is decided by the casting of lots after the eldest has divided the shares. Eqnal division among all the sons or other heirs is still common in many parts of Teutonic Europe, and this feature survives in the Kentish *gavelkind*.

In many parts, however, the farm is not divided among all the heirs, either for purely economic reasons or in order to facilitate the collection of dues or taxes. In such cases the farm is either held in common by all the co-heirs—a system which seems to have been common in England—or one of the heirs is allowed to purchase it at a price quite irrespective of its market value, but calculated not to be an undue burden on the farm. This system persists in Schleswig-Holstein to the present day. Sometimes this right of purchase is granted to the eldest, but more often to the youngest son, the idea being that, while his brothers have had time to set up establishments of their own, he has not done so, but has remained with his parents. In the custom known as Borough English, still prevailing (in the case of intestacy) in certain English districts and boroughs, the youngest son inherits land to the exclusion of all the other children.

The inheritance of real property is often limited to males, especially in the case of ancestral land such as the *terra aviatica*, which appears in the earliest Frankish (ripuarian) law, and the Norwegian *odal*. Frequently the son excludes the daughter, but she inherits in his absence. In other parts—Denmark and Friesland—the daughter receives half as much land as the son. Low Saxon law gives preferential treatment to sons; but, as soon as an inheritance falls to collaterals, it makes no distinction between males and females, nor between the paternal and maternal kindred. On the whole, we may say that a tendency to limit inheritance to agnates (persons descended through males) is observable chiefly in South Germany. The supporters of the mother-right theory lay weight on certain statements of Tacitus (with regard to the privileged position of the mother's brother, and to inheritance by children, not by sons only), but find the chief confirmation of their view in the earliest texts of the Frankish Lex Salica, which, in the absence of children, gives all moveable property to the mother, or, in her absence, to her relatives, females taking precedence of males (Lex. Sal. tit. 29). It must be pointed out that it is unsafe to base theories of inheritance mainly on the rules governing the transmission of real property, since individnal ownership of land was of late growth among the Teutonic races. Neither Tacitus (*Germ.* 26) nor Cæsar (*de Bell. Gall.* vi. 21 f.) knows of it; and as late as 574 a Frankish edict intimates that tribal land had only recently and partially become heritable.

Moveable property may be regarded under three

heads: (1) cattle, farm implements, etc.; (2) armour and weapons (*Heergewäte*); (3) household furniture, clothing, and women's ornaments (*Gerade*). (1) Except in some of the earliest laws, cattle, etc., went with the land. (2) In Old Saxon law, agnatic kinsmen, males descended through males, succeeded to armour, weapons, and the war-horse. This form of property was restricted to persons of noble birth, but in certain towns we find the workman's tools, even the tailor's scissors, being treated as *Heergewäte* as regards succession. (3) *Gerade* falls in almost all early laws, and in the Old Saxon *Sachsenspiegel*, to women, and generally to those whose connexion with the deceased person is to be traced through women. It cannot, however, be regarded merely as dowry, for we find unmarried women also in possession of it. It is best defined as consisting of those chattels which are under the woman's charge. The *Sachsenspiegel* enacts that, on the death of a man's wife, the successor to the *Gerade* must leave the widower his bed, a table and cloth, and a stool and cushion, so that evidently the entire household furniture is included in the term. With regard to (1) and (2), it is important to remember that in heathen times a considerable proportion of the personal property of the deceased (weapons, ornaments, cattle, and even slaves) would be buried or burned with the original owner. The Arabian traveller Ibn Faḍlān says that among the Scandinavians in Russia one-third of a man's personal property was burned with him, and another third expended on the funeral banquet. A memorial banquet was common all over Scandinavian territory, and was usually made the occasion for the heir to succeed to the dead man's property. In Scandinavia this was signified by his taking up his position for the first time in the 'high-seat.' In Germany the inheritance was usually entered into on the thirtieth day after the death of the previous owner.

In historical times rank is so closely bound up with the possession of land that its transmission necessarily follows the rules governing inheritance of real property. There can, however, be little doubt that in earlier times succession to hereditary royal rank and title was independent of inheritance of land, indeed probably of any form of inheritance.

With regard to the order of inheritance, we must make a distinction between the immediate family (persons related within the first degree) and the wider kindred; for the principles governing inheritance are different in the two groups. The inner group, which is supposed to have once formed a 'house-community,' consists of children, parents, and brothers and sisters. The Frisian law calls these the 'nearest six hands': *i.e.* (1) son, (2) daughter, (3) father, (4) mother, (5) brother, (6) sister. To this group the Salic law added mother's brothers and sisters, and, later, father's brothers and sisters. It seems that, if the son was dead, his sons did not originally precede all other relatives, but were regarded as no nearer to the inheritance than grandfathers of the deceased. This, however, is disputed by some authorities.

In the outer group the degree of consanguinity is alone regarded: all persons equally related to the deceased have an equal claim, though, as we have seen, in certain forms of inheritance preference may be given to persons related through the father's or the mother's kindred. It is necessary to indicate the mode of reckoning kinship which prevailed among the Teutons. This is a subject round which a storm of controversy still rages; but, without committing ourselves too deeply to any theory, we may say that the Teutonic kindred was regarded as falling into groups centring round the person whose property was to be inherited, and that any one tracing his descent through the grandfather of this person was nearer than one tracing his descent from the great-grandfather. Thus kinship was not reckoned by the number of births between the persons concerned, as in Roman law, but by the number of generations ('knees') between one of them and the common ancestor. The first 'knee' is formed by the parents: thus brothers and sisters are in the first degree; the second by the grandparents: first cousins are, therefore, in the second degree, and so on. To describe persons related in the unequal collateral line, Teutonic languages employ circumlocutions.

Sometimes the kindred is clearly thought of as divided on a 'parentelic' system, the first parentela being (*a*) the parents and their descendants; the second (*b*) the grandparents and their descendants, exclusive of (*a*); the third and fourth (*c*) being the two pairs of great-grandparents and their descendants, other than (*a*) and (*b*); while the fifth, sixth, seventh, and eighth are the descendants, other than the preceding, of the four pairs of great-great-grandparents. The descendants of these are called in Dutch dialects the four 'quarters' (*vierendeels*) of the kindred, while the eight groups descended from the couples one degree higher are known as *achtendeels*. It is supposed that the Scandinavian *ætt*, 'kindred,' is derived from a word meaning 'eight' and referring to these eight divisions; otherwise there is little evidence for a 'parentelic' ordering of the kindred in the North. There are, however, traces of a reckoning of the kindred in 'cousinships' both in Scandinavian and in old Continental law.

The outer limit of the kindred is variously described in the early Continental laws as the fifth, sixth, or seventh generation. It is probable that the degree of kinship referred to is the same, the reckoning beginning in one case with the common ancestor himself, in another with his children, and in the third with first cousins, the children being in this case regarded as belonging to the family. When the outer limit of the kindred varies, as in Norway, popular ideas on the subject have probably been affected by ecclesiastical ordinances determining the prohibited degrees of affinity.

B. S. PHILLPOTTS.

**INHIBITION.**—Inhibition is a term commonly and loosely applied to certain aspects of physiological and mental processes in which one process is checked or displaced by another. It is thus not a function comparable, *e.g.*, with nutrition or circulation on the physiological side, or with perception, memory, or emotion on the mental side; it is rather descriptive of a condition resulting from the action or inter-action of these or other functions.

Whether regarded as a mental or as a physical phenomenon, it is a result of the incapacity of the organism to give simultaneous expression to its many different impulses to action. The organism's energy being limited, under ordinary circumstances it tends to be more or less concentrated in a few directions. If it is scattered over much ground, it is less effective. If it is concentrated, it is correspondingly more effective. For instance, great activity of one part of the body, while not necessarily or always incompatible with the action of other

parts, may frequently interfere with the action of these other parts through the draining off of needful energy; when, *e.g.*, the forces of the body are devoted to the digestion of a full meal, there is not much energy available for mental work or for vigorous physical exercise. If two such processes involving the large use of bodily force are attempted at the same time, the effectiveness of each is greatly diminished. Then, again, one type of action may be antagonistic to another. An athlete cannot run a race and observe the scenery at the roadside at the same time. If he wishes to run well, he must suppress the impulse to gaze about.

Inhibition is, then, an incident of the fact that effective action must be relatively concentrated, both because of the limitation of one's energy and because too many disparate processes interfere with one another.

On the physiological side there is some evidence of specifically inhibitory nerves. The best attested example is that of the vagus, which, when stimulated, tends to check the action of the heart. According to Yerkes, however,

'the cases of inhibition which result from the functioning of inhibitory nerves or centres, if such exist, are few and unimportant in comparison with those which appear to be due to the conflict or competition of impulses within the nervous system' (art. 'Inhibition,' in *Cyclop. of Education*, iii. 457)—the inhibition, in other words, which results from the fact that the action of the nervous system tends to be confined at any one time to relatively few channels.

Only in extreme cases is this actually due to the limited fund of energy at the disposal of the organism; but every such case is a manifestation, in degree at least, of the fact of the limitation of the organism's resources. It may in its simplest form be due, however, to the neutralization of one nerve impulse by another when they meet in the same centre, as when

'the appropriate reflex of the leg of the frog to stimulation of the foot may be inhibited by simultaneous stimulation of the other leg' (*ib.*).

The higher nerve centres, especially those of the cortex, tend to hold in check the impulses emanating from the lower centres. Hence in a broad sense the brain may be regarded as an inhibiting centre. The function of the brain is in part

'to hold back or to inhibit the activity which other centres, left to themselves, would carry out in response to the sensory stimuli which reach them' (Royce, *Outlines of Psychology*, p. 70).

On the psychical side, there is abundant illustration of the apparent interference of states of consciousness. Within narrow limits one sensation, as an auditory, seems sometimes to enhance the vividness of another, as a visual; but, ordinarily, two vivid sensory experiences interfere with each other, both being diminished in their conscious effects, or one being ignored for the sake of the other. The distraction of attention by some exciting situation will render one suffering from acute pain unconscious of it. Strong emotions interfere with ideation and tend to annul weaker feelings or emotions. One absorbed in thought is unaware of many sensory impulses impinging on his nervous system. Two disparate trains of thought cannot occur with complete effectiveness in consciousness at the same time.

Historically, several different views of the nature of inhibition, as it appears in mental phenomena, have been held. The oldest, that of Herbart, regarded ideas as permanently existing entities or psychical forces which constantly tend to interfere with each other, some being thus prevented by the repellent force of others from appearing in consciousness. Another view is that 'inhibition is the negative side of the associational process' (Breese, 'On Inhibition,' p. 12). The number of mental elements which may co-exist is limited, and those which cannot fit into the associative system that is uppermost are suppressed. According to this view, inhibition is an aspect of the control of mental elements through attention. Logical contradiction has been considered by others as one phase of inhibition; *e.g.*, one cannot think of an object as white and not-white at the same time. In so far as this is true, however, it is really a special phase of the preceding type. Others have regarded inhibition as an aspect of the control of mental and physical processes by the will. It is pointed out that the will may not only excite and direct, but also hold in check, a movement or a mental process.

All views, however, which assume that inhibition may be a purely psychical process are inadequate. It is rather a phenomenon of the action of the organism as a whole, *i.e.* of the psycho-physical organism. It depends ultimately upon the drawing off of the nervous energy from certain centres, resulting in the checking of their action, and the concentration of the energy in other centres, resulting in their heightened activity. Every case of apparent psychical inhibition is associated definitely with some re-adjustment of the energies of the physiological organism. Hence it is only relatively true that we can say that thought is opposed to action. It is opposed only to some kinds of action, for thought itself is bound up with and expresses itself through the expenditure of a definite amount of energy of the physiological system. In fact, to the degree in which there is inhibition of movement, to that degree mental processes are themselves rendered impossible. The problem of inhibition, then, whether on the side of the physical organism or on that of the mind, is the problem not of merely suppressing action, but of substituting one kind of action for another kind. When we speak of thought as suppressing bodily activity, we mean only that *one kind* of bodily activity is suppressed. When a person thinks intently and his outer movements are inhibited, there has simply been a shifting of the locus of psycho-physical action. For the gross overt forms of bodily movement there have been substituted the more subtle inner movements of the vaso-motor system and those of the cortex itself, which are more intimately associated with the thought processes. Only relatively speaking, then, does inaction take the place of action when a process is inhibited. What actually occurs is a transfer of psycho-physical energy from one point to another, a lessening or suppression of one form of action and a corresponding intensification of another form.

It is frequently and truly said that the higher the process (*e.g.*, the more intellectual), the more numerous are the inhibitory influences which it exercises on the nerve centres controlling the more primitive forms of action; but this means, as we have just pointed out, not that the psychical, as such, inhibits the physical, but that different action complexes are associated with the higher intellectual processes, and that, if the latter are to function, it must be at the expense of the former or lower types of action. It is for this reason that all phases of character development and growth of personality involve a large amount of inhibition. In fact, it is through the capacity of the psycho-physical organism to suppress inconsistent modes of action that it is possible for any definite type of behaviour to emerge at all. The growth of an individual from childhood to effective maturity is associated from start to finish with the building up of certain complexes of conduct, the obverse of which is always the draining of energy from the lower, less organized forms of action and their consequent inhibition. Thus the little child has an excess of gross, overt, bodily activity. He is apt to be flighty and inconsistent in his behaviour. He gives way to all sorts of

instincts and impulses. The problem of character development is not that of suppressing the energy thus exhibited, but of gradually organizing it into more definite and desirable forms. The higher types of behaviour, therefore, displace the lower by consuming their energy or by giving it outlets in accord with more definite purposes and ideals.

The re-construction, which thus takes place so conspicuously in the development of child-nature into maturity, is typical of the process which occurs in every instance of change of attitude in the adult. Whenever an adult inhibits an undesired act or mode of behaviour, he must accomplish it by fixing his attention upon some other mode of action, which thereby has a chance to develop. Nor is this fixing of attention to be thought of as some intervening outside agency. It is simply the expression of the fact that another impulse, or set of impulses, is present which, for the time being, is felt to be more definitely in accord with the real personal character as that has gradually integrated through many previous reactions. The inhibition of one mode of behaviour by another is due to the superior power of the then dominant complex of psycho-physical attitudes over those less perfectly organized and for the time being inconsistent with the action of the dominant mode. The re-construction thus effected may be partial or complete. It is partial when the suppressed impulse is merely suppressed or ignored rather than utilized. In that case the suppressed factor may drop out of consciousness and be apparently forgotten, but it is still capable of exerting an influence or of causing a stress beneath the level of consciousness which is injurious.

The strain of merely holding the undesired tendency in check or of preventing its finding expression acts as a drag, though unconscious, upon conscious processes, preventing their attaining their highest degree of efficiency. Moreover, the suppressed impulse may have various pathological effects. In extreme cases, as Freud has shown (*AJPs* xxi. [1910] 191 f.), it may result in producing the condition of nervous disease known as hysteria. All those modes of training which attempt flatly to prohibit the expression of undesirable tendencies in children incur this danger. The inhibition resulting is not genuine. The better method, and the one which would accomplish real inhibition, would be that which would seek to re-direct the impulse into some more desirable channel. The energy of the impulse could thus be saved and turned to positive account in character formation. The tendency to tell falsehoods is undesirable, but it is of little avail to say to the child, 'Thou shalt not.' What is needed is to determine the underlying motive leading to lying, and see that it can find expression in a more desirable form. The correction must, in other words, be positive, by opening to the child other lines of action which will afford an outlet to the energy thus far finding expression in an undesired form.

What is true of child-training is true of every phase of character development. Many adults suffer from excessive inhibitions. The energy they expend, sometimes unconsciously, in holding in check their undesired tendencies greatly reduces their positive efficiency. The root of the difficulty is that their inhibitions are only partial. The undesired forms of behaviour are struggling to assert themselves instead of being assimilated by more approved complexes of conduct. The work of Freud, referred to above, and of his followers in the treatment of hysteria furnishes many examples of this condition. While some pathological conditions of adults have been traced to the improper suppression of impulses in early childhood, in the majority of cases they are the outcome of the determined repression of intense desires which develop in youth and which are usually connected, directly or indirectly, with the sex impulse. This normal and necessary phase of human nature frequently runs counter to accepted social usages. Desires recognized as improper are thrust into the background of the mind, are ignored or even forgotten, but when thus dealt with are apt to continue to exert a harmful and mysterious influence over the person's conscious life.

Thus, a governess treated by Freud for hysterical tendencies, finally confronted with the question as to whether she was not in love with her master, replied: 'Yes, I believe it is so, but I did not know it, or rather I did not wish to know it. I wished to crowd it out of my mind, never to think of it, and of late I have been successful.' But this impulse, thus ignored and forgotten, became the exciting cause of a host of hysterical symptoms.

The problem presented by this case, which is typical, was to dispose of the energy of the impulse in a manner that would not conflict with the woman's own sense of social propriety. One of the serious problems of the education of the adolescent is that of finding ways of using in sports, in physical and mental labour, in artistic creation of various types, and in social intercourse impulses which, though intrinsically sexual, may thus be transmuted into forces of the utmost worth in the development of a well-rounded character. Here, if ever, it is important to recognize the practical character of the psychological dictum that the most effective inhibition occurs only through the re-direction of the energy into other channels of expression.

IRVING KING.

# INITIATION.

**INITIATION (Introductory and Primitive).**—**1. Definition and nature of initiation.**—Initiation in its general sense is synonymous with 'beginning' (*initium*), 'training,' 'instructing.' The word is usually applied in a restricted sense to signify admission to ceremonies or traditions of a religious or magical order. The communications made to the initiated are not necessarily secret; they may consist of teaching whose efficacy depends on the authority of the one who gives it, the

character of the one who receives it, and the conditions in which it is imparted. But ordinarily they are a secret carefully guarded from the profane, and so initiation comes to mean 'introduction to a mystery,' whether we take 'mystery' as meaning truths beyond the reach of vulgar comprehension or practices jealously reserved for a chosen few. Among the Romans *initia* was a generic term for mysteries.[1]

Two exegetical schools, which have often held rival opinions on the subject of the history of religion, differ also in their conclusions as to the origin and function of initiation ceremonies. According to the one (Dupuis, Creuzer, Guigniaut, etc.), initiation furnished a philosophical explanation of vulgar beliefs and led to a rational and moral interpretation of official cults. The other school (Lobeck, Andrew Lang, etc.) holds that it tended rather to perpetuate, under cover of secrecy, rites and myths of primitive barbarism, which their adepts were ashamed to lay bare to the open day. These two theories may both be applied in particular cases, but neither of them can be accepted as a general view. Another theory, which is no better founded, is that every initiation is invariably an embodiment or a dramatic representation of old legends or myths. In most cases it is not the myths that have given birth to the ceremonies of initiation, but rather, as has been superabundantly proved by Robertson Smith and Frazer, the ceremonies that have been explained by myths, after their original meaning has been lost sight of. In any case, an unbiased study of the forms and circumstances of the initiation ceremonies themselves in the different regions where they are found will enable us to gain some enlightenment as to their nature and function.

All known peoples admit the existence of a sacred world, peopled by mysterious influences, which are sometimes propitious, sometimes baleful, but always to be feared. In every country, too, there are individuals or groups of individuals who claim to be able to find out these forces, disarm them, and use them for their own purposes. This power is given by initiation into certain processes. The ceremonies of initiation are divided into two categories. (*a*) In the one the ceremony has as object the granting of a certain power to the neophyte, who uses it exclusively in his own personal interest, or, in return for a remuneration, for the benefit of others. This is the kind of initiation which is practised by sorcerers all over the world—shamans, angakoks, and so on. Those to be initiated are chosen by preference from young men showing a tendency to hysteria or visions, a tendency which is developed by the aid of intoxicants or narcotics, fasting, over-fatigue, hypnotism, and all kinds of devices. The apprenticeship at an end, these new sorcerers set out to apply the magic recipes which have been imparted to them, and add new ones from their own experience. Even when, as is sometimes the case, men set up as sorcerers of their own accord, they do so only after dreams or hallucinations either naturally or artificially induced, which are regarded as being a veritable initiation in which they have received direct revelations from above.[2] (*b*) The second category includes initiation ceremonies forming an integral part of the social institutions of so-called primitive peoples; they are usually performed on behalf of the community by a natural or artificial group. It is impossible to say with certainty which is the older of these two forms of initiation, but the second is by far the more important, not only because it forms a necessary part of the life of individuals and communities in primitive society, but also because its development is parallel with the modifications taking place in the structure of the social body.

[2] H. Hubert and M. Mauss, 'Théorie générale de la magie,' in *ASoc* vii. [Paris, 1902–03] 230.

**2. Aims of initiation.**—Those who penetrate the domain of the sacred with the sole ambition of finding there a means of satisfying their personal desires run the risk of entering into conflict with the community, and not without reason. The day is sure to come when the community will recognize the distinction between witchcraft and priesthood, and these sorcerers will be finally and utterly proscribed. Yet, in the heart of primitive societies, and later in the less developed strata of cultured populations, the magician's claims are still acknowledged or submitted to, not only because of the fear he inspires, but also for the services he can render to most individuals, and even to the community itself, by curing disease, bringing rain, favouring the multiplication of useful animals or plants, ensuring the periodicity of heavenly phenomena, finding out the guilty, exorcizing evil spirits—in a word, fulfilling real priestly functions in the dealings of the people with certain parts of the sacred world or certain personages belonging to it. This function of influencing natural phenomena is frequently assumed by groups of initiated persons representing a subdivision of the tribe or by secret societies, which gain new recruits by co-optation. Where division into clans still prevails, the principal magical operations are undertaken by the clans for the benefit of the community, each clan acting on its own particular totem.

Among the natives of Australia, *e.g.*, it is the emu clan that performs the rites supposed to be capable of ensuring the multiplication or the capture of this species; the rain clan which recites the incantations necessary for forming clouds, and so on.

In all primitive societies, individuals of the same sex and age, having the same interests, tastes, and occupations, have a tendency to group themselves into particular societies within the general society. Thus arise many classes standing in juxtaposition and including respectively youths, adults, celibates, married men, old men, women in different conditions, totemic groups, clans, phratries, inhabitants of the same territory, strangers, even dead men, and also, as Van Gennep has noted, certain social categories constituted by normal though particular and temporary events, such as illness, pregnancy, a common danger, travel, seasonal occupations, etc.[1] It was not until later that distinctions founded on permanent professions appeared. Now every passage from one of those states to another is accompanied by a modification in the form or nature of the superhuman influences with which the individual has to deal. In each group these influences, whether personified or not, are inoffensive and even highly useful to those who are within and who know how to avail themselves of their help, but dangerous and extremely harmful to strangers. On the other hand, those passing into a new group are apt to bring with them the magical and infectious taints of their old *milieu*. They must therefore be purified, assimilated, and instructed, which is the threefold object of initiation.

Among initiation ceremonies of this nature, one of the most important and most common is that which marks the attainment of puberty, or rather the ceremony which about that age officially breaks all ties binding the adolescent to children and women, and admits him into the society of men. This ceremony is found, either as an established institution or as a survival of an older ceremony, among nearly all uncivilized peoples—among the Fuegians, the natives of North and South America, Arctic populations, in Australia, Poly-

[1] Van Gennep, *Rites de passage*, 1 ff.

nesia, Melanesia, in New Guinea, and in India—not to speak of the traces of it still found among the civilized peoples of antiquity. Its function is to confer on the adolescent the rights and obligations of an active member of society; *i.e.*, it enables him to take part in war, to lay the foundations of family life, and to observe the customs and rites necessary for the well-being of the tribe. Initiation, so understood, may be considered as the oldest form of public instruction.

This was realized by the Tuscarora of North Carolina when they explained to Lawson more than two hundred years ago that initiation 'was the same to them as it is to us to send our children to school to be taught good breeding and letters.'[1]

This instruction, nevertheless, retains a magico-religious character which often envelops the whole official cult of the tribe. Women also are divided into similar age classes; but with them initiation, even when it is a close imitation of the men's ceremony, is less important because it confers fewer privileges.[2] There are many other social transitions entailing rites which may be considered as initiatory—*e.g.*, naturalization, adoption, marriage, the consecration of priests, funeral ceremonies, etc. Sacrifice, too, at least in connexion with cults which regard it as a means of penetrating into the sacred world, assumes the form and functions of initiation. The spot on which all these ceremonies take place is, as it were, a sanctuary, to which access is forbidden to the uninitiated. The organization of the rites of initiation remains in the hands of the old men, who are the natural guardians of the tribal traditions, and they lay down as the first duty of man obedience to the ancients and to their teaching.

3. **Evolution of initiation.**—The initiation of adults loses its general character in proportion as the authority of the chiefs develops and legal institutions become separated from the magico-religious rites of which they were at first part and parcel. The age classes tend to become subdivided into a hierarchy of different grades, which fill up their ranks sometimes without regard to age or seniority. The initiated of the higher grade think that they have a right to rule over those of the lower grades. Sometimes even their privileges become hereditary, at least to the extent that their children alone have a right of initiation into the grade. The age class is thus turned into one or more secret societies, which sometimes recruit their members from various tribes and even open their doors to women, as, *e.g.*, in West Africa and North America.

In the district of Gabun, we are told, there was a secret society exclusively composed of women, who, like the ancient Bacchantes, celebrated orgiastic rites in the depths of the forest, and were much feared by men, who ran the risk of death if they surprised them in their ceremonies.[3]

The same individual can thus belong to several 'brotherhoods,' especially when they have different aims. Some of these societies become mere schools for working magic arts, and thus assimilate themselves to the societies of sorcerers who unite for mutual benefit in the exercise of their art. Most of the societies, however, continue to play some part in the affairs of the community. In Africa they sometimes reinforce and sometimes limit the authority of the chiefs. Sometimes, like the *Vehmgericht* of mediæval Germany, they form a sort of superior police acting with repressive justice, and they are all the more to be feared that they do their work in secret. The societies whose members belong to different tribes contribute towards the maintenance of peace, and on occasion we find them performing the function of arbiters. Yet almost all these societies respect the social and religious traditions and customs that have

[1] J. Lawson, *History of Carolina*, London, 1714, p. 380 ff.

[3] J. L. Wilson, *Western Africa*, London, 1856, p. 398.

come down to them, and transmit them to their successors. As de Jonghe says with regard to the Lower Congo, they form, in spite of their abuses, 'a centre of religious instruction and civic formation.'[1]

An analogous evolution has taken place among the Kafirs, the Polynesians, the Melanesians, and the tribes of New Guinea. Each of the numerous secret societies of the natives of North America deals with some kind of magical operation which influences the course of nature—the ripening of crops, the falling of rain, the success of hunting or fishing, and the treatment of innumerable individual ailments. In the Oceanic Islands and among the American Indians, the ceremonies connected with all these societies are partly public and partly secret, according as they represent scenes from current mythology or explain to their neophytes the esoteric meaning of these representations.

When belief in the efficacy of magic begins to disappear, or when public cults gain in importance, secret societies gradually develop into mere clubs, from which all mystic element has disappeared; their old sanctuaries become the social meeting-places of the club, and their rites degenerate into popular rejoicings or mere buffoonery. But we must not lose sight of the fact that these brotherhoods, which monopolize all communication with the domain of the sacred, are able to fulfil the characteristic functions of a cult as well as the magic rites proper to sorcery.

The transition may be seen in the order of the Areoi in Polynesia, who accompany the worship of the god Oro with all sorts of magic practices. There were eight or nine different grades, entrance to which was gained by successive ceremonies of initiation. All the great religions of the East had room for initiation ceremonies over and above their public cults. Some of the Greek mysteries certainly go back to the pre-Homeric period.[2] Texts analyzed by Moret, Lefébure, and others confirm the opinion of Herodotus and Plutarch that there was in the Egyptian cult an initiation reserved for a chosen few, which besides the regular and official cult included the celebration of the passion of Osiris.[3] The famous Chaldæan poem describing the descent of Ištar to the gloomy abode of Aralû to look for her lover Tammuz presents all the characteristics of an initiation ceremony. From texts edited by A. H. Sayce we learn that certain priests or soothsayers had to submit to a formal initiation; they were made to pass through an artificial representation of the under world, where they were shown 'the altars amid the waters, the treasures of Anu, Bel and Ea, the tablets of the gods, the delivering of the oracle of heaven and earth, and the cedar-tree, the beloved of the great gods, which their hand has caused to grow.'[4]

C. P. Tiele has shown that, among the Western Semites, Byblos and other centres of Syrian cults had their mysteries from before the time of the Assyrian conquest of the country.[5] The OT has more than one allusion to mysteries reproved by the Prophets.[6] In India, a man was a Brâhman by right of birth, but could not exercise sacrificial functions without first having passed through a complicated initiation.

Even the subjection of a nation by conquerors and the superimposing of new cults tend rather to develop than to discourage initiation ceremonies. Sometimes the victors organize them for the use of peoples desirous of adopting the cult of the victorious god.

Thus the Mazdæan religion, which was essentially a national religion (to be born a Mede or a Persian was also to be born a worshipper of Ormazd and Mithra),[7] had no initiation ceremony other than the admission of children into the cult; but, when the Achæmenians had extended their sphere of influence as far as the Mediterranean, Mazdaism had to organize the mysteries of Mithra, which were to become of such importance in the Western world.

On the other hand, the victorious people often become converts to the cult of the conquered nation.

After the subjugation of Eleusis, the Athenians could not gain admission to the *sacra gentilicia* of some Eleusinian families who

worshipped Demeter, until they had gone through the formalities of an initiation ceremony. This ceremony, which was instituted exclusively for the citizens of Attica, was gradually opened to the other inhabitants of Greece, and even to all the subjects of the Roman Empire, 'as a sanctuary common to the whole earth' (Aristides, *Eleusinios*, ed. W. Dindorf, Leipzig, 1829, p. 415). Every foreign religion which spread through the Roman world assumed the form of mysteries open to all who showed themselves worthy or merely desirous of being initiated into them.

Thus initiation paved the way for universalistic cults by substituting community of beliefs and rites for nationality as the foundation of religious ties.

The Christian sacrament of baptism (*q.v.*), the primary rite of initiation into the Church, was elaborately developed by the Gnostics. Two MSS, belonging to the sect of the Valentinians, the *Pistis Sophia* and the *Book of the Great Logos according to the Mystery*, give a description of four grades of initiation: the Baptism of water, 'which gives access to the place of Truth and the place of Light'; the Baptism of fire, 'which admits one into the company of the heirs of the kingdom of Light'; the Baptism of the Spirit; and, finally, 'the mystery which forces all the Archons to remove iniquities from off the Disciples and make the Disciples immortal.'[1] Among the Druses, according to the Arab historians al-Maqrizi and al-Nuwairi, there were no fewer than nine grades of initiation where the hidden meaning of the *Qur'ān*, the real origin of the universe, the inaccessibility of the supreme principle, and, finally, the equivalence of all cults were successively taught.[2] The Christian sects of the Middle Ages had frequent recourse to initiation ceremonies, the secrecy of which served to protect them from the attacks of orthodoxy. The favour which symbolism then enjoyed allowed them to attribute to texts and to sacred or at least inoffensive emblems an esoteric significance which was gradually revealed to neophytes. Even such exclusively technical details as the formulæ and tools employed in the art of building lent themselves in the apprenticeship of mediæval freemasons to a moral or philosophical interpretation, which has preserved their use in the initiation of modern Freemasons, though freemasonry (*q.v.*) has long ago lost its professional character.[3]

It is of importance to note that, while preserving its outward form throughout this evolution, initiation changed its object somewhat in passing from magic to the service of religion. What was required of it now was to make the gods better known, and to bring about a closer intercourse with them. As a consequence, we notice among neophytes new feelings of curiosity, anxiety, and even anguish, allied with an ardent desire for communion with their religious and moral ideal. The rites giving them access to the sacred world—whether these ceremonies were originally held in connexion with the changing of the seasons, the revolutions of the stars, or the transformations of the crops—recurred in a rhythm of periodicity and alternation which the initiated applied to their own destiny. In the liturgical drama, in which he had to play a part, the novice now saw the passion of a god—some divine sacrifice, the benefit of which he was personally called upon to reap. All the symbolism of the ancient mysteries found an outlet in this direction. The aim of initiation thus became once more the attainment of an individual advantage, but this time on a different plan: 'Thanks to these beautiful mysteries which come to us from the gods,' we read in an Eleusinian inscription, 'death is for mortals no longer an evil, but a boon.'[4]

The question is to discover whether, as Paul Foucart maintains,[5] initiation confined itself to furnishing the neophyte with topographical information, as it were, to prevent him from losing his way in the under world, and with magic formulæ to baffle the demons lying in ambush in his path, or whether it insisted also on the necessity of his having led a just and righteous life. It would seem that initiation was sufficient in itself to ensure eternal life, and Diogenes of Sinope was more or less justified in putting the crucial question: 'Will the brigand Poetacion be happier after his death because he has been initiated than Epaminondas, who has not been initiated?'[1] In Greece an attempt was made to satisfy the demands of morality more or less by excluding from initiation all traitors, perjurers, and criminals—in a word, all those who had not 'clean hands.' The Egyptians had found a more practical expedient. They introduced as part of the ceremony representing the supreme journey into the infernal regions a summons before the tribunal of Osiris; only those who were acquitted there could benefit by the formulæ and amulets provided to help the dead to attain safely to the blessed region of the fields of Aalu. If this had not been the case when the culture of the ancients was at its height, men like Plato, Cicero, Plutarch, and Diodorus would have been more careful about proclaiming the moralizing and civilizing influence of initiation into the mysteries of their time.

**4. The ritual of initiation.**—The formalities of initiation, whether its dominant function is magical or religious, present striking general resemblances. Andrew Lang notes the following general characteristics: (*a*) mystic dances; (*b*) the use of the *turndun*, or bull-roarer (*q.v.*); (*c*) daubing with clay and washing this off; (*d*) performances with serpents and other 'mad doings.' To these we might add: (*e*) a simulation of death and resurrection; (*f*) the granting of a new name to the initiated; (*g*) the use of masks or other disguises.[2] In any case, we may say that initiation ceremonies include: (1) a series of formalities which loosen the ties binding the neophyte to his former environment; (2) another series of formalities admitting him to the superhuman world; (3) an exhibition of sacred objects and instruction on subjects relating to them; (4) re-entry or reintegration rites, facilitating the return of the neophyte into the ordinary world.[3] These rites, especially those of the first three divisions, are found fulfilling a more or less important function in all initiation ceremonies, both among savages and among the civilized.

(1) *Separation rites.*—In every initiation of any importance the neophyte has to leave his family, live in isolation, consent to all kinds of restrictions and tabus, and submit to purifications, aspersions, purgations, fasting, flagellation, even mutilation (and, more particularly, circumcision), and, finally, assist at his own burial, or at least pretend to have left this world. Sometimes spirits wearing masks corresponding to their supposed character come and carry him off to some hut or enclosure, or to some isolated spot where he lives in their company for a certain period, which may be months or even years, as in Africa, America, New Guinea, and other countries. Even when initiation is nothing but a mere transmission of magical powers, the neophyte is supposed to be carried off to the spirit world.

Among the Eskimos, an *angakok* goes through the ceremony of killing the aspirant to magical powers, and his soul then flies off to probe the depths of sky, sea, and earth, and thus learn the secrets of nature. On its return it resuscitates the body, which has been lying stretched on the frozen ground, and the patient then becomes an *angakok* in his turn.[4] It would be useless to insist upon the importance of this practice of simulating death in the initiation ceremonies of the ancients. Many mysteries included, we are told by Lampridius in connexion with Mithraic mysteries, something similar to an immolation 'which was described or represented so as to produce unnecessary fear.' There is a story that the Emperor Commodus, filling

[3] Van Gennep adds to these what he calls 'marginal' rites or periods, the object of which is 'to facilitate changes of state, without violent shocks or abrupt stops to individual and collective life' (*Rites de passage*, 14).
[4] Hubert and Mauss, 'Théorie générale de la magie,' in *ASoc*, vii. 88.

the rôle of mystagogue, one day took his part too seriously and really killed the unfortunate candidate.[1] The allusion of Apuleius to his initiation into the mysteries of Isis is well known.[2] Even to-day, in the 'profession of vows' in use among the Benedictines, the novice is laid out on the ground between four candles, and covered with a winding sheet, the service of the dead is performed above his body, and the whole congregation chants the *Miserere* for him.

It is noticeable that among nearly all peoples funeral ceremonies themselves imply a sort of initiation of the deceased into the society of the dead; without this, he would have no choice but to remain on earth and torment the living.

(2) *Admission rites.*—Plato has rightly written τελευτᾶν τελεῖσθαι, 'to die is to be initiated'; we might reverse the order and say, 'to be initiated is to die.' But it is only to die so as to be re-born under better conditions. 'That which thou sowest is not quickened, except it die' (1 Co 15[36]) is a reflexion which must always have occurred to man from the day when he conceived the idea of a higher life in the sacred world. We find this notion wherever initiation ceremonies exist, as we may see by a glance over the examples collected by Frazer in *GB*[2] ii.

In the Lower Congo, initiation ceremonies are called *kimbasi*, which means 'resurrection.' During a dance the neophytes fall dead, and then the sorcerer resuscitates them.[3] Sometimes the rôle is filled by persons who have already been initiated, and the neophyte is present simply as a spectator. On the River Darling in New South Wales, an old man lies down in a grave which has been dug and holds a small bush in his hand. He is then covered with a thin layer of earth and the branch is allowed to protrude, to look as if it were growing. Other bushes are stuck in the soil to heighten the effect. The novices are then brought to the edge of the grave, when a singer begins a chant invoking the totem, and a dance is performed by old men. The dancing and singing are continued till the bush held by the buried man begins to quiver, and he rises from the grave.[4] In the Fiji Islands the novices are set before a row of men lying on the ground and seemingly dead, their bodies having been previously covered with the blood and entrails of pigs. At a given signal they rise and run down to wash in the neighbouring river.[5] Among the Omahas of the United States the neophyte is bound to a plank, after which one priest pretends to kill him, and another brings him back to life.[6] Where we can penetrate behind the veil of secrecy overhanging the initiation ceremonies of the ancients, we find in nearly all cases the representation of the passion of a divine or semi-divine being, who is attacked or carried off by infernal powers, descends to the realm of the dead, is liberated by the intervention of some higher divinity, and brought back to the region of light in the presence or company of those assisting in the ceremony. It is curious to find the same idea not only in Japan, Polynesia, etc., but also among peoples who could never have had any connexion whatever with the mythology of the ancient world. Father de Smet discovered in 1840 among the Pottawatomies of North America a legend about the introduction of agriculture and organization of mysteries which bears an astonishing resemblance to the drama played at Eleusis.[7] Still more recently, J. W. Fewkes, describing the secret rites performed among the Hopi of Arizona by the Brotherhood of the Antelope and the Snake, reports that there the initiated are treated to a representation of the adventures of a personage called Ti-Yo—his journey to the spirit world, the ordeals he passed through there, and his return to the land of the living, bringing with him the knowledge of the rites for making rain.[8]

Sometimes the idea of re-birth is still more clearly marked: the initiated passes into a state of embryo.

Initiation with the Nosairis of Lebanon was closely connected with child-birth, and the neophyte received the embryonic name of *alakali*, lit. 'clot of blood.'[9] In Egypt the Pharaoh, who was solemnly consecrated in ceremonies which were supposed to ally him with Osiris, had to wrap himself up in an animal's skin which was called 'the cradle skin,' or 'the place of becoming, of transformations, of renewed life,' and this skin was used also in funeral ceremonies as a temporary shroud. According to A. Moret, a similar ceremony was celebrated for

certain privileged persons, whose return to a state of embryo was simulated in the same way as in the legend of the resurrection of Osiris; this is what is called 'passing through the skin.'[1] The same symbolism is found in India, where the young Brâhman had also to assume the attitude of an embryo in the course of his initiation, by setting himself on a black antelope's skin which represented the womb.[2] After this ceremony he was called *dvija*, 'twice born.' The Romans had an analogous expression (*in æternum renatus*) to designate one who had passed through the ceremonies of the Taurobolium and the Criobolium; and we find the same expression again in an inscription which Pope Xystus III. had carved on the baptistery of the Lateran:

> 'Coelorum regnum sperate, hoc fonte renati.
> Non recipit felix vita semel genitos.'

It is obvious in all these cases that initiation is literally a *re-generation*. This is brought about in two ways: (*a*) the ceremony evolves mystic influences which modify the spiritual and even the physical nature of the neophyte.

Among the Australians these influences materialize as pebbles or bits of quartz which are supposed to enter the body of the candidate for magicianship.[3] Some clans even believed that his entrails were replaced by new ones. In other parts, a snake is supposed to enter his head.[4] In still other cases there is the substitution or even the superposition of a new soul which comes down from the spirit world; J. G. Frazer has shown that this is a very common way of explaining the change, but he is mistaken in thinking that this *avatar* is invariably the work of a totem which communicates its own soul to the novice, while retaining its own individuality. There is, as a matter of fact, nothing to prevent the soul or spirit thus incarnated from being ascribed to an entirely different source. This new factor may be merely a quality, a virtue, or a gift of grace, which the sanctifying influence of initiation has poured down on the neophyte to purify and exalt his inner nature.

(*b*) The neophyte may pass for the time being into the spirit world. He lives the life of the spirits, becomes like one of them, and so enjoys their privileges. Perhaps the idea here is, reasoning from imitative magic, that, since the neophyte has once died and been resuscitated, the same thing will happen again when he dies in reality.

It is impossible to enter into details of the rites which finally admit the neophyte into the superhuman world. Those which are quoted by Andrew Lang nearly all belong to this category. It is a curious thing that among almost all uncivilized peoples the noise produced by the bull-roarer, or rattle, is supposed to be the voice of spirits; but it is still a moot point whether this instrument was in general use in initiation ceremonies among the ancients. Daubing with clay, chalk, or other colouring substances is a very common rite, but the washing which follows it is not to be confused with the lustrations whose object is to rid the novice of all pernicious taints, and which belong rather to the rites of separation. On the other hand, the mutilations which were classed under separation rites (circumcision, the drawing of a tooth, the removal of a phalanx, etc.) may also be taken as admission rites when their object is to test the courage of the neophytes and their power of resistance, or to set a mark on them by which they will know each other. Dancing, as Lucian noted when he wrote 'there is no mystery without dancing,'[5] may be regarded as of universal use in initiation ceremonies, if we include under it all rhythmic movements, from the *corroboris* in which the Australians imitate the actions and gestures of their totems, to circumambulations (*q.v.*), which aim at drawing a circle to separate the two worlds (except when these circumambulations are a magic ceremony to influence the course of nature). The giving of a new name is often accompanied by the use of a new language, formed either from archaic expressions or turns of speech, or from everyday words which are given a new intonation. Again, we must notice the frequent recourse to communion, through which the neophytes,

[5] Περὶ ὀρχήσεως xv.

by partaking of the food of the initiated, become assimilated with them, or, in the case of sacrifice, with the gods themselves.

(3) *Communication of the sacra.*—The communication of the *sacra* is at once the complement and the essential object of the admission rites. It includes: (*a*) exhibitions, (*b*) actions, and (*c*) instructions—a threefold distinction already made by the ancients (at Eleusis: τὰ δεικνύμενα, 'what is shown'; τὰ δρώμενα, 'what is done'; and τὰ λεγόμενα, 'what is said'). (*a*) The exhibitions include magical or evocatory instruments (amulets, charms, relics, the *churingas* of the Australians, certain shells, the rattle of the American Indians and Negroes, the contents of the medicine bags, the cithern of the Egyptians, the fan, the cist, the tympanum of the Greeks); representational and symbolic objects (various images and effigies, masks, animals, ears of corn, etc.); or pictures representing the adventures of superhuman beings or scenes from the other world. In this way the novice gets to know the inhabitants of this higher world, to familiarize or identify himself with them, and to live their life. (*b*) The performances vary according to the goal aimed at, but we must distinguish between those whose object is initiation properly so called, and which are performed only once for each neophyte, and those which are repeated periodically and form the essential aim of the institution.[1] (*c*) The instruction, which often comprises several grades or degrees, bears of necessity on what the neophytes are to gain by initiation, but it generally extends to other matters than the explanation of rites and the teaching of formulæ. It includes the communication of the real name of divine personages, theogonies, and cosmogonies, mythical history, common law, the exercise of certain arts, moral and social obligations, tabus, and marriage laws.

Among the Basutos, the initiated are adjured to 'be men, fear theft, fear adultery, honour your father and mother, obey your chiefs.'[2] Here we are reminded of the laws attributed to Triptolemus, and said by St. Jerome to have been carved in the sanctuary of Eleusis: 'To honour one's parents, to worship the gods by offerings, and not to eat flesh.'[3]

The revelations may even include, under pressure of a more advanced state of culture, a supposed rational interpretation of vulgar beliefs, or even a religious philosophy agreeing with the most advanced philosophical views of the time. In any case, this instruction is protected by the obligation of secrecy, which the neophyte cannot infringe without laying himself open to the gravest consequences. But, as Seneca says, speaking of the mysteries of his time, the secrecy could apply only to the *sacra*, *i.e.* to the formulæ of incantation, the esoteric explanation of symbols, and the signs by which the initiated recognized each other; it could not cover philosophical precepts, if philosophy there was, because they were current among the uninitiated also.[4]

(4) *Reintegration rites.*—It is only very rarely that the initiated can remain for ever in the realm of the sacred. By some means or other he has to renew his relations with the ordinary world. But he does not return in exactly the same state as he went away. Since he reappears laden with mystic influences, which are, of course, dangerous for the uninitiated, he has to be, so to speak, 'detabuized' and readmitted to his original sphere. He has, for a certain period, to submit to rules of silence and abstinence, and, yet more, he must, in his new character, pretend to have forgotten all about his previous existence and re-learn everything connected with ordinary life.

In the Congo, he must pretend that he cannot either walk or eat by himself, and he has to be fed like a new-born infant. In Virginia, he has to learn the language of his tribe all over again. In New Guinea, he has to go backwards into his house. Among the Brāhmans, he throws his old garments into the river and puts on new ones.

These precautions are only transitory, yet a man who has once been initiated is, throughout his whole life, subjected to a special and more or less strict discipline. Sometimes he bears a special mark or wears special garments or insignia, as, *e.g.*, the cord worn by the Brāhmans, the white dress of the Essenes and Pythagoreans, etc.; he must also respect certain tabus and avoid certain localities. In every case he gains great prestige in the eyes of the uninitiated. When one has visited the infernal regions, even though it is only after the manner of Dante, some trace of it always remains.

GOBLET D'ALVIELLA.

## INITIATION (Buddhist).—1. Forms of initiation.

—Admission to the Buddhist Order (*saṅgha*) is gained by two forms of initiation, a lower, *pravrajyā* (Pāli, *pabbajjā*), and a higher, *upasampadā*, though the former is only preparatory to the latter and, in fact, a probationary part of it.

(*a*) *Pravrajyā* means 'going out'; and by this ceremony one goes out from a prior state of life, either from the worldly life in the case of an ordinary person, or from a monastic life in the case of one changing to another faith. This is in a certain way analogous with the Brāhmanical initiation (*upanayana*) by which a boy is admitted to a teacher's hermitage (*āśrama* [*q.v.*]) in order to live with him (*antevāsin*) as a *brahmachārin*. With the Buddhists a layman is thereby admitted to the Order, and is henceforth obliged to live with a preceptor, without whose directions he is not allowed to do anything. The lowest limit of age is eight, children under that age being ineligible. With this ordination the child begins his life as a 'homeless one' (*pravrajita*, *pabbajita*), and is called a *śrāmaṇera* (*sāmaṇera*), 'novice.' The period of novitiate lasts for twelve years, and, in the case of one initiated at eight, his higher ordination takes place only in his twentieth year.

(*b*) *Upasampadā* means 'arrival,' and is the entry into the circle of the fully accredited members of the *saṅgha*. This second and full ordination is never conferred on a novice under twenty years of age; but, if he receives the *pravrajyā* ordination at or after twenty, and is otherwise properly qualified, he can proceed at once to the *upasampadā*. One who has gone through the *upasampadā* is henceforth an *upasampanna bhikṣu* ('fully ordained mendicant'), and will be called, after ten years' standing, a *sthavira* (*thera*), 'elder,' elders only being allowed to instruct others, that is, to become an *upādhyāya* (*upajjhāya*), 'preceptor,' or an *āchārya* (*āchariya*), 'tutor.' Those who cannot as yet be named 'elders' are called *daharas* ('small teachers'), according to I-tsing.[1]

The names, *śramaṇa* (Pāli, *samaṇa*), 'one performing austerity, ascetic,' *bhikṣu* (Pāli, *bhikkhu*), 'one begging, mendicant,' and especially *śākyaputriya śramaṇa* (*sākyaputtiyasamana*), 'an ascetic belonging to the son of the *Śākya* tribe,' are ap-

[1] Perhaps some such distinction is alluded to in *Hom. Hymn to Demeter*, 481, where the author seems to mention successively 'initiation into' and 'participation in' the mysteries: Ὃς δ' ἀτελὴς ἱερῶν, ὅς τ' ἄμμορος (cf. Goblet d'Alviella, *Eleusinia*, Paris, 1903, p. 60).

[2] E. Casalis, *Les Bassoutos*, Paris, 1860, p. 278.

[3] Jerome, *adv. Iovinianum*, ii. 14.

[4] Seneca, *Ep.* xcv.

[1] I-tsing, *Record of the Buddhist Religion as practised in India*, tr. J. Takakusu, Oxford, 1896, p. 104.

plied to all the members of the Order except the laity, though, strictly speaking, these terms can be applied to the elders only, for no one can be designated an ascetic or a mendicant until he is fully confirmed by the *upasampadā* and becomes himself responsible for such a mode of life.

While the *pravrajyā* resembles the initiation (*upanayana*) to the first stage of the Brāhmanic life, the *upasampadā* makes the Buddhist system quite different from that of the Brāhmans. Coming of age and finishing his study, a *bramachārin* becomes a *snātaka* ('bathed') and returns to household life (*gṛhastha*), whereas a *śrāmanera* becomes by the *upasampadā* a *sthavira*, a full member of the Order, or a *bhikṣu* in the proper sense of the word, corresponding to the fourth and last stage of the Brāhmanic life, i.e. *sannyāsin*, an ascetic.

**2. Particulars of initiation.**—(*a*) The *pravrajyā* ordination chiefly consists of (1) the investment with a yellow robe, (2) a tonsure, (3) the declaration of the Three Refuges (*saraṇattaya*), and (4) the imparting of the Ten Precepts (*dasasikkhāpadāni*).

A lay person desiring to enter the Buddhist Order first chooses a *vihāra* ('monastery'), approaches an elder living therein (bringing with him a suit of yellow robes), and requests to be initiated. The elder invests him with the robe, and instructs him to keep the Three Refuge creed by repeating it:

'I take refuge with the Buddha, I take refuge with the Religion, I take refuge with the Order. For the second time I take refuge with the Buddha. For the third time I take refuge with the Buddha,' etc.

After this the candidate is again taught to adhere to the Ten Precepts (*dasasikkhāpadāni*):

'Abstinence from taking life, Abstinence from taking what is not given, Abstinence from impure practices, Abstinence from telling a lie, Abstinence from intoxicating drinks, Abstinence from eating out of time, Abstinence from dancing, singing, and seeing shows, Abstinence from the application of perfume, incense, etc., Abstinence from the use of a high or large couch or seat, Abstinence from receiving gold and silver.'

So far the ceremony. Henceforth the novice lives with his preceptor and acts under the latter's supervision until he is fully qualified for the next ordination.

The *pravrajyā* is in reality a preparatory ceremony by which one enters into the probationary course of the priestly life. Without this course of novitiate one cannot proceed to the higher Order, the relation between a *śrāmaṇera* and a *śramaṇa* being analogous to that between deacon and priest in the Anglican Church.

(*b*) The *upasampadā* ordination is not so simple as the *pravrajyā*, since it involves the fullest possible enjoyment of the privileges of the Buddhist Order and the final registry of the right of seniority among the younger brethren. Every step of the ordination has to be performed before a chapter of fully equipped elders, the number of the members being in this case at least ten.[1] An ecclesiastical vote of the chapter of elders is called *kammavāchā*, and there are two forms of arriving at a resolution: (1) a summary decision (*ñattidutiyakamma*), in which a resolution is arrived at by the first reading, and (2) a decision by the third reading (*ñattichatutthakamma*).[2] In the *upasampadā* ordination all questions are decided by three readings. The method of voting is very simple. Those who assent remain silent, while those who dissent speak out. Occasionally, however, when there are dividing opinions in case of a difficult question, the chapter has recourse to the use of voting slips (*salākā*), which are divided in colours, generally white and black, but sometimes of several different colours. The time generally chosen for holding the ordination is the full-moon day of Vaiśākha (April–May), and the three successive

[1] *SBE* xiii. [1881] 176. [2] *Ib.* p. 169.

days of quarters of the moon.[1] The proceedings are as follows.

First a preliminary examination of the candidate takes place A novice is brought by a tutor before the president of the chapter,[2] and an *upādhyāya* (*upajjhāya*, 'preceptor') is appointed for the candidate. Meanwhile one of the assembly comes up as a second tutor, or, rather, witness. By these two tutors he is questioned as to his name, his preceptor's name, his bowl, and his robes. All being well, he is ordered to stand on a certain spot, while the tutors remain before the president, and, having asked the permission of the chapter, they instruct the candidate to tell the truth, and further examine him as to his qualifications. He is first questioned if he has any such diseases as leprosy (*kuṭṭha*), boils (*gaṇḍa*), itch (*kilāsa*), asthma (*sosa*), or epilepsy (*apamāra*). These questions being answered in the negative, he is asked if he is a human being (*manussa*), a male (*purisa*), and a free man (*bhujissa*); if he is free from debt (*anaṇa*), exempt from military service (*rājabhaṭa*), and permitted by his parents (*anuññāta mātāpitūhi*); and, further, if he is of the full age of twenty. The questions as to the state of the bowl, and the robes, and his name and his preceptor's name, are also asked.

This strict and searching examination being over, the two tutors go up to the president of the chapter and report the result, and then the candidate is called out (*āgachchhāhi* or *ehi*).[3] Thereupon he comes out and stands between the two tutors and says: 'Venerable sirs, I ask the chapter to confer upon me the *upasampadā*. Have pity on me and lift me up (*ullumpetu*).' He repeats this request three times.

Now the tutors repeat the above examinations once more before the assembly, and finally a motion (*ñatti*) is proposed publicly with the words:

'This Nāga desires the *upasampadā* under the venerable Tissa. He is free from disqualifications (*antarāyikā dhammā*). If any of the venerable chapter approves the ordination of the candidate, let him be silent; but if any objects, let him speak.'

This motion also is repeated three times. If all are silent, the president declares that the resolution is carried.[4] As soon as the ceremonies are over, the shadow of the sun (*chhāyā*) must be measured, and the season (*utupamāna*) and the division of the day (*divasabhāga*), with the details of the assembly (*saṁgīti*), should be recorded.

The four requisites (*nissayā*) for a *bhikṣu* and the four interdicts (*akaraṇīyāni*) must be minutely taught.

The four requisites are (1) food collected in the almsbowl (*piṇḍiyālopa-bhojana*); (2) robes made of rags (*paṁsukūla-chīvara*); (3) lodging at the foot of a tree (*rukkhamūlasenāsana*); and (4) cow's urine used as medicine (*pūtimutta-bhesajja*). To each of these several exceptions are given

The four interdicts are (1) sexual intercourse (*methunadhamma*); (2) theft (*adinnādāna*); (3) killing (*pāṇātipāta*); and (4) a claim of superhuman power (*uttarimanussadhamma*). To these also many exceptions are allowed.

With the instructions as to these two series of important moral precepts the ordination comes to an end.

**3. Training of the initiated.**—The *upasampadā* ordination confers on the candidate no mystic power, as is the case in the *abhiṣeka* described below; nor is it regarded as an indelible Order imposed upon him, for one's free will is always respected in the Buddhist Order. But the *upasampadā* ordination alone does not give a man freedom of conduct, for he has further to live under the supervision of the superiors whom he has chosen. The superiors are generally two, one being the preceptor (*upādhyāya*), the other the tutor (*āchārya*).

[1] The full-moon day of Vaiśākha is the day of the Buddha's *parinibbāna*; see Buddhaghosa's *Samantapāsādikā*, in H. Oldenberg's *Vinaya Piṭaka*, London, 1879–83, iii. 283.

[2] An elder who becomes president must be of more than ten years' standing after his *upasampadā* ordination; see *SBE* xiii. 178.

[3] Cf. Rigveda, III. viii. 4, which is used in the Brāhmanic initiation in the Gṛhyasūtras. The first verse, *Yuvā suvāsāḥ parivīta āgāt*, etc., is recited by a candidate, and the second verse, *Taṁ dhīrāsa Kavaya unnayanti*, etc., is said by the teacher. *Āgachchhāhi-āgāt* and *ullumpetu-unnayanti* are interesting. The ordination is sometimes called *ehi-bhikkhu-pabbajjā*, 'come-priest-ordination' (V. Fausböll, *Dhammapadam*, Copenhagen, 1855, p. 119).

[4] *SBE* xiii. 170.

The duties of the two superiors are very difficult to define; it is perhaps impossible to draw a line between them. Their offices, as detailed in the *Mahāvagga*, i. 25–33,[1] are exactly identical. Most probably, as the general purport of the two words indicates, the *upādhyāya* (preceptor) is responsible for his pupil's study of the sacred texts, while the *āchārya* (tutor) takes charge of the pupil in respect of conduct. The latter is sometimes called *karmāchārya*, meaning, most probably, a tutor in the ecclesiastical act, but personally a tutor in discipline.[2]

Thus an *upasampanna bhikṣu* is dependent on the two teachers. Though the *upādhyāya* seems to be more important than the *āchārya*, contrary to the Brāhmanic usage,[3] the duty of giving a *nissaya* (dependence, protection) properly belongs to the *āchārya*. It is prescribed by the Buddha in the Vinaya that a *bhikṣu* after the *upasampadā* should live ten years in dependence (*nissaya*) on an *āchārya*, and that he who has completed his tenth year may himself give a *nissaya* to others.[4] Thus an *āchārya* is a proper *nissaya-da* ('giver of protection'), and his protégé is *nissaya-antevāsika* ('pupil in dependence'). The pupil should be regarded as a son, and the tutor should be looked up to as a father.[5] Yet it is said in the *Vinaya* that a *nissaya* will cease when the *upādhyāya* and the *āchārya* come together.[6] This would imply that, though a pupil is always dependent on his *āchārya*, when he is in the presence of his *upādhyāya* for instruction or otherwise his dependence on the *āchārya* would cease for the time being.

As a *bhikṣu* is an *antevāsika* ('dwelling close by pupil') towards his *āchārya*, so he is a *saddhivihārika* ('living in the same *vihāra*, co-resident') towards his *upādhyāya*. Of the two superiors one is something like a private tutor whose duty is chiefly towards the progress of morals, while the other is a professor in the college (*vihāra*) who is mostly responsible for the instruction of the pupil.

**4. Initiation in the mystic school of Buddhism (Japan).**—The mystic doctrine of Buddhism is imparted only by the *abhiṣeka* ('anointing') rite, which is important, as it raises one above the level of ignorance and reveals the real state of nature. Through this one can witness the true *bodhichitta* ('mind arising from perfect knowledge') of the Buddha, unite one's mind with it, and become blessed and enlightened. An *āchārya's* sprinkling over the head of a novice of the water of knowledge (*jñānodaka*) of the Mahāvairochana Buddha (one of the Dhyānibuddhas) is at once symbolical of dispelling one's ignorance and one's sins. The *abhiṣeka* is certainly a reproduction of the crowning of Indian Rājas.[7]

In contrast to the *upasampadā*, liturgical elements come to the front, which are considered to effect a mystic transmission in the candidate's mind and person. A new name is always given to the anointed (*abhiṣikta*).

In the Buddhist *abhiṣeka* there are, theoretically, the three following forms: (1) the *abhiṣeka* of signs (*mudrā*); (2) the *abhiṣeka* of actions (*karma*); and (3) the *abhiṣeka* of mind (*chitta*). The *mudrā-abhiṣeka*, chiefly consisting of finger intertwinings symbolical of actions, is a curtailed form of initiation to be conferred on an earnest believer who is short of means, whereas the *chitta-abhiṣeka*, which is beyond the scope of speech and action, is conferred only on a holy personage (*ārya-pudgala*) like a Bodhisattva (*q.v.*). The *karma-abhiṣeka* is the ordinary rite which an *āchārya* performs for a fully equipped pupil, and is important in proportion as it is elaborate in details. The *karma-abhiṣeka* is again divided into three kinds: (*a*) the *abhiṣeka* for forming a sacred connexion (*pratītyabandha-abhiṣeka*); (*b*) the *abhiṣeka* for holding a magical power (*vidyādhara-abhiṣeka*); and (*c*) the *abhiṣeka* for transmitting the law (*dharmasaṁchāra-abhiṣeka*).

These ordinations are the stages of training in the mystic school. The most common of all is the *pratītyabandha-abhiṣeka*, which may be performed for any person, making no distinction whatever of qualifications, either good or bad; sometimes one is forcibly brought to the ordination hall so as to improve one's character. The object of this particular rite is to form a sacred connexion with a Buddha or a saint in the *maṇḍala* (sacred diagram), a fact which in the end will lead one to perfect knowledge. Every one who believes in the mystic doctrine is entitled to receive this ordination. During the rite the candidate is made to throw a flower over the sacred *maṇḍala* placed before him. If the flower falls on a Buddha or a Bodhisattva, he is considered to be worthy of the Buddha-gotra; but, if it falls on the outer circle of the *vajra-kula*, as on Vināyaka (Gaṇapati), he is not allowed to study the mystic doctrine, though at the present day there is no strict adherence to this rule. The *vidhyādhara-abhiṣeka* is a step higher than the *pratītyabandha*. It is conferred on the best qualified pupils who are able to grasp the highest truth. *Vidyā* ('science,' especially 'occult science') means *mantra* ('incantations'), *stotra* ('praises'), *dhāraṇī* ('charms'), and *mudrā* ('signs'). One who is possessed of this knowledge is called *vidyādhara* ('holder of occult science'). An *āchārya* through this ordination gives his select pupil permission to acquire the *vidyā* above specified, and also the *kriyā*, a religious achievement such as the four *pāramitās* ('perfections'); and this rite is, accordingly, also called the *abhiṣeka* for the position of a pupil (*śiṣyasthāna-abhiṣeka*). While the *pratītyabandha-abhiṣeka* is an admission to the mystic circle, the *vidyādhara-abhiṣeka* is an introduction to the mystic doctrine, and is therefore placed much higher than the *pratītyabandha*. Still higher in grade is the *dharmasaṁchāra-abhiṣeka*, which gives one, not the position of a pupil, but the position of a teacher, especially a transmitter of the mystic doctrine. The name means, therefore, the transmission of the teaching (*dharmasaṁchāra* or *śāsanasaṁchāra*), but sometimes it is called the *āchāryasthāna-abhiṣeka* (the *abhiṣeka* for the position of a teacher). This ordination is not conferred on a *bhikṣu* under fifty years of age, however well qualified he may be. This was in any case the rule set forth by Kūkai, the founder of the Japanese school of mystic Buddhism.

**5. The ceremonial of the Buddhist abhiṣeka.**—The object of the *abhiṣekas* as specified is to create (*a*) an ideal religious personage, (*b*) an ideal religious scholar, and (*c*) an ideal religious instructor. Consequently the rules of the religious performance preparatory to the *abhiṣeka* (*samaya-śīla*) are very minute and strict. By the *samaya* practice the candidate should produce a believing mind ('faith'), a compassionate mind ('compassion'), deep *prajñā* ('wisdom'), and a great *bodhi-chitta* ('mind arising from perfect knowledge'), and remain firm in determination. *Samaya* means 'agreement,' 'union,' 'communion,' and the *samaya-śīla* is intended to keep a man in communion with the Mahāvairochana Buddha. Through the efficacy of this preparatory performance the candidate now assumes the position of the Buddha-son, Vajrasattva, and enters into the hall of ordination (Pali, *sīmāmaṇḍala*).

Among the chief objects in use during this rite are a tooth-stick symbolizing the cleansing of passion and sins, a bundle of *vajra* threads in five colours representing the five Buddhas in union, a pot of the holy *vajra* water indicating the firm determination to seek *bodhi* ('supreme knowledge'), and so on. This ended, the *āchārya* blesses the candidate and covers his eyes, meaning to shut the gate of evils so as to open the divine eye. He is now led into the room of ordination with his eyes covered, and is made to throw a flower as before described, his object of worship being determined in this way. Afterwards he is allowed to gaze on this sacred *maṇḍala*. He is then led into the terrace of Bodhi (*bodhi-maṇḍa*), and is made to sit in the *padmāsana* fashion or on a lotus seat, and wear a diadem of the five Buddhas (*ratna-mukuṭa*) and a necklace (*hāra*). The *āchārya* sprinkles over his head the holy water of knowledge from five jars (*pañcha-kuṇḍaka*), and furnishes him with several things, such as a wheel (*chakra*) and a conch-shell (*śaṅkha*). While the *abhiṣeka* is still going on, a *homa* rite is performed, in which a sacred fire is lighted to burn all the past sins of the candidate.

Each ceremony is performed twice, first for the *garbhakośadhātumaṇḍala* (or *dharmadhātu*), and

then for the *vajradhātumaṇḍala*, or *vice versa*. Without entering into details of these *maṇḍalas*, it will be sufficient to say that these two are quite different in Japan, whereas in Nepāl the distinction is very vague, one *maṇḍala* serving for the other, in spite of the existence of two separate names.

The description here given follows the practices of the Japanese *mantra* school which were originally taught in China, by Subhākara Siṁha, an Indian *āchārya*, who was active in China A.D. 716–724, and which were brought to Japan by Kūkai (A.D. 774–835).[1] The tradition on the whole is no doubt much older than that in Nepāl.

**6. The pravrajyā rites (Nepāl).—**

In the Nepālese *abhiṣeka*, called the *pravrajyāvrata*,[2] the initiation of the Nepālese *banra* (Skr. *vandya*, 'worthy of honour, priest') is again different from those given above. A *guru* (teacher) in charge of the candidate prepares a pot (*kalaśa*) full of water and puts into it a lotus made of gold. Five confections, five flowers, five drugs, threads of five colours, etc., are properly provided. The candidate sits in the *vajrāsana* fashion before the pot and the four sacred *maṇḍalas* specially provided. He repeats the formula of the Three Refuges, and the first day's service is over. On the second day the candidate sits on the *svastikāsana*, and the *guru* gives him (1) the *vajra rakṣā* ('protection') by placing a *vajra* on his head; (2) the *loha* ('iron') *rakṣā* by placing three iron padlocks on the belly and on the two shoulders; and (3) the *agni* ('fire') *rakṣā* by placing a wine-cup (*surāpātra*) on his head. Then comes (4) the *kalaśa-abhiṣeka*, in which the holy water is sprinkled over his head. The *nāyaka banra* (head priest) of the *vihāra* ('monastery') now comes to him and puts a silver ring on the finger of the pupil. To the sound of a bell he sprinkles rice on the pupil and on the images of the protecting deities. On the third day, all necessary preparations being made, the pupil sits again on the *svastikāsana* and performs worship of the *guru maṇḍala*, the *chaitya* ('memorial tope'), the Three Treasures '*Tri-ratna*, *i.e.* Buddha, Dharma, and Saṁgha), and the *prajñā-pāramitā* text, and, lastly, he receives the Ten Precepts. He is again given three *rakṣās*, invested with a robe, and tonsured by a barber. Thereupon a diadem of the five Buddhas is put on his head, and the holy water is sprinkled on it, *mantras* being repeated all the while. With an offering (*pūjā*) the ceremony comes to an end, and a new Buddhist name is given to him.

Though *maṇḍalas*, five-coloured threads, the holy water, and the diadem of the five Buddhas are in common with the Japanese *abhiṣeka*, the Nepālese rite is more Hindu in its appearance. The ceremony of initiation in Tibet is generally similar to that of the southern Buddhists.[3] The *vinaya* school in Japan also mainly follow southern Buddhism in their ordination. The *abhiṣeka* belongs only to the *mantra* school of the mystic Buddhism.

**INITIATION (Greek).**—The Greek word for 'initiation,' *τελετή*, has until quite recently not been rightly understood. The lexicons tell us that it means 'accomplishment,' 'fulfilment,' 'attaining an end,' a *τέλος*; hence a rite of accomplishment, hence initiation into the mysteries. But we are left uncertain as to what end is to be accomplished. The word *τελετή* is derived from *τελέω*; its gist is best seen in the cognate *τέλειος*, which means 'full-grown.' A *τέλειος ἵππος* is a full-grown horse as contrasted with a foal. A *τέλειος ἀνήρ* is a full-grown man, an *adult*; *τελετή* is the rite of the first human accomplishment, the rite of growing up, of coming to maturity.

This meaning of *τελετή* is very clearly shown in the myth of the Prœtids told us by Apollodorus (II. ii. 2). The daughters of Prœtus, king of Tiryns, went mad and ranged over the mountains. They were finally cured by the soothsayer Melampus, who healed them by a ritual dance, and eventually married one of them. The time *when* they went mad is most instructive: 'when they had grown to maturity' (*ὡς ἐτελειώθησαν*). The reason *why* they went mad is equally so: 'they refused the maturity rites of Dionysos' (*τὰς Διονύσου τελετὰς οὐ κατεδέχοντο*). It is not safe to grow up without the orthodox rites of maturity; the crisis is momentous, and needs *rites de passage*. Not only baptism is needed, but confirmation.

Another version of the story given by Apollodorus says that the maidens went mad because they held the image of Hera cheap. Hera was worshipped in three forms: as child (*παῖς*), as full-grown woman (*τελεία*), and as widow (*χήρα*); she represented the three stages of a woman's life. This explains the sequel of the story of the Prœtids. The maidens who are healed by initiation are immediately married. Marriage, in fact, is the sign-manual of maturity. A boy among primitive peoples cannot take a wife till he has been initiated. In some cases initiation is not complete till after the birth of the first child. This explains the statement of Pollux (iii. 38): 'The married are mature'—*τέλειοι οἱ γεγαμηκότες*. This explains also why to the Greeks the Danaids both were 'uninitiated in marriage' (*ἀτελεῖς γάμων*) and became the prototypes of those who were 'uninitiated' in the Mysteries. To the Greeks, as in the English Prayer-Book, marriage is 'an excellent mystery.'

Initiation rites will be discussed under the head of MYSTERIES (Greek). All that concerns us here is to grasp the important fact that the primal *τελετή*, or initiation rite, was the rite of maturity. This rite was, of course, carefully concealed from the immature, and in sex rites from the uninitiated sex. Therein resided the *mystery*, which was indeed the social sanctity of the whole proceeding.

How little 'mysterious' in our sense the rite of maturity was is seen from a marble relief, probably funerary, now in the Central Museum at Athens, and dating about the 1st cent. A.D. A matronly figure seated on a decorated chair is inscribed 'Increase' (*Ἐπίκτησις*). Before her, on a base, is a statue of 'Fertility' (*Εὐθηνία*), who carries a basket of fruit. Behind 'Fertility,' on a Doric pillar, is a goddess of the Artemis type. Near her in the field is the inscription Τελετή, 'Rite of Maturity.' Whether this refers to the figure on the pillar or to the whole scene is not very clear. What is clear is that Τελετή, 'Initiation or Maturity Rite,' stands both for the fertility of man and for that of the fruits of the earth, for behind the figure on the pillar is a great tree with a fillet hanging from one bough and round the stem a snake, the emblem of the fertility of the ground. According to ancient thinking, the same rite promotes and protects the maturity of man and of nature. In the light of this conception we understand why the great Eleusinian Mysteries were a festival of sowing. In the light of the fact that Τελετή stands on a gravestone we understand those hopes of immortality which centred round the Mysteries. Death was a *rite de passage* to a new life. 'It is sown a natural body, it is raised a spiritual body.' 'Thou fool, that which thou sowest is not quickened, except it die' (1 Co $15^{44, 36}$).

**INITIATION (Hindu).**—The ceremony of initiation, or girding with the sacred thread, is considered one of the most important events in the life of a young Hindu. Before it he is, under the ancient Sanskrit law, equal to a low-born Śūdra, but the investiture is supposed to confer a spiritual birth in virtue of which he is reckoned a member of the higher classes, and these are therefore called the twice-born (*dvija*). It appears probable that the original meaning of this Indian custom has been preserved in those celebrations which take place among wild tribes all over the world at the time when a youth attains puberty, the Indian notion of a spiritual re-birth, or beginning of a new life, being present at many of these ceremonies. The Brāhmanical law of India seems to have narrowed the original meaning and importance of the custom by converting it into an 'introduction' (Skr. *upanayana*) to the future teacher, but the extension of the privileges conferred by it to many non-Brāhmanical castes was retained, and the now prevailing neglect of the course of sacred studies prescribed for the young novice seems to have been very common from an early period even among the Brāhmans. The Sanskrit law-books and the *Gṛhyasūtras* (domestic rules) are prolix in their descriptions of the rite of *upanayana*, the principal part of which consists in the communication of an ancient Sanskrit prayer (*gāyatrī*) to the novice by his future teacher, and in the investiture of the boy with a girdle which he puts round his waist, and with the sacred thread which he carries over the left shoulder. The performance of this rite is enjoined in general for a Brāhman in his eighth year, for a Kṣatriya in his eleventh, and for a Vaiśya in his twelfth. After initiation the youth has to live at the house of his spiritual teacher, studying the Veda under him, obeying his commands, begging for alms on his behalf, and collecting fuel for his fire. The period of studentship lasts for twelve years, or until the student has acquired a knowledge of the Vedas, and it terminates with another ceremony called *samāvartana* ('return'). The expense incurred by initiating a boy is defrayed by his parents, and after their death it becomes a charge on the inheritance.

At the present day the rite of *upanayana* is performed by Brāhmans and other high castes all over India, and the ancient ceremonies are preserved more or less in their original form. Thus among the Mādhva class of Deshāsth Brāhmans in Dhārwār (Bombay Pres.) eight is the usual age for a boy's thread-girding, and the season from mid-February to mid-July is the right time. An astrologer chooses a lucky day for the ceremony, for which great preparations are made, the house being cleaned and whitewashed, a porch erected in front of it, with posts ornamented with twigs and flowers, an altar raised facing the east, and invitation letters sent to friends and kinsmen. The lucky day having arrived, musicians begin to play at the boy's house; he is anointed with oil and turmeric, and bathed; a barber shaves his head, leaving three or five locks, according as he is supposed to study the Rigveda or the Yajurveda. He is then taken to the dining-hall, where his mother places him on her lap, feeds him, and for the last time eats from the same plate with him. The barber shaves the boy once more, leaving only the top-knot on his head; he is bathed, and made to sit down on a low wooden stool between his parents, and the Brāhman priests present chant eight auspicious hymns. As soon as the 'lucky moment' has arrived, the musicians raise a loud noise, the guests clap their hands, and the Brāhman priests and guests throw red rice over the boy. The priest then formally girds him with the sacred thread, one part of which rests on the boy's left shoulder, the rest falling below the right arm. A piece of deer-skin is tied to the sacred thread, and a staff is placed in his hand. Money presents are made to Brāhman priests, and fruits and flowers are handed round among the guests. At noon the boy is made to say his midday prayers, and in the evening his evening prayer. He asks alms of his mother in Sanskrit, and afterwards of his father, and in the same way of friends and kinsmen. Each drops rice and silver coins into the boy's cloth wallet. On the following three days he is taught to say his regular prayers, and is made to worship the sacred fire. On the fifth day he is dressed in fine clothes and taken in procession with music to a temple in the village, where he worships the idol and returns home. Among the Paradeśa Brāhmans of Travancore, in the extreme south of the Peninsula, the *upanayana* consists of no fewer than fourteen parts, which have retained their old Sanskrit names, and correspond in the main to the ceremonies in vogue at Dhārwār as above described. The actual initiation, however, is performed by the teacher instructing the boy in the holy *gāyatrī* prayer, which he mutters in a low voice so that the assembled throng of friends may not hear it. Elsewhere it is the father who mutters the *gāyatrī* in the boy's right ear, whereas it rests with the priest to kindle the sacred fire and to gird the boy with the sacred thread. The initiation ceremony entails considerable expense; thus it is said to cost 40 to 100 rupees among the Deshāsth Brāhmans of Bijāpur, and 20 to 50 rupees among the Patane Prabhus of Poona. The course of instruction in the sacred books and prayers after *upanayana* has in most cases dwindled down to a period of a few days, but the privilege of wearing the sacred thread continues to be highly prized. In the 17th cent. the valiant Sivaji, the founder of Mahratta power, on account of his low origin did not venture to wear the sacred thread till his solemn coronation had taken place. On the other hand, customs precisely analogous to the initiation of the Brāhmans are found to occur even among those castes the members of which never wear the sacred thread. Thus among the Agarvāls of Poona it is customary for every boy at the age of eight or nine to prostrate himself once before his teacher, who presents him with a wreath of flowers and mutters a sacred verse in his ear. The Kanphatas of Cutch, a religious body, give every novice a black woollen thread, which he ties round his neck with a knot; and on receiving him into their Order the teacher whispers a certain verse into his ear.

LITERATURE.—J. Jolly, 'Über die indische Jünglingsweihe,' in *Jahrbuch der internat. Vereinigung für vergleich. Rechtswissenschaft*, Berlin, 1897; A. Hillebrandt, *Rituallitteratur*, Strassburg, 1897; *The Census of Travancore*, 1891, vol. i., Report; *Bombay Gazetteer*, *passim*.

J. JOLLY.

In modern practice only a few of the initiatory or purificatory rites (*saṁskāra*) remain in force. In the case of a boy, on the twelfth or on some other lucky day after the fortieth from birth the naming rite (*nāmakarma*) is performed, the name being regarded as a part of the personality. It is selected either by astrological calculations, by adoption of that of some deceased ancestor, or in other ways. In the sixth or eighth month after birth comes the 'food-giving' rite (*annaprāśana*, in W. India *boṭan*), at which boiled milk with rice and sugar or coarse wheat-flour mixed with sugar and clarified butter is laid on a rupee or gold plate and given to the child by the maternal uncle or by some other near relation (*BG* ix. [1901] pt. i. p. 35; *Census Reports*, Kashmir, 1911. i. 145,

Central Provinces, 1911, i. 156; W. J. Wilkins, *Modern Hinduism*, London, 1887, p. 13). This is regarded as an initiation into caste, and the child henceforth is supposed to observe the food rules and tabus peculiar to his group. In the Central Provinces, the lower Hindu castes and the Gonds (*q.v.*) regard the ear-piercing (Skr. *karṇavedha*, Hindi *kan-chhedan*) as the mark of admission to the caste community. It is generally done when the child is four or five years old, and up to this time he or she is not considered to be a member of the caste, and may consequently take food from any one (R. V. Russell, *Ethn. Survey, Central Provinces*, pt. viii. Allahabad, 1911, p. 99 ff.).

There have been various explanations of this rite. F. B. Jevons (*Introd. Hist. Rel.*, London, 1896, p. 171 f.) considers it to be a survival of the offering of blood to the deity. A. E. Crawley (*The Mystic Rose*, London, 1902, p. 135) classes it with other forms of savage mutilation:

> 'When we find that the mouth and lips, the teeth, nose, eyes, ears, and genital organs are subjected to such processes, we may infer that the object is to secure the safety of these sense-organs, by what is practically a *permanent* amulet or charm.'

Russell (*op. cit.* 101) suggests that

> 'the continuous distension of the lobe of the ear by women and the large hole made is supposed to have some sympathetic effect in opening the womb and making child-birth easy.' In this connexion he refers to the horror felt by women if the flesh surrounding the hole is torn by accident or design. In such case the woman has to undergo a rite of purification as severe as in the case where it is found that maggots have formed in a wound or sore.

On the whole, the theory that it is intended as a protection to one of the body exits appears most probable (cf. KAPĀLAKRIYĀ).

The initiation of a child of one of the higher castes into the Hindu religion is provided by the rite in which the *guru*, or spiritual teacher, whispers into the ear of the child a formula containing the name of some god, which thenceforward becomes his special personal deity (*iṣṭadevatā*), 'by repeating whose name he is to obtain present and future happiness' (W. Ward, *A View of the Hist., Lit., and Mythol. of the Hindoos*[3], Serampore, 1815, ii. 253 f.). Marriage is the only form of initiation required for a girl, as she thereby enters the group of her husband; but in some cases tatuing (*q.v.*) is an indispensable preliminary to marriage, and is regarded as a form of initiation.

LITERATURE.—Besides the authorities quoted above, see M. Monier Williams, *Brāhmanism and Hinduism*[4], London, 1891, p. 357 ff.; H. A. Rose, 'Hindu Birth Observances in the Punjab,' *JRAI* xxxvii. [1907] 226 ff.; *Census Reports*, Assam, 1911, i. 76 ff., Central Provinces, 1911, i. 156 ff., Rajputana, 1911, i. 158 f.

W. CROOKE.

**INITIATION (Jewish).**—1. Philo of Alexandria regards the assumed allegorical sense of the Scriptures as a mystery. Thus, in a fragment of his *Quæstiones in Genesin* entitled περὶ θείων λόγων, and preserved by Johannes Damascenus (*Sacra Parallela*, p. 782; in Philo's *Opera*, ed. Mangey, London, 1742, ii. 658), he declares that it is not proper to divulge the sacred mysteries to the uninitiated before they have been purified by a perfect purification,[1] and speaks of the words of Scripture as the true mysteries (τὰς ἀληθεῖς τελετάς) which must not enter into profane ears (ὦτα μεστὰ φλυαρίας). That these are only metaphorical terms, by which the author does not allude to any initiatory rite of mysterious description, appears from the conditions he lays down for those to whom the Scriptural mysteries may properly be communicated, viz. (1) piety and holiness, corresponding to a strict belief in the one true God; (2) 'to be cleansed by the sanctifying purification, in body and soul alike—by (through?) the laws and customs of the fathers';[1] (3) seriousness of mind. Here the 'cleansing of the body' (καθαρθῆναι κατὰ σῶμα) can be regarded only as being effected by the purifying baths prescribed by the law (see PURIFICATION [Jewish]), perhaps also by abstinence from forbidden foods, and by observation of the traditional Jewish fasts, while the 'cleansing of the soul' (καθαρθῆναι κατὰ ψυχήν) must be understood as that which is effected by the influence of religious and moral principles. The words διὰ νόμων πατρίων, κτλ., require this interpretation, which we find fully confirmed by similar utterances of the same author.[2]

2. In another work Philo (*de Pœnitentia*, p. 717; Mangey, ii. 406), in counselling a kind behaviour towards proselytes, says that, having abandoned polytheism in order to worship the one God, they are 'like men who, once blind, have recovered their sight, having from the deepest darkness descried a most glorious light.'[3] The context, as given here, shows that the statement of Philo is simply a rhetorical simile, for the instruction and baptism of Jewish proselytes cannot rightly be regarded as an initiation into a mystery, nor were they ever associated with any such rite.

3. The 'dreadful oaths' required of the neophytes of the Essene order (ὅρκους . . . ὄμνυσι φρικώδεις) might with more confidence be regarded as forming part of an initiatory ceremony. Josephus, after recounting the obligations which the candidates were bound by oath to fulfil, continues as follows:

> 'Moreover, they swear that they will communicate the doctrines to no one on any other condition than those on which each himself received them, . . . and that with like care they will preserve the books of their sect and the names of the angels,'[4] and adds: 'By such oaths do they [i.e. the Essenes] make their proselytes trustworthy.'

Now, in his autobiography (*Vita*, 2), Josephus tells us that, when a youth, he became a pupil successively of the Pharisees, the Sadducees, and the Essenes, and thereafter of an eremite named Bannûs, with whom he remained in solitude for three years, and then, at the age of nineteen, returned to the city. It is thus clear that he must have parted from the Essenes in his sixteenth or seventeenth year—at an age, that is to say, when he could not yet have been received into the full membership of the sect. Accordingly, he had not taken the oath that would have obliged him to maintain the secrecy of the Essene doctrine, nor had he undergone the consecrating ceremonies or taken part in the initiatory rites of the order, so that, however willing he may have been, as a historian, to speak of these things in detail, he was not in a position to do so.

The present writer is, nevertheless, inclined to believe that, if initiatory rites were now and again performed among the Essenes, either in connexion with the admission of new members or on other occasions, Josephus would certainly have become aware of the mere fact, and in that case would doubtless have expressly attested it. Our conclusion, accordingly, is that, although baptism of proselytes is an initiatory rite, there was among the Jews no practice of initiation in the technical sense; that is to say, no mysterious initiation and no initiations into a mystery.

W. BRANDT.

**INITIATION (Parsi).**—There are two distinct forms of initiation among the Parsis: *naōjot*, the reception of a child into the Zoroastrian faith; and

[1] *Sacra Parall.* 782 A: οὐ θέμις τὰ ἱερὰ μυστήρια ἐκλαλεῖν ἀμυήτοις, ἄχρις ἂν καθαρθῶσι τελείᾳ καθάρσει. The reason given is that an uninitiated person will laugh at what is not to be laughed at (μωμηθήσεται τὰ ἀμώμητα).

[1] *Sacra Parall.* 782 B: καθαρθῆναι τὰς ἁγνευούσας καθάρσεις κατά τε σῶμα καὶ ψυχήν, διὰ νόμων πατρίων καὶ ἠθῶν (ἐθῶν).

[2] Cf. *de Plantatione Noë*, p. 237 (Mangey, i. 354; L. Cohn and P. Wendland, Berlin, 1896 ff., ii. 166): σώματα καὶ ψυχὰς καθηράμενοι, τὰ μὲν λουτροῖς, τὰ δὲ νόμων καὶ παιδείας ὀρθῆς ῥεύμασι, κτλ.

[3] καθάπερ ἂν εἰ καὶ τυφλοὶ πρότερον ὄντες ἀνέβλεψαν, ἐκ βαθυτάτου σκότους αὐγοειδέστατον φῶς ἰδόντες.

[4] *BJ* II. viii. 7 adds ἀφέξεσθαι δὲ λῃστείας; these words seem not to be in their proper place here.

*nāvar* and *marātib*, the initiation into the priesthood.

**I. Naōjot.**—The *naōjot* is essentially the ceremony of investing a child with the sacred shirt (*sudrah*) and girdle (*kustī*), which must be worn throughout the remainder of a Zoroastrian's life, though otherwise he may adopt any costume he desires.

The word *naōjot* (Pers. *nūzūd*) is derived from Avesta * *nava-zaotar*, 'new priest,' because after the completion of the rite a Parsi child is held responsible for prayer and for the observance of religious customs and ceremonies. According to another view, it represents Pers. *nauzād*, 'new-born,' thus implying spiritual re-birth. The modern Persian Zoroastrians term the ceremony *sūdrah-kustī*, 'basal girdle.'

The age of initiation is seven, when, according to the pseudo-Platonic *Alcibiades Primus* (121 D), as confirmed by the *Vendīdād* (xv. 45) and the *Dīnkarț* (ed. and tr. P. B. Sanjana, Bombay, 1874 ff., iv. ch. 170), the education of the child began (see, further, art. EDUCATION [Persian]). If a child is not sufficiently intelligent to understand the ceremony and to know its responsibilities, the *naōjot* may be postponed to any age below fifteen, when investiture must take place, or the child will be claimed by the Evil Spirit (cf. *Vend.* xviii. 54–59; *Sad-dar*, x. 1, xlvi. 1; *Šāyast la-Šāyast*, x. 13), and is guilty of the sin of 'running about uncovered' (*Dīnā-ī-Maīnōg-ī-Xrat*, ii. 35; *Artā-ī-Vīrāf Nāmak*, ed. and tr. J. Hoshang and M. Haug, Bombay, 1872, xxv. 6; *Patēț* 10).

Both the *sudrah*[1] and the *kustī* bear a symbolic meaning, though the symbolism is not explained in the Avesta, but only in later Persian works.

The *sudrah* is made of white cambric, the white colour being symbolic of innocence and purity. It must not be made of one continuous piece of cloth, but of two pieces sewn together on the sides, so that one seam may be on the right-hand side and the other on the left-hand side, thus dividing the shirt into two parts, front and back. These two parts are said to be symbolic of the past and the future, both being related to each other through the present. The most important part of the shirt is the *girībān* ('that which preserves the knot') or *kissah-i-karfah* ('bag of righteousness'), which signifies loyalty to or faith in the religion. It is made in the form of a bag or purse, a little below the throat. It indicates symbolically that a man has to be industrious, and has not only to fill his purse or bag with money, but also with *karfah*, *i.e.* righteousness.

The *kustī*,[2] or girdle, is made of lamb's wool, which is first combed and then spun into a fine thread on a hand-spindle (*chhātrī*). Two such threads are twisted into one, and this is woven into the *kustī* on a hand-loom, the ends of which are movable, so that it can be adjusted to the length required. The twisted thread is passed round the loom seventy-two times, so that the *kustī* consists of seventy-two threads, which are divided into six strands, each of twelve threads. In the process of weaving, a continuous thread is made to pass through each of the six strands, and, when the weaving is almost finished, and only about a foot of the threads remains to be woven, the whole thread is removed from the loom and handed to a priest to be cut and consecrated. It is the privilege of the women of the priestly class to weave and prepare the sacred thread, and it is the privilege of a priest finally to cut and consecrate it.

To consecrate the thread, the priest first performs the *pādyāb* (see next col.), and then recites the *sraōš bāj* (for which see J. Darmesteter, *Le Zend-Avesta*, Paris, 1892–93, ii. 686–688) as far as the word *ašahe*. He next recites the *nīrang* (liturgical formula) for cutting and consecrating the thread, followed by the *ašem vohū* and *yaθā ahū vairyō* (*Ys.* xxvii. 14. 13), and while reciting the latter he cuts the *kustī* into two parts as he utters the word *šyaoθananãm*. On finishing the *yaθā ahū vairyō*, he utters a brief Pazand formula, and then finishes the *bāj*.

The women who prepare the *kustī* generally get it cut and consecrated by the male priestly members of their own families. When they have no such members, and have, therefore, to get it consecrated by other priests, they have to pay a small fee for it.

After this consecration the *kustī* is returned by the priest to the owner, who now completes it. First, by means of a needle, she turns the *kustī*, which is hollow, inside out, and then knits by hand the remaining part of the thread. Three tassels, each of four threads, are formed at each end of the woven thread. The *kusti* is then finally washed before being used.

The *kusti*, being prepared from the wool of a lamb, is held to remind a Zoroastrian of the purity of life and action which he has always to observe; the seventy-two threads composing the *kustī* symbolize the seventy-two chapters of the *Yasna*; the twenty-four threads which make up each of the three tassels at each end of the *kustī* symbolize the twenty-four sections of the *Vīsparad*, a part of the liturgy; the six strands, each of twelve threads, into which the seventy-two threads of the *kustī* are divided at the time of weaving, are said to symbolize the six religious duties[1] of a Zoroastrian; the twelve threads in each of the strands symbolize the twelve months of the year; the six tassels symbolize the six seasonal festivals of the Zoroastrian year; the hollow of the thread symbolizes the space between this world and the next; the doubling of the thread in the beginning symbolizes the connexion between the present corporeal world and the future spiritual world; the turning of the *kustī* inside out symbolizes the passage of the soul from the corporeal to the spiritual world; the final uniting of all the threads into one symbolizes universal brotherhood.

The *kustī* is said to have existed in the pre-Zoroastrian religion, and to have been adopted by Zoroaster, who held it to be a symbol of obedience to God, closing the door against sin, and breaking the power of evil.[2]

Except when bathing, the *sudrah* and *kustī* must always be worn, but the latter must be untied and re-tied immediately after rising in the morning, after answering a call of nature, before prayer, after bathing, and before meals. After performing the *pādyāb*, or ablution of the face and other exposed portions of the body, the Parsi recites the *ašem vohū*, and then (facing the sun by day, and the moon or a lamp or the stars by night) the *kēm-nā Mazdā* (*Ys.* xlvi. 7, xliv. 16; *Vend.* viii. 21; *Ys.* xlix. 10), after which he unties the thread and, holding the doubled end in his left hand and taking in his right the centre of the remaining portion, recites the *nīrang kustī* (for which see Darmesteter, ii. 685, and E. W. West, *SBE* xviii. 384 f.). After re-tying the *kustī* (for which see below, p. 326) *Ys.* xii. 8 is recited. When the *kustī* is put on, it must be fastened with two knots, one on the front and the other on the back. While forming the first half of the first knot on the front in the second round of the thread, a Zoroastrian must think that Ahura Mazda exists, and that He is one, is holy, and is matchless. While forming the second half of this first knot, he must remember that the Mazdayasnian religion is the word of God, and that he must have full faith in it. In the third round of the thread, while forming the first half of the second knot on the back, he has to remember that Zoroaster is the prophet of God, and shows the proper path of worship. While forming the second half of the second knot, he must bear in mind that he has always to attend to 'good thoughts, good words, and good actions' (*Sad-dar*, x.).

Before a Parsi child is eligible for the *naōjot*, it must know a few short prayers, of which the *nīrang kustī* is the most important. A short time before the actual ceremony, which may now be performed in the evening, though formerly only in the morning,[3] the child, until recently required to be fasting, is bathed and taken to the room where the *naōjot* is to be performed. The child, the upper part of whose body is covered with a piece of white cloth, is seated on a low stool, facing the east, with a lighted lamp, new clothes, etc., near him, and with the officiating priest sitting before him. After all the priests have taken their places, the officiating priest places a new *sudrah* in the child's hand, and all recite the *patēț* (for which see art. EXPIATION AND ATONEMENT [Parsi], § I, vol. v. p. 664 f.) or *Yt.* i., the child repeating this or reciting the *yaθā ahū vairyō*. The priest and child now rise, and the investiture proper begins.

This consists of four parts: (*a*) the recital of the Confession of Faith[4] by the child, led by the officiating priest, who then invests the child with the *sudrah*; (*b*) the recital of the *nīrang kustī*, prefaced by *Yt.* i. 0, and accompanied by investiture with the *kustī*; (*c*) the recital of *Ys.* xii. 8 f., as a brief summary of the Zoroastrian faith; (*d*) the recital of the *tan darustī*, or final benediction.[5] The process of donning the *kustī* is as follows. The priest holds the centre of the *kustī* in his left hand, and takes in his right a part of the two cords thus formed, the remainder hanging vertically until the recital of the words *manaśnī*, *gavaśnī*, *kunaśnī* ('thought, word, deed') in the

[1] The term is probably Persian, and may mean 'advantageous path.' Anquetil du Perron (*Zend-Avesta*, Paris, 1771, ii. 529) traces it to an alleged Avesta *setēhr peeschenghē*, 'tapis (étoffe) utile.'

[2] The word *kustī* is the rendering of Avesta *aiwyāṅhana*, 'girdle' (cf. *Ys.* ix. 26, *Yt.* i. 17, *Vend.* xviii. 54, 58). It is variously derived from Pers. *kust*, 'direction,' or *kust*, 'waist,' or *kust*, 'limit, boundary,' or is even identified with Pers. *kištī*, 'ship.' The true etymology is quite uncertain.

[1] The enumeration of these duties differs in different Pahlavi and Pazand books (cf. *Šāyast lā-Šāyast*, xii. 31; *Sad-dar*, vi. 2; *Dīnā-ī-Maīnōg-ī-Xrat*, iv.; *Sar-nāmah-ī Rāz-ī-Yazdānī*, ed. P. J. Hātaria, Bombay, 1255 A.Y., pp. 38–40).

[2] *Sad-dar*, x.; *Dāțistān-ī-Dīnīk*, xxxix.

[3] The priest recites, in the course of the *naōjot*, the *hōšbām*, or prayer to the rising sun (on this see Darmesteter, ii. 688–690).

[4] See art. CREED [Parsi], vol. iv. p. 247 f.

[5] For the text of this see E. K. Antiā, *Pāzend Texts*, Bombay, 1909, p. 160 f.; for the tr., F. Spiegel, *Avesta übersetzt*, Leipzig, 1852–63, iii. 250 f.

*nirang kusti*. With the recital of these words, a part of the string is then formed into circular curves in both the hands, and then, on reciting the words *xšnaoθra Ahurahe Mazdåo* ('through the joying of Ahura Mazda'), the curves are let loose, and with the recital of the *ašem vohū*, the thread is passed around the child's waist. With the recital of the first *yaθā ahū vairyō*, the second round is completed, the first knot in front being tied with the recital of the word *šyaoθananām*. With the recital of the same word in the *yaθā ahū vairyō* the second knot in front is tied, and then, with the recital of another *ašem vohū*, the thread is passed round the waist for the third time and the final two knots at the back are tied.

After being thus invested with *sudrah* and *kusti*, the child recites *Ys.* xii. 8 f., and the initiation, in the strict sense of the term, is now complete. The officiating priest then repeats the *tan darusti*, with a special invocation of blessing on the new member of the Zoroastrian faith; and as he recites it, he showers over the child's head a mixture of rice, pomegranate grains, raisins, almonds, and slices of coco-nut, after which all the priests join in another *tan darusti*. The priests then receive their fees, and, like the assembled guests, are given presents of flowers, betel-leaves, and rose-water, after which a formal dinner is given in honour of the event.

**2. Initiation into the priesthood.**—Among the Parsis only the son of a priest is eligible for the priesthood (see, further, art. PRIEST, PRIESTHOOD [Iranian]). This law, reintroduced by the Dastur Tansar, in the reign of Ardašīr Pāpagān,[1] is traditionally as old as the mythic period of Jamšīd (Yima),[2] and there have been but few exceptions, notably Dastur Rustām Guštāsp Ardašīr, who, in the 17th cent., 'is said to have sprung from the laity, and not from a priestly family,'[3] being raised to the priesthood for his services in averting a massacre by proving to the Muhammadan king of Persia that the Zoroastrians were monotheists. At the present time it is held that a priest's father need not necessarily have been a priest, but, after the fifth generation of a priestly family, the right of its members to enter the priesthood is forfeited if in the meantime none of them have been priests.

To become a thoroughly qualified priest two grades of initiation are requisite, *nābar* and *marātib*.

(*a*) *Nāvar*.—The first rite of initiation into the priesthood is termed *nāvar* (also written *nāibar*, *nāgbar*; Pahlavi *nāpar*, *nāivar*).[4] The etymology and exact meaning of the word are uncertain.[5]

The rites connected with the *nāvar* are three in number: the *barašnūm* (for which see art. PURIFICATION [Iranian]), the *gewrā*, and the initiation proper. The *barašnūms* are two: one for the priest himself who is being initiated; and the other for the person, whether dead or living, in whose memory or honour the priest is initiated. The two *barašnūms* may be performed either consecutively or with an interval of a few days. When they have been completed, two priests perform the *gewrā*[6] ceremony, which consists of the recital of the *Yasna*, with its ritual, for six consecutive days.

The priest who recites the whole *Yasna* is called *jōti* (Pers. *zōt*, Avesta *zaotar*), or the officiating priest; and his assistant is the *rāthwi* (Pers. *rāspi*, Avesta *raθwiškara*, 'mixer').[7] The two alternate in the performance of the *gewrā*, the *jōti* for each day being obliged to remain awake on the night of that day to obviate danger of *pollutio nocturna*, which would vitiate the whole *gewrā* and require it to be begun again. As a further precaution two priests frequently act as *jōti*, and a third as *rāthwi*.

During these six days the candidate must devote himself to religious duties and avoid contact with any non-Zoroastrian. On the seventh day he bathes and is clothed in white *jāmā* (loose robe) and *picchori* (linen girdle). In his left hand he carries a shawl as insignia of temporary office and function, and in his right a mace or club (Pers. *gurz*, Avesta *vazra*) to symbolize his resolution to fight against all evils, physical or moral.[1] If local conditions permit, as at Naosari, the headquarters of the Zoroastrian priesthood in India, the candidate, escorted by the head-priest or by his deputy and other elders of the community, heads a procession of invited friends of both sexes to the Dar-i Mihr, or fire-temple, in which he is to be initiated. Where conditions are unfavourable to a public procession, as at Bombay, the candidate lives in the Dar-i Mihr during the *gewrā*, and the friends assemble there, representing the procession by moving from one part of the temple to another.

The guests having taken their places, the candidate goes to the *yasišn-gāh*, where he is to perform the *yasišn*, or recital of the *Yasna*. The assembled priests are generally seated on carpets spread on the floor. The candidate removes his upper garments, performs the *pādyāb-kusti*, and puts on the *padān* (mouth-veil), which, at first, is not thrown across the face, but is held up and made to lie on the turban. Thus prepared, the candidate is brought before the assembly by one of the priests, who asks permission to initiate him. The head-priest present, after the interval of a few seconds, takes the silence of the assembly for assent, and nods his head or puts forward both his hands to signify the acquiescence of the gathering.

If the candidate suffers from leprosy,[2] or if he has a wound on his body from which blood oozes, it is expected that he may be rejected, and, accordingly, in order to enable the assembly to see him well, he is presented after the removal of his upper garments.

The candidate now returns to the *yacišn-gāh* to go through the ceremonies of his initiation and to recite the *Yasna* with its ritual. The visitors disperse after flowers and rose-water have been presented to them. If the father or the guardian of the candidate is well off, he distributes money among the assembled priesthood. Relatives and friends are, at times, feasted at noon and even at night when the parents can afford to do so.

On retiring to the *yasišn-gāh* the candidate recites the *mīnō nābar Yasna* (*Yasna* without the *Visparad*)[3] with its ritual, he acting as the *jōti*, and the priest who initiates acting as the *rāthwi*. In the afternoon he performs the *bāj*[4] ceremony and takes his meals, after which he performs the *āfringān* ceremony.

On the second day, on which, as also on the third day, the candidate is allowed only one meal, these three ceremonies are repeated in honour of Sraoš, the *bāj* being performed in the morning instead of the afternoon, as on the first day. On the third day they are again repeated in honour of *Sīh rōčak* (the thirty days of the month). On the fourth day, the *Yasna* is recited with the *Visparad*, the *bāj* and *āfringān* being in honour of Ahura Mazda.

Thus qualified, the priest, now called *hērbad* (Avesta *aēθrapaiti*, 'teacher'), can perform the *āfringān*, *naōjot*, marriage, and such other rites, but not the *Yasna*, the *Vendīdād*, or the *bāj* ceremonies.

It appears that the *nāvar* has been, from the first, a ceremony of trial—of self-abnegation, self-denial, and self-renunciation. (1) The candidate is expected to pass his days during the whole ceremony, which lasts about a month, in a kind of retreat, in order to be free from worldly thoughts and engaged in pious thoughts; he must sleep on the floor and not on a cot, take his meals at stated hours after prayers, etc. According to the present custom, if the candidate has a *pollutio nocturna* during the two *barašnūms*, he is disqualified and has to go

[4] *Ib.* xviii. 234.

[5] Cf. Darmesteter, *Zend-Avesta*, i. p. liv, note 2.

[6] The word is derived from Avesta *garew*, 'to seize, acquire.'

[7] For the etymology see Darmesteter, *Zend-Avesta*, i. p. lxxi, note 4.

[1] Cf. the mace of Mithra *Yt.* vi. 5.

[2] On the Iranian horror of leprosy cf. *Vend.* ii. 29 and Herod. i. 139.

[3] On the meaning of *Yasna*, *Visparad*, and *Vendīdād* in this connexion see Darmesteter, *Zend-Avesta*, i. p. lxvii.

[4] On the *bāj* see Darmesteter, *Zend-Avesta*, ii. 153 f.

through the *baraśnûm* again, since the untoward occurrence is held to show that he was not passing his time in pure meditation, which he was expected to do, as a would-be priest, but that he thought of worldly matters.[1] (2) During the last four days, when he is being initiated and performs the *Yasna* ceremony himself as *jôtī*, he may take only one meal on the second and third days, this also implying that the *nâbar* is intended to prove whether he has control over hunger and thirst, and hence over other passions.

To obviate risk of the special danger just indicated, candidates are now made to pass through the *nâbar* before the age of fifteen or sixteen. Furthermore, not only those intended for the priesthood, but many others whose parents plan for them very different walks in life, are thus initiated with the idea that the *nâbar* is a good ceremony to have performed, whatever the future occupation is to be. In these cases only a portion of the *Yasna* is recited.

(*b*) *Marātib*.—Since the *hērbad* is forbidden to perform for others the *Yasna*, *Vendīdād*, and *bāj* ceremonies, or to officiate at the rites of purification, even though he has himself performed them at his *nâbar*, he must, in order to qualify for these higher functions, undergo a second initiation called *marātib* (Arab. 'high degrees,' pl. of *martaba*). For this he must read the *Vendīdād*, in addition to the *Yasna* and *Vīsparad* read for his *nâbar*.

In the *marātib* the candidate has to go through one *baraśnûm* of ten days. On the eleventh day, in the company of a qualified priest, he performs the *khûb* ceremony[2] and recites for it the *minō nâvar Yasna* with its ritual. On the second day, in the morning, he has to recite another *Yasna* in honour of Sraoš, and at midnight he recites the *Vendīdād*. This completes the *marātib*. He is then entitled to perform and recite any of the Zoroastrian ritual and prayers, and his official title is *mōbad* (Pahlavi *magupaṭ*), 'chief of the magi.'

**INITIATION (Roman).**—Although the word *initio* is used by Latin writers of the best period to express the same idea as our 'initiation,' the concept of advancement from a lower to a higher stage in cult hierarchy, by means of a rite which often partakes of the mysterious, is not native to Roman religious practice. In early Roman times the worship of the gods was more a matter of State than of private enterprise. It involved a complicated ritual, for the observance of which a trained body of men was required. Naturally this priesthood had its method of obtaining and training new members, but this can hardly be classed as 'initiation.' Apart from the State worship, it may be said that the very life of the people was a continuous practice of religion. They imagined themselves surrounded by unseen forces, and practised innumerable means of appeasing those that were evil, and returning thanks for favours received. This was a matter of everyday usage, and required no special training or initiatory rites.

The practice of initiation involves a close organization of a more or less secret character, into which the initiate is received after an examination and ordeal, of which the tendency is to excite the imagination and render of more apparent value the knowledge he is to receive. It is but human nature to desire that which is difficult to attain, and this is the trait which, at all periods, the wiser or more clever of mankind have used for their own advantage.

It must also be remembered that we ourselves use the word 'initiation' rather carelessly, and that in all probability the Romans did the same. Thus, even when we find the word in their literature, without some explanatory context, it is often impossible to determine whether the writer means a distinct ceremony, or merely that the individual referred to has attained some slight degree of knowledge over and above those about him, or is well informed concerning a given subject. Moreover, the border line between initiation proper and cult practices which deal with the admission of new members is very narrow. Thus, in the cults of Vesta and Bona Dea, in which no men were allowed to participate, new followers were of course taken in. For the sake of limiting the subject, the word 'initiation' is here understood to involve a more complicated ceremony, with secret and mysterious rites, by means of which one was admitted to a close organization.

Even at a fairly late period initiation did not play the part in Roman religion that one would expect from its use at other times. The references to it in literature are by no means frequent; they are so slight, in fact, that the more important modern classical encyclopædias and dictionaries (*e.g.* Pauly-Wissowa, Daremberg-Saglio, etc.) include no treatment of the subject save for scanty references under other headings. In Roman literature there is no mention of any such practice before the introduction of the cult of Demeter (identified with the Roman Ceres) in the first years of the Republic. The Eleusinian mysteries connected with the worship of this goddess must soon have become known, although they were not officially introduced into Rome until much later. Cicero refers to them in *de Leg.* ii. 9:

'Let no one be initiated into the mysteries save those of Ceres, and according to the Greek rite'; cf. also ii. 14: 'Certainly I do [*i.e.* make an exception of the mysteries into which we have been initiated], for among all the excellent and divine institutions which Athens has given to mankind, there is nothing better than these mysteries, which have raised us from a wild and savage state to one more noble and refined. As is indicated by the word *initia*, in very truth have we learned the first principles of life, and not only to live happily, but to die with hope for a better future.' In *de Leg.* ii. 15 also Cicero insists that the initiation of women into the rites of Ceres must take place as it is done in Rome.

These passages bring out the respect in which the Eleusinian mysteries were held, and also the fact that they received some modifications at the hands of the Romans. They show indirectly that there existed at the same time other cults of a more harmful nature.

Something of the same import is also found in Varro, *de Re Rustica*, III. i. 5:

'Not without reason do they call her Mother Earth, and Ceres, and believe that those who worship her lead a virtuous and useful life, and that they are the sole survivors of the ancient Saturnian stock. With this is in harmony the fact that the term *initia* is generally applied to those rites which are held sacred to Ceres.'

Here, too, *initia* means the sacred mysteries to which only the initiated were admitted. In this connexion may be mentioned two references of merely general import in Seneca. In *Ep.* xc. 29 he says:

'These are her [wisdom's] initiatory rites, by means of which are revealed, not the mysteries of a municipal temple, but of the world itself, the vast temple of all the gods.' And in *Lucil.* xcv. 64: 'Thus, just as only the initiates know the most holy of the sacred rites, so in philosophy,' etc.

We learn from Vitruvius that in temple construction account was sometimes taken of those who were to be initiated. In the preface to bk. vii. he says:

[1] If this occurs during the last four days, the candidate is called *nâbûd* ('non-existent') and is absolutely rejected as unfit for the priesthood.

[2] The *khûb* is of two grades. For the major the recital of the whole *Yasna* is requisite; for the minor the recital of *Ys.* ii.–vi.

'Thus by the addition of a vestibule he gave to the initiates an increase of space, and to the work a supreme dignity.'

There is also a reference to initiation as a general practice in Terence (*Phorm.* i. 13, tr. Sargeaunt):

'Then again Geta will be hit for another present when a child is born: and another on its birthday, and another at the initiation ceremony.'

On the whole, however, in spite of these and a few other references, we know very little of the actual rites of initiation—a fact which is not surprising when we consider the mystery in which they were involved.

Even in the case of the cults of Cybele, Isis, Bacchus, and Mithra, we know comparatively little concerning the initiation ceremonies. In Livy we have several references to the Bacchanalia, especially in bk. xxxix., and the verb *initio* is often used [*e.g.* xxxix. 9: 'Bacchis eum se initiaturam (vovit)'], showing that certain definite rites were performed. Concerning the Mithra cult something more is known (see art. MITHRAISM). Still other mysteries were connected with the worship of Isis and Serapis, and their cult attained great importance in Rome. In Apuleius (*Met.* xi.) are described the various stages by which the initiate gradually became familiar with the secrets of the cult of Isis; but not even here are the actual details revealed, and the language used is purposely figurative; *e.g.* xi. 23:

'I approached the confines of Death. Having trod the threshold of Proserpina, I returned through all the elements. At midnight I beheld the sun brightly gleaming. I was in the presence of the gods above and the gods below, and worshipped them close at hand.'

All of these cults appealed to the love of the mysterious. They aroused the interest of their followers, and often led them on to the highest pitch of frenzied excitement and fanaticism. With this in mind we understand why the initiates were numbered by the thousands, and why the cult of Mithra was for some time a serious rival to Christianity. This state of affairs could not have existed at an early period, when individual action was suppressed and made subservient to the welfare of the family and of the State. The banding together of men of different walks in life for some cult practice meant the downfall of the early unity, and of the cold formalism of a State religion as well.

C. DENSMORE CURTIS.

**INITIATION (Tibetan).**—Admission into the Buddhist Order in Tibet follows generally in its details the orthodox practice of ancient Indian Buddhism. The most notable exception is that in Tibet, in common with the countries of 'Southern' Buddhism, the nominal age limit is reduced to considerably below the sixteen years of primitive Buddhism. This earlier entrance, however, is in the case of Tibet expressly regarded as a preliminary stage of probation, anterior to the actual novitiate, and is, therefore, analogous to the period of 'probation' (Skr. *parivāsa*) imposed in early Buddhism upon adult converts from a heterodox religion before their initiation into Buddha's Order. In Tibet, therefore, we find three stages in the process of initiation—probation, novitiate, and full initiation or ordination.

1. **Probation.**—In this preliminary stage, which corresponds to the 'leaving home to become an ascetic' (*pravrajyā*) of primitive Buddhism, there is little ceremony. The boy-candidate is brought to the monastery by his parent or guardian between the ages of eight and twelve. His parentage is inquired into by a senior monk (not necessarily the head of the monastery) to ascertain that he is not the son of a butcher, smith, or other irreligious trade, and that he is free-born; and he is physically examined to ascertain the absence of any disqualifying bodily or mental defect. On passing this examination, he has a tuft of his hair snipped off, as a preliminary tonsure, and he is clad in the monastic robe, and made over to one of the senior monks, preferably a relative, as a tutor. He is now a 'pupil,' or *ḍā-pa* (*grva-pa*) of the monastery. His tutor or teacher (*ger-gan*, Skr. *upādhyāya*) takes him to an informal conclave of fellow-monks, and gains their consent to taking the boy as his pupil. The boy is not allowed to take part in the public services, but performs acts of personal service to his teacher. After several years spent in learning to read and write and recite from memory the elementary scriptures, he becomes eligible for the novitiate.

2. **Novitiate.**—This may not be entered before the age of sixteen years, and the ceremony is more formal and solemn than for the preliminary entrance. In Tibet it has two stages, a lower and an upper initiation. The candidate himself applies for admission into the Order. He is conducted by his tutor to the abbot or prior of the monastery, who examines him with any other candidates as to his desire to enter the Order, and his knowledge of some elements of the religion, and hears him recite some sacred texts. The candidate, on being passed, has his head shaved, excepting a tuft on the crown, and he is given a new religious personal name, usually that of some ancient Buddhist divine. He is taught to repeat the 'Three-Refuge' formula, 'I go for refuge to Buddha, His Word, and His Congregation,' and is exhorted to keep the fasts, the first five (or eight) moral commandments (*śīla*), and 'the ten precepts' (*śikṣā-pada*), the transgression of which creates 'the ten sins.' The novice is now of the class called *gé-ñen*, 'the approacher towards virtue,' a translation of the Skr. *upāsaka*, with which stage it generally corresponds, so that it is practically equivalent to the stage of the lay devotee of primitive Buddhism. The great majority of the so-called 'monks' of Tibet do not advance beyond this stage of what is practically a lay devotee, and they still are called *ḍā-pa*, or 'pupil.'

The higher grade of the novitiate, which is the real novitiate, is attained only by the more intelligent and meritorious pupils and those who can afford to pay the somewhat heavy educational fees necessary. In this stage the neophyte is called *ge-ts'ul*, 'follower in the path of virtue,' the equivalent of the *śrāmaṇera* of Indian Buddhism. He must be specially approved by the superior of the monastery, and he solemnly vows to renounce the world for a religious life, to embrace poverty and celibacy, and to keep the thirty-six moral and disciplinary rules. He is then permitted to mix with the other higher monks in the routine of the monastery, recite with them the sacred texts, participate in the various celebration rites, and take part in discussions. Initiation into this grade takes place in a formal chapter or conclave of the monks, presided over usually by one of the higher 're-incarnating' Lamas, who during the ceremony completes the tonsure by removing the remaining tuft of hair, and calls the novice by his religious name, which now is exclusively used as his personal designation. This consecration to the higher novitiate is supposed, in Tibet, to bind the individual to the Order for life.

3. **Full initiation or ordination.**—Admission to

the final stage of full monkhood cannot take place before the age of twenty, and is usually much later. In this stage the monk receives the title of *ge-long*, 'the virtuous beggar,' the literal equivalent of the Indian *bhikṣu*, or mendicant friar, the usual epithet of Buddha and his disciples. This stage is attained by comparatively few of the monks in Tibet, owing to the high standard of qualifications, intellectual and moral, demanded, and the educational expense. For this purpose several years of study must be passed in one or other of the great collegiate monasteries, at Tashilhunpo, Gahldan, Sera or Depung at Lhasa, Kumbum, etc., for the yellow-hat sect, or at Saskya, Mindolling, etc., for the red-hat sects. To reach these centres of learning the novice has to undertake long journeys on foot, and great privations, and be for a time in a very literal sense a 'beggar of virtue.' The examination, which is searchingly severe, is undertaken by a chapter of the most learned monks available, usually over ten in number. The successful candidate formally vows to keep the full rules, 253 in number. The fully fledged monk, or *ge-long*, is the acme of the Buddhist Order in Tibet. The Dalai Lama himself rejoices in this title. From the ranks of the *ge-long* are recruited the abbots, teachers, chief celebrants, high priests, and astrologers of the great monasteries and temples.

The initiation of nuns is substantially identical with that of the male members of the Order. Into the esoteric doctrines and practices of Yoga mysticism special personal teaching is imparted by adepts.

**INNER LIGHT.**—See CERTAINTY (Religious), EXPERIENCE (Religious), FRIENDS, SOCIETY OF.

**INNOCENCE.**—There are two words in the NT which, though not uniformly translated in the English versions, seem to convey the ideas suggested by the word 'innocent.' In Ro $16^{18}$ the word *ἄκακος* is translated (RV) 'innocent'; in He $7^{26}$ (of Christ) 'guileless.' The other word, *ἄδολος*, occurs in 1 P $2^{2}$, where the Apostle exhorts his readers to 'long for the spiritual milk which is without guile' (*ἄδολον*). Each word, however, has its own strict sense.

1. The *ἄκακος* (Vulg. *innocens*) is he who hurts nobody by word, deed, or thought—the character virtually described in 1 Co $13^{6.7}$. In He $7^{26}$ our Lord is described as *ὅσιος, ἄκακος, ἀμίαντος* (cf. Cypr. *de Orat. Dom.* 15: 'Voluntas Dei est quam Christus et fecit et docuit . . . iniuriam facere non nosse, et factam posse tolerare'). Cicero perhaps overlooks the word *ἀκακία* (used by Demosth.) when he remarks that *innocentia* has no exact Greek equivalent, but that possibly *ἀβλάβεια* would express that state of mind which injures no one (*Tusc. Disp.* iii. 8; the same definition is given by Augustine, *Serm.* cclxxviii. 8). It is obvious that the character which 'taketh not account of evil,' and which believes to any extent in the integrity of others, is apt to be credulous and easily deceived. Hence the word *ἄκακος*, like *ἁπλοῦς*, tends to acquire a contemptuous sense in some heathen writers, suggesting the notion of one who is inexperienced and readily imposed upon.

2. *ἄδολος* (Vulg. *sine dolo*, 1 P $2^{2}$) clearly connotes the absence of conscious fraud or intention to deceive (cf. Jn $1^{47}$). The word may thus be regarded as virtually synonymous with *ἁπλοῦς*. Thus Augustine asks, 'Quid est dolus nisi aliud agere et aliud simulare? . . . dolus duplicat cor' (*Serm.* ccciii. 1). But it seems also to include that kind of quality which we describe by the word 'innocent,' or, in other words, the characteristic grace of childhood, the grace commended by St. Paul in 1 Co $14^{20}$ (*τῇ κακίᾳ νηπιάζετε*) and by St. Peter in 1 P $2^{1-3}$.

3. The *ἄκακος*, then, is he who has no *malitia* in him, and who harms no one; the *ἄδολος* is without 'guile,' and deceives no one. The two words taken together express the childlikeness, the simplicity, which our Lord requires in the citizens of His Kingdom (Mk $10^{14}$). In fact, 'innocence' is specially claimed by Tertullian as the characteristic grace of Christians: 'Nos ergo soli innocentes. . . . Innocentiam a Deo edocti, et perfecte eam novimus ut a perfecto magistro revelatam, et fideliter custodimus, ut ab incontemptibili dispectore [*al.* dispensatore] mandatam' (*Apol.* 45). Cf. the aphorism of Lactantius, *Div. Inst.* vi., 'de Vero Cultu,' 1: 'Nihil sancta et singularis illa majestas aliud ab homine desiderat quam solam innocentiam; quam si quis obtulerit Deo, satis pie, satis religiose litavit.'

In a sermon ascribed (incorrectly) to St. Bernard[1] some useful distinctions are drawn.

(i.) There is an 'innocentia *secundum potestatem*,' the innocence which is incapable of committing sin. Innocence in this sense is the attribute of Christ alone. He only is without sin; the Evil One comes 'and hath nothing in' Him (Jn $14^{30}$). In Him only is there 'that absence of all evil which implies the presence of all good.' He is innocent because He fulfils 'all righteousness' (cf. Aug. *Enarr. in Ps.* 100 [101][2]: 'Tota ergo iustitia ad unum verbum innocentiae redigitur').

(ii.) There is also an 'innocentia *secundum aetatem*,' the 'harmlessness' of those who through weakness of body or simplicity of mind know not how to sin. This is the primal innocence of childhood, a negative state—the state of those who either are untempted or have not yet awakened to the consciousness of good and evil in choice and action. The 'innocence' of the first man was of this kind. He was not 'perfect' in the sense of having reached his full or final development, but 'upright' in the sense that he was on the right line towards the perfection of which he was capable. He had not the perfection either of knowledge or of sanctity (we must not confuse 'innocence' with 'sanctity'); but he possessed those faculties which made him capable of a progressive development, which was to be conditioned, ennobled, and secured by communion with God (see G. Bull, *Discourses*, no. 5, 'The State of Man before the Fall,' in his *Works*, Oxford, 1846, ii. 52–136; H. Martensen, *Christian Dogmatics*, Edinburgh, 1878, § 78).

Perhaps it is also appropriate to mention under this head the assertions of innocence and integrity, both personal and national, with which we meet in the Psalter. It must be remembered that side by side with language of this tenor we find the most heartfelt acknowledgment of sin (*e.g.* in such Psalms as 32, 51, and many others), together with a deep sense of dependence on the divine mercy (*e.g.* Pss. 25, 86, 130). The fact is that the consciousness of innocence awakened in devout Israelites by the study of the Law is 'relative, not absolute.' 'The assertion of integrity . . . is that of the *ḥasid*, the "godly" man, who is determined to keep well within the bounds of the covenant which is the charter of national religion, or is conscious of having done so' (W. T. Davison, in *HDB* iv. $157^{b}$). Further, the spirit of childlike confidence in God which pervades many of the Psalms in question is entirely opposed to the temper of self-righteousness. It is significant that, in the argument of Ro 4 on the blessedness of justification by faith, St. Paul illustrates his point by citing the language of a Psalm ($32^{1f.}$).

(iii.) There is, finally, an 'innocentia *secundum voluntatem*,' *i.e.* the confirmed habitual innocence of those who have retained their purity of heart in spite of temptation, and have consistently striven to be true to their highest ideals. This state is compatible with minor faults of ignorance or infirmity, but it is essentially a Christ-like state. The Christian believer does fall into sin; but for him sin is exceptional, and contradicts the *habitual*

[1] *Opera*, ed. Paris, 1839, ii. 1520 (*PL* clxxxiv. 1119).

tenor of his life, leaving his essential character intact (1 Jn 1[6] 2[1] 3[6]).

Here, then, we pass beyond the conception of innocence as mere harmlessness. The innocence which man lost in the Fall is restored to us in Christ. He enables men to become what He bids them to become—as 'little children,' and so 'simple concerning evil' (Ro 16[19]; cf. Ph 2[15]). Innocence is practically equivalent to that simplicity or singleness of mind which springs from whole-hearted and entire devotion to God. As Augustine more than once insists, innocence belongs to him who injures neither others nor himself; that is, who abstains from the wilful self-injury involved in sin. Innocence, then, means the personal integrity of which the heathen dreamed, but which he had no means of realizing (Hor. *Carm.* i. 22). Nor does it exclude zeal for the good of another. 'Pertinet ad innocentis officium, non solum nemini malum inferre, verum etiam cohibere a peccato vel punire peccatum, ut aut ipse qui plectitur corrigatur experimento, aut alii terreantur exemplo' (Aug. *de Civ. Dei*, xix. 16).

4. The question may be raised whether innocence once lost can be restored. Augustine touches upon this point in his *Op. Imperf. c. Julian.* vi. 19. The answer to the question is that there is no limit to the power of true repentance so long as the soul is capable of it, and is willing to accept the discipline which penitence implies. There is such a thing as a re-created purity and beauty of character. And in this re-creative process a chief agent is the very spectacle of innocence. Christ acts upon the sin of the world, not only or chiefly by unveiling and denouncing it, but also by exhibiting to men a flawless pattern of goodness, which exercises its own attractive power and elicits goodness in others. Men are drawn to Christ by what He *is*, not less than by His words of grace and works of power. The vision of stainless purity, combined with perfect humility and gentleness to the sinful, awakens the longing for holiness; the dumb yearning of the soul for righteousness is kindled by the actual presence and influence of a righteous personality. This power of kindling the desire for holiness is one of the many precious privileges of innocence. Others might be mentioned, such as 'the boldness and frankness of those who are as if they had no sin, from having been cleansed from it; the uncontaminated hearts, open countenances, and untroubled eyes of those who neither suspect, nor conceal, nor shun, nor are jealous' (Newman, *Paroch. and Plain Serm.* viii. 268)—the clear conscience, strong will, and joyous temper of those who have experienced the renewing power of grace, and have 'tasted the powers of the world to come' (He 6[5]).

R. L. OTTLEY.

**INQUISITION.—1. History.**—Inquisition was a method for searching out heretics, instituted by the Church with a view to bringing them to repentance, or punishing them in proportion to their offence.

In the present article we shall confine our discussion to the Inquisition of the 12th and 13th centuries against the Cathari and the Waldenses, and of the 14th cent. against the Franciscan heresies. The Spanish Inquisition established in 1478 by the Catholics Ferdinand and Isabella, with the approval of Sixtus IV., and specially directed against the lapsed Jews, Moors, and Moriscoes, is outside of our scope; we shall also leave out of account the Sacred Congregation of the Holy Office or Inquisition which Paul III. established by his Constitution *Licet* of 21st July 1542, and to which Sixtus V. put the final touch (Constitution *Immensa* of 25th Jan. 1587 or 1588).[1]

From the 12th cent. onwards the repression of heresy was the great business of Church and State. The distress caused, particularly in the north of Italy and the south of France, by the Cathari, or Manichæans, whose doctrine wrought destruction to society as well as to faith, appalled the leaders of Christianity. On several occasions and in various places, people and rulers sought justice at first in summary conviction and execution; culprits were either outlawed or put to death. The Church for a long time opposed these rigorous measures, its representatives forming three classes—those who denied the right of punishing heterodoxy as a crime, and limited their opposition to discussion; those who wished to use only spiritual weapons against it, such as excommunication, and so preserve the orthodox from contamination; and, lastly, those who, while advocating temporal punishments for the heretics, resorted to extreme measures only half-heartedly and against their better feelings. The death-penalty was never included in any system of repression.

Towards the end of the 12th cent. and the beginning of the 13th a change took place. At the Lateran Council of 1179 (can. 27), Pope Alexander III. invited sovereigns to employ force of arms to protect the Christian people from the violence of the Cathari, Brabançons, etc., giving princes the right to imprison offenders and confiscate their property. The pope even offered indulgences to those who should accomplish this work of piety. In 1184, Pope Lucius III., in consort with the Emperor Frederick Barbarossa, published an edict at Verona with still more severe measures: heretics, once excommunicated, were to be handed over to secular authority to be punished according to their deserts (*animadversio debita*). This *animadversio* did not mean the death-penalty, but it included exile, confiscation of property, demolition of their houses, *infamia*, loss of civil rights, and so on.

The most noteworthy measure of the Council of Verona was the institution of episcopal inquiry, or inquisition. Every bishop was required to inspect carefully, in person or through his archdeacon or by means of trustworthy clerks, all suspected parishes, and to make the inhabitants denounce under oath all heretics, acknowledged or secret. The latter were then required to free themselves from suspicion by oath; and, if they refused to take the oath, or recanted later, they were sentenced and punished. Counts, barons, rectors, and consuls of towns and other places were required to assist the Church in this work of repression, on pain of forfeiting their office, being excommunicated, and seeing their lands laid under interdict.

The pontificate of Innocent III., which began in 1198, marks a lull in the development of the penal legislation of the Church. Neither his Letters nor the Lateran Council of 1215, over which he presided, did anything beyond confirming the decisions of his predecessors. But, if Innocent III. did not add to the canons, he justified them by motives which afterwards served to make them considerably more severe.

'According to civil law,' said the pontiff, 'criminals convicted of treason are punished with death and their goods are confiscate; if even their children's lives are spared, it is simply out of pity. With how much more reason then should they who offend Jesus, the Son of the Lord God, by deserting the faith, be cut off from Christian communion and stripped of their goods, for it is infinitely more serious to offend against the Divine majesty than to injure human majesty' ('cum longe sit gravius aeternam quam temporalem laedere majestatem').

[1] For the further history of the Inquisition, see art. OFFICE (Holy).

This saying, addressed to the magistrates of Viterbo on 25th March 1199 (*Epp.* ii. 1), will live for ever. Frederick II. set himself to deduce the consequences implied in it; and the Constitution which he promulgated on 22nd Nov. 1220 for the whole empire exactly reproduces (ch. vi.) Innocent III.'s phrase (*Mon. Germ. Leges*, sect. iv. vol. ii. pp. 107–109). In the Constitution of 1224 for Lombardy, the death-penalty is decreed against the Manichæans; and, as the ancient legislation imposes upon them the penalty of death by burning, we may take it that Frederick II. condemned heretics to die at the stake. In 1230, the Dominican Guala, bishop of Brescia, exacted this law in his episcopal town.

Pope Gregory IX., who had frequent dealings with Guala, adopted his point of view. The Imperial Constitution of 1224 was entered in the register of pontifical letters either at the end of 1230 or at the beginning of 1231, and is found there under the number 203 in the fourth year of Gregory's pontificate (Auvray, *Registres de Grégoire IX.*, no. 535). The pope then set himself to put this Constitution into practice, beginning with the city of Rome. He promulgated a law, probably in Feb. 1231, in which he commanded that heretics convicted by the Church should be abandoned to secular justice, to be punished as they deserved (*animadversio debita*). A municipal regulation published at the same time by the senator of Rome, Annibaldi, established the new jurisprudence for the Eternal City (J. F. Boehmer, *Acta Imperii selecta*, Innsbruck, 1870, xiii. 378). The penalty to be imposed was not specified; but the kind of punishment was sufficiently indicated by the Constitution of the Emperor, which had just been entered in the registers of the pontifical office. From the month of Feb. 1231 onwards a number of Patarins were arrested in Rome; those who resisted conversion were condemned to be burned alive, and the others were sent to Monte Cassino and Cava to do penance (*Mon. Germ. Script.* xix. 363). The actual facts thus showed, in a very striking manner, in what sense these documents were to be interpreted (see Vacandard, *L'Inquisition*, pp. 129–134).

The bishops, who, in virtue of their ordinary powers, were originally charged with the duty of searching out heretics and judging them in concert with the secular authority, performed their duty with more or less precision. Where their zeal was insufficient, Rome was obliged to step in. The popes commissioned their legates to take action against heresy over and above the bishops; and, from the end of the 12th cent., we find two inquisitions at work at the same time—the episcopal inquisition of the ordinary bishops in their own respective dioceses; and the legatine inquisition carried on by the legates throughout the districts under their supervision, in virtue of their commission from the Holy See. For example, we know that, in 1178, Pope Alexander III. had sent the cardinal of St. Chrysogonus to Languedoc as legate, with full power to repress heresy.

'In virtue of this commission, the legate and the Cistercians who accompanied him extracted a promise under oath from the bishop of Toulouse, a section of the clergy, the consuls, and all the citizens whose orthodoxy was not under suspicion, to give written information against all heretics and their abettors' (*Hist. gén. de Languedoc*, Toulouse, 1879, vi. 79).

Similarly, in 1198, Innocent III. gave absolute power to the Cistercian religious whom he sent into the county of Toulouse as apostolic legates. The princes received orders to put themselves at their disposal:

'It is our wish also that all the people take arms against the heretics whenever brother Raynier and brother Gui may deem it advisable to give the command' (Potthast, *Regesta*, no. 95).

St. Dominic, who has been credited with being the first inquisitor, acted at first only as a subordinate; any services that he rendered to the Inquisition were done in fulfilment of an office which he held—the Cistercian legateship under the direction of Arnaud of Citeaux and Pierre of Castelnau (cf. *AS*, Aug. i. [1867] 410 f.).

The time was approaching when the papacy was to confine the office of inquisitor exclusively to religious Orders, and, among them, particularly to the Dominicans and Franciscans. It was in this form that the Inquisition was established nearly everywhere under Pope Gregory IX. In 1132, the pope put the prosecution of the heretics in Bourgogne into the hands of the Dominican prior of Besançon and Fathers Gautier and Robert. This mission, limited at first to a well-defined area, soon extended over the whole of France. On 13th April 1233, Gregory IX. advised the bishops of France that he had invested the Dominicans with the office of inquisition in this country, because 'the cares of their multifarious duties hardly left the bishops time to breathe.' Finally, by another bull, dated 21st Aug. 1235, the pope nominated as Inquisitor-General of the kingdom of France ('per universum regnum Franciae') brother Robert (surnamed 'le Bougre' because, before he joined the Dominican Order, he himself had been a member of a body of Cathari known by the name of Bulgari, Bougres). Robert was required to act in concert with the bishops and religious Orders (Frederichs, *Robert le Bougre, premier inquisiteur général de France*, p. 13).

It is well known how these pontifical measures were welcomed by the king of France. The statute-book known as *Establissements de Saint Louis* and the *Coutumes de Beauvoisis* of Beaumanoir attest the readiness of the civil power to support the work of inquisition:

'Quand le juge [ecclésiastique] aurait examiné [l'accusé], se il trouvait qu'il fut bougre [hérétique], si le devait faire envoier à la justice laïque et la justice laïque le doit faire ardoir [brûler] (E. J. de Laurière, *Ordonnances des rois de France*, Paris, 1723, i. 211, 175). 'En tel cas,' says the *Coutumes de Beauvoisis* (ed. Société de l'hist. de France, Paris, 1842, i. 157, 413), 'doit aider la laïque justice à sainte Eglise; car quand quelqu'un est condamné comme bougre par l'examination de sainte Eglise, sainte Eglise le doit abandonner à la laïque justice et la laïque justice le doit ardoir, parceque la justice spirituelle ne doit nul mettre à mort.'

The Inquisition soon overstepped the boundaries of France. Flanders and the Low Countries, for example, were subject in 1233 to the authority of the Grand Inquisitor of France, Robert le Bougre (cf. Fredericq, *Corpus documentorum inquisitionis neerlandicæ*, i., *passim*).

In the south, the ecclesiastical dioceses had their seat on the two slopes of the Pyrenees; hence the frequent communications between the orthodox, as also between the heretics, of Spain and France. The King of Aragon, Jayme I., was always interested in questions of faith. On the advice of his confessor, the Dominican Raymond of Pennafort, he requested Gregory IX. to send him some inquisitors; and in a bull of 26th May 1232 the pope invited the archbishop of Tarragone and his suffragans to institute a general inquisition in their dioceses, either personally or with the help of the Dominicans or some other religious Order. A little later (30th April 1235), in reply to several questions, Gregory IX. handed over to the king of Aragon a whole code of inquisitorial procedure which had been drawn up by Raymond of Pennafort. From this time the Inquisition operated regularly throughout Aragon, with the co-operation of Dominicans and Franciscans, and extended its sway into Navarre (Lea, *Hist. of the Inquisition*, ii. 162 ff.). Castille could not escape its influence. The *Fuero real*, a code promulgated by Alphonso the Wise in 1255, and the *Siete Partidas* of 1265 reproduce the prescriptions against heresy inserted into the *Decretals* of Gregory IX., and also those of his successors, which figured later in the *Sextus* of

Boniface VIII. (cf. *El Fuero real*, iv. 1; *Siete Partidas*, i. 6. 58, viii. 24. 7, vii. 25).

The Cathari heretics in the south of France had come over from the north of Italy; but Italy still cherished a goodly number in her breast. Even before Gregory IX. adopted the laws of Frederick II., the Inquisition was doing active work in these regions. As early as 1224, Honorius III. had ordered the bishops of Brescia, Modena, and Rimini to expel the heretics from their dioceses. In 1228 the papal legate, Geoffrey, commanded the unconverted and lapsed heretics of Milan to be handed over to the secular authority. We have already noticed the inquisitorial work of Guala in Brescia in 1230. Seeing the trend of the movement, Gregory IX. nominated the Dominican Alberic inquisitor in Lombardy (1232), the Dominican Peter of Verona (St. Peter Martyr) inquisitor at Milan (1233), and the Dominicans Aldobrandini Cavalcanti and Ruggieri Calcagni inquisitors at Florence—the former in 1230, the latter about 1241 (cf. Lea, ii. 201 ff.).

In Germany, it was given to the Dominican Conrad of Marburg to apply the Imperial ordinances and pontifical bulls relating to the Inquisition. A letter from Gregory IX., dated 11th Oct. 1231, gave him minute directions as to the procedure to be followed (J. P. Kuchenbecker, *Analecta Hassiaca*, Marburg, 1730, iii. 73).

From Germany the Inquisition spread into Bohemia and Hungary and even into the Slavic and Scandinavian countries. In short, with the exception of England, it soon covered the whole of Latin Christendom.

**2. Procedure.**—The working of the Inquisition is explained in a letter addressed by Gregory IX. to Conrad of Marburg on 11th Oct. 1231 as follows:

'When you arrive in a town, convoke the prelates, clergy, and people, and deliver a solemn address; then, with the help of some discreet persons make a very diligent search for heretics and suspects (who will have been denounced to you). Those who, after examination, are considered guilty or suspected of heresy must promise absolute obedience to the orders of the Church; otherwise you will have to proceed against them in accordance with the statutes recently promulgated by us' (Kuchenbecker, *loc. cit.*).

Here we have the whole inquisitorial process: the 'time of grace'; the summoning and depositions of witnesses; the examination of the accused; the sentence of reconciliation of repentant heretics; and the sentence of condemnation of the unrepentant. The several acts of this drama call for separate explanation.

The first duty of the inquisitor was to invite those who acknowledged heresy to present themselves voluntarily before him, within a fixed time varying from fifteen days to a month. The time thus set apart for voluntary confession was called the 'time of grace' ('tempus gratiae sive indulgentiae'; cf. *Processus inquisitionis*, composed between 1244 and 1254, in Vacandard, App. A, p. 315). Those who took advantage of this and whose offence had not been previously discovered were exempt from all penalty, or were prescribed a secret and only nominal penance; those whose heresy was already known before confession were exonerated from the penalties of death and life-imprisonment, and suffered no worse punishment than a short pilgrimage or some other of the usual canonical penances (Consultation of Cardinal Pierre of Colmieu, bishop of Albano, formerly archbishop of Rouen, in fonds Doat, xxxi. fol. 5; cf. Tanon, *Hist. des tribunaux de l'Inquisition en France*, p. 144 f.).

With the edict of grace was connected an 'edict of faith,' which made it incumbent upon any one who knew a notorious heretic or any person suspected of heresy to point him out to the inquisitor (Eymeric, *Directorium*, pt. iii. nos. 52, 53–56). Thus, if they failed to give themselves up voluntarily, the heretics were rooted out by the denunciation of the orthodox catholics. The number of witnesses required to make an accusation valid was not fixed at first, but was finally settled as two. Gui Foucois (afterwards Pope Clement IV.) thought that more than two witnesses would be advisable in certain circumstances (Consultation in Doat, vol. xxxvi. qu. xv.; cf. Eymeric, pt. iii., 'De testium multiplicatione,' p. 445). In theory the inquisitor was not supposed to accept the evidence of any but discreet persons, and it had long been acknowledged by the Church that the evidence of a heretic, an excommunicated person, a homicide, a thief, a sorcerer, diviner, or false witness was not valid in a criminal prosecution (Gratian, *Decretum*, pt. ii. causa v. qu. iii. cap. 5). But the great fear of heresy made room for an exception in matters relating to the faith. In the 12th cent. Gratian decreed that the evidence of a heretic or a person under civil disability (*infamis*) should be received on the question of heresy (*Decretum*, pt. ii. causa ii. qu. vii. cap. 22, causa vi. qu. i. cap. 19). The edicts of Frederick II. denied the right of appearing in a court of justice to members of a sect, but this disability was removed in the Constitution of Ravenna of 22nd Feb. 1232: 'adjicimus quod haereticus convinci per haereticum possit' (cf. Huillard-Bréholles, *Historia Diplomatica Frederici II.*, iv. 299 f.). At first the inquisitors sometimes hesitated to consider evidence so obtained. But in 1261 Alexander IV. soothed their consciences (bull *Consuluit* of 23rd Jan. 1261, in Eymeric, App. p. 40). From this time onwards it was agreed that the evidence of a heretic should be valid at the discretion of the inquisitor. This principle was accepted generally, incorporated in canon law (cap. vi. 'In fidei favorem,' *Sextus*, v. ii.; Eymeric, p. 105), and confirmed by constant practice. Of all the legal pleas of common law that an accused person could bring forward against the witnesses to a charge, only one held good—mortal or very serious enmity (Eymeric, pt. iii. qu. lxvii. p. 606 f.; cf. Penna's remarks, *ib.* pp. 607–609).

It was quite useless to count on witnesses for the defence; in fact, we very seldom hear of their presence (cf. Lea, i. 446 ff.). And this is natural, for they would be practically certain to be suspected of complicity as abettors of the heretics.

For the same reason, the accused could not put their case in the hands of advocates except under conditions. The bull *Si adversus nos*, signed by Innocent III. in 1205 and inserted by Gregory IX. in the *Decretals* (cap. xi. 'De haereticis,' lib. v. tit. vii.), expressly forbade advocates and notaries to defend heretics; and this rule, though meant by the pontiff to concern only the acknowledged heretics, was insensibly extended to the accused who were striving to establish their innocence (Eymeric, pt. iii. qu. xxxix. p. 565; cf. p. 446; Vacandard, p. 151, n. 3).

The heretics and suspects, therefore, usually found themselves quite alone in the presence of their judges. They had to reply to the various charges (*capitula*) collected against them. It was important that the sources of these denunciations should be known. But the fear—a fear, moreover, that was justified (cf. Vacandard, 152, n. 1)—that the accused or their friends might take vengeance on their denunciators made the judges keep a prudent silence as to the names of the witnesses (see *Processus inquisitionis*, in Vacandard, App. A, p. 317; cf. bull of Alexander IV., *Layettes du trésor des chartes*, vol. iii. [1875] no. 4221). When Boniface VIII. incorporated this rule in the canon law (*Sextus*, v. ii. cap. 20), he made express reservations, and required the inquisitors to communicate the names of the witnesses to the accused when there

was no danger involved in doing so (cf. Eymeric, pt. iii. qu. 72: 'An nomina testium et denuntiatorum sint delatis publicanda,' p. 627). But, as a rule, the accused had no other means of invalidating the evidence against him than the privilege of naming enemies whom he knew to be bent on his destruction; if his denunciators were of their number, their evidence was dropped (Eymeric, p. 446 ff.).

But the real aim of the inquisitor was to induce the heretic to confess. For this purpose various means were employed, an account of which is given by David of Augsburg (analyzed in Douais, *L'Inquisition*, p. 170): (1) the fear of death; the supreme penalty and the stake were held before the prisoner's eyes if he should refuse to confess; on the other hand, he was promised that he would be spared these punishments if he would consent to speak; (2) more or less strict imprisonment, made more trying by very scanty fare and the total absence of friends; (3) the visit of two capable judges who could force a confession from the prisoner by clever insinuations and tricky questions; (4) finally, from the time of Innocent IV., torture (*Tractatus de inquisitione hæreticorum*, ed. Preger, Mainz, 1876, p. 43).

Torture could not be resorted to until the judge had exhausted all the gentler methods on the prisoner, and unless the latter was under very serious suspicion. Even in the torture-chamber, while the prisoner was being stripped and bound, the inquisitor continued his exhortations to confession. The *vexatio* then began with the mildest ordeals; if these were ineffectual, others were tried, and from the very beginning care was taken that the prisoner should see the whole series of punishments, so that he might be inspired with a salutary fear by the thought of the pains in store for him (Eymeric, pt. iii. p. 481, col. 1). But, of course, the prisoner's life and limbs were not meant to be endangered: 'cogere citra membri deminutionem et mortis periculum,' says the bull *Ad extirpanda* of Innocent IV. (in Eymeric, App., p. 8). Originally it was not even allowable to repeat the torture; but later it became the rule that, if necessary, torture might be applied several times and even at intervals of a few days, not by way of 'repetition,' but by way of 'continuation' ('ad continuandum tormenta, non ad iterandum,' as Eymeric says in *Directorium*, pt. iii. p. 481, col. 2).

If on leaving the torture-chamber the accused repeated his confession, his case was easily disposed of; but, if he withdrew the confession made under the pressure of torture, he necessitated recourse to witnesses. The rule of the *Processus inquisitionis* was that the accused must not be condemned without confession or certain and clear proofs (cf. Vacandard, p. 321). But, whether he confessed or not, if two witnesses deemed competent by the inquisitor agreed in charging him, he was declared a heretic.

Helpless in the face of such witness, the accused could only choose between two courses: either he had to make a confession and show his penitence by submitting to whatever penance the Church, in the person of the judge, decided to impose upon him, or he might stand firm in his denial of crime or in his profession of heresy, and bravely take the consequences.

If converted, the heretic bowed before the inquisitor as a penitent before his confessor. He had no cause to fear his judge, for the latter did not inflict real punishments, but rather penances.

These penances 'consisted, firstly, of pious observances—recitation of prayers, frequenting of churches, the discipline, fasting, pilgrimages, and fines nominally for pious uses, such as a confessor might impose on his ordinary penitents. These were for offences of trifling import. Next in grade are the "*pœnæ confusibiles*"—the humiliating and degrading penances, of which the most important was the wearing of yellow crosses sewed upon the garments; and, finally, the severest punishment among those strictly within the competence of the Holy Office, the "*murus*," or prison' (Lea, i. 462; cf. C. Molinier, *L'Inquisition dans le midi de la France aux xiiiᵉ et xivᵉ siècles*, pp. 358–398).

Imprisonment might be temporary or for life.

'There were two kinds of imprisonment, the milder, or "*murus largus*," and the harsher, known as "*murus strictus*" or "*durus*" or "*arctus*." . . . In the milder form, or "*murus largus*," the prisoners apparently were, if well behaved, allowed to take exercise in the corridors, where sometimes they had opportunities of converse with each other and with the outside world. This privilege was ordered to be given to the aged and infirm by the cardinals who investigated the prison of Carcassonne and took measures to alleviate its rigors. In the harsher confinement, or "*murus strictus*," the prisoner was thrust into the smallest, darkest, and most noisome of cells, with chains on his feet—in some cases chained to the wall. . . . When the culprits were members of a religious Order, to avoid scandal the proceedings were usually held in private, and the imprisonment would be ordered to take place in a convent of their own Order. As these buildings, however, usually were provided with cells for the punishment of offenders, this was probably of no great advantage to the victim. In the case of Jeanne, widow of B. de la Tour, a nun of Lespenasse, in 1246, who had committed acts of both Catharan and Waldensian heresy, and had prevaricated in her confession, the sentence was confinement in a separate cell in her own convent, where no one was to enter or see her, her food being pushed in through an opening left for the purpose—in fact, the living tomb known as the "*in pace*." . . . While the penance prescribed was a diet of bread and water, the Inquisition, with unwonted kindness, did not object to its prisoners receiving from their friends contributions of food, wine, money, and garments, and among its documents are such frequent allusions to this that it may be regarded as an established custom' (Lea, i. 486, 487, 491).

The greatest penalty was that of death. The inquisitor, indeed,

'never condemned to death, but merely withdrew the protection of the Church from the hardened and impenitent sinner who afforded no hope of conversion, or from him who showed by relapse that there was no trust to be placed in his pretended repentance' (Lea, i. 460).

It was then that the civil authority intervened. The ecclesiastical judge handed the prisoner over to the secular arm (cf. *Liber sententiarum*, in Limborch, *Historia Inquisitionis*, p. 91), and it applied the legal punishment (*animadversio debita*), death by fire. The prisoner had one last resource, however: to save his life he could, even at the stake, renounce his error, and his sentence was immediately commuted to imprisonment for life (Constitution of Frederick II. of 1232; cf. Eymeric, pt. iii. p. 515).

Death did not protect heretics from the condemnation of the Inquisition. Trial after death was not unknown to the Romans; it was applied to criminals who had committed treason, and, in case of conviction, entailed confiscation of property and spoliation of heirs. The analogy established by Innocent III. (bull of 25th March 1199, inserted in the *Decretals*, v. vii. 10) between heresy and the crime of treason led the tribunals of the Inquisition to punish deceased heretics just as if they were still alive. They were regarded as condemned in default, and treated accordingly; their goods were seized and their remains exhumed. The exhumation was carried out with great solemnity; bones and even semi-decomposed bodies were carried through the streets to the sound of trumpets, and then burned at the stake. The names of the dead were proclaimed, and the living were threatened with a similar fate if they followed their example: 'qui aytal fara, aytal périra,' says the *Chronique de Guilhem Pelhisso*, first inquisitor of Albi (published in Douais, p. 110).

These various penalties could be applied only after sentence pronounced in a public assembly convoked for the purpose and known by the name of *Sermo generalis* (see Tanon, pp. 425–431). This assembly was what is commonly called the *auto da fé*, or *auto de fe* ('act of faith'). To the masses and to many others the name *auto da fé* suggests the very worst horrors of the Inquisition; they

can scarcely picture it without towering flames and fierce-eyed hangmen. In reality there was neither hangman nor burning stake. The heretics who appeared at this tribunal had simply to listen to a speech and then hear their sentence, which was sometimes very light. The death-penalty was not always the result of these 'solemnities,' which were meant to appeal to the imagination of the orthodox. Of the 18 *auto da fé* presided over by the famous inquisitor Bernard Gui, 7 pronounced no greater penalty than prison or dungeon. When the heretic deserved a worse punishment, he was handed over to the secular arm. This was the device employed by the Church to avoid transgression of the principle forbidding her ministers to shed blood ('Ecclesia abhorret a sanguine').

3. **Appreciation.**—We need not discuss the abuses which crept into the inquisitorial system through the fault of individuals. Whatever their origin, history, and extent, they should be the object of inexorable and universal reprobation. No one would ever dream of defending the memory of Cauchon, the sole judge of Joan of Arc. Nor is there any excuse for those inquisitors like him who used their authority to convict all suspects brought before their tribunal with no thought of justice or moderation.

It is the institution itself that we must judge here, according to our idea of a higher social justice. The form of inquisitorial procedure appears in itself to be inferior to that of accusatory procedure. In the latter it was the accuser's duty to prove the truth of his words; in the former the accused had to prove his innocence, no one was allowed to speak in his defence, he was reduced to a desperate self-defence before a secret tribunal without the help of an advocate. It is possible, indeed, to allege important reasons in justification of this system. The risks that the witnesses would have run if their names had been divulged are patent to all; and publicity of debate would certainly have hindered the success of the work. But these considerations do not alter the nature of the institution; the large part left to the discretion, or rather licence, of the judges marks an inferiority that leads inevitably to suspicions of its strict justice. All that can be said in defence or even to the credit of the Roman pontiffs is that, once the principle of inquisition was admitted, they did their best to prevent its inconveniences and to repress its abuses. They stipulated for exceptionally high moral qualities in inquisitors: Alexander IV. (1255), Urban IV. (1262), Clement IV. (1265), Gregory X. (1273), and Nicholas IV. (1290) insisted on spiritual qualities, moral purity, and scrupulous honesty in these judges (Potthast, *Regesta*, nos. 16132, 16611, 18387, 19372, 19924, 20720, 20724, 23297, 23298); Clement V. made a decision, in confirmation of one already made by his predecessors, that, in order to guarantee against any possibility of frivolity, no one under the age of forty should exercise inquisitorial power (Clementin. ii. 2). In Bernard Gui (*Practica*, vi., ed. Douais, p. 232 f., tr. in Vacandard, p. 156) we have a portrait of the ideal inquisitor; it is a model which leaves nothing to be desired. It was, further, decreed by Innocent IV. and Alexander IV. that, in order to protect the judges themselves against sudden outbursts of passion, they should be guided by a certain number of *boni viri* and gather a body of experts (*periti*) about them (cf. *Layettes du trésor des chartes*, iii. no. 4111; Potthast, *Regesta*, no. 15804; Vacandard, p. 165, n. 1). The official reports of sentences, in fact, often mention the presence of *periti* and *boni viri* in great numbers (see Douais, 'La Formule "Communicato bonorum virorum concilio" des sentences inquisitoriales,' in *Congrès scientifique international des catholiques*, section 'Sciences historiques,' Freiburg, Switzerland, 1898, pp. 316–367). We see in these councillors a foreshadowing of the modern jury; and it has been rightly observed that the inquisitors generally followed their advice and even tempered it with mercy (Douais, pp. 324–326, with examples). They were, furthermore, forbidden, from the time of Clement V. (bull *Multorum querela*) to make any serious decision without first hearing the advice of the bishops, the natural judges of the faith. In a word, although they do not present 'a sublime spectacle of social perfection' (*Civiltà cattolica*, Rome, 1853, i. 595), the tribunal of the Inquisition conformed to a very high ideal of justice—an ideal as lofty as that conceived by the best spirits of the Middle Ages.

We could not adopt this ideal for our own; for among the methods employed by the Inquisition there was one, namely, torture, which could never find favour in the eyes of criminalists with a love of justice. If they had even restricted themselves to flagellation, such as was administered, to quote St. Augustine, at home, in school, and even in the episcopal tribunals of the early ages, or such as was recommended by the Council of Agde in A.D. 506, and applied by the Benedictine monks (Augustine, *Ep.* cxxxiii. 2; cf. clxxxv. 23; *Concil. Agath.*, can. xxviii.; *Benedicti Regula*, xxvii.; cf. Vacandard, p. 38, n. 3), their conduct would not have appeared so scandalous. We might have looked upon it as a sort of domestic or paternal practice, somewhat rigorous, of course, but harmonizing with the ideas of goodness prevalent at the time. But the rack, *strappado*, and lighted torches were particularly inhuman inventions (cf. St. Augustine, *Ep.* cxxxiii. 2). When they were employed in the first centuries against Christians, every one agreed in regarding them as relics of barbarism and inventions of the devil. Their character did not change when they were employed by the Inquisition against heretics; and it is a sad fact that, in spite of Innocent IV.'s appeal for moderation ('citra membri diminutionem et mortis periculum'), it was possible to draw a comparison between the pagan and the ecclesiastical tribunals. Pope Nicholas I. delivered a judgment on torture as a means of getting judiciary information which is worthy of remembrance.

'Such processes,' he said, 'are contrary to both Divine and human law, for confession should be spontaneous and not forced; it should be made voluntarily, not extracted by violence. The prisoner can endure all the torments you inflict without confession, and then what shame there is for the judge, and what an exhibition of his inhumanity! If, on the other hand, the prisoner is overcome by pain and confesses a crime of which he is innocent, on whom does this enormous impiety recoil if not upon him who forced the poor wretch to tell a lie?' (*Responsa ad consulta Bulgarorum*, lxxxvi., in Labbe, *Concilia*, viii. col. 544).

Innocent IV. was, of course, ignorant of this text when he recommended the use of torture. His excuse, if he had any, was that he was only following the example of the civil courts and conforming to the customs of his time.

The penalties imposed by the tribunals of the Inquisition are more difficult to judge. The death-penalty is of the first importance. Let us notice, to begin with, as a point of history, that the punishment of death for the crime of heresy owed its origin to the people, and passed into the penal code only at the wish of the princes, without any intervention of ecclesiastical power; the Church never admitted the penalty of death into her code. This being so, it remains for us to see whether heretics could be justly condemned to death, and whether the Church could have, or actually had, any share in their condemnation.

The early Fathers, notably Origen, Cyprian, Lactantius, Chrysostom, and Augustine, did not approve of the death-penalty for heresy (see texts

in Vacandard, pp. 3, 5, 20, 34); and their doctrine seems to conform to our Lord's parable of the wheat and tares: 'Is it not possible,' said Wazon, bishop of Liège, in the 12th cent., 'that those who are tares to-day may be converted into wheat to-morrow?' (*Vita Vasonis*, xxv. [*PL* cxlii. 753]). To put them to death, then, was to deprive them at a stroke of any possibility of conversion.

Those who advocated the death-penalty, Frederick II. and Thomas Aquinas (*Summa*, II. ii. qu. xi. art. 3), tried to support their doctrine by arguments from reason. The supreme penalty, they said, was the recognized punishment for persons guilty of treason or forgery, and accordingly . . . and so on. Their argument is, of course, a case of mistaking comparisons for reasons. The State criminals in question were a serious menace to the social order, which could not be truly said of all and every heresy as such. There is nothing in common between a crime against society and a crime against God; and, if these were to be assimilated, it would be quite an easy matter to prove that every sin is Divine treason, and consequently punishable with death.

To tell the truth, the heresies of the Middle Ages were nearly always interwoven with anti-social systems. Such a sect as the Cathari, for instance, which wrapped itself round in mystery and corroded the heart of the people, inevitably called down the vengeance of society and the sword of the State for no other crime than existing and acting;

'and, however much we may deprecate the means used for its suppression and commiserate those who suffered for conscience' sake, we cannot but admit that the cause of orthodoxy was in this case the cause of progress and civilization. Had Catharism become dominant, or even had it been allowed to exist on equal terms, its influence could not have failed to prove disastrous. Its asceticism with regard to commerce between the sexes, if strictly enforced, could only have led to the extinction of the race, and as this involves a contradiction of nature, it would have probably resulted in lawless concubinage and the destruction of the institution of the family, rather than in the disappearance of the human race and the return of exiled souls to their Creator, which was the *summum bonum* of the true Catharan. Its condemnation of the visible universe and of matter in general as the work of Satan rendered sinful all striving after material improvement, and the conscientious belief in such a creed could only lead man back, in time, to his original condition of savagism. It was not only a revolt against the Church, but a renunciation of man's domination over nature' (Lea, i. 106).

Its development had to be stopped at any cost. In fighting it to the death, society was only acting in self-defence against the inroads of an essentially destructive force. It was the struggle for existence.

It is not surprising that Church and State should combine to oppose their common enemy. If all disturbers of public order and ordinary law-breakers were to be struck from the list of sect-members sent to the stake or the dungeon, we should find the remaining number of condemned heretics to be very small indeed. They were, according to commonly received doctrine, equally amenable to the jurisdiction of Church and of State. It was inconceivable that God and His revelation should lack defenders in a Christian kingdom: the magistrates were held responsible to a certain extent for offences committed against the Deity. Hence heresy belonged indirectly to their tribunal. It was their privilege and duty to combat errors of faith as they did anti-social theories.

As regards the Church's attitude, in principle no heretic was condemned to death. The sacred formula ran: 'Damnati per ecclesiam seculari judicio relinquantur, animadversione debita puniendi' (ch. *Excommunicamus*, 15, x. lib. 5, tit. 7 [ed. E. Friedberg, Leipzig, 1882, col. 789]); and the sentence of delivery to the civil judges added: 'We recommend the secular court, and with confidence, to such moderation in your sentence as will avoid all effusion of blood or danger of death' (Eymeric, p. 588). But these formulæ evidently belong to a time when the *animadversio debita* did not include death at the stake; Lucius III. (bull *Ad abolendam*, in *Decretals*, v. vii. 9) and Innocent III. (*ib.* v. vii. 13) could use them without any reservation. But it was different from the time when Gregory IX. and Innocent IV. sanctioned the code of Frederick II. and imposed it upon the tribunals of the Inquisition. The Church continued to recommend the State to act with moderation and avoid all 'effusion of blood and danger of death.' This was, unfortunately, only an empty formula that deceived no one. Its purpose was to safeguard the principle which the Church had taken for its motto: 'Ecclesia abhorret a sanguine.' The inquisitors imagined that, by boldly proclaiming this traditional rule, they removed all responsibility in the matter from their own shoulders. It was their only safeguard against being soaked in judgments of blood, and it must be taken for what it is worth. It has been described as a 'device' and 'hypocritical' (Lea, i. 224); we may call it simply a legal fiction.

It is impossible to claim that the Church had never any responsibility for the execution of heretics. This was attempted, however, in the 13th cent.:

'Our Pope,' so says a clumsy apologist ('Disputatio inter Catholicum et Patarinum haereticum,' in E. Martène, *Thesaurus novus anecdotorum*, Paris, 1717, v. col. 1741), 'neither kills nor orders to be killed any person; it is the law that kills those whom the Pope allows to be killed, and it is they themselves who cause their own death by committing deeds that must be punished by death.'

The same position has been taken up by modern apologists. But they forget that the Church excommunicated princes for refusing to burn the heretics delivered into their hands by the Inquisition (Boniface VIII., *Sextus*, 'de Hæreticis,' xviii., in Eymeric, pt. ii. p. 110; cf. qu. 47, p. 360 f.). It was undoubtedly the princes who passed the death-sentence; but there were two authorities involved—the civil power, which applied its own laws; and the ecclesiastical power, which forced it to apply them. Hence the command to Peter the Cantor not to kill the Cathari immediately after an ecclesiastical judgment, as this might compromise the Church; 'illud ab eo fit cujus auctoritate fit' was added in justification (*Verbum abbreviatum*, lxxviii. [*PL* ccv. 231]).

The question whether the Church's responsibility was a juridical or simply a moral responsibility is of no importance historically. Let us notice, however, that in the tribunals of the Inquisition sentences involving death were not frequent. We have the sentences of Pamiers from 1318 to 1324, and of Toulouse from 1308 to 1323. During 9 *Sermones* or *auto da fé* held by the tribunal of Pamiers, and involving the sentence of 75 persons, only 5 heretics were handed over to the secular arm (Vidal, *Le tribunal de l'Inquisition de Pamiers*, pp. 50–56). Bernard Gui presided over 18 *auto da fé* in Toulouse, and pronounced 930 sentences; of this number only 42 were marked with the fatal sign, 'relicti curiae seculari' (cf. Douais, *Documents*, i. p. ccv; Vacandard, App. B). The proportion is, therefore, one in 15 for the tribunal of Pamiers, and one in 22 or 23 for that of Toulouse (cf. Vacandard, p. 236 f., with notes). Taking everything into consideration, we may hold that the institution and working of the tribunals of the Inquisition were the means of real social progress: not only did they close the era of summary judgment (cf. Vacandard, pp. 38–66), but they also considerably lessened the number of sentences involving the death-penalty. Lea, who could not be charged with any bias in favour of the Church, has found it possible to say in all truth: 'The stake

eating, but in severe cases even these functions may be suspended. The conscious state varies greatly, some patients being aware of and capable of recalling all that occurred during the attack, while others are unconscious and without memory. Most of the subjects exhibit in greater or less degree the curious phenomenon of catalepsy, or the tendency of the muscles to maintain a limb in any position in which it is placed by another person.

(*e*) *Delusions or insane ideas.*—A delusion is a partially dissociated train of ideation which invariably involves the personality of the subject, which possesses a distinct emotional tone, and the content of which refers to subjects either inimical or beneficial to the welfare of the individual.

The new school of morbid psychology has done much to extend our knowledge of the origin of delusions. According to their teaching, certain ideas or trains of thought possessing a strong emotional tone which tend to interfere with the ordinary thought processes must either be wholly excluded from the mind or suppressed. When they are suppressed and sunk below the level of conscious thought, they manifest a tendency—stronger in ill-balanced minds—to force themselves upon attention. Hence arises in some persons a constant conflict between the will and the morbid idea. In time the suppressed idea may gradually force itself into the sphere of conscious thought and capture for itself a place in the ideation and personality of the individual, but in the great majority of such instances the sphere of influence of the morbid train of thought is rigidly delimited and to a large extent independent. Having once entered the sphere of personal ideation, it assumes the position of an intuitive certainty similar to that occupied by any other fundamental belief of the individual. The fact that it may be absurd in the opinion of others does not affect the individual's belief in its truth, for he builds around it a system of 'rationalization' whereby he satisfactorily accounts to himself for its validity in the same way as a normal individual explains his religious, political, or social opinions apart from any rational bases. The partial dissociation of the morbid train of thought and its rigid delimitation from the ordinary normal ideation of the individual explain the otherwise incongruous phenomenon of divided personality and the not uncommon spectacle of an individual endowed with intelligence above the average and eminently capable in the affairs of life being yet dominated by beliefs wholly incredible to ordinary people, and being often thus influenced in his conduct to an extent which compels his sequestration in his own interests or that of others. Delusions form the basis of the two large and important groups of insanity described below under the headings 'dementia præcox' and 'paranoia.'

(*f*) *Hallucinations* of the senses are frequently observed in different forms of insanity. All the five senses may be implicated, but by far the most common is that of hearing. Next in order of frequency come false sensations of touch or pain, of taste, of smell, and of sight. Hallucinations are of two kinds—primary or peripheral, and secondary or ideational. When the stump of an amputated limb is electrically stimulated, the absent fingers and toes are distinctly perceived—the cause of which can only be that the excessive irritation of the afferent nerves forces into association neuron paths long previously disused. In the same way peripheral irritation of the aural or optic nerves tends to arouse latent ideas by forced association, and in this way to cause auditory or visual hallucinations. Secondary hallucinations are of ideational origin, and are intimately associated with the emotional tone of the mental state of the patient. Thus a man who believes himself the victim of persecution generally develops hallucinations corresponding to his delusions, and a man who is the subject of delusions of pride and grandeur is liable to hallucinations corresponding to these ideas (see, further, art. HALLUCINATION, vol. vi. p. 482 ff.).

(*g*) *Obsessions and impulses.*—An obsession is a dissociated idea, or group of ideas, which suddenly enters consciousness, disturbing the ordinary course of ideation, but not involving the personality of the individual—that is to say, the subject of obsession regards it as an unreality, and as apart from his ordinary ideation. Obsessions are most common in neurasthenic, hysteric, or hereditarily degenerate people. The number of obsessions is endless, there being almost as many forms as there are of thought. Some are harmless and meaningless, as, *e.g.*, the desire to repeat certain words or phrases, to count objects of no interest, or to touch certain articles. Others are fateful, as the desire to kill, to commit suicide, or to steal.

As thought precedes action, so does obsession lead up to impulse. Some impulses are harmless; others are serious. Among the latter are suicidal and homicidal impulses, the impulse to drink (dipsomania), or the impulse to steal (kleptomania). True impulse is generally preceded by mental distress, due to the strength of the obsession against which the purposive will of the individual contends. The recognition of this contest between impulse and will is important in the diagnosis of obsession and impulse.

(*h*) *Dementia or mental enfeeblement.*—Mental enfeeblement is of two kinds—primary and secondary. The first is congenital, and will be referred to under congenital mental defect; the other is a terminal condition of many forms of mental disease. Secondary dementia varies greatly according to the nature of the preceding malady, the hereditary power of resistance of the individual, or the character and extent of the injury to the nerve cells of the cortex of the brain. It may manifest itself variously from a mere change in disposition up to the most complete ineptitude for the simplest duties, with abolition of the faculty of ordinary thought, loss of memory, and absence of the human instincts.

II. *CONGENITAL MENTAL DEFECTS.*—1. Idiocy varies from a condition in which the mental faculties are rudimentary, if, indeed, they can be said to exist, up to a state of mind characterised by such limited ideation that the subject is unable to take proper care of himself, or to perform ordinary social or civil functions. All idiots are incapable of acquiring literary education. The higher grades of them, however, may be trained to habits of decency and cleanliness. There are various types of idiocy, *e.g.* the genetous or congenital type, which are malformed germinal variations; the paralytic type, in which an early brain injury or inflammation has resulted in infantile paralysis, with accompanying arrest of mental development; the microcephalic type, in which the head measures less than 17 inches in circumference, and in which the skull sutures are for some reason prematurely ossified; the hydrocephalic type, accompanied by enormous enlargement and deformity of the head; and cretinism, a condition associated with failure of development of the thyroid gland, and accompanied by dwarfishness and abnormality of the skin and its appendages. In addition to a paucity of ideas, idiots usually present speech defects and a host of physical abnormalities. Their resistance to disease, especially to tubercle, is low, and they are liable to suffer from caries of the teeth, and from gastro-intestinal disorders.

2. Imbecility is a much less pronounced form of mental degeneracy than idiocy, from which it differs more in degree than in kind, to that it is

often difficult to classify borderland cases. The absence of mental power in imbeciles may be so slight that it becomes apparent only in the continuing infantilism which the subject manifests as puberty is approached. On the other hand, it may manifest itself by inability to acquire ordinary education at an early period of life. Not only so, but imbecile young children generally manifest peculiarities of conduct, unusual attitudes of mind, and abnormal ways of thought, all of which are characterized by a feeble and undeveloped mind. Physical deformity is rare, as compared with idiocy, and many imbeciles, though not well developed physically, are of robust bodily constitution.

The mental reaction of imbeciles towards their environment is, generally speaking, defective; they are incapable of learning by experience the common social relationships of everyday life, or of understanding anything beyond the merely animal and the simpler human necessities of existence. At the same time, these defects are, in a few exceptional individuals, associated with some musical or arithmetical faculty, with an extraordinary memory for dates, or even an aptitude for certain limited mechanical skill. The power to protect themselves varies greatly, from helplessness in the midst of ordinary dangers up to a capacity for partially or even wholly earning their own means of livelihood by the performance of, as a rule, unskilled labour. The majority of imbeciles are deficient in self-control and in the moral sense; and, though many are good-natured, not a few are impulsive, passionate, and vicious.

3. **Higher grade imbecility or degeneracy.**—This class of imbeciles, though often apparently normal, physically and mentally, are only a degree removed from imbeciles. As a rule, such individuals, though of average intelligence—occasionally even exhibiting genius—are mentally ill-balanced, and the subjects of certain distinguishing peculiarities. Chief among these are eccentricity in manner, extravagance in thought or conduct, extravagant immorality of various kinds, and anomalies of emotion either in the direction of hyper-emotionalism or in the absence of certain emotional qualities, such as sympathy, which not infrequently results in cruelty. Certain types of criminals undoubtedly belong to this class. The intellectual development of such persons is always defective, and presents well-marked irregularity. On the physical side they do not present any constant signs of degeneracy. As a class, they are subject to various forms of psychopathic affection, such as paranoia or hysteria, and to such nervous diseases as epilepsy.

III. *THE ACQUIRED INSANITIES.*—The acquired insanities include those mental affections which manifest themselves between puberty and the end of the fourth decade in life. Undoubtedly they may appear, though rarely, both before and after these periods.

i. MANIA-MELANCHOLIA GROUP.—The relationship between mania and melancholia, which until recently were regarded as separate entities, consists in the fact that they are often associated in the same individual. The manifestation may be alternate (circular insanity); or the recurrent attacks of mania may be ushered in by a slight mental depression, which rapidly disappears; or an attack of melancholia may be followed by a slight transient mental exaltation; or, finally, a person who has suffered for many years from attacks of recurrent melancholia may suddenly develop an attack of mania, or *vice versa*. Notwithstanding the fact that one solitary attack of mania or melancholia may be the sole manifestation of the disease in an individual lifetime, the validity of the relationship is not thereby affected.

(*a*) *The circular form of mania-melancholia.*—The attacks of mental exaltation and of mental depression succeed each other usually without intermission, and are followed by a lucid interval of longer or shorter duration (*folie à double forme*). When the alternate attacks follow each other without a lucid interval, or are continuous, the form is known as 'circular insanity' (*folie circulaire*). The term 'circular insanity' is, however, used to embrace both forms. It is unimportant whether the mental depression succeeds or precedes the mental exaltation.

Although the form of mania which occurs in circular insanity may assume an acute type, it is usually of the form known as 'simple.' There is a general exaltation of the mental functions, without any apparent incoherence of ideas, without hallucinations of the senses, and without the presence of marked delusions. The memory becomes extraordinarily acute, and the patients talk or write incessantly. At the same time, although they appear capable of reasoning correctly, they lose their sense of proportion and of the fitness of things, and their judgment loses its normal balance. Thus they become less reticent regarding themselves and their affairs, and less cautious in speculation, or in what they say to or about other people, and their moral conduct becomes faulty and untrustworthy. They lose their natural affection for their relatives, and affect the company of people of an inferior type. In short, they become extraordinarily active, vain, vindictive, quarrelsome, and lose their moral status. When this condition has lasted for months, it may be years, the subject gradually loses his abnormal energy, though occasionally it may flicker up, and lapses into a state of mental depression. The contrast between the same patient labouring under melancholia and in his previous maniacal condition is profound. He becomes silent, pale-faced, seeks solitude, and shows a disinclination to converse. His former energy is replaced by extreme lassitude and an almost paralyzing disinclination to, or an incompetence for, mental or physical work. The durations of the two periods of mania and melancholia are not always the same, the period of depression being generally longer than that of excitement. Great irregularity also exists in the duration of the lucid interval, although there are some cases in which it bears a stated relation to the length of the mental affections which go to form the cycle. Circular insanity is, from the point of view of recovery, a very unhopeful condition; for, though the individual attacks are almost always recovered from, the condition tends to recur with an almost fatal certainty. It is a condition that is more common among the educated classes of society, and which occurs not infrequently in persons with an inherited tendency to insanity.

(*b*) *The recurrent forms of mania-melancholia.*—1. **Mania.**—The form in which mania appears may be either simple or acute. The description of simple mania given above in connexion with circular insanity must suffice for the present purpose. Acute mania differs from it only in degree of intensity, and simple mania may in any patient suddenly pass into the acute form. In acute mania there is great mental exaltation combined with intellectual disturbance, sensory disorders, and uncontrollable motor restlessness. The first appearance of the affection is usually ushered in with malaise and mental depression generally of short duration. Gradually mental excitement supervenes, sometimes suddenly, at other times after lapses into depression. The patient's ideas soon become confused, for the ideation becomes so rapid that there is difficulty in consecutively

expressing them, until finally speech becomes incoherent. The exaggerated excitability of the senses of sight and hearing becomes so intense that a stray word or an object starts a train of ideation unconnected with the train of thought. Thus the patient's attention becomes unfixed, and he tends to associate his ideas more by their external than by their essential relationship. The motor excitement manifests itself by incessant movement and loquacity. The will-power at this stage can hardly be said to exist, and actions are determined, not by any formulated principle, but by the idea predominant for the time. Further, there is complete loss of the moral sense and of natural affection, and the emotions are equally disturbed: grief, joy, fear, and hatred may be manifested by the patient within a few minutes of each other. Notwithstanding this extraordinary mental disturbance, the memory in many cases remains intact. Not only do many of the patients remember afterwards what had been said and done to them, but they are able to describe their sensation and repeat their own sayings. The physical symptoms comprise a marked change in the facial expression, which betrays the instinctive and varied passions which dominate the mind. The disorder of movement to which reference has been made expresses itself in an agitation of all the voluntary muscles, which during intense mental excitement results in violent movements. Insomnia is always a more or less marked symptom of acute mania; it often resists all treatment, and, when long continued, has a deleterious effect upon the patient. The functions of digestion and nutrition are always disordered during the attack; the appetite, whether diminished or increased, is capricious, and the patients invariably lose weight during the acute stages. The body temperature is only slightly, if at all, increased. Finally, there is high blood pressure and a marked increase in the relative number of the white corpuscles of the blood. This last change is regarded as indicating a toxic condition of the blood. Mania may be associated with various nervous and cerebral affections, such as hysteria, epilepsy, and general paralysis. After one attack the disease tends to recur at regular or irregular intervals. Although it is not a usual occurrence, it is right to remark that at any time in the course of recurrent mania an attack of melancholia may take the place of one of the maniacal attacks. The termination of the attacks is by recovery in from 70 to 80 per cent, a small percentage die of some complication, and a certain number pass into chronic mania.

Chronic mania is simply the indefinite persistence, in a milder form, of the symptoms of acute mania. The excitement is continuous but less intense, and the patients are more manageable. Many of the subjects are able to perform some simple work. The illusions and morbid ideas of the acute stage become more fixed and crystallized, so that many patients exhibit the symptoms of delusional insanity (paranoia). A certain degree of mental enfeeblement is always present, and many such patients are unable to express themselves coherently. The patient may be liable, from time to time, to acute attacks of excitement which resemble those of the primary condition.

2. **Melancholia.**—The characteristic feature of melancholia is a morbid depression of feeling which expresses itself in every degree from silent resignation up to the most violent despair. At the same time, there is intellectual disturbance in which painful impressions predominate. In contradistinction to mania, the ideational centres are more or less depressed and inactive, so that instead of the pleasurable feelings which accompany their activity there is produced a feeling of pain and misery. The treatment of the attacks of manic-depressive insanity is symptomatic, and as a rule the patients make satisfactory recoveries from the individual attacks. From the point of view of prognosis, however, the matter is more serious, for the danger of a relapse at some future period can never be ignored. In the circular form of the disease the recurrence of the attacks is almost certain.

ii. THE DEMENTIA PRÆCOX GROUP.—Dementia præcox is essentially a disease of adolescence; by far the greater number of cases develop between the ages of 20 and 35 years. The fact that some cases develop before the age of 20 and a few after 40 does not affect the validity of the above statement. The onset of the disease is so slow and insidious as almost to escape observation. The early symptoms extend over a period of years. Patients, the majority of whom have given promise of a normal development, may gradually exhibit, in early adolescence, unmistakable signs of progressive mental deterioration. This intellectual decadence is almost always accompanied by emotional disturbances, such as outbreaks of temper, impulsive conduct, or violent language. These irritable manifestations are at first rare and isolated, and the patient may fully realize, and be truly repentant for, his behaviour. As the disease progresses, these unaccountable and unprovoked emotional outbreaks may become more numerous, alarming, and even dangerous, and the patient becomes apathetic, careless in his habits, tends to lie in bed too long, and often gives up work altogether without any adequate reason. Then his natural affection abates until it may disappear or become perverted into an antipathy towards his nearest relatives. Finally, he may develop loose ideas of persecution, rarely co-ordinated except in the paranoiac form of the disease. These delusions of persecution are accompanied by hallucinations and illusions of the senses. The disease ends, in the great majority of instances, in dementia or permanent mental decay.

Dementia præcox presents three forms: hebephrenia, katatonia, and paranoia, or the delusional form.

1. **Hebephrenia** occurs, as a rule, in young subjects who, although fairly normal up to a certain point in the intellectual sphere, yet have always presented some symptoms of emotional instability or eccentricity. The mental deterioration, which sets in very gradually, is characterized by a desire for solitude, reticence, shyness, and suspicion of others. Suddenly a period of slight mental exaltation may appear, during which the behaviour of the patient attracts attention; or, on the other hand, an attack of depression may supervene, in many respects similar to a mild attack of melancholia. These mental disturbances quickly pass off, but sooner or later they recur. The patient may suffer from indefinite delusions, or even hallucinations, but these, as a rule, are rare in hebephrenia; meantime the mental deterioration progresses. The patient comes to lose all initiative, all interest in his work or surroundings; becomes indifferent towards relatives; careless of appearance and negligent of duties. His speech becomes jerky and hesitating, and the power to carry on a conversation is gradually lost. Throughout the course of the disease, and up to the time when actual dementia sets in, there is a surprising degree of accurate knowledge of his surroundings and of what is being said or done in his presence. The inability of the patient to respond or react is the characteristic feature of the disease. Sooner or later, however, the patient lapses into a state of irresponsiveness due to permanent loss of mental

power. Before this final stage is reached, it is not infrequent to observe violent and impulsive conduct, as a result, probably, of hallucinations, of delusions, or of both.

2. **Katatonia** differs from hebephrenia chiefly in the presence of peculiar attacks of muscular tension or cataleptic rigidity of the muscles; in mutism-phases of the disease, during which the patients refuse to speak; and in the peculiar symptoms of negativism in which the patients resist all attempts on the part of others to do anything for them. Impulsive actions are perhaps more marked in the katatonic form than in the other varieties of dementia præcox. In other respects, such as the presence of acute temporary attacks of mental excitement and depression, and in the gradual mental deterioration of the subject, katatonia bears a general resemblance to hebephrenia.

3. **Paranoia.**—This variety of dementia præcox may commence exactly like hebephrenia, or katatonia, or with an acute attack of manic-depressive insanity followed or not by katatonic symptoms. Its chief and distinguishing feature, however, is the presence of delusions of a more or less systematized nature, and of hallucinations of the senses. These delusions lack the clearness and consistency of true paranoia (see below); and, moreover, the patients almost always exhibit peculiarities and mannerisms indicative of mental degeneration. Sooner or later one or other of the symptoms which have been described as characteristic of dementia præcox supervenes and is followed by a tendency towards dementia.

From the point of view of prognosis, dementia præcox is a particularly grave form of mental disease, and only a small minority of the subjects make a satisfactory recovery. It has been estimated that no less than 80 per cent of the cases fall into permanent dementia, that about 15 per cent recover partially, though more or less mentally crippled, and that only 5 per cent recover absolutely. So little is as yet known of the pathology of the disease that no scientifically formulated line of treatment can be laid down. As regards causation, the hereditary factor would appear to be of great importance, no less than 75 per cent of the cases showing a hereditary tendency to mental affections. The environment of the subject is also, apparently, important, and it has been pointed out by some observers that dementia præcox is particularly liable to occur in families which have been subjected to sudden and extreme social changes, such as from poverty to wealth, or from a country to an urban life.

iii. THE PARANOIA GROUP. — Paranoia is a chronic mental disease of which systematized delusions, with or without hallucinations of the senses, are the prominent characteristic. The delusions may take the form of ideas of persecution or of grandeur and ambition; these may exist separately or run concurrently in the same individual, or they may become transformed in the course of the patient's life from a persecutory to an ambitious character. The disease may begin during adolescence, but the great majority of the subjects manifest no symptoms of the affection until full adult life. The prominent and distinguishing symptom of paranoia is the delusion, which is gradually organized out of a mass of original but erroneous beliefs or convictions, until it forms an integral part of the ordinary mental processes of the subject and becomes fused with his personality. This slow process of the growth of a false idea is technically known as 'systematization,' and the delusion is then said to be 'systematized.' As such delusions are coherently formed, there is no manifest mental confusion in their expression. Notwithstanding the fixity of the delusion, it is subject in some cases to transformation which permits of the gradual substitution of delusions of grandeur for delusions of persecution. It happens also that periods of remission from the influence of the delusion may occur from time to time in individual cases, and it may even happen, though very rarely, that the delusion may permanently disappear.

Paranoia is classified for clinical purposes according to the form of delusion which the patients exhibit. Thus there are the persecutory, the ambitions, the amatory, and the litigious types, these divisions depending upon the prevalence of the primary emotions of fear or suspicion, pride or vanity, and love.

1. **Persecutory paranoia.**—This form is characterized by delusions of persecution, with hallucinations of a painful and distressing character. In predisposed persons there is often observed an anomaly of character dating from early life. Towards the commencement of the insanity the patients become gloomy, preoccupied, and irritable. Suspicions regarding the attitude of others take possession of their minds, and they ultimately come to suspect the conduct of their nearest relatives. Certain physical symptoms caused by sleeplessness and anxiety gradually supervene, and the patients become pale and worried in appearance, and their appetite is affected. The mental symptoms slowly become more pronounced, until the patient believes that people are conspiring against him. The conversations of his friends are supposed to be interlarded with phrases which, on examination, he believes to contain hidden meanings, and the newspapers appear to abound in veiled references to him. A stray word, a look, a gesture, a smile, a cough, a shrug of the shoulders on the part of a stranger, are apt to be misinterpreted and brooded over. The extraordinary prevalence of this imagined conspiracy may lead the patient to regard himself as a person of great importance, and may result in the formation of delusions of ambition which intermingle themselves with the general conceptions of persecution, or which may wholly supplant the persecutory insanity.

At this juncture, however, it generally happens that hallucinations begin to appear. These, in the great majority of instances, are auditory, and usually commence with indefinite noises in the ears, such as ringing sounds, hissing, or whistling. Gradually they assume a more definite form, until isolated words and, ultimately, formed sentences are distinctly heard. There is great diversity in the completeness of the verbal hallucinations in different patients. Some patients never experience more than the subjective annoyance of isolated words, generally of an insulting character, while others are compelled to listen to regular dialogues carried on by unknown voices concerning themselves. A not uncommon form of verbal hallucination is formulated in the complaint of the patients that 'all their thoughts are read and proclaimed aloud.' Even more than the enforced listening to verbal hallucinations this 'thought reading' distresses the patient, and often leads him to acts of violence, for the privacy of his inmost thoughts is, he believes, desecrated, and he often feels helpless and desperate at a condition from which there is no possible escape.

Though some of the subjects do not develop any other form of hallucination, it is the unfortunate lot of others to suffer, in addition, from hallucinations of taste, smell, or touch. The misinterpretation of the subjective sensations in these sense organs leads to the formulation of delusions of poisoning, of being subjected to the influence of

noxious gases or powders, or of being acted on by such agencies as electricity. Such are the persons who take their food to chemists for analysis; who complain to the police that people are acting upon them injuriously; who hermetically seal every crevice that admits air to their bedrooms to prevent the entrance of poisonous fumes; or who place glass castors between the feet of their beds and the floor with the object of insulating electric currents. Such patients obtain little sleep; some of them, indeed, remain awake all night—for the symptoms are usually worse at night—and have to be content with such snatches of sleep as they are able to obtain at odd times during the day. It is obvious that a person tormented and distracted in this way may at any moment lose self-control and become a danger to the community.

This type of the disease may persist for an indefinite period—even for 20 or 30 years—without any change, except for the important fact that remissions in the intensity of the symptoms occur from time to time. These remissions may be so marked as to give rise to the belief that the patient has recovered; but in true paranoia this is never the case, and sooner or later the persecution begins again in all its former intensity.

2. **Ambitious paranoia.**—After a long period of persecution, a change in the symptoms may set in, in some cases, and the intensity of the hallucinations may become modified. Delusions of grandeur begin to appear, at first faintly, but gradually they increase in force until they ultimately supplant the delusions of persecution. At the same time, the hallucinations of a disagreeable nature fade away, and are replaced by auditory hallucinations conformable to the new delusions of grandeur. Undoubtedly, however, paranoia may commence, so far as can be observed, with delusions of grandeur, in which case there is seldom or never a transformation of the personality, or of the delusions from grandeur to persecution, although delusions of persecution may engraft themselves upon or run side by side with the predominant ambitious diseases. The emotional basis of ambitious paranoia is pride, and every phase of human vanity and aspiration is represented in the delusions of the patients. There is, moreover, considerably less logical acumen displayed in the explanations of their beliefs by such patients than in the case of the subjects of persecution. Many of them, without any regard for accurate genealogical detail, affect to be the descendants of historical personages. They have no compunction in disowning their natural parents or explaining that they have been 'changed in their cradles,' in order to account for the fact that they are of exalted or even of royal birth. Dominated by such beliefs, paranoiacs have been known to travel all over the world in search of confirmation of their delusions. It is people of this kind who drop into the ears of confiding strangers vague hints as to their exalted origin and kindred, and who make desperate and occasionally alarming attempts to force their way into the presence of princes and rulers. The sphere of religion affords an endless field for the ambitious paranoiacs, and some of them may even aspire to divine authority; but, as a rule, the true paranoiac does not lose touch with earth. The more extravagant delusions of persons who call themselves by divine names and assume omnipotent attributes are usually found in patients who have passed through acute attacks of such insanity as mania or 'dementia præcox,' and who are mentally enfeebled.

A not uncommon form of paranoia, combining both ambition and persecution, is where the subject believes that he is a man of unbounded wealth or power, of the rights to which he is, however, deprived by the machinations of his enemies. These patients frequently obtain through auditory hallucinations the knowledge on which they base their delusions. They are often so troublesome, threatening, and persistent in their determination to obtain redress for their imagined wrongs that in the public interest they have to be forcibly detained in asylums. On the whole, however, the ambitious paranoiac is not troublesome, but calm, dignified, self-possessed, and reserved on the subject of his delusions. He is usually capable of reasoning as correctly and of performing work as efficiently as ordinary people. Many of them, however, while living in society, are liable to give expression to their delusions under the influence of excitement, or to behave so strangely and unconventionally on unsuitable occasions as to render their seclusion either necessary or highly desirable.

3. **Amatory paranoia.**—A distinguishing feature of this form of paranoia is that the subjects are chivalrous and idealistic in their love. Some of them believe that they have been 'mystically' married to a person of the opposite sex, usually in a prominent social position. The fact that they may have never spoken to or perhaps never seen the person in question is immaterial. The conviction that their love is reciprocated and the relationship understood by the other party is unshakable, and is usually based upon suppositions that to a normal mind would appear either trivial or wholly unreal. The object of affection, if not mythical or of too exalted a position to be approached, is not infrequently persecuted by the admirer, who takes every opportunity of obtruding personally or by letter the evidences of an ardent adoration. The situation thus created can easily become complicated and embarrassing before it is realized that the persecutor is insane.

The subjects of this form of paranoia are in the majority of instances unmarried women well advanced in years who have led irreproachable lives, or men of a romantic disposition who have lived their mental lives more in the realm of chimeras than in the regions of real facts.

4. **Litigious paranoia (paranoia querulans).**—The clinical form of litigious paranoia presents uniform characteristic features which are recognized in every civilized community. The basic emotion is vanity, but added to that is a strong element both of acquisitiveness and avarice. Moreover, the subjects are, as regards character, persistent, opinionative, and stubborn. When these qualities are superadded to a mind of the paranoiac type, which, as has been pointed out, is more influenced by the passions or emotions than by ordinary rational considerations, it can readily be appreciated that the subjects are capable of creating difficulties and anxieties which sooner or later may lead to their forcible seclusion in the interests of social order.

It is important to observe that the rights to which such people lay claim, or the wrongs of which they complain, may not necessarily be imaginary. But, whether imaginary or real, the statement of their case is always made to rest upon some foundation of fact, and is, moreover, presented, if not with ability, at any rate with forensic skill and plausibility. As the litigants are one-ideaed and capable of seeing only one side of the case—their own—and as they are actuated by convictions which preclude feelings of delicacy or diffidence, they ultimately succeed in obtaining a hearing in a court of law under circumstances which would have discouraged any normal individual. Once in the law-courts, their doom is sealed. Neither the loss of the case nor the payment of heavy expenses has any effect in disheartening the litigant, who carries his suit from court to court until the methods of legal

appeal are exhausted. The suit may be raised again and again on some side issue, or some different legal action may be initiated. In spite of the alienation of the sympathy of his relatives, and the advice of his friends and lawyers, the paranoiac continues his futile litigation in the firm belief that he is only defending himself from fraud, or seeking to regain his just rights. After exhausting his means and perhaps those of his family, and finding himself unable to continue to litigate to the same advantage as formerly, delusions of persecution begin to establish themselves. He accuses the judges of corruption and the lawyers of being in the pay of his enemies, and imagines the existence of a conspiracy to prevent him from obtaining justice. One of two things usually happens at this stage. Though well versed in legal procedure, he may one day lose self-control, and in open court resort to threats of violence. He is then probably arrested, and may on examination be found insane and committed to an asylum. Another not uncommon result is that, finding himself non-suited in a court of law, he commits a technical assault upon, it may be, some high legal functionary, or on some person in a prominent social position, with the object of securing an opportunity of directing public attention to his grievances.

Paranoia is generally a hopeless affection from the point of view of recovery. From what has been stated regarding its genesis and slow development it is apparent that no form of ordinary medical treatment can be of the least avail in modifying its symptoms. The best that can be done in the interests of the patients is to place them in surroundings where they can be shielded from influences which aggravate their delusions, and in other respects to make their unfortunate lot as pleasant and easy to endure as possible.

IV. *THE TOXIC INSANITIES.*—In this division are included those forms of mental affection which we know to be associated with the presence of toxic substances within the body. Among these substances are the poison of infective fevers and of syphilis, the auto-intoxication of the body by waste products, as in fatigue, the disturbance of metabolism by shocks, either physical or mental, or by exhausting and wasting illnesses, and, finally, the poisoning of the system by the habitual abuse of such drugs as alcohol. Such a number of causes necessarily produce different clinical symptoms, which for convenience and clearness have been labelled as distinct varieties of disease. It is manifest that only the typical forms can be dealt with here.

There are certain general symptomatic features common to all these affections. On the mental side there is more or less marked confusion of ideas, in striking contrast to the mental clearness found in patients labouring under the so-called acquired insanities, especially in the manic-depressive and paranoiac groups. The mental state is dreamy, thought is dissociated, speech is incoherent, and memory is blurred. There is great restlessness of an aimless character, accompanied often by mental and physical uneasiness, or pain, or an anxious emotional state. False sense-perceptions amounting to hallucinations, accompanied by delusions of a passing kind, are common. All the mental manifestations are further coloured by the bodily weakness which is present. On the physical side there are grave bodily symptoms, characterized either by fever and prostration, or by slow, chronic changes and wasting of the tissues. There is always a tendency to destruction of the finer nerve elements and cortical cells of the brain. In the acuter forms the prognosis is always serious, but the course is more rapid, and recovery often takes place. In the more chronic forms, such as chronic alcoholism and general paralysis, the prospect of recovery is almost hopeless.

1. **The delirium of fevers.**—This delirium is typical of the whole of the toxic insanities. The delirium varies greatly in different fevers, being, as a rule, more severe in typhus and certain types of smallpox, and less severe in the milder exanthemata, such as measles or scarlet fever. Much, however, depends upon the individual resistance of the nervous system to the influence of the toxin. Some persons, children in particular, tend to become confused and delirious when subjected to the action of any disease poison, *e.g.* pneumonia or influenza, which raises the temperature of the body. The delirium generally subsides after the crisis of the fever.

2. **Septic delirium.**—Delirium is also apt to occur when the system is invaded by certain poisonous micro-organisms. This condition is frequently observed in the blood-poisoning arising from wounds, in puerperal conditions, and in purulent affections of the pleural and abdominal cavities, and in some conditions unaccompanied by purulent inflammation. The puerperal insanities, because of their frequency, are important; but there are various forms of this disease. In predisposed individuals, insanity may occur during pregnancy, especially in the later months; at the time of parturition the ordinary forms of manic-depressive insanity may occur. The shock of parturition may induce the symptoms of exhaustion delirium, or the system may become infected by some pathological micro-organism which may occasion an attack of septic delirium. It is with the last variety that we are at present concerned, because it is in all respects similar to the other septic deliria associated with blood-poisoning as distinct from the delirium of fevers. The mental symptoms of septic delirium reach their climax of intensity very rapidly after infection, though in some cases there is a preliminary period of mental depression, with apathy and listlessness. The speech is incoherent; there is great motor restlessness, and a subdued but intense excitement. Vivid hallucinations of sight and hearing are present, so that the patient loses touch with the environment and lives in a world of phantasy. Sleep is invariably suspended, and the expression is anxious and morbidly mobile. The bodily symptoms point to prostration with fever, and the temperature ranges from 100° to 103° F. or higher. The pulse is weak and rapid, the tongue furred, and there is marked loss of appetite. The great majority of the patients (70 per cent) recover, the recovery being often preceded by a period of stupor. In those cases which do not recover, the patients, as the disease advances, become more and more prostrate, their movements become more feeble, and they lapse into coma from which they do not emerge.

3. **Delirium of collapse (the exhaustion insanities).**—These mental affections are most apt to occur in persons who have been exhausted by long-continued fatigue, insufficient food, or wasting diseases; but they are found most frequently after the crisis of fevers or during convalescence from fevers, after surgical operations, injuries of a severe kind, or shocks. The insanity breaks out, as a rule, with suddenness. The prevailing mental condition is one of confusion, with excitement, incoherence of speech, and weakened ideation. The patients suffer from vague hallucinations, and not infrequently express delusions of persecution or of self-importance. Such delusions are, however, fleeting and ill-defined. On the physical side the patients are weak, and manifest profound disorder of nutrition; the pulse is feeble and slow,

the pupils are dilated, and the skin is clammy; the tongue is furred, and the appetite so perverted that the patients are averse to taking food. The great majority of the patients recover, but the prognosis is by no means always favourable. When the predisposing cause has been comparatively slight, as, *e.g.*, influenza or pneumonia, the patients rapidly recover; but, when it has been prolonged and grave, as, *e.g.*, some forms of typhoid fever, long-continued wasting illnesses, or severe injuries, the prospect, depending always upon the patient's strength, is more grave.

4. **Alcoholism.**—Many other drugs besides alcohol, when habitually taken into the system, may produce chronic poisoning, accompanied by mental disturbances; but, in view of their greater frequency, the effects of alcohol only will be referred to here.

(*a*) *Ordinary intoxication.*—Alcoholic intoxication is itself an insanity, and a person who drinks himself from sobriety into unconsciousness passes through many phases of mental alienation. In certain predisposed or degenerate persons, ordinary alcoholic intoxication may develop great excitement, with a tendency to violence. In this condition, of which the patients retain but a confused recollection, serious crimes against others, or suicide, may be committed.

(*b*) *Acute alcoholism* (*delirium tremens*) is the result of excessive drinking, but it is a secondary and not a direct consequence of alcoholic poisoning. For instance, a person who has drunk to excess, but who has abstained from alcohol for several days, or even for several weeks, may, after some physical shock, such as a surgical operation, an illness like pneumonia, or a bodily injury, develop the symptoms of acute alcoholism. Such an onset points to a secondary toxæmia from the intestinal canal, for alcohol is very rapidly eliminated from the system. The chief mental symptoms are vague terror, mental distress, and confusion of ideas. These symptoms are further complicated by vivid hallucinations of the senses, especially of sight and hearing. The dangers attending the mental symptoms of acute alcoholism are the violent impulses to which the patients are liable—impulses to homicide and suicide. These impulses are partly obsessional, but they are undoubtedly often the result of the despair produced by the hallucinations. The chief bodily symptoms are insomnia, want of appetite, great thirst, and trembling or twitching of the muscles. The danger accompanying the physical symptoms is death from heart failure, from pneumonia, or from nervous exhaustion. Under suitable medical treatment the great majority of the patients recover.

(*c*) *Dipsomania.*—Dipsomania is really more an obsessional condition than an alcoholic disease, but it is more convenient to consider it here. Probably all the subjects have a hereditary predisposition to alcohol, but the chief inherited quality is an instability of the nervous system which renders them liable to obsession, and consequently to impulse. The impulse to drink probably would not appear in a person who had never experienced the pleasurable effects of alcohol, but an attack may occur suddenly in a predisposed person of perfectly irreproachable character. There are generally, however, exciting causes, such as moral shocks or strain or physical illness, and the attack is usually preceded by malaise or mental depression. The attacks usually last several weeks, often with short intermissions, during which the patient strives with all his might to overcome his obsession. According to circumstances and the environment, the attacks tend to become more numerous or less frequent. If the former, then rapid physical and mental deterioration takes place, and the case becomes hopeless; if the latter, (unfortunately the minority), the patient may experience only one or two attacks and afterwards be immune.

(*d*) *Chronic alcoholism* is a somewhat vague term including numerous conditions. It may be defined as a condition of mental deterioration, emotional depression, and enfeeblement of the will, with a progressing tendency towards dementia, met with in persons who have habitually used alcohol to excess. The enfeeblement of the will-power, which is the cardinal mental symptom, is not confined to the inability to resist the craving for alcohol, but extends into all the social and business relations of the individual. So much is this the case that the subjects are apt to become the tools or dupes of other people. In more advanced types of the disease there is loss of memory, especially for recent events, with confusion of ideas. The bodily symptoms are also characteristic, and include tremor of muscles, weakness of certain muscle groups, various sensory disturbances, and, not infrequently, epileptiform seizures. Certain internal organs, especially the liver, kidneys, and heart, are liable to organic disease. The condition is incurable.

5. **General paralysis.**—While modern authorities have long been agreed that syphilis is the antecedent cause of this disease, the recent discovery by Noguchi of the spirochæte of syphilis (*Treponema pallidum*) in the cerebral tissues of persons dying of general paralysis has placed beyond doubt the fact that the disease is of direct syphilitic origin. General paralysis is a disease chiefly of middle life, occurring most often between the ages of 35 and 45. It is a disease of modern civilization, and affects chiefly persons residing in industrial urban centres. It may be stated generally that it does not exist in the remoter rural parts of England, or of Ireland, or in the Highlands of Scotland. The male sex is more liable than the female. General paralysis is a subacute inflammatory disease of the brain, occasionally involving the spinal cord and the larger nerve trunks. It is characterized by the concomitant appearance of mental and physical symptoms. On the mental side there is progressive dementia, to which is superadded, in the majority of instances, insanity of the maniacal, melancholic, or confusional type; on the physical side there is weakness of the muscles and incoordination of movement, with partial degeneration of the osseous, cartilaginous, and muscular tissues.

For clinical purposes the disease is divided into three stages, although a prodromal stage is also recognized. The symptoms of the first stage are chiefly mental, although certain bodily symptoms can be detected by medical experts, or by the near relatives of the patient. These bodily symptoms vary, but they may include lassitude, headache of a severe type, nervous pains, or epileptiform convulsions. Insomnia is almost always a feature of the early period. Mentally, while the intelligence remains apparently unimpaired, the patients are usually conscious of defects of memory, revealing themselves in odd and unaccountable lapses in writing, in spelling, or in the performance of their ordinary routine duties. The chief change, however, is in the moral character: at home the patient is irritable, and occasionally violent; among strangers he is facile, versatile, and easily led astray. Gradually there develops in typical cases a condition resembling simple mania, with, however, a certain amount of mental confusion depending upon the underlying condition of progressive dementia. Delusions of grandeur are common in this stage; these delusions, which result from the predominant state of mental

exaltation, do not always exceed the bounds of possibility and credibility. It is important to bear in mind that the insanity of the first stage may be a simple mental confusion without any conspicuous feature, or may be of the melancholic type. The latter forms are more common in females. Towards the end of the first stage, the affection of the innervation of the muscular mechanism becomes more pronounced. The muscles of the face show tremulousness, and the speech becomes incoordinate. Difficulty is experienced by the patient in pronouncing certain words, such as 'artillery,' 'British Constitution,' 'incompatibility,' etc. The staccato manner of pronouncing such words is characteristic of the disease.

In the second stage, the mental weakness and confusion are more marked, the delusions become extravagant and absurd, and the conduct of the patient uncertain and foolish. He is apt to steal useless objects, to stuff his pockets with rubbish, and to lose all sense of propriety, especially with regard to instinctive human habits. The embarrassment of speech becomes painfully apparent, and the muscular incoordination becomes so great that the patient loses the power of performing accurately such habitual movements as buttoning clothes or untying knots. The handwriting becomes shaky and unrecognizable, the gait ataxic, and all muscular movements feeble; towards the end of this stage there appear convulsive seizures which are known as congestive attacks, and which appear to accelerate greatly the downward course of the patient's strength.

The state of mental weakness and confusion reaches its acme in the third stage. The patient appears to be devoid of emotion, sentiment, or memory, and the only animal instinct which seems to remain is that for food. The physical symptoms of the third stage are characterized by a progressive weakness and paralysis which necessitate ultimately the patient's continued confinement to bed. The third stage terminates his life. He usually dies in a convulsive seizure, or from extension of the disease to some vital centre in the brain, or from blood-poisoning or pneumonia.

General paralysis is the most fatal of all diseases, for no authentic instance of recovery is known. The average duration is from 2 to 3 years in the male, and from 3 to 4 years in the female.

V. *INSANITY CONNECTED WITH THE NEUROSES.*—There are many forms of neurosis, but the types with which insanity is most usually associated are, in order of importance, epilepsy, hysteria (*q.v.*), neurasthenia, and chorea. It must be remembered that the majority of persons who are the subjects of the neuroses do not become insane. As epilepsy is the most important of all the neuroses, and the one most commonly associated with insanity, it alone will be described here.

Epilepsy is a disease which is characterized by convulsions of a definite type, or by sudden and temporary loss of consciousness without convulsions. The former is known as the 'grand mal,' the latter as the 'petit mal.' In the severer form the patient falls to the ground and is violently convulsed; in the milder form he does not usually fall; he is suddenly overwhelmed with mental darkness, but after a few seconds he is able to continue the work in which he may have been engaged at the time of the seizure. The two forms of fit are often combined in the same individual. As a rule, beyond the congenital degeneracy or mental deterioration, to which reference will be made, the subjects of epilepsy who manifest insanity are free from mental symptoms in the interval between the seizures. Mental disturbances are most commonly observed either immediately preceding the fit, immediately succeeding it, or replacing it. The last form is designated 'larvated' or 'masked' epilepsy. Of all the forms of insanity accompanying the fit, either before or after it, mania is the most common. The kind of mania varies, not only in different cases, but very markedly in the same cases at different times. From mere irascibility with capricious conduct it may vary to the most violent excitement, incoherence, and fury. But insanity does not always accompany the fits in the same person, and an epileptic may be free from it for long periods notwithstanding the regular recurrence of the fits. The insanity may then occur quite suddenly and be attended by acts of violence of which the patient retains afterwards no recollection. In the pre-epileptic mania the mental symptoms usually come on gradually, and may last a few days preceding the fit; the post-epileptic mania, on the other hand, is sudden in its onset, and usually of very short duration.

Another, but less common, post-epileptic form of insanity is stupor. When stupor occurs it is more persistent in its duration than mania, and may be accompanied by hallucinations and a tendency to automatic impulsive action.

The least common form of insanity connected with epilepsy is melancholia, which is not a passing insanity accompanying the fits, but a progressive, chronic, and usually incurable condition.

Many epileptics exhibit mental degeneracy of a congenital kind which manifests itself by certain oddities and eccentricities of conduct, want of self-control, and instability of the emotions. An extreme form of degeneracy is observed in epileptic idiots where epilepsy is superimposed upon a markedly degenerate physical and mental constitution. On the other hand, epilepsy is often the cause of mental deterioration. Under the influence of repeated attacks the mental faculties tend to become enfeebled; the patients gradually become more and more demented; their movements lose energy; and the facial expression reveals a condition of feeble-mindedness. Sooner or later, in greater or less degree, all prolonged cases of epilepsy tend towards mental feebleness and mental deterioration. Generally speaking, the younger the age at which epilepsy occurs, the greater the tendency to mental enfeeblement because of interference with mental development. When it occurs in infancy or childhood, the normal development of the brain is more or less arrested, with the result that idiocy or imbecility may be produced in otherwise normal children. Recovery from epileptic insanity is rare. The insanity depends upon the recurrence of the seizures, and epilepsy is a chronic persistent disease.

VI. *INSANITY CAUSED BY GROSS LESIONS OF THE BRAIN.*—1. Of these various lesions, apoplexy is by far the most common in ordinary life. 'Apoplexy' is a vague popular term which in medical nomenclature is generally divided into two distinct lesions: (*a*) hæmorrhage from a blood vessel within the skull, and (*b*) the blocking of a small artery supplying an area of the brain. Although any cerebral artery may become diseased, the most commonly affected artery is the middle cerebral; and, as it supplies the motor cortex of the brain and the chief basal ganglia, the symptoms are usually well marked, and depend upon the branch of this artery affected. In hæmorrhage, or blocking of the branches of this artery, there is generally paralysis of some limb or portion of the body; as in every cerebral affection, the resulting mental symptoms depend upon the health, age, and state of nutrition of the brain. If, *e.g.*, the person is young and the lesion slight, complete recovery may take place; on the other hand, if the arteries are atheromatous and the brain tissues feeble,

recovery does not take place so readily, if at all. In a typical case of apoplexy occurring after middle life, there ensues as an almost invariable result a certain amount of dementia accompanied by emotional disturbances. Depending upon the nature, situation, and extent of the lesion there may also occur loss of memory, mental confusion, and an impairment of judgment. Again, in most of the older patients the mental enfeeblement is slowly progressive, but in the majority of the younger cases and sometimes, though exceptionally, in the older cases, the condition is not progressive.

Apoplexy may be followed by any of the chief forms of insanity. Perhaps the most common form is mania which is greatly modified by the underlying condition of dementia. The mania is characterized by a noisy excitement accompanied by restlessness, and illusions or hallucinations of the senses. The symptoms are usually more accentuated during the night, so that it is not uncommon to find a patient either quiet or slightly excited during the day become noisy and sleepless during the night. This form of mania is also often intermittent, the attack lasting for two or three weeks, followed by a period of calm which, however, cannot be regarded as a true lucid interval. Melancholia is less frequently an accompaniment of cerebral lesions of this kind. It is usually acute in appearance, but there is probably less mental distress than the restlessness and noisy emotionalism of the patient would lead one to suppose. Delusions with visual and auditory hallucinations may also be met with as a result of such lesions. The delusions are of the persecutory form, but are irregular and badly systematized.

2. With regard to the insanity arising from tumours and injuries to the head, it may be said in a word that it is very irregular and difficult to describe. In cerebral tumour, by far the most common form is a progressive enfeeblement ending in complete dementia. Traumatic injuries may undoubtedly cause a confusional insanity in predisposed persons, immediately following the injury. Where a portion of the skull has been depressed and affects the brain, serious cerebral affections may be caused, which are relieved by operation. In the class of case in which insanity is said to occur long after the receipt of the injury, some excusable doubt has been cast upon the relation of the injury to the mental trouble. It is believed by many authorities, however, that profound moral deterioration accompanied by impulsive tendencies may supervene as a result of injuries to the head received years previously.

VII. *Senile insanity.*—The insanity of old age has been divided into: (*a*) cases in which there is no dementia present, and (*b*) cases in which dementia is the most prominent mental symptom.

(*a*) In the first class any form of insanity may be observed, but by far the most common are mania and melancholia. The mania usually presents itself in an acute form, the patients being restless, confused, and often troublesome and destructive in their habits. The subjects are generally hereditarily predisposed, or have suffered from mania at previous periods of their lives. The melancholia is also acute. The patients present a debilitated appearance, and suffer from delusions of persecution and from hallucinations of hearing. Melancholia in senile persons is not so favourable as mania so far as recovery is concerned, and either lasts a long time or becomes chronic.

(*b*) The second class, who present dementia, owe their condition to advancing age, which varies in its onset according to the cerebral integrity of the individual. In some cases it occurs as early as 50, in others as late as 90. Superadded to this dementia there may be either mania-melancholia or a form of systematized delusional insanity. The mania and melancholia correspond closely to the types already described as accompanying gross lesions of the brain. Systematized delusions may take the form of either persecution or ambition. In the former type the patients are in constant dread of being robbed. They may hide their more valuable possessions in out-of-the-way places which on account of their faulty memory they are afterwards unable to find; or they barricade their house or room doors to prevent the ingress of imaginary thieves or robbers. The delusions of ambition usually exist side by side with those of persecution, and are generally accompanied by hallucinations both of a pleasant and of a disagreeable character. The progress of senile insanity combined with dementia is always unfavourable.

For primitive views concerning the insane, cf. the various sections of art. Possession.

# INSPIRATION.

**INSPIRATION** (Protestant doctrine).—Protestant scholars of the present day, imbued with the scientific spirit, have no *a priori* theory of the inspiration of the Bible. They do not attempt to define the term by abstract reflexion. Their method of inquiry is critical and inductive, not metaphysical and deductive. They do not, of course, attempt to make the mind which receives and weighs evidence a mere *tabula rasa*—that is neither possible nor desirable—but they do their best to free it from prepossessions and presuppositions. They reject every foregone conclusion as to the mode and shape in which God must reveal His ways to men. They do not open any book of the OT or NT with the feeling that they are bound to regard its teaching as sacred and authoritative. They yield to nothing but what they regard as the irresistible logic of facts. They feel that, if they are not convinced of the inspiration of the Bible by its intrinsic merits, they cannot be legitimately convinced in any other way. And, if in the end they formulate a doctrine of the Divine influence under which the Scriptures were written, this is an inference from the characteristics which, after a free and fair investigation, they are constrained to recognize.

The time of privilege and prestige among books is past for them. The attitude of all liberal thinkers

towards the Scriptures was admirably indicated half a century ago by Richard Rothe:

'Let the Bible go forth into Christendom as it is in itself, as a book like other books, without allowing any dogmatic theory to assign it a reserved position in the ranks of books: let it accomplish what it can of itself through its own character and through that which each man can find in it for himself: and it will accomplish great things' (quoted by W. N. Clarke, *The Use of the Scriptures in Theology*, p. 154).

Some believers in inspiration prefer to avoid 'the ancient, ambiguous, confusing word.' They think that this word

'has lost its clearness without losing its claim: it bears the urgency of sacred tradition after definableness has forsaken it: it is now an enemy to clear thought, and a misleading guide to reverence for the Scriptures. It will be a good day for theology, and for religion, when we fearlessly take the Bible for exactly what it is, with an abiding value resident in itself' (*ib.* 155).

The term 'inspired of God' (θεόπνευστος) is, however, used in the Bible itself (2 Ti 3[16]); and if, after the application of the most rigid tests, inspiration is proved to be a fact, it is better not to abandon the accepted word, but, if possible, so to re-mint it as to free it from all misleading associations.

1. **Inspiration and experience.**—It is through an experience of the spiritual power of the Bible that the term first comes to have a real meaning. Something more than the 'criticism of pure reason' is required for the correct and just valuation of the Scriptures. They make their appeal not only to the intellect but to the imagination, the heart, and the conscience. Their light is for the seeing eye, their message for the spirit which hungers and thirsts after righteousness and truth; and it is the testimony of one generation after another that through the Scriptures God finds the soul and the soul finds God.

Two Christian utterances may be regarded as typical. In his *Letters on the Inspiration of the Scriptures* (Letter i.), Coleridge tells how he re-read the books of the Old and New Testaments, each book both as a unit and as an integral part, and then he continues: 'Need I say that I have met everywhere more or less copious sources of truth, and power, and purifying impulses; that I have found words for my inmost thoughts, songs for my joy, utterances for my hidden griefs, and pleadings for my shame and my feebleness? In short, whatever *finds* me, bears witness for itself that it has proceeded from a Holy Spirit, even from the same Spirit, *which remaining in itself, yet regenerateth all other powers, and in all ages entering into holy souls maketh them friends of God and prophets* (Wis 7[27]).' 'If I am asked,' says W. R. Smith, 'why I receive Scripture as the Word of God, and as the only perfect rule of faith and life, I answer with all the fathers of the Protestant Church, *Because the Bible is the only record of the redeeming love of God, because in the Bible alone I find God drawing near to man in Jesus Christ, and declaring to us in Him His will for our salvation. And this record I know to be true by the witness of His Spirit in my heart, whereby I am assured that none other than God Himself is able to speak such words to my soul*' (*Exp.* IV. x. [1894] 250).

2. **Inspiration and ecstasy.**—The theory that inspiration is an ecstasy, or possession, has probably few advocates to-day. It was the view propounded by Plato, from whom it was borrowed by Philo, Josephus, and some early Christian writers.

'God has given the art of divination not to the wisdom, but to the foolishness of man. No man, when in his wits, attains prophetic truth and inspiration; but when he receives the inspired word, either his intelligence is enthralled in sleep, or he is demented by some distemper or possession' (Plato, *Timæus*, 71). 'For a prophet gives forth nothing at all of his own, but acts as interpreter at the prompting of another in all his utterances, and as long as he is under inspiration he is in ignorance, his reason departing from its place and yielding up the citadel of the soul, when the Divine Spirit enters into it and dwells in it and strikes at the mechanism of his voice, sounding through it to the clear declaration of that which He prophesieth' (Philo, *de Spec. Leg.* iv. 8 [ed. Mangey, ii. 343]). Josephus takes Balaam as a typical prophet, who spoke 'not as master of himself, but moved to say what he did by the Divine Spirit,' and makes him express himself thus to Balak: 'God is stronger than my resolve to serve thee. For those who fancy that of themselves they can foretell the fortunes of men are all too weak to help saying what God suggests to them or to resist His will; for when He has entered into us nothing that is in us is any longer our own' (*Ant.* IV. vi. 5). Athenagoras, the Christian apologist (c. A.D. 177), said, in reference to the prophets, that, 'while entranced and deprived of their natural powers of reason by the influence of the Divine Spirit, they uttered that which was wrought in them, the Spirit using them as its instruments as a flute-player might blow a flute' (*Apol.* ix.). Another favourite figure was that of a plectrum striking a lyre (Epiphanius, *Hær.* xlviii. 4).

This theory commended itself to the Montanists (*q.v.*), whose excesses were castigated by Miltiades in a treatise bearing the title, *That the Prophet ought not to speak in Ecstasy*, which recalls the words of St. Paul, 'The spirits of the prophets are subject to the prophets' (1 Co 14[32]). Few people now cling to the idea that the Divine influence was communicated to the Bible by dictation to its writers. It is seen that the prophet, the psalmist, and the apostle are degraded if they are regarded as the mere mouthpieces or penmen of Deity. Inspiration does not suspend the powers and faculties of the soul, but raises them to their highest activity, the supernatural intensifying the natural. A cognate word to inspiration (θεοπνευστία) is enthusiasm (ἐνθουσιασμός, from ἐν and Θεός), and the Divine energy is comparable to a breath which quickens, a seed which fertilizes, a flame which kindles the human spirit to the finest issues.

3. **Inspiration and revelation.**—Inspiration is the correlate of revelation. Whenever God revealed Himself, He inspired men to receive and to communicate the revelation. It is a truism that no lesson, human or Divine, is taught until it is learned; and it is inconceivable that the facts of the Kingdom of Heaven should have failed to find appreciative minds. There were seekers ready to be initiated into the mysteries. Spiritual truths made their due impression upon the finest minds in the Hebrew nation and the Christian Church, in order that they might ultimately make a similar impression upon all mankind. Amos was disciplined to become the stern prophet of Divine righteousness. Hosea had an experience which sensitized his mind to receive a new image of Divine love. Isaiah's regal spirit apprehended the Divine majesty. Paul knew himself to be separated and called that God's Son might reveal Himself in him (Gal 1[15f.]). Rare indeed were the minds which at first were possessed by any new truth, and impelled to utter it with a power greater than their own. Yet the Divine influence felt by the few was not essentially different from that which affected a much wider circle. Without a general inspiration there could have been no special one. Behind the inspired prophets and psalmists of the OT there was the inspired Hebrew nation, and behind the inspired apostles there was the inspired Christian community. The organ of revelation was never a solitary visionary. It was in the religious consciousness of the many, purifying itself in the life and the teaching of their noblest representatives, expanding itself from age to age, and ultimately concentrating and consummating itself in the Gospel of Jesus Christ, that the voice of God was heard.

4. **Inspiration and literature.**—It is self-evident that the true medium of revelation is not a book, but a man. Inspiration is a condition of the soul in relation to God, and can be ascribed to a roll or book only in so far as this is the record of a vital experience. It was not into prophecies and histories, laws and psalms, gospels and epistles, that the Spirit of God was directly breathed, but into their authors. The living truth always shaped itself first in some living mind, and whether it was published *viva voce* or by writing was immaterial. As a means of preserving the truth the art of writing was of immense value, but it could make no difference to the inspiration.

'The authority of the word written was precisely the same as that of the word spoken, neither less nor more. It was inherent in the person who wrote or spoke, and was derived from the special action upon that person of the Spirit of God' (W. Sanday, *Inspiration*[3], 226 f.).

5. **In OT.**—(*a*) The *prophets* are by pre-eminence the inspired men of the OT. Their inspiration is

the type of all inspiration. The 'madness' of the earlier prophets, such as those among whom Saul found himself (1 S $10^{11f.}$), had certain well-marked affinities with heathen mantic and with the excesses of the Muslim dervish, but the inspiration of the later Hebrew prophets purified itself from that taint; and, if the claims which they made can be established, the Divine influence upon the minds of men is an indisputable fact. Judged by their *gesta*, their credibility is the highest. The establishment of ethical monotheism as the religion of Israel was their achievement, and their affirmations regarding the righteousness and love, the faithfulness and holiness of God, are to-day the kernel of the world's faith. It was their characteristic that, instead of reasoning and conjecturing, they announced and commanded. Each of them spoke as if he was commissioned to publish the laws of heaven in the language of earth, as if his mind was a medium for the transmission of the white light of eternity. The ideas of which they were the bearers were not proclaimed as their own pious opinions or shrewd guesses. They drew a firm and unwavering distinction between the thoughts of their own minds and the sacred authoritative truths which came to them by God's own prompting. They thus separated themselves from the false prophets who uttered the deceits of their own hearts. The whole fellowship of the prophets, whose activities extended over several centuries, made the same claim to inspiration. 'Thus saith the Lord,' or some equivalent expression, was the formula with which they habitually introduced their utterances. And on the fact of their own consciousness, the belief of their contemporaries, the unanimity of their testimony, the ethical quality of their teaching, and the beneficent results of their labours a strong foundation is laid for the truth of their assumption that they were the organs or instruments of the Most High.

'There is no alternative between accepting this belief as true and regarding it as a product of mental disease or delusion. But to bring such a charge, not against a few individuals but against the whole line of prophets from Moses or Samuel to Malachi, is a step from which most of us would shrink' (Sanday, *op. cit.* 304).

(*b*) In what sense and to what extent were the *historians of Israel* inspired? It is a remarkable fact that the books of the OT from Joshua to the end of Kings (Ruth excepted) are called 'the Former Prophets.' Historical criticism justifies this title, finding, as it does, that all the older historical writings were the work of men imbued with the prophetic spirit. That imbuement was their sole and sufficient inspiration. They had the double function of relating and interpreting events, and as narrators they were dependent upon the ordinary channels of information—folk-ballads, oral traditions, State annals, and the like. In their researches they were as liable as ordinary historians to fall into errors. Their inspiration did not fill up lacunæ in their knowledge of events. If their sources of information were good, their narratives were full and accurate, but not otherwise. It is evident that they sometimes glorified the institutions of which, as patriots, they were justly proud, and that they frequently idealized the past by reflecting upon it the beliefs and practices of a later time. The monuments of Assyria have shown how unreliable is their chronology. In the execution of the whole technical part of their work—the collecting, sorting, and combining of materials—the scientific historian of to-day finds many grounds for criticism. Yet their value remains unimpaired. It is by their insight into the true meaning of events, their interpretation of history, and the lessons which they educe from the past for the guidance of men in the present, that they demonstrate their prophetic inspiration. History as well as Nature was for them a book written by the hand of God, and their community of spirit with Him made it possible for them to read His secrets. The stories which they tell—often with astonishing dramatic power—might, if otherwise related, have done infinite mischief, but in the light of inspiration the annals of Israel's fortunes and misfortunes are so transfigured as to become the vehicles of spiritual and eternal truth for all men of all ages.

(*c*) If a measure of inspiration is also conceded to the *Pentateuch*, this cannot mean—except for the orthodox Jew—that the Torah is still authoritative in matters of conduct and worship. The ancient Rabbis considered that the highest degree of inspiration was necessary for the Law, a lower for the prophets, and only a small degree for the other Scriptures (called the *K'thûbhîm*, or Hagiographa). The 'Reform Judaism' of to-day, on the contrary, recognizes that the inspiration of the prophets excels that of the Law, and accordingly would like to see such a revision of the synagogal lectionaries as would do justice to the finest parts of the OT (C. G. Montefiore, *Liberal Judaism*, London, 1903, p. 125; see, further, art. LIBERAL JUDAISM). Those elements of the Torah which have an intrinsic and permanent value—such as the humane provisions of Deuteronomy—are just the parts that embody the ideals of Prophetism, and, for the rest, the ritual of Judaism may be regarded as a sacred form without which the volatile spirit of true religion would perhaps have perished in Israel's days of tribulation and distress.

(*d*) The common origin of certain *Chaldæan and Biblical legends*—notably those of the Creation, the Fall, and the Flood—cannot be disputed; but, with all the apparent affinities, which are too close to be mere coincidences, the stories in Genesis display a remarkable difference, and the difference is the measure of their inspiration. The spirit of true religion penetrated the primitive traditions of the human race, purified them of their grossness and polytheism, and brought them into harmony with the ethical monotheism of the prophets of Israel.

(*e*) If one of the marks of a book's inspiration is its spiritual power over its readers, no part of the OT is more fully inspired than the *Psalter*, which was originally the hymn-book of the second Temple, and is now the world's chief classic of praise and prayer, giving lyric expression to every mood of religious feeling, every phase of spiritual life. Its authors were the successors of the prophets. It need not be denied that some of them had a primary inspiration, a direct and original insight into the things of God; but as a class they were poets and singers who assimilated the characteristic ideas of the prophets and applied them to all the varied relations of human life. The products of their secondary inspiration are certainly not inferior in practical value to those of prophecy. Expressing for every man the grief of repentance and the joy of forgiveness, the agitation of doubt and the serenity of faith, the agony of spiritual abandonment and the rapture of communion, the Psalter bears on the face of it the unmistakable stamp and sign of the Spirit of God. Not that every psalm is equally inspired, or that every sentiment can be endorsed by a Christian.

'We cannot and we do not mean that the passages which show an ignorance about the immortality of the soul, or the passages which breathe out cursings and threatenings against personal enemies, are in any sense whatever the words or the utterances of God' (R. F. Horton, *Inspiration and the Bible*, 224 f.).

(*f*) The inspiration of the *Wisdom literature*—Proverbs, Job, Ecclesiastes—is for the most part secondary. Impregnated with the ideas of a

religion whose first principle is the fear of the Lord, the writers apply their minds now to the ordinary questions of conduct in the household and in society, now to the world's ultimate enigmas of sin and suffering, of life and death, and nearly always as sages observing, reflecting, and even speculating, rather than as seers coming forth from God's immediate presence with authority to publish new truths in His name. Yet in some of the noblest passages of Job, where a great mind wrestling with deep and difficult problems is rewarded, if not with a satisfying solution, at least with glimpses of Divine greatness and goodness which make life's mystery bearable, and in such passages as the eighth chapter of Proverbs, where Wisdom is personified as God's Master-workman in creation, the inspiration may be regarded as primary.

(*g*) In the *Book of Esther*, whose canonicity was long disputed by the Rabbis, and which Protestant Christian theologians accepted only in deference to Jewish tradition, inspiration is at a minimum. A certain vague doctrine of providence is presupposed, but God's name is never mentioned in the story, and no spiritual interpretation is attempted, while the massacre over which the reader is invited to gloat sends him, by reaction, either to the critical verdict that one is here perusing romance and not history, or to the higher criticism of Marjory Fleming, 'But then Jesus was not then come to teach us to be merciful' (John Brown, *Horæ Subsecivæ*, Edinburgh, 1882, iii. 214). The *Song of Songs* is instinct with at least the highest *poetic* inspiration, and, though the allegorical interpretation which secured it a place in the Canon is regarded by Protestants as a mistake, it cannot but be welcomed on other grounds, such as its passionate delight in nature, its enthusiastic praise of a pure idyllic love strong as death and mightier than the grave.

To sum up: the old doctrine of the equal and infallible inspiration of every part of the OT, with its correlated doctrine of the absence of inspiration from every book outside the Hebrew canon, is now rapidly disappearing among Protestants. There is, in reality, no clear dividing line between what is and what is not worthy of a place in the Scriptures. If some of the books of the Apocrypha could be admitted into the canon, few would be found to object.

'It is out of the question to say that the Book of Esther is wholly filled with the Spirit of God and the Book of Wisdom wholly devoid of it. . . . Just as there is a descending scale within the Canon, there is an ascending scale outside it. Some of the books in our Apocrypha might well lay claim to a measure of inspiration' (Sanday, *op. cit.* 258 f.).

Further, our leading authority upon the Apocalyptic books finds in their contribution to the doctrine of immortality 'a genuine product of Jewish inspiration,' and in the ethics of some of them an advance upon the highest morality of the OT and a preparation for the Sermon on the Mount (R. H. Charles, *Eschatology*², London, 1913, pp. 179, 226 ff.).

6. In NT.—The writers of the NT were as conscious of their own inspiration as those of the OT. The apostles, like the Lord, spake with authority. They were not pedants like the scribes. Whether they used tongue or pen, they somehow knew that their minds were under the control of the Spirit of God. (*a*) *St. Paul's* claim to teach is based on a special call and a special endowment. The gospel which he preaches was not received from man, but came to him through the revelation of Jesus Christ (Gal $1^{12}$). He had no need to confer with flesh and blood. His inspiration was primary, immediate, and personal. Having drunk at the fountain-head, he affirms that he and others who share his inspiration speak 'not in the words which man's wisdom teacheth, but which the Holy Spirit teacheth; comparing spiritual things with spiritual' (1 Co $2^{13}$). Like the OT prophets, he can in general distinguish clearly between the revelations of God and his own opinions. After expressing his preference for the celibate life, he adds, 'and I think also that I have the Spirit of God' (1 Co $7^{40}$). Evidently there is a borderland between inspiration and uninspiration, a region in which he has to tolerate, if he cannot welcome, difference of opinion, because the oracle is silent. On some important points—*e.g.* 'concerning virgins'—he has no commandment of the Lord, but can only offer his own judgment for what it is worth (v.$^{25}$). When he is about to give advice to the brother who has an unbelieving wife, or the woman who has an unbelieving husband, he is careful to premise that his counsel is based merely on his own sense of the fitness of things: 'But to the rest speak I, not the Lord' (v.$^{12ff.}$). When, however, he admits that he speaks 'after the manner of men' (*ἀνθρώπινον λέγω, κατὰ ἄνθρωπον λέγω*, Ro $6^{19}$, 1 Co $9^{8}$, Gal $3^{15}$), he implies that, unless he chooses to descend from a privileged position, he speaks and writes under a Divine influence to which most men are strangers.

(*b*) If the writers of the *other Epistles* do not directly refer to their inspiration, this is apparently because their authority has never, like St. Paul's, been questioned and resisted. When St. Peter, St. James, and St. Jude teach and command, warn and exhort, they expect to be believed and obeyed. St. John's claim to first-hand knowledge of Christ and His gospel is peculiarly impressive:

'That which was from the beginning, which we have heard, which we have seen with our eyes, which we have looked upon, and our hands have handled, of the Word of life . . . declare we unto you' (1 Jn $1^{1-3}$).

(*c*) The author of the *Apocalypse* makes a strong, explicit claim to inspiration. He is a prophet, and his book a prophecy ($1^{3}$ $10^{7.11}$ $22^{6f.9.18f.}$). The things of God are revealed to him when he is 'in the Spirit' ($1^{10}$ $4^{2}$ $17^{3}$ $21^{10}$). His letter to each of the seven Churches is 'what the Spirit saith.'

(*d*) Like the OT historians, the *Evangelists* did not depend on inspiration for any of the facts which they wished to record.

The Prologue to the Gospel of St. Luke is in this relation singularly instructive. It indicates that a narrator required to be in touch with 'eye-witnesses, and ministers of the word,' and thus be able to trace the course of all things accurately from the first, before he could 'write in order.' Papias of Hierapolis indicates the source of St. Mark's information by saying that this evangelist, 'having become interpreter of St. Peter, wrote down, as far as he remembered accurately, the things said or done by Christ' (Eusebius, *HE* III. xxxix. 15).

Inspiration cannot, and there is no reason why it should, do the work of memory and research. It rather makes its presence felt in the spirit which was breathed into the evangelical narratives, and which is exhaled from them by the receptive reader. Two of the evangelists, according to tradition, were themselves apostles, and the other two belonged to the apostolic circles, St. Luke being the companion of St. Paul as St. Mark was of St. Peter. But behind all the narrators was the Spirit-filled Church, and many parts of the Gospels are doubtless not the composition of the evangelists themselves, but their transcripts from vivid traditions, first oral and then written, which had taken definite shape within the Church as the result of the apostles' own preaching and teaching. It may be assumed that the Logia of the Synoptic Gospels come, as a whole, directly from Christ Himself, whose words are the standard of the highest inspiration. While the Divine power which seized the OT prophets was intermittent, and even that which worked in the apostles was not without breaks and flaws, the inspiration of Jesus was continuous and perfect. His words are revelations which touch the common heart of mankind as no other utterances of human lips. He is

the incarnate Word, and no part of the Bible can be profitably used as a rule of faith and life until it proves itself to be in harmony with His Mind and Will.

**7. Non-inspired Bible passages.**—Tried by this standard, there are not a few passages in the Bible which cannot be regarded by Protestants as in any true sense inspired. Its sixty-six books certainly have not all the same measure of the Divine fire. Yet the old phrase 'the inspiration of the Bible' continues to have a real significance, which is thus expressed by Sanday:

'It may be hard to sum up our definition in a single formula, but we mean it to include all those concrete points in which as a matter of fact the Bible does differ from and does excel all other Sacred Books. . . . And if we are asked to define the measure of this special influence, we can see it reflected in that wide margin which remains when the common elements of the Biblical religion and other religions have been subtracted and that which is peculiar to the Bible is left' (*op. cit.* 128, 140).

**8. Inspiration in the Church and individual.**—The last matter is the bearing of the doctrine of inspiration upon the living Church and the individual believer. Every Christian is inspired in so far as he is enlightened and renewed by the Divine Spirit. It is sometimes maintained that there is a distinction in kind between the inspiration of the apostles and that of the ancient or modern Church. This is probably a mistake. The real distinction is one of degree rather than of kind. The inspiration of an apostle should be conceived as that of a common Christian raised to a higher power in proportion to his clearer vision of Christ, his closer fellowship with Christ, and his deeper devotion to Christ.

'This must be insisted on, that the inspiration of the NT writings is not due to the mysterious endowment of a few choice souls, but must be traced to the inspired life of Christian believers of greater or less intensity according to the moral and religious condition. If the Church of Christ to-day were as a whole cleansed and renewed, so that a like receptivity for the divine truth and grace were secured, who can doubt that the divine activity in the presence and power of the Spirit of God in man would once more be made manifest?' (A. E. Garvie, *A Handbook of Christian Apologetics*, London, 1913, p. 66).

J. STRAHAN.

**INSPIRATION** (Roman Catholic doctrine).—**1.** In ascertaining what is meant and must be understood by inspiration in Roman Catholic doctrine, we are helped by several dogmatic definitions issued at different times. For the Catholic these are documents of the greatest possible weight and authority, next to the texts of the Scriptures themselves, since they are accepted by all, within the Church, as pronouncements of an infallible authority. All are of a comparatively recent date —from which it is plain that the doctrine of inspiration remained for many centuries a universally recognized tradition, and that it was only later, under the pressure of accidental and historical circumstances, that it was considered necessary to crystallize it, partially at least, into a defined dogmatic form.

The date at which the first authentic doctrinal statement concerning the Scriptures was issued in the Church (at the Council of Toledo in 442)[1] is, accordingly, both comparatively late and comparatively early. The eighth anathema then formulated reads thus: 'Si quis dixerit vel crediderit, alterum Deum esse priscae Legis, alterum Evangeliorum, A. S.' (Denzinger, no. 28; cf. also no. 707). The obvious meaning of this declaration is that the one and only God whom the Christians adore reveals Himself in both Testaments alike, and that they are, therefore, of equally Divine authority. Several similar declarations were made later, at different times, explicitly stating the belief of the Church in the Divine authorship of the books of Scripture, for the detail and text of which H. Denzinger's *Enchiridion Symbolorum*[11] (Freiburg, 1911, nos. 348, 421, 464, etc.) may be consulted.

The first definition, however, in which the doctrine of the Divine authorship is stated with use of the word 'inspiration' is the decree of the Council of Florence for the Jacobites (1441), in which we read (Denzinger, no. 706) that the Roman Church

'Unum atque eundem Deum Veteris et Novi Testamenti, hoc est, Legis et Prophetarum atque Evangelii profitetur auctorem: quoniam eodem *Spiritu Sancto inspirante* utriusque Testamenti Sancti locuti sunt.'

This decree evidently marks an important doctrinal advance, since it not only asserts, as a dogma of faith in regard to the Scriptures, the Divine authorship, but explicitly assigns inspiration as the peculiar mode by which it exercises itself. The same assertion was afterwards renewed by the Vatican Council in the following terms:

'Si quis sacrae *Scripturae* libros integros cum omnibus suis partibus, prout illos sancta Tridentina Synodus recensuit, pro sacris et canonicis non susceperit aut eos divinitus inspiratos esse negaverit: A. S.' (Denzinger, no. 1809; for the Tridentine *Decretum de canonicis Scripturis*, see *ib.* no. 783 f.; cf. also the present Pontiff's condemnation of the Modernist assertion, 'Nimiam simplicitatem aut ignorantiam prae se ferunt, qui Deum credunt *vere esse Scripturae sacrae auctorem*' [*ib.* no. 2009]).

To the doctrine of the Divine authorship we find here added the important statement that inspiration must be held to extend to the books in their entirety and including all their parts. It remains, therefore, established as an undisputed dogma of the Catholic Church that God is the author of the Holy Scriptures through this peculiar mode of influence to which the Church gives the name, borrowed from the Vulgate,[1] of 'inspiration.'

**2.** The texts that we have quoted thus far establish the belief of the Church in the *fact* of inspiration. But, in order to understand what is meant by it, and what is the *nature* of the fact expressed by that name, we must have recourse to another doctrinal pronouncement—a definition of the Council of the Vatican, which is both very explicit and very guarded. After having once more re-asserted the Divine character of the books of the two Testaments enumerated by the Council of Trent and contained in the Vulgate, as extending to all their parts, the Vatican Council adds, by way of explanation:

'Eos vero [libros] Ecclesia pro sacris et canonicis habet, non ideo, quod sola humana industria concinnati, sua deinde auctoritate sint approbati; nec ideo dumtaxat, quod revelationem sine errore contineant; sed propterea, quod *Spiritu Sancto inspirante conscripti Deum habent auctorem*' (Denzinger, no. 1787). It is plain, from this definition, that in the interpretation of what is meant by inspiration two hypotheses are excluded. The first is that of what has been called *subsequent* inspiration, a theory propounded in 1582 by the two Jesuits L. Lessius and J. du Hamel, in the following terms: 'Liber aliquis . . . humana industria, sine assistentia Spiritus Sancti scriptus, si postea Spiritus Sanctus testatur ibi nihil esse falsum, efficitur Scriptura Sacra.' Manifestly the Council rejects the notion of books which were originally human in authorship being raised, by a subsequent approbation, to the dignity of sacred Scriptures. The second hypothesis, which is also excluded by the above definition, is the theory held, at a later date, by another theologian, J. Bonfrère, and proposed by him in the following terms: 'Hoc modo potest Spiritus Sanctus scriptorem dirigere, ut in nullo eum errare fallive permittat; ita ei adstat ut sicubi videret eum erraturum, inspiratione sua illi esset adfuturus.' This way of conceiving inspiration makes it practically identical with the 'assistance' of the Holy Spirit which the Church understands to accompany the Supreme Pontiff in his *ex cathedra* definitions, both guiding and pre-

[1] Cf., however, Denzinger, no. 19, note, where the *Libellus in modum Symboli* is tentatively ascribed to a Gallaecian bishop of about the middle of the 5th century.

[1] Cf. 2 Ti 3[16] 'omnis scriptura divinitus inspirata' (πᾶσα γραφὴ θεόπνευστος); 2 P 1[21] 'Spiritu sancto inspirati locuti sunt sancti Dei homines' (ὑπὸ πνεύματος ἁγίου φερόμενοι ἐλάλησαν ἀπὸ θεοῦ ἄνθρωποι).

serving him from error; but inspiration implies more than this. The meaning of the Council requires something of a higher order, something positive, not negative; antecedent, not concomitant, a motion *sui generis* by which man acts as an instrument, conscious and free, while God remains the primary and responsible author; or, as it has been very happily expressed by J. B. Franzelin (*de Div. trad. et script.*[2], p. 334 f.), 'Deus est auctor Scripturae Sacrae per conscriptores humanos.'

If the formula of the Vatican Council implies this much and no more, inspiration is not necessarily either a mechanical, automatic performance, in which the Holy Spirit is the exclusive agent, and the human writer the mere material writing machine or 'penholder,' so to speak; nor is it necessarily a process of dictation, in which the writer acts simply as a scribe or registrar of *effata*, or oracles, in relation to which he is a mere conscious but passive recipient. On the contrary, the definition of the Council does not even require that the things thus inspired by the Holy Spirit should always have been new and revealed to the sacred writer. It may have been so, and in some cases at least the Council does not exclude such a possibility; it might very well not have been, and the Council says nothing about it.

3. If we seek now to form a theory in harmony with the definition of the Vatican Council, we can, by applying to the dogma of inspiration the old scholastic doctrine of the instrument, give a notion of it which will appear both very luminous and very consistent, although this is no longer a matter of faith, but merely a theological explanation. An instrument may be defined as a cause which receives its impulse and activity from a superior and principal agent, in virtue of which it produces the effect of that principal agent, but produces it according to its own peculiar mode of action. An instrument is bound to show the traces of its own particular, specific, or individual characteristics in the effect which it produces in virtue of the impulse of the principal cause. Assuming now that, in the case of inspiration, God is the principal cause, and man the instrument, an instrument of a conscious and free nature, we understand that man will act through the impulse of God, who supernaturally inclines his will and illumines his mind to enable it to grasp, conceive, and view such things as God desires and in the light in which God means the agent to do. Sometimes God might reveal to the mind of the writer new and hitherto unknown facts or doctrines; sometimes He might content Himself with inspiring him with regard to facts or things already previously known to him through natural means. At the same time we shall find no difficulty in understanding why the result of inspiration, viz. the sacred book of one writer, is very unlike the work of another equally inspired writer. The conscious and free 'instrument,' of which God makes use, retains his own individual characteristics, either congenital or acquired, his own temperament, culture, style, idiosyncrasies, etc., which will necessarily be reflected in his work. Hence the inspired writings of Isaiah must needs be unlike those of Jeremiah, the Gospel of Matthew unlike that of John, etc.

4. Such being the most accurate conception of the Catholic doctrine of inspiration—viz. that God is the moving agent and responsible author, and the sacred writer His free and conscious instrument—we are naturally led to inquire about the consequences that are likely to follow from such premisses. We have already seen, by referring to the definition of the Vatican Council, that all the books and all the parts of each book enumerated as canonical by the Council of Trent and contained in the Roman edition of the Vulgate are Divinely inspired. Hence, if a Catholic should convince himself, through critical researches, that the history of the adulteress, for instance, in the Gospel of John, or that the final chapter of the Gospel of Mark, cannot possibly have been written by the same authors as those Gospels themselves, he must nevertheless maintain that they are the work of some (other equally) inspired writer. But, if we grant, as we must in the Catholic Church, that inspiration extends to all the *books* and to all the *parts* of the books, it does not necessarily follow that we are bound to believe that all the *things* which we find referred to in them are, by that very fact, to be declared sacred, Divine, and God-appointed in themselves, so that God should be made answerable for every one of them; the definition of the Council, at least, does not say so. Accordingly, Catholic theologians are in the habit of distinguishing several classes of *things*, such as the teachings of faith and morals, the historical or scientific facts that may be known to the writer by natural means, the minor details or *obiter dicta*, the quotations, etc., and, finally, the words of the text themselves, and to inquire of each class separately whether they too are inspired.

The obvious cause for establishing such distinctions and separate inquiries is the difficulty often experienced, apparently at least, of reconciling some statements contained in the Scriptures with what seem to be the well authenticated and reasonably certain conclusions of modern science. The natural tendency of some theologians is to limit inspiration to such things (viz. dogmatic and moral teachings) as belong exclusively to the domain of revealed religion, getting rid of scientific or historical objections by asserting that inspiration does not extend to scientific or historical matters, even when they are touched upon in the Scriptures.

5. Previous, therefore, to entering upon the question whether inspiration extends to the various classes of things or facts that can be distinguished among the contents of the Scripture, it is advisable, first of all, to answer the often mooted and vexed question, Can there be any errors in Scripture? It is granted on all sides, and the concession has been officially recognized in the Encyclical *Providentissimus Deus* of Pope Leo XIII., that, once committed to writing, the sacred text became subject to alterations and vicissitudes, analogous to those to which all books subject to repeated transcription are exposed; that, as a consequence, some errors foreign to the original slipped into the copies through the mistakes of the transcribers, or otherwise. The original text itself might even contain such expressions or modes of speech as a fastidious and scientifically trained mind might consider not strictly and rigorously accurate from a scientific point of view, since the authors themselves saw no reason for departing from the modes of speech that were prevalent at the time, lest they might uselessly arouse controversies foreign to their main object by ostentatiously discarding the received notions in the minds of their hearers in non-religious matters. Every one nowadays will grant this. The question, however, remains, and must be solved, Can any inspired writer ever utter a false statement or perpetuate a positive error?

The older theologians for whom the problem did not exist, and those modern theologians who apparently do not suspect that the question exists, used to decide the question by simply answering in the words of Thomas Aquinas (*Sum. Theol.*, prima pars, qu. I. art. 10, ad 3): 'Patet quod sensui litterali sacrae Scripturae numquam potest subesse falsum.' The sacred text, giving expression to an utterance of the first truth, can contain no error, since God can neither deceive nor be mistaken. Other theologians, however, for whom the problem does exist, have often endeavoured to modify in a more or less subtle way the rigour

of the Thomistic axiom, while, of course, claiming to remain, both at heart and in word, perfectly orthodox.

As it would be tedious to enter upon a detailed historical account of the various phases of the question, we shall content ourselves with recalling a simple distinction, in which, in our opinion, might be found a means of conciliation between the opposing parties. If and whenever it is the manifest intention of a sacred author authoritatively to teach us a fact, however slight or unimportant, in any department whatsoever, the principle of Thomas Aquinas must find its full and irresistible application. Thus, to use a comparison of Thomas Aquinas himself, if it should be definitely the intention of the Scripture to teach us authoritatively that Samuel was really the son of Elkanah, it is impossible that the statement should be erroneous, and that Samuel should have been in reality the son of another. There are, however, obviously many cases when such an intention is absent, and can be introduced only by arbitrarily forcing one's private view on the text; the author writes in conformity with received historical or scientific views, which are evidently immaterial to his purpose. Who could, for instance, without assuming to himself the rôle of an authoritative interpreter of the mind of the sacred writer, maintain that the latter certainly meant to teach us that, at the battle of Gibeon, the sun itself stood still in the heavens in the literal sense of the words, and that any other interpretation of the text is positively excluded?

Briefly, to assert in an absolute manner that error is compatible with inspiration in the mind of the sacred writer is to adopt a position which most Catholic theologians would characterize as 'erroneous' or 'errori proxima,' as being indirectly opposed to the Catholic dogma of inspiration.[1] To maintain, on the other hand, that every statement in the Scripture must be taken as strictly accurate in the literal sense in which it appeared in the original text seems unnecessary, besides being out of harmony with many clearly established and well authenticated facts.

It will be enough to note here, by the way, that no one nowadays thinks of claiming inspiration for any of the versions of Scripture, either the Septuagint or any other; and, indeed, the decree of the Council of Trent declaring the Vulgate of St. Jerome 'authentic' (*pro authentica habeatur*) means only that, being sufficiently accurate for the purposes of Catholic theology, it is adopted by the Catholic Church as its official version.

6. The question of the compatibility of inspiration with error being thus disposed of by denying the possibility of any falsehood being authoritatively asserted in the Scripture, even by mistake, it becomes comparatively easy to answer the various questions raised concerning the extension of inspiration to the various classes of subjects contained in the Scripture. There is really no necessity for any classification whatsoever. Everything that is contained in the sacred books—be it dogma, moral precept, historical statement, quotation, or the words themselves—was clearly selected and put there by a mind under the actual influence of inspiration. Inspiration, therefore, must be understood as extending to everything; for why, indeed, ought it to have stopped short at anything in the sacred text?

Leaving out of account the desire to avoid imputing to the Holy Spirit a certain number of supposed erroneous statements in matters not strictly religious — a desire which apparently haunts some minds—there is no class of things contained in the Scripture to which there is any apparent reason to deny the benefit of the influence of inspiration, except perhaps the words themselves, those material particles, so to speak, of which the text is composed. Verbal inspiration, indeed, is denied by a large number of theologians, but mainly on two grounds: (1) it seems impossible, on that hypothesis, to account for the diversity of style, which is so marked between two different authors; (2) because most theologians are averse to the notion of dictation, which they consider inseparable from that of verbal inspiration. But, for any one who has read and understood our exposition of the theory of the instrument, as applied to the case of inspiration, those difficulties do not exist. Inspiration is the same in all sacred writers, in kind at least; but its result, the style and wording of the Divine oracles, ought nevertheless to be different, owing to the natural differences that exist between the various free and conscious instruments. An Isaiah and a Jeremiah, a Matthew and a John, write under the same pervading Divine influence, but each one in his own natural way, *modo proprio*. Moreover, the same theory has nothing in common with the conception of a dictation of God to the sacred writer. For to inspire is to illumine, and to illumine is not to dictate. Instead, therefore, of conceiving of a kind of diminished inspiration, stopping short at the selection of the words, we ought to conceive of a supernatural influence full and one, pervading the sacred writing throughout, and casting its Divine splendour on everything contained in it, even the most minute particles of the sacred text. There is no necessity to assume that inspiration enlightened the mind of the sacred writer in regard to his thoughts only, but abandoned him to his own natural industry when endeavouring to give literary utterance to his Divinely inspired conceptions.

[1] The recent condemnation of the Modernist proposition that 'inspiratio divina non ita ad totam Scripturam sacram extenditur, ut omnes et singulas eius partes ab omni errore praemuniat' expressly reproves that opinion (Denzinger, no. 2011; the pronouncement of the Commissio Biblica of 23rd June 1905 may also be consulted in this connexion [*ib.* no. 1960]).

E. L. VAN BECELAERE.

**INSPIRATION (Hindu).**—Indian authorities and scholars in their references to the Hindu writings draw a clearly marked distinction between Scripture, revealed and inspired, and other compositions which, however great their antiquity and worth, have, in their judgment and in accordance with the verdict of tradition, no valid claim to divine inspiration, or to direct derivation from a superhuman source. The former are *śruti*, that which is heard, the human ear receiving the divine voice, and communicating its message direct to men by the pen or by oral teaching. The latter are *smṛti*, that which is stored up in the mind, learning acquired by observation and study, which is then delivered as the ripe fruit of human intelligence and application, moulded and fashioned at the writer's will, and presented as the reasoned conclusions of his meditation and thought. The writings known as *smṛti*, therefore, however choice their theme and style, or however high the regard in which they are held, occupy an entirely subordinate position of authority. They furnish no proof-texts, and, great as their popularity may be, they may not in a formal and strict sense be drawn upon for the establishment of rule and doctrine. The theory formulated with regard to *śruti*, on the other hand, assumed and taught a doctrine of literal and verbal inspiration, as consistent and exacting as has elsewhere ever been conceived. In practice the line was not seldom overstepped, especially in regard to works which appealed to the general taste and inclination, and enjoyed in consequence a wide popularity. In many instances these gained and retained a hold upon the allegiance and affections of the people, and especially of the non-priestly classes, which lay entirely outside of any theory or dogma of inspiration limited in its application to certain books and to these alone. The volume of *śruti*, however, was absolutely closed, and was incapable of either addition or diminution.

The language also that is employed with regard

to the Vedas is sufficiently definite to remove all doubt as to the religious estimate which the writers themselves placed upon them. For, although in certain passages a degree of inspiration appears to be claimed for other and later works, yet in more formal doctrine and practice the distinction was always observed between the Vedic writings which possessed authority as *śruti* and other compositions, in the production of which the mind and skill of man played the predominant part. Thus in *Bṛhad. Up.* II. iv. 10 it is said that the Rigveda, Yajurveda, Sāmaveda, Atharvāṅgirasas, Itihāsa, Purāṇa, and other works have been breathed forth from Brahman alone. The same theory is expounded elsewhere in the same Upaniṣad, not always with an identical enumeration of texts.[1] A definite doctrine of inspiration is assumed and stated, *e.g.*, by Rāmānuja on Vedāntasūtras, II. ii. 43: 'the Veda . . . on account of its non-human character, is raised above all suspicion of error and other imperfections';[2] and the Veda, therefore, is the final authority and court of appeal on all questions of teaching and interpretation. The epithets applied to the Veda appear to be intended to convey the same idea, *e.g.* 'imperishable,'[3] 'eternal,'[4] etc. And the most comprehensive and profound teaching is enunciated when the Veda, or the syllable *Om*, which is the beginning and the end of the Veda, is identified with Brahman.[5] The same thought also is poetically expressed when it is elsewhere said that the deity is resident in the sacred text.[6]

A further indication of the sacred character attached to the Vedic writings was the elaborate provision made in the schools for the exact preservation of the letter of the text. Apparently each of the schools had its own traditional recension, of which the members of the school were jointly and severally in charge, and which it was their office and duty faithfully to bear in mind, and to communicate orally to their disciples. The Vedic texts, therefore, were committed to memory by all; and the precise and perpetual recitation of them was their safeguard, and a sufficient check against alteration even in the least detail of the accepted order and form of words. Moreover, as an additional precaution against accidental variation, the sacred text was learnt and recited not only directly, but also according to a method known as *kramapāṭha*, or 'serial reading,' in which each word was repeated twice in progressive order, with the preceding and also with the succeeding word. An extension of the same method, which further illustrates the anxious care with which it was sought to secure the *ipsissima verba* of the sacred text, was the *jaṭāpāṭha*, 'twisted' or 'inverted reading,' in which each successive pair of words was repeated three times, in one instance in inverted order. Moreover, the verses and words of the hymns were laboriously counted, and the records preserved in the works of the Sanskrit grammarians; these numbers are found to be in agreement with the extant texts. It was in harmony also with this conception of the peculiarly sacred character of these writings that the communication of them to Śūdras, or out-castes, was strictly forbidden.[7] They were the heritage and possession of the 'twice-born,' and might not be carried beyond the circle of the elect, lest defilement in any form should reach them. Parallel instances to this scrupulous limitation of the circulation of a sacred book or books are numerous among other peoples. A *sūtra* of the Vedānta prohibits to Śūdras the hearing or studying of the Veda.[1]

Further, it would appear that the method of revelation, as it was conceived by the Hindu authors themselves, and the descriptive terms employed with regard to it were intended to imply the same sacred and inviolable character of the text. The *ṛṣis*, the ancient poets and seers of the Vedic hymns, are said to have 'seen' (*dṛś*) the sacred texts which they then conveyed to men. Although in some instances they claim in so many words to have been the authors of the hymns which bear their names, the claim is disallowed, as far as the play of individual character is concerned, or the application of human intelligence and skill. Their part is limited to that of exact recorders of a message in the ordering of which they have no share, as regards either subject-matter or form. Their merit is that of faithful transmission of the words and teaching which the eye 'saw.'[2] No doubt the language employed is to a very considerable extent figurative and metaphorical. The 'eye' is the eye of the mind. The figure, however, in harmony with the universal tendency of thought and language, became obscured, and was literally interpreted. The mental or spiritual vision was transformed into a real 'seeing' of the actual letters and words, presented to the eye in material form. It is not improbable also that to the mystical meditative temperament of India a strong capacity for visualizing the creations of the mind may have played a considerable part in the elaboration of the metaphor, and have contributed not a little to its ready acceptance and popularity.

Moreover, in India and, it may be said, to the Eastern mind in general, inspiration is much more a matter of men than of books or of the written word. The Veda was regarded, indeed, as the source and spring of all knowledge, and the teaching which it conveyed was the final and infallible standard of practice and belief. Even so, however, the veneration with which the Vedic text was regarded by the people as a whole hardly equalled the strict and anxious care with which the Jewish Rabbis erected a 'hedge' about their Law. In part this was due to the fact that the sacred writings were so jealously guarded by the Brāhmans, and screened from profane knowledge, that to the great majority of the Hindus they were and always have been invested with attributes of distance and mystery rather than accepted and known as a guiding presence and authority in the life. The *theory* of the inspiration and inerrancy of the scriptures was universally taught and received, being denied only by the *nāstikas*, the atheists

[1] *Bṛhad. Up.* IV. v. 11; cf. Śaṅkara on *Vedāntasūtras*, I. i. 3, a text which he interprets to mean that Brahman is the source of Scripture, the latter being defined as consisting of the Rigveda and other Vedas, with the works subsidiary to them.

[2] Cf. *SBE* xlviii. [1904] 485, 473 f., 529 f.

[3] *Śatap. Br.* X. iv. 1. 9.

[4] Manu, iii. 284, *purātanī*, rendered 'eternal' by G. Bühler (*SBE* xxv. [1886] 127), but perhaps connoting rather high antiquity, and the dignity and authority which the texts accordingly were believed to possess.

[5] Baudhāyana, II. x. 17. 40, IV. i. 26; cf. Vasiṣṭha, xxv. 10.

[6] 'I [Lakṣmī] reside . . . in the sound of the Veda' (*Inst. of Viṣṇu*, xcix. 14 f.).

[7] *e.g.*, 'The Veda must not be recited in the presence of a Śūdra' (*Vasiṣṭha*, xviii. 12); 'Let him not recite (the texts) indistinctly, nor in the presence of Śūdras' (Manu, iv. 99).

[1] *Vedāntasūtras*, I. iii. 39; cf. Śaṅkara's comment and citation of passages (*SBE* xxxiv. [1890] 228 f.).

[2] Cf. Manu, xi. 244: 'the sages . . . obtained (the revelation of) the Vedas through their austerities'; and *ib.* 234. Śaṅkara (on *Vedāntasūtras*, I. iii. 30) quotes the authority of earlier writers that the ten books of the Rigveda were 'seen' by the ancient *ṛṣis*; and elsewhere asserts the same of the *mantra* and *brāhmaṇa* portion of the Veda (on I. iii. 34). Rāmānuja seems to make an attempt to combine the theory of inerrancy with a natural belief in the effective authorship of the poets: 'The eternity of the Veda admits of being reconciled with what scripture says about the mantras and kāṇḍas of the sacred text having "makers," and about Rishis seeing the hymns . . . the Rishis . . . thus gifted by Prajāpati with the requisite powers . . . *see* the mantras, and so on . . . perfect in all their sounds and accents, without having learned them from the recitation of a teacher,' etc. (*SBE* xlviii. 332 f., on *Vedāntasūtras*, I. iii. 28). To the *ṛṣis* themselves, in their divine or semi-divine character, worship was offered.

or infidels, whose influence appears at no time to have been wide-spread, or their numbers considerable. But its practical effect upon the everyday thought and experience of the Hindu was slight. Like the books themselves, it was the doctrine and possession of a learned class. And, although theoretically acknowledged and accepted by all, it was in reality little in touch with the needs and movements of everyday life.

It was entirely otherwise with the belief in the inspiration and authority of the teacher, the man upon whom the spirit of the god had descended, and whose utterances, like his actions and person, were invested with the sanction and force of the divine. It would be difficult to indicate any one doctrine or belief which has had a more profound influence on the habits and character of the Indian peoples. Beginning with the *ṛṣis* themselves, and passing down through a long series of deified men, among whom the *guru*, the teacher, has in India always occupied the most important place, the doctrine of the direct inspiration of the individual has never ceased to be an effective and influential article of faith. The repeated incarnations of the gods bear witness to the same tendencies of thought and belief. And, although modern conditions of life, and the forms under which modern education is being conveyed, are gradually and perhaps inevitably undermining and destroying the ancient reverential habit of thought and life, it will be long before the Hindu affection deserts its ancient ideals, or regards as other than unwelcome a new theory of life, which minimizes the spiritual element in the heart and character of the individual.[1]

These numerous incarnations of the gods, and the readiness with which men or women endowed with unusual qualities or an attractive and dominating personality are deified, are evidence of similar characteristics of thought. The high-priests of the different sects, in their formal visitations of the districts under their charge for purposes of pastoral oversight and confirmation of the young men, journey in state and are greeted by all with a reverence which implies the assumption of divine or semi-divine rank. Their persons and utterances are inspired; their touch confers happiness and deliverance from the bondage of evil. In a similar manner the recognition of authority concentrated in the hands of an individual, whether European or Indian, is separated by a very narrow line in the thought of the Hindu from a belief in definite inspiration by the deity, who in greater or less fullness has taken up his abode within, and thus manifests his presence and power. The experience of any Englishman who has come into real touch with the mind and heart of the Indian would furnish many instances of the facility with which exceptional or unfamiliar gifts and powers are set down to the credit of a supernatural afflatus which for the time being, or permanently, confers upon the man the rights and dignity of a god.

To the Hindu, therefore, the conception of an inspired personality or an inspired book is perfectly natural. In neither case would the affirmation of inspiration suggest doubt, or the necessity of an inquiry into the validity of the claim advanced or the possibility of the fact asserted. The disposition would rather be in favour of its acceptance as part of the natural order of things. It is regarded as not improbable, it is even looked upon as highly probable, that the god will thus communicate his will and make known his ways. The burden of proof lies with those who deny. And this disposition or tone of mind is part of the larger bias and tendency of the Eastern nature, which, for whatever reason, seems to live in closer touch with the realities of the unseen and the spiritual than the more practical and unemotional mind of the West.

[1] The conception is illustrated, *e.g.*, by Manu, iv. 182: 'The teacher is the lord of the world of Brahman'; ii. 233: 'By obedience to his teacher [the student gains] the world of Brahman'; cf. ii. 144–154, *Inst. of Viṣṇu*, xxxi. 10, etc., *Āpast.* I. iv. 14. 7: 'The feet of all Gurus must be embraced (every day) by a student who has returned home.'

A. S. GEDEN.

**INSPIRATION (Muslim).**—Inspiration may come to a prophet in an external form, and consist of the very words which God wishes him to give forth as the divine message. This is called *waḥī ẓāhir*, 'external inspiration.' It is the highest form of inspiration, in the opinion of Muhammadans, and was used for the production of the Qur'ān. The mind of Muhammad was passive, and the message, an external one, was brought to him by Gabriel. A somewhat lower form of this is called *ishārat al-malak*, 'the sign of the angel.' Muhammad refers to this when he says: 'The Holy Ghost has entered into my heart,' that is, the inspiration came through Gabriel, but not orally. The other term is *ilhām*, which means the saint or prophet using his mental powers and, under divine guidance, giving forth the message of God, though not in the very words of God.

The recipient knows the medium, *i.e.* the angel, by which he receives the information. This is *waḥī*, the inspiration of prophets, the inspiration of the Qur'ān. The recipient receives information from an unknown source and in an unknown way. This is the inspiration of saints and mystics. It is called *ilhām*. The difference between *waḥī* and *ilhām* is that in the former an angel is the medium of communication, and in the latter he is not. It comes direct to the mind of the Prophet (see al-Ghazālī in the *Mudāq al-Ārifīn*, an Urdu tr. of the *Iḥyā' 'Ulūm ad-Dīn*, Lucknow, 1878, iii. 30).

Some theologians hold that, whilst the Qur'ān was revealed by the *waḥī* method, the teaching of the Prophet as recorded in the traditions was by the *ilhām* mode; that is, the traditions are a real revelation and convey divine injunctions, only the mode was different. Others hold that even the traditions were of *waḥī* authority, and ash-Shahrastānī speaks of 'the sayings of the Prophet which have the marks of waḥī' (quoted in *Dābistān*, ed. Bombay, A.H. 1242 [A.D. 1826], p. 21). In support of this view this verse is quoted:

'By the star when it setteth, your companion Muhammad erreth not, nor is led astray, neither doth he speak of his own will. It is none other than a revelation which hath been revealed to him' (Qur'ān liii. 1).

The latter part seems to refer to the Qur'ān, but the former distinctly asserts that he was rightly guided either by the *waḥī* or by the *ilhām* mode of inspiration, and so all his words and actions form a rule of faith called the *Sunna*, which all Muslims must accept, for they were said and done under the constant influence of a divine inspiration.

The revelation given to Moses is thus described in the Qur'ān.

'We wrote for him upon the tables a monition concerning every matter, and said, "Receive them thyself with steadfastness, and command thy people to receive them for the observance of its most goodly precepts"' (vii. 142).

This equally describes the inspiration of the Qur'ān. The Muhammadan cannot conceive that there can be a human as well as a divine side to inspiration. This is clearly stated in the verse in which Muhammad is directed to disclaim any knowledge apart from the words revealed:

'Say: I say not to you, "In my possession are the treasures of God"; neither say I, "I know things secret"; neither do I say to you, "Verily, I am an angel"; only what is revealed to me do I follow' (vi. 50).

The Qur'ān, then, comes direct from God. The word 'say' is either expressed or implied before each sentence. This to the Muslim mind is its highest perfection. It is verbal inspiration in its most extreme form. The Christian view of inspiration—the divine mind working through the human consciousness—is considered to be very

inferior, and any book so revealed to be altogether on a lower plane.

Thus, Ibn Khaldūn says:

'Of all the divine books, the Qur'ān is the only one of which the text, words, and phrases have been communicated to the Prophet by an audible voice' (*Prolégomènes*, tr. de Slane, i. 195).

This is the universal belief, and it shows how mechanical is the Muslim view of inspiration. The Qur'ān, both as to matter and as to form, is all of God; but the mode in which it was revealed varied. It is only once clearly stated in the Qur'ān that Gabriel was the medium of communication:

'Say, "whoso is the enemy of Gabriel?" For he it is who by God's leave hath caused the Qur'ān to descend on thy heart' (ii. 91).

Other passages, though they do not mention Gabriel by name, are generally believed to refer to him.

'The faithful spirit hath come down with it' (xxvi. 192); 'one terrible in power taught it to him' (liii. 5); 'the Holy Spirit hath brought it down with truth from thy Lord' (xvi. 104).

Tradition, however, is very clear on the point that Gabriel was the medium. Sometimes a brightness surrounded the Prophet, out of which Gabriel delivered his message; sometimes the angel appeared in the form of a man called Duḥiyya, one of the Companions of the Prophet, renowned for his beauty. This statement is supported by the verse:

'And if we had appointed an angel, we should certainly have appointed one in the form of a man' (vi. 9).

When the revelation was one of denunciation or a prediction of woe, the angelic nature of Gabriel overcame the nature of Muhammad, who was then transported to the angelic world; when the message was one of comfort and consolation, the angel, in the form of a man, delivered his message. Gabriel sometimes made his message known through the tinkling of a bell, a mode of operation which had a most disquieting effect on the Prophet. His body became agitated, and even on a cold day the perspiration rolled off him. His countenance bore witness to the agitation of his mind. If riding, the camel on which he sat would fall to the ground.

Zaid said: 'One day when God sent *waḥi* on the Prophet, his thigh was on mine, but it became so heavy that I feared mine would be broken' (*Ṣaḥiḥu'l-Bukhāri*, 'Kitāb aṣ-Ṣalāt,' Leyden, 1862-68, i. 105).

Gabriel sometimes, without appearing in person, so influenced the mind of the Prophet that what he spoke was a divine message. This is *ilhām*, the inspiration of the traditions.

On the occasion of the night journey to heaven, 'great mysteries and numerous conversations took place' (Mirkhond's *Rauḍat aṣ-Ṣafā*, Ras, 1893, II. i. 211). God is said to have spoken to the Prophet directly, though whether with face veiled or not is a matter of doubt. God sometimes appeared to the Prophet in a dream and made known His will. On two occasions angels, each having six hundred wings, appeared and brought the message (for other accounts see *Rauḍat aṣ-Ṣafā*, II. i. 135–148).

The seasons when it came were usually periods of anxiety and care. His countenance changed; his fear seemed uncontrollable. This terrifying effect of inspiration is shown in the verse:

'The best of recitals hath God sent down, a book in unison with itself and teaching by repetition. The very skins of those who fear their Lord do creep at it' (xxxix. 24).

The fear caused to men is not to be wondered at when it is believed that in heaven the effect of it is that angels become senseless and that Gabriel is the first to return to consciousness (*Khulāsat at-Tafāsir*, Lucknow, A.H. 1311 [A.D. 1893], iv. 75). The revelation of *sūras* xi., lvi., and ci., known as the '*sūras* of terror,' turned the hair of the Prophet grey.

Ibn Khaldūn thus describes inspiration.

After stating that some souls cannot attain to a perception of spiritual truth, and that others can enter into a state of contemplation and ecstasy, which is the intuition of the saints, he goes on to speak of those whose souls can rise from the human body to the angelic state and there hear the divine voice. Such are the souls of the prophets. God has given them the power of leaving the human body and, when so separated from it, they receive His revelations, which, when they return from the spiritual world, they make known to men. The journey to and the journey from the angelic world and the comprehension of the message received occupy less time than the twinkling of an eye. This is why inspiration is called *waḥi*, which, according to Ibn Khaldūn, means 'to make haste' (*Prolégomènes*, i. 196–205, quoted in full in Sell, *Faith of Islām*[3], p. 242 f.).

The orthodox view is that a prophet knows all things without having received previous instruction, that he gives information regarding the past and the future, otherwise than by analogical reasoning, and that he is superior to other human beings, as he has communion with the angelic world.

The sacred month of Ramaḍān has been specially selected as the time for the descent of divine books: on the first day the book of Abraham, on the sixth the book of Moses, on the thirteenth the Gospel, and on the twenty-seventh the *Lailat al-Qadr*, or 'Night of Power,' the Qur'ān which then came complete to the 'House of Glory,' situated in the lowest of the seven heavens, from which, as occasion required, portions were brought by Gabriel and revealed to Muhammad: 'Verily we have caused it [the Qur'ān] to descend on the Night of Power' (xcvii. 1 ff.). This is the blessed night, the night 'better than a thousand months,' the night 'which bringeth peace and blessings to the rosy dawn' (*ib.*).

Some suppose that the first revelation was 'Warn thy relatives of nearer kin' (xxvi. 214), but the objection to this opinion is that the words of the context, 'kindly lower thy wing over the faithful who follow thee' (*ib.* 215), and 'who seest thee when thou standest at prayer and thy demeanour among those who worship' (218 f.), presuppose the existence of a small Muslim community. There are other objections also connected with the style and use of words in this chapter which show that it must be a later one.

The general view, then, may be accepted as correct, which is that, when in the cave at Ḥira, a little distance from Mecca, the Prophet heard a voice calling on him to recite the opening words of the *sūra* xcvi. Tradition has surrounded the event with many marvels. The following is a condensed account of the narrative concerning the inspiration of the Prophet given in Mirkhond's *Rauḍat aṣ-Ṣafā* (II. i. 140).

The Prophet was sleeping in the cave of Ḥira when Gabriel made his appearance in the form of a man, and said, 'Read.' But his Lordship answered, 'I am not a reader.' Then Gabriel squeezed him so hard that he thought his end was near; but the angel again said 'Read,' and received the same answer. Having again given the command, Gabriel said: 'Recite thou in the name of thy Lord, who created man from clots of blood. Recite thou! For thy Lord is the most Beneficent, who hath taught the use of the pen; hath taught man that which he knoweth not' (Qur'ān, xcvi. 1–4). The first squeezing purified his august nature from all concupiscence; the second, from all sinful desires. Though free from all ignominious qualities, his purification was necessary to divest his heart from all human failings and to prepare it for the reception of divine revelation. His terror was so great that he meditated suicide, but Gabriel called out: 'Thou art the Apostle of Allāh and I am Gabriel.'

Another account is that, when the third call was made, Gabriel struck his foot on the ground, and a spring of water gushed out. He then performed the ablutions before prayer and taught Muhammad to do the same, after which they said the *namāz*, or stated prayers. When the Prophet was terrified at the appearance of Gabriel, whose feet were yellow and his wings green, and between whose eyes the words were written, 'There is no God but Allāh, and Muhammad is the apostle of Allāh,' Gabriel comforted him by saying that he was the messenger of God to prophets. When Muhammad said that he could not read, Gabriel took from beneath his wing a piece of the silk of Paradise, embroidered with pearls and gems, and threw it on his blessed face.

All this very much alarmed the Prophet. He hastened home, and Khadija, his wife, said: 'I perceive a light in thy countenance, the like of which I have never beheld'; but in terror he lay down in a paroxysm of fear. When he recovered, he said, 'O Khadija, I have become a soothsayer or mad.' She replied, 'God will not surely let such a thing happen to thee, for thou speakest the truth, dost not return evil for evil, keepest faith, art of a good life, kind to thy relatives and friends. Hast thou seen aught terrible?' He then told her what had happened, whereupon she said: 'Rejoice, dear husband, and be of good cheer. He in whose hands stands Khadija's life is my witness that thou wilt be the Prophet of His people' (*Literary Remains*

*of Emmanuel Deutsch*, London, 1874, p. 77). She then went to Waraqa, one of the Ḥanifs, and told him that Gabriel had appeared to Muhammad. He assured her that great benefits and blessings would follow from this (see *Rauḍat aṣ-Ṣafā*, II. i. 146).

Then, for a while, the revelations ceased, and the mind of Muhammad was much disturbed thereby. He doubted the reality of his call and became so melancholy that he sought to put an end to his life. On such occasions Gabriel appeared and strengthened him in the belief that he was to be the apostle of God, and so gave him comfort. A tradition states that Khadija, alarmed at his state, not only wrapped him up, but sprinkled cold water upon him, which seems to show that he had a fit (*Mishkāt al-Maṣābiḥ*, Madras, A.H. 1274 [A.D. 1857], p. 846). Bukhārī relates how on one such occasion he saw the angel seated on a throne midway between heaven and earth. Alarmed, he hastened home and said to his wife: 'Cover me with a cloth.' Then God revealed to him *sūra* lxxiv., beginning 'O thou, enwrapped in thy mantle, arise and warn' (*Ṣaḥiḥu'l-Bukhārī*, i. 2). This became the first of a continued series of revelations. The period of suspense—the *fatrah*—was now over. Henceforth there was no intermission in the revelations, which came with remarkable aptness to time and circumstance for the rest of his life.

The doctrine of *waḥī*, the inspiration of the Qur'ān, is closely connected with the attribute of God, called *kalām*, 'word,' or 'speech,' and concerning which there was a long and bitter conflict between the Mu'tazilite and the orthodox section of the Muslims. It ranged round the great dispute as to whether the attributes of God were eternal or not. The orthodox belief is that the Qur'ān was written from all eternity on the Preserved Table.

'The unbounded reverence of the Muslims for the Qur'ān reaches its climax in the dogma (which appeared at an early date through the influence of the Christian doctrine of the eternal Word of God) that the Book, as the divine word, *i.e.* thought, is immanent in God, and consequently eternal and uncreated' (T. Nöldeke, *Sketches from Eastern History*, p. 58).

This view has been well stated by D. B. Macdonald:

'There had grown up very early in the Muslim community an unbounded reverence and awe in the presence of the Qur'an. In it God speaks, addressing His servant, the Prophet; the words, with few exceptions, are direct words of God. It is, therefore, easily intelligible that it came to be called the word of God (*kalam Allah*). But Muslim piety went further and held that it was uncreated and had existed from all eternity with God. Whatever proofs of this doctrine may have been brought forward later from the Qur'an itself, we can have no difficulty in recognizing that it is plainly derived from the Christian Logos and that the Greek Church, perhaps through John of Damascus, has again played a formative part. So, in correspondence with the heavenly and uncreated Logos in the bosom of the Father, there stands this uncreated and eternal Word of God; to the earthly manifestation in Jesus corresponds the Qur'an, the Word of God which we read and recite. The one is not the same as the other, but the idea to be gained from the expressions of the one is equivalent to the idea which we would gain from the other, if the veil of the flesh were removed from us and the spiritual world revealed' (*Development of Muslim Theology*, p. 146).

It is interesting to notice how, right in the heart of the Islāmic system, there is such a near approach to a great truth, and how, in rejecting the Incarnate Word, the eternal Son of God, Muslims have accepted instead the dead letter of a book.

The history of the development of the Qur'ān and of its exegesis lies outside the scope of this article; and so it only remains to state the various views on *kalām*, 'the word,' so far as they are connected with the question of inspiration (see, further, art. KALĀM). The orthodox view of *kalām*, one of the attributes of God, is that

God 'speaks, but not with a tongue as men do. He speaks to some of His servants without the intervention of another, even as He spoke to Moses, and to Muḥammad on the night of the ascension to heaven. He speaks to others by the instrumentality of Gabriel, and this is the usual way in which He communicates His will to the prophets. It follows from this that the Qur'án is the word of God, and is eternal and uncreated' (Muhammad al-Birkawi, quoted in Sell, *Faith of Islām*[3], p. 187).

The speech (*kalām*), then, that is necessary to God is not the glorious expressions revealed to the Prophet, because these are originated, and the quality that subsists in the essence of God is eternal. Both the glorious expressions and the eternal quality are called the Word of God; but the former are created and written in the Preserved Table, from which on the Night of Decree they were brought to the lowest heaven, and thence were revealed to the Prophet.

These are the views held by the Sunnī Musalmāns. They were earnestly opposed by the Mu'tazilites, who deny the eternity of the Qur'ān on the following grounds. It is written in Arabic, it descended to earth, and is written and read. Events are described in the past tense, whereas, if the Qur'ān existed before all time, the future tense would have been used; it contains commands and prohibitions; who, then, were commanded, and who were prohibited? If it existed from eternity past, it will exist till eternity future, and so in the next world its laws will be incumbent on men who must perform the same religious ceremonies as they do now; if it is eternal, then there are two eternals, God and the Word, which would destroy the Unity of the Divine Being. If it is said that it is speech only which is eternal, and not the word and sounds, then how can there be speech without sound? To the latter objection the Sunnis reply that a man's thoughts are a kind of speech without sound. It is true that, as man's thought is originated, it cannot be compared to God's speech, which is eternal; yet the illustration is good as far as it goes to show that speech does not necessarily need sound.

The Mu'tazilites produced such texts as 'Verily we have made it an Arabic Qur'ān' (xii. 2, xiii. 37, xx. 112, xxxix. 29, xli. 2, xlii. 5, xliii. 2). Now, what God made He created, as it is said: 'Who hath created the heavens and the earth' (vi. 1). To which the reply is made: 'Are not the creation and the command His?' (vii. 52). Here there is a difference between the creation and the command, and, inasmuch as the command 'Be' creates, it cannot itself be created, and is, therefore, eternal. Some of the 'Abbāsid Khalifs of Baghdad were supporters of the Mu'tazilites, and the Khalif Ma'mūn in the year 212 A.H. issued a decree declaring that all who asserted that the Qur'ān was eternal were heretics. A little later on the Khalīf sent an order to the Prefect of Baghdad denouncing as a mere rabble and mob, as men of no insight or knowledge, those who held the orthodox views. He was told to assemble the Qāris, the Qur'ān readers, to question them as to their opinions, and to inform them that the Khalīf neither wished for nor would retain in his service any one whom he considered to be untrustworthy in the faith. The inquiry was unsatisfactory, and so this order was issued:

'What the pretenders to orthodoxy and the seekers after the authority for which they are unfitted have replied has reached me. Now, who does not admit that the Qur'ān is created, suspend his exercise of judicial powers and his authority to relate traditions' (Jalāl-ad-dīn as-Suyūṭī, *History of the Khalīfs*, Calcutta, 1881, ch. on Ma'mūn).

The next Khalīf, al-Mu'taṣim, severely punished and imprisoned the Imām Ibn Ḥanbal (*q.v.*), a theologian of great repute, because he would not admit that the Qur'ān was created. Al-Buwaitī, a theologian, was brought from Cairo to Baghdad, and there imprisoned till the day of his death for the same reason. Whilst they led him on fettered and chained, he kept repeating to himself, 'Almighty God created the world by means of the word "Be." Now, if that word was created, one created thing would have created another,' which he held to be impossible.

The reference here is to the verse, 'Verily our speech unto a thing, when We will the same, is that we say to it only "Be," and it is' (xxxvi. 82). This was a standing argument against the Mu'tazilites. So also the verse, 'Nay, but it [the Qur'ān] is a warning . . . written on honoured pages, exalted, purified' (lxxx. 11 f.), is said to refer to the eternal copy of the Hidden Table, an argument repudiated by the Mu'tazilites.

When times changed and the orthodox returned to power, Imām ash-Shāfi'ī called before him a theologian named Ḥafs, and, quoting the verse,

'God said "Be" and it is,' said, 'Did not God create all things by the word "Be"?' Ḥafs assented. 'Then, if the Qur'ān was created, must not the word "Be" also have been created?' To this Ḥafs agreed. 'Then all things were created by a created thing, which is a gross inconsistency and manifest impiety.' Such was the effect of Shāfi'ī's reasoning that Ḥafs was put to death as a pestilent heretic (Sell, *Faith of Islām*[3], p. 217).

The Mu'tazilites opposed the orthodox view, for they said that it limited their freedom of thought. To them the Qur'ān had a human as well as a divine side; but, if it was an eternal word, it was clearly beyond even reverent criticism. Their view of the nature of the divine attributes also led them to fear that there was a danger lest this idea of an eternal attribute (*kalām*, 'word') should impair the great doctrine of the Unity of God. However, the reaction came, and the orthodox school gained the day. The Mu'tazilite movement was a great one, and, when it failed, Islām again resumed the rigid form which has characterized it till this day. In India, under the influence of Western thought and a liberal government, there has been some attempt to revive Mu'tazilite teaching. The leaders of the movement see that the mechanical view of inspiration taught in Islām is fatal to enlightened progress, and they have selected this very subject as one to be discussed, and as one on which sounder views should be propagated. One of them says:

'A prophet is neither immaculate nor infallible. A prophet feels that his mind is illumined by God, that the thoughts which are expressed by him and spoken or written under this influence are to be regarded as the words of God. This illumination of the mind, or effect of the divine influence, differs in the prophet, according to the capacity of the recipient, or according to the circumstances—physical, moral, and religious—in which he is placed' (M. Cherāgh 'Alī, *Critical Exposition of Jihad*, p. lxix).

Another well-known writer, an avowed Mu'tazilite, speaks of the realistic description of heaven and hell as borrowed from Zoroastrian and Talmudic sources (see Syed Amir Ali, *Spirit of Islām*, London, 1891, p. 394). It may be said that, as his followers grew in the apprehension of spiritual conceptions, so the mind of the Prophet developed; but the objection to this is that the later chapters of the Qur'ān are, as a rule, less spiritual than the earlier ones; and so the development, if such there was, tended in a downward direction. But it is clear that there are a few Muslims who see wherein the weakness of their system lies, who boldly repudiate all the teaching of the past, and adopt what is practically a Christian view of inspiration. These men, however, are repudiated by the great mass of the Muslim world, as men having forsaken a revealed religion, and are to be shunned as innovators, a class most distasteful to the orthodox Muslim. But herein the only hope of Islām lies; for, until more reasonable views of inspiration become general, until the dead weight of traditionalism is lifted off, and until intelligence and reason are allowed some force, there can be no enlightened progress in the community.

E. SELL.

**INSTINCT.**—With regard to the exact meaning which we should attach to the words 'instinct' and 'instinctive' there is much difference of opinion. There is, indeed, a general agreement that, as W. Paley long ago phrased it, an instinct is, in some sense, 'a propensity prior to experience [in the individual] and independent of instruction' (*Natural Theology*, London, 1802, ch. xviii.). But the word 'propensity' is somewhat vague. Then it must be asked to what end the propensity leads. Is it a propensity to behave in some more or less specific manner, or to experience certain emotional states, or to believe certain things, or to frame certain types of judgment? Is it one of these, or all of these? Furthermore, what are we to understand by *an* instinct? Is it a propensity to a specific mode of behaviour, a particular belief, a definite type of judgment? And can such a propensity be clearly marked off and isolated in analytic treatment? There are difficulties in doing so; and it is probably better to use the noun as a grouping term—as we use 'intelligence'—to cover all those processes to which the adjective 'instinctive' is properly applicable. But this still leaves on our hands the question: What is the distinguishing nature of these processes?

Those who approach this question from the biological side tend to limit the term 'instinctive' to certain more or less specific modes of behaviour which are characterized by the fact that they just come, without any intervening and guiding mental process, when the organism is appropriately stimulated by the presentation of a more or less complex situation, often supported by stimulations arising within the organism. And on this view they so come because the organism, and, especially in higher forms of life, its nervous system, have been prepared by a long evolutionary process to respond to such stimulation in more or less specific ways. The chick pecks, the duckling swims, the moorhen dives, the infant sucks, because the inherited organic constitution is such that these modes of behaviour are the automatic outcome when the requisite situation is presented, without any mental realization of the meaning of the situation or of the instinctive response. The word 'instinctive' is thus, for those who accept this view of the matter, primarily a biological term. But the presented situation, and the process of behaving in such and such a manner in its midst, are accompanied by a coalescent mode of experience—the instinctive experience—and this is assimilated to or incorporated with such prior experience (revived through association) as the organism may have already gained in other ways and on previous occasions. Thus, although the word 'instinctive' is primarily a biological term, it is secondarily a psychological term which labels a somewhat complex factor in the development of the mental life of the individual.

Now, such a definition of the term 'instinctive' as has been briefly indicated, tenable as it may be in the appropriate universe of discourse, seems hardly acceptable in connexion with the topics of ethics and religion. It seems desirable, therefore, so to extend the connotation of the word 'instinctive' as to bring our treatment into line with current usage in the familiar speech of educated persons, who are often impatient of subtle psychological distinctions. In this broader sense of the word, the traditional distinction between that which is instinctive and that which is based on carefully reasoned foundations is preserved and emphasized; stress is laid on the spontaneous as contrasted with the deliberate nature of the mental processes involved; and, though it may be difficult to distinguish between that which is the outcome of the net results of previous training and education and that which is due to congenital and hereditary disposition, it is generally implied that what is instinctive in this larger sense is in the main unlearnt and, at least predominantly, the expression of the innate constitution of the mind.

William James has given a graphic description of the manner in which he was affected by the

Californian earthquake of 1906, which lasted some forty-eight seconds. It may be quoted in illustration of the spontaneous as contrasted with the volitional attitude of mind.

'In my case,' he says, 'sensation and emotion were so strong that little thought, and no reflection or volition, were possible in the short time consumed by the phenomenon. . . . As soon as I could think, I discerned retrospectively certain peculiar ways in which my consciousness had taken in the phenomenon. These ways were quite spontaneous, and, so to speak, inevitable and irresistible. First, I personified the earthquake as a permanent individual entity. . . . It came, moreover, directlyt o *me*. It stole in behind my back, and once inside the room, had me all to itself, and could manifest itself convincingly. Animus and intent were never more present in any human action, nor did any human activity ever more definitely point back to a living agent as its source and origin. . . . For "science," when the tensions in the earth's crust reach the breaking-point, and strata fall into an altered equilibrium, earthquake is simply the collective *name* of all the cracks and shakings and disturbances that happen. They *are* the earthquake. But for me *the* earthquake was the *cause* of the disturbances, and the perception of it as a living agent was irresistible. It had an overpowering dramatic convincingness. I realise now better than ever how inevitable were men's earlier mythologic versions of such catastrophes, and how artificial and against the grain of our spontaneous perceiving are the later habits into which science educates us' (*Memories and Studies*, London, 1911, pp. 210–214).

In this graphic account of his mental attitude at a moment of crisis given us by a leading psychologist and a master of description, although the term 'instinctive' does not occur, what is commonly understood by the word in its wider and currently popular sense is admirably exemplified. The outlook of the moment was not that which calls into play the rational faculties developed by scientific thought; it was far more primitive and unsophisticated. What James wished to emphasize is, seemingly, that, in face of a new and thrilling experience, deep-seated natural tendencies, spontaneous and nowise explicitly volitional, emerged unsummoned in the light of consciousness—and especially a tendency to personify the cause of the disaster, and to attribute to that cause malign intent. The natural man in William James was, during those forty-eight seconds, laid bare; his science, his psychology, his philosophy had not, just then, a word of protest to utter. The sudden onslaught of the earthquake shock caught the guardians of the citadel of reason asleep at their post. Whether the verdict of reason or that of instinct was the truer verdict is not here the point. The point is that the verdict of instinct was in possession. That James's attitude was spontaneous rather than deliberate, and that his swift interpretation of the meaning of the calamitous situation was charged with a sense of its being inevitable and irresistible—as much beyond his control as the earthquake itself—is clear from the description he gave just after the event. But whether this direct and immediate pronouncement of the natural man within him was due to something innate in his mental constitution, or was the unbidden outcome of acquired habits of mind—habits perhaps acquired in quite early stages of his development—he does not attempt to determine. And, if it was partly due to the one and partly to the other, he does not pause to assign something like approximate values to the innate and to the acquired determinants of the attitude spontaneously assumed. No doubt, since his aim was to describe faithfully what passed through his mind at the moment when the earthquake caught him in its grip, he was wise not to enter upon a discussion of an exceedingly difficult problem. So difficult, indeed, is this problem that it is questionable whether it is possible to solve it on the basis of the broader definition of the term 'instinctive.' Innate tendencies are undoubtedly profoundly modified in the light of the experience which is personally acquired through education, through commerce with the world of nature, and through a thousand social influences in childhood and in later life. Can we eliminate these if the question arises whether the moral and religious attitude of the adult is instinctive in the sense of being, strictly speaking, innate and not acquired—or even predominantly inborn, no matter how much they have been directed in early education? To differentiate the strictly congenital factors of the tendencies and propensities of mature life from those which have been insensibly developed through individual training and habit seems, at present, to be a task beyond the powers of psychological analysis.

Still, analysis may help us on our way towards the solution of such problems. A resolute and suggestive attempt to lay bare the innate foundations of the mental life of man is made in W. McDougall's *Introduction to Social Psychology* (London, 1908). He holds that the problem for solution has been mis-stated—nay more, completely inverted.

The doctrine has been accepted, he says, that 'men normally and in the vast majority of cases act reasonably and as they ought to act,' so that the question arises why they sometimes act otherwise; 'whereas the truth is that men are moved by a variety of impulses whose nature has been determined by long ages of the evolutionary process without reference to the life of men in civilized societies; and the psychological problem we have to solve . . . is—How can we account for the fact that men so moved ever come to act as they ought or morally and reasonably?' For 'mankind is only a little bit reasonable and to a great extent very unintelligently moved in quite unreasonable ways' (pp. 10, 11).

This is McDougall's way of asking the question how moral and rational conduct have been evolved. But he renders the question more concrete by asking from what primitive impulses, common to men and the higher animals, this progressive evolution has proceeded. And his answer is: From a relatively small number of primitive instincts.

These instincts are directly or indirectly the prime movers of all human activity. By the conative and impulsive force of some instinct, or of some habit derived from an instinct, every train of thought, however cold and passionless it may seem, is borne along towards its end, and every bodily activity is initiated and sustained. There is on the inlet side the presentation of some situation or of some problem; there is on the outlet side an appropriate response in bodily behaviour or in mental activity; and between these two there is the conative impulse emotionally toned in some more or less specific manner. Analysis discloses in any such emotional impulse, no matter how complex, a subtle combination of a few primitive instincts; and any higher secondary or tertiary product of evolution may, therefore, be regarded as a synthesis of a few primary constituents. What, then, are these primitive and elemental factors in the conative life of social mankind? The principal instincts of man, each of which is also a primary emotion, are, according to McDougall's analysis, seven in number: (1) the instinct of flight and the emotion of fear; (2) the instinct of repulsion and the emotion of disgust; (3) the instinct of curiosity and the emotion of wonder; (4) the instinct of pugnacity and the emotion of anger; (5) and (6) the instincts of self-abasement (or subjection) and of self-assertion (or self-display), and the emotions of subjection or of elation (positive or negative self-feeling); (7) the parental instinct and tender emotion. These seven instincts

'are those whose excitement yields the most definite of the primary emotions, and from these seven emotions together with the feelings of pleasure and pain (and perhaps also feelings of excitement and of depression) are compounded all, or almost all, the affective states that are popularly recognised as emotions, and for which common speech has definite names' (p. 81).

To these are added, in a supplementary list, the instinct of reproduction, the gregarious instinct,

the instinct of acquisition, and that of construction. Among the more general innate tendencies, whose behaviour-outlet is less definite and circumscribed, are sympathy, suggestibility, imitation, play, habit, and certain ingrained temperamental factors.

It must be remembered that the presented situations which call forth such emotional impulses as self-abasement, or self-assertion, or the parental instinct with its tender emotion are very varied, and may be much modified in the course of the development of individual experience as life runs its course. It must be remembered also that the resulting behaviour is no less varied and no less subject to modification through acquired habit. But McDougall contends that the central emotionally-toned impulse remains relatively unchanged amid changing circumstances and varied response. All the principal instincts of man, he says, are liable to modifications of their afferent and motor parts, while their central parts remain unchanged and determine the emotional tone and the visceral changes characteristic of the excitement of the instinct. No doubt this must be taken in a relative sense; but even on these terms it is open to question whether there are not as many different shades and varieties of, say, tender emotion as there are situations which call it into being, and modes of behaviour which further qualify its experiential nature. We must, however, attempt to classify modes of instinctive experience which are bewildering in their rich variety and multiplicity, and of which perhaps no two are in all respects quite alike. McDougall's treatment is a helpful step towards such a classification of experiences which are differentiated, with much residual overlap, and what H. Bergson terms 'interpenetration,' through the presentation of diverse situations and by means of that instinctive behaviour in their midst which is a legacy of ages of evolutionary preparation.

We have thus a list of seven or more elementary 'propensities' or impulses which may be predicated of man in virtue of his innate and hereditary constitution. Each concrete case of predication is, of course, conditional upon the presentation of a situation of somewhat varied nature, and upon the performance of sundry appropriate activities linked therewith. But, as experience develops and becomes more complex, the life of emotion and conduct becomes richer, more subtly differentiated, and more harmoniously integrated. Still, according to McDougall, whom we are taking as our accredited guide, no new elementary factors are introduced. The higher and richer emotions are compounds of the primary emotions subtly combined or blended. We may take as examples admiration, awe, and reverence, since these are salient features in the religious attitude. With regard to admiration, McDougall says, there seem to be two primary emotions essentially involved in the state provoked by the contemplation of the admired object, namely, wonder and negative self-feeling or the emotion of submission. Thus admiration is a binary compound. But awe is a tertiary compound, since an element of fear is also present. Awe is, indeed, of many shades, ranging from that in which admiration is but slightly tinged with fear to that in which fear is only slightly tinged with admiration. But, unless fear is in some measure incorporated with wonder and submission, the emotion which we name awe is not fully constituted. And, when to awe, as a tertiary compound, gratitude is also added, we experience the highly compound emotion of reverence. Now, gratitude itself is a binary compound of tender emotion and submission or negative self-feeling. Submission is thus doubly emphasized, for it is a constituent both of admiration and of gratitude. Thus we have a highly complex and predominantly submissive emotional state, but still one which is compounded of elementary instinctive and emotional constituents. Now,

'reverence is the religious emotion *par excellence*; few merely human powers are capable of exciting reverence, the blend of wonder, fear, gratitude, and negative self-feeling. Those human beings who inspire reverence, or who are by custom and convention considered to be entitled to inspire it, usually owe their reverend character to their being regarded as the ministers and dispensers of Divine power. . . . The history of religion seems to show us the gradual genesis of this highly complex emotion. Primitive religion seems to have kept separate the superhuman objects of its component emotions, the terrible or awe-inspiring powers on the one hand, the kindly beneficent powers that inspired gratitude on the other, and it was not until religious doctrine had undergone a long evolution that, by a process of syncretism or fusion, it achieved the conception of a Deity whose attributes were capable of evolving all the elements of the complex emotions of reverence' (*ib.* pp. 132, 135).

McDougall has an interesting suggestion with regard to the difference in attitude which characterizes religion on the one hand and magic on the other. He suggests that the fundamental distinction between religious and magical practices is not, as is sometimes said, that religion conceives the powers it envisages as personal powers, while magic conceives them as impersonal, but rather that the religious attitude is always that of submission, the magical attitude that of self-assertion, and that the forces which both magical and religious practices are concerned to influence may be conceived in either case as personal or impersonal powers. Hence the savage, who at one time bows down before his fetish in supplication, and at another seeks to compel its assistance by threats or spells, adopts towards the one object alternately the religious and the magical attitude. In this connexion we may ask whether William James's attitude in presence of the personified earthquake, as an attitude of submission, was religious in its nature.

The point of view which McDougall has developed in his discussion of reverence in its relation to religion is interesting and suggestive. But questions of no little difficulty arise. Granted that reverence may be regarded as such a compound of elementary factors as McDougall has indicated, how far may we regard the process of compounding as an innate propensity, and thus look upon reverence in its developed form as instinctive in the broader acceptation of the term—an acceptation somewhat broader than that which he advocates? Is the process of blending as instinctive as the elementary factors which are blended? And, if so, instinctive in what sense? Is it instinctive in its unreasoned and involuntary spontaneity? Is it instinctive as wholly unlearnt? Can we say that it is entirely congenital and nowise acquired? And, if in some measure acquired, are we to regard the acquisition as a relatively negligible modification of an attitude that is fundamentally innate? The answers to these questions in some degree turn upon the previous answer to that most vexed of vexed questions with regard to the inheritance of that which is acquired in the course of individual life. But apart from this question, which cannot here be discussed, it is exceedingly difficult to determine how far attitudes which are seemingly racial in character are due to inborn proclivities or tendencies, and how far these attitudes are due to the influence of the environment on each succeeding generation and to the traditional outlook imparted through early education. W. C. D. and C. D. Whetham, in *Science and the Human Mind* (London, 1912, p. 25 f.), have drawn attention to the fact that, whereas

'in Chaldæa and, more markedly, in Assyria, the gods were usually conceived as hostile to man, pursuing him in life and death with implacable hatred; in Egypt, as in Greece, the

divine powers were represented in mythology as friendly, ready to watch over, to protect, and to guide mankind in life, in death, and in the after-world. It would be interesting to enquire what share the external conditions of their lives have in shaping their attitude towards the forces of nature and the mythology by which they endeavour to interpret the phenomena of the world and of consciousness. In Egypt, the Nile, with its regular and unfailing rise and fall, was the source of all fertility—steady, trustworthy, and friendly. In Chaldæa, the tempestuous and incalculable flooding of the Euphrates and the Tigris made life on their banks dangerous and uncertain. Nature was hostile, ready to sweep away man and his puny works in one unforeseen ruin. . . . In the one case, any attempt to understand or to control the elemental forces becomes an impious and useless action. Deceit and trickery by magic and sorcery, or, at the best, propitiation of the hostile powers by sacrificial bribes, represent the logical outcome of this view of nature. . . . But in the other case, where the deities are friendly, any increase of man's mastery over his surroundings is approved by the tutelary powers, and is probably directed by them, since it is their good pleasure to help him on his way. One or other of these alternative attitudes of mind predominates in every religious system, according to the race and circumstances of those who hold to it.'

Here we have different attitudes as the result of differences of environment. We speak of the net result as illustrating racial characteristics. But it is hard to say how far the 'instinctive' attitude assumed is congenital and innate, and how far it has been handed on by tradition in the social *milieu* of the race.

Although McDougall deals with admiration, awe, and reverence under the heading of 'complex emotions that do not necessarily imply the existence of sentiments,' his treatment of their connexion with religion leads us to infer that, at the stage of mental development when religious conceptions are in being, they are incorporated in that higher ideational synthesis in which the sentiments play so conspicuous a part. By sentiment we are to understand, following A. F. Shand ('Character and the Emotions,' in *Mind*, new ser., v. [1896]), an organized system of emotional tendencies centred around the idea of an object. The object here is not merely a presentation to perceptual experience evoking such naive behaviour, adapted to the immediate situation, as is found in animal life. It is a centre, not only of a system of emotional dispositions, but of a system of knowledge in some degree organized, and of a system of conduct which is significantly related to the idea of the object or class of objects. It is always in some measure a centre of thought, of emotional tendency, and of conscious endeavour. Otherwise it does not attain to the level of sentiment, which is always in alliance with concepts and with conduct. On these terms the sentiment cannot be wholly instinctive in the sense that it is on the same plane as the innate ideas of early writers. As McDougall says,

'the organization of the sentiments in the developing mind is determined by the course of experience; that is to say, the sentiment is a growth in the structure of the mind that is not natively given in the inherited constitution' (p. 159).

None the less, it may be founded on an inherited basis.

If, then, the question be raised whether the moral sentiments (centred around the ideas of self and of alter) and the religious sentiments (centred around the idea of a super-alter as source and cause of mundane happenings) are instinctive, our answer must again depend on the connotation to be attached to this perplexingly elusive term. That in the course of life they may become instinctive, in the sense that they rise unbidden and spontaneously within the mind without explicit rational backing, when the circumstances are of the appropriate kind, can scarcely be questioned. That they are instinctive, in the sense that they are the outcome of a hereditary bias or proclivity in the native constitution of man, is more open to question, and is as roundly asserted by some people as it is flatly denied by others.

The fact is that, when once we accept the broad and general usage of popular speech, anything like a precise and clear definition of instinct becomes very difficult, if not impossible. And perhaps some measure of vagueness and elasticity is commonly regarded as only right and fitting where strict accuracy of scientific interpretation is at present unattainable. If the instinctive in man is to be taken as synonymous with 'of or belonging to his constitution as human,' do we mean the constitution of the infant at birth, or the constitution of the adult after a prolonged period of education and development? Or do we mean neither of these, but rather some indwelling principle of synthesis—or, if it be preferred, a synthetic tendency the existence of which is inferred from certain observed facts—in virtue of which man is at birth and throughout life what he is or may become? By this nothing more mysterious is implied than that which is commonly accepted as the ground of embryological development in the organism, or even, in inorganic nature, as the ground of crystalline synthesis or of the formation of complex chemical compounds. The acceptance of a specific constitutional factor is only carrying up into the realm of mind what is by many regarded as scientifically legitimate in the interpretation of other natural phenomena. Assume, *e.g.*, that tender emotion (to select one item from McDougall's list) is what, to borrow a term from Mendelian interpretation, may be regarded as a 'unit character.' Even thus regarded, it is a synthesis of no little complexity. Its components are more elementary factors which are additive in the emotional state; and they are probably more than additive in that in their combination they possess a constitutive quality which gives to the algebraical sum of the factors what we may perhaps term its peculiar and specific emotional *timbre*. Just as a note played on the violin gives a complex periodic wave affording to our consciousness a simultaneous combination of the fundamental tone and an orderly series of fainter overtones, and yet there is something about the timbre of the note which is not merely additive but constitutive of that peculiar auditory experience, so in tender emotion there is a constitutive supplement to the additive factors—a supplement which gives to these factors in combination the characteristic property of the unit character as a synthetic whole. To pursue the analogy a stage further, just as a musical chord is not only the additive sum of the constituent tones and overtones simultaneously presented to hearing, but has its constitutive property *as a chord*, so, too, the blend of wonder, negative self-feeling, and fear, as generators of the complex emotion of awe, affords in consciousness what we may term an emotional chord, the specific nature of which is not exhausted by giving a list of its factors. When the emotional chord has its definite place in life's symphony, and derives further and richer significance from its context, it is raised to the level of a sentiment, and, in relation to the context, has a higher constitutive value.

Not all psychologists would concur in such statements as these. But many are prepared to accept what W. Wundt (*An Introduction to Psychology*, Eng. tr., London, 1912, p. 164) has termed the principle of creative resultants—creative in the sense that the resultant compounds have new properties. This principle, he says, attempts to state the fact that

'in all psychical combinations the product is not the mere sum of the separate elements that compose such combinations, but that it represents a new creation' (p. 164).

This is extended to the whole realm of life in Bergson's doctrine of creative evolution, which many biologists can accept without subscribing to his radical vitalism. Even in the inorganic world

the same principle holds. W. Nernst teaches (quoted in *The New Realism*, New York, 1912, p. 238) that, while a large number of physical properties are clearly additive, there are other properties which are not merely additive. Such non-additive properties, he says, are termed constitutive.

Granted, then, that in the course of mental development new constitutive properties of, let us say, the moral and religious emotions and sentiments are characteristic evolutionary features that supervene at critical periods of synthesis, our immediate question is whether they should be regarded as instinctive in that broader sense of the term which is here provisionally accepted. They appear to be distinctive of man in virtue of his inherent constitution as human; they appear to be in large measure beyond volitional control; from the ethical point of view they appear to be the outcome of character (which is the constitutive factor) rather than the sum of the conditions which, of course, must supply the requisite additive data; and on such grounds they may well be claimed to be instinctive in the widest sense of the term. On such grounds, therefore, it can scarcely be denied that the moral and religious sentiments, so widely prevalent in mankind, though they assume varied forms under varied circumstances, have an instinctive basis in the human constitution.

**INSTITUTIONS (Indian).**[1]—A native of India, as observed by R. C. Bose in his attractive little work, *The Hindoos as they are*, is a religious character. 'He is born religiously, lives religiously, eats religiously, walks religiously, writes religiously, sleeps religiously, and dies religiously.' All the more important ancient institutions of the Aryan Indians may be said to have a religious tinge. Even the *rules of Government*, as framed by the Brāhmans, are essentially theocratical. It is true that they could never have been fully enforced, but, whenever Brāhmanism was in the ascendant in a Hindu State, the orthodox union of Church and State was carried into practice as much as was found practicable. Thus one of the eight ministers appointed by the great Sivaji, the founder of Mahratta power, was entrusted with the exercise of all the sovereign's ecclesiastical powers, and was to order punishment to be inflicted after investigating into what is and what is not in accordance with the religious law (A.D. 1674). The main inspiring principle of the whole movement initiated by Sivaji, and carried on by his successors, was the preservation of the Hindu religion against foreign aggression.[2] The administration of justice, which was considered one of the principal duties of a king, is similarly characterized, the test by ordeal being a regular feature of judicial proceedings (see LAW).

*Caste*, whatever its origin, is another important institution of an essentially religious or hierarchical nature. As observed in the Report on the Census of 1901 (p. 360), the most obvious characteristic of the ordinary Hindu is his acceptance of the Brāhmanical supremacy and of the caste system. Although the political power of the Brāhman caste is gone, their influence with Hindu society continues to show itself in what has been called the Brāhmanization of non-Hinduized castes—the endeavour to rise in the social scale by adopting the characteristic social customs of the Brāhmans, such as infant marriage and the prohibition of widow remarriage.

Passing to religious institutions in the proper sense of the term, we may perhaps mention the following as specially characteristic. *Purity*, both external and internal, is a great object with Hindus of every sect and persuasion, and manifold are the rules regarding the avoidance of pollution or defilement, and the removal of its consequences where it has been contracted (see PURIFICATION, FOOD). There is not only a fully developed system of penances (see EXPIATION AND ATONEMENT), but an endless round of devotional acts tending to the expiation of guilt and to the acquisition of spiritual merit. The *saṁskāras* or sacraments, to be performed during pregnancy (*puṁsavana*, *sīmantonnayana*), at childbirth (*jātakarma*), when the child receives a name (*nāmakaraṇa*), when it first gets rice to eat (*annaprāśana*), on the first hair-clipping (*chūḍā*), when the boy is girt with the sacred thread (*upanayana*), on marriage (*vivāha*), after death, etc., are still kept as of old, and form a regular source of income for the Brāhmans officiating at these ceremonies. Thus among the Patane Prabhus of Poona, a highly respectable caste, a birth was said to cost £20 to £40, a thread-girding £20 to £50, the marriage of a son £150 to £400, of a daughter £100 to £500, a girl's coming of age £10 to £20, a pregnancy £10 to £15, the death of an adult £20 to £30, of a child 10s. to £5 (*BG* xviii. 194). Marriage is a particularly expensive and solemn celebration, at which many of the old rites described in Sanskrit literature are still observed, together with many new ones. The special importance and sanctity attributed to the institution of marriage in the Hindu religion become conspicuous equally in the before-mentioned customs of infant marriage and of prohibition of widow remarriage. By betrothing their children at an early age, parents could best provide for their not remaining unmarried, a spinster, especially of the Brāhman caste, being considered a disgrace to her family. This early betrothal was in reality the decisive act, though married life could not begin till some years later; and thus arose the peculiarly Indian institution of virgin widows, remarriage of a woman, like divorce, being unknown to the Brāhmanical law of India (see CHILD-MARRIAGE). The former practice of *satī*, or self-immolation of widows, has been abolished by the British Government. The two ceremonies of tonsure (*q.v.*) and of thread-girding (see INITIATION) are considered important events in the life of a Hindu boy. The ordinary mode of disposing of the dead is by cremation (see DEATH AND DISPOSAL OF THE DEAD). Every death is followed by a certain period of impurity, and by the offering, at regular intervals, of sacrificial oblations called *śrāddha* to the manes. Adopting a boy, though not a sacrament, is a religious act of considerable importance for Indian family life (see ADOPTION). According to the religious duties prevailing in each successive stage of life, there are four *āśramas*, or orders, in the life of a Brāhman, of pupil (*brahmachārin*), married householder (*gṛhastha*), hermit (*vānaprastha*), and ascetic (*yati*, *bhikṣu*). Of these, however, the order of hermits has died out, and the pupil and ascetic are chiefly represented by the *chelas* and *gurus* of the monastic orders of the

[1] The institutions of other countries are sufficiently described, each under its own title.

[2] See K. T. Telang, 'Gleanings from Marāthā Chronicles,' in *Trans. of the 9th Cong. of Orientalists*, London, 1892, i. 252 ff.

present day, so that the householder is the ordinary type of the modern Brāhman (see Āśrama).

*Monastic life* is common enough in India, and many convents (*maṭha*) possess considerable endowments, for the devolution of which, after the death of their heads, there are special rules of succession (see Inheritance). *Idol-worship* exists both in private houses and in public temples. *Bathing*, particularly in a sacred river, is considered highly efficacious, and belongs to the class of daily duties. There are brotherhoods of priests, such as the *Gaṅgāputras*, waiting on the bathers. *Sacrificing* was considered one of the principal duties of a Brāhman, from the discharge of which a considerable part of his income was derived. The horse-sacrifice (*aśvamedha* [*q.v.*]) is an instance of a sacrifice on a large scale which not only is described in Sanskrit literature, but of which there are several historical instances as well, such as the horse-sacrifice of king Puṣyamitra (2nd cent. B.C.), and of king Samudragupta (4th cent. A.D.). The practice of animal sacrifice is nowadays confined to certain religious sects, but other oblations to the gods, to deified ancestors, etc., are very common. Thus the tutelary deity of a respectable Hindu household is worshipped every morning and evening by the hereditary *purohit*, or priest, of the family, who is allowed to carry home, after the close of the service, the offerings of rice, fruits, sweetmeats, and milk made to the god. Endowments for a family idol are very usual, especially in Bengal. *Public charities* are also recommended a great deal, and supposed to confer the highest bliss in a future state on those who offer them. They include the foundation and repair of temples and sanctuaries, together with endowments for the maintenance of the priesthood and of the idol; the establishment of an image in a temple; the digging of pools and tanks, especially near a public road, to supply the thirsty with water; the planting of trees, particularly of sacred trees; the building of lodging-houses or sheds for travellers; the building of flights of steps to descend into a tank or sacred river. Thus king Aśoka in his inscriptions (3rd cent. B.C.) boasts of having planted banyan-trees on the high-roads to give shade to man and beast, of having planted mango-groves, of having ordered wells to be dug and rest-houses to be built, and numerous watering-places to be prepared here and there for the enjoyment of man and beast. Arrangements for the healing of man and beast were provided by the same king. Benevolent institutions and religious establishments were also founded by king Harṣa throughout his empire (7th cent. A.D.).

*Hospitality* (*q.v.*) is enjoined as a religious duty, being one of the five great devotional acts (*mahāyajña*) according to the Code of Manu (iii. 69), who declares that a Brāhman sojourning in a house without being honoured takes to himself all the merit of the householder's good deeds (*ib.* 100). Making gifts to Brāhmans, and honouring and serving them, are also considered highly meritorious (see Gifts). Austerities (*tapas*) of every kind, and mortification of the body, are believed to lead not only to heavenly bliss, but to the acquisition of miraculous power in this life, the great deity Śiva himself being represented as practising severe asceticism in a forest. The wonderful performances of Indian ascetics in the way of self-torment are sufficiently well known. *Fasting* is an important element in many of these self-imposed austerities and penances, and seems to have been carried to a surprising extent. It also enters very largely into the composition of the so-called *vratas*, or devotional acts, tending to the gratification of some special desire (see Festivals and Fasts, Vows).

Visiting sacred places of *pilgrimage* (*tīrtha*) is supposed to have the effect of wiping off the guilt of even a heavy sin. An ancient Sanskrit text, the *Viṣṇusūtra* (ch. lxxxv.), names no fewer than 53 different places of pilgrimage, including Pushkar, Bodh Gayā, Prayāga (Allahābād), the banks of the Ganges, and of other sacred rivers, etc. Great feasts and pompous religious displays, such as the *Durgā Pūjā* in Bengal and the Car Festival at Purī, still tend as of old to excite the religious fervour of worshippers. In the devotional practices and daily worship of the Brāhmans, texts from the Veda, such as their sacred prayer called *gāyatrī*, occupy a conspicuous place. According to the *smṛti*, Brāhmans had to devote a large number of years to the study of the Vedas, and there were lifelong students (*naiṣṭhikabrahmachārin*) leading an unmarried life in the family of their teacher. Religious education was also to a great extent in the hands of the monks, some of whose educational institutions, such as the great convent of Nālanda (2nd cent. A.D.), were frequented by thousands of pupils. Though Sanskrit learning has gone down very much at the present day, the monastic establishments of the different religious sects continue to be centres of religious instruction. Public recitations from the *Purāṇas* and other sacred books also continue to be in vogue, and the mere repetition of the name of one's guardian deity is considered a meritorious practice.

**INSTITUTIONAL CHURCH.**—The 'Institutional Church' is a clumsy title used to describe a modern development of Church life necessitated by new social conditions. It is not clear how the term originated, but it was first heard in America about a quarter of a century ago. Before that time many attempts had been made sporadically to minister through the Churches to the social needs of the community; and social settlements had arisen which were in some instances definitely linked to certain Churches, and in all cases a product of the Christian social spirit. These 'settlements' consisted, at first, of groups of men or women, associated for the study of social conditions, and living the community life. As they developed, however, more elaborate buildings were erected, in which provision was made for educational work and social engagements, so making the settlement central to the life of the community alike for instruction, inspiration, and recreation. In a sense the settlement aimed at the recovery of an old ideal, for time was when the Church stood for education, for the relief of poverty, and generally for the practical care of the community. But many settlements not only had no direct connexion with any Church, but were anxious to emphasize the fact lest any suspicion of proselytizing should attach to their work. On the other hand, those who valued the Church idea and who were anxious to strengthen the position of the Church within the life of the community, looked at the modern problem from this point of view. They saw that there was no institution through which the settlement workers brought their influence to bear upon their neighbours which might not with equal advantage be used by the Christian Church.

It goes without saying that this conviction was

confirmed by the new sense which was being developed among the members of all Churches as to their duty to the young. The English Sunday Schools have seldom succeeded in retaining their older scholars. Even in schools where large Bible Classes exist, the need for some week-day provision for keeping in touch with these young men and women was increasingly felt. The statistics were alarming as to the small number of young people who went forward in membership from the school to the Church. R. W. Dale, on a memorable occasion, pressed home the question, 'How have we lost them?' Certain religious associations sprang into existence to meet this felt need. The Christian Endeavour Societies (see art. CHRISTIAN ENDEAVOUR) were probably the most successful in making appeal to the religious nature of the young. But the Church was even then hardly prepared to recognize that the physical and intellectual needs are equally urgent, and that it may form part of her duty to make provision for these. In some communions this ideal was advocated; and what were known as 'Guilds' were formed upon the explicit basis of the organic unity of our nature, and that just because we are human beings we must be treated as such. Hence the Guild had its athletic and social programme as well as its intellectual and religious one. The Guild movement had a partial success. Where the home-life is normal and strong, it is evident that the need for many of the activities of such societies is less insistent. But modern Britain and modern America have tended increasingly to produce overcrowded areas, where little or nothing deserving the name of home-life exists, and where all social and recreative satisfactions must be sought for elsewhere. Earnest people in all Churches began to see that the problem before them was to adapt the Church's institutions to the needs of areas such as these.

One other movement had brought home this problem to the conscience of Christian people. This was what was known as the 'P.S.A.' movement, by means of which large congregations of men and women were brought together on Sunday afternoons for purposes which, it would be fair to say, were at once religious and social. These people were not exclusively young people. They were workmen and their wives, for the most part; and very many belonged to the poorest classes in the community. They enjoyed and profited by the Sunday afternoon meeting, with its freedom from conventionality; and they soon formed themselves into societies with branches designed to promote thrift, to encourage reading, and to secure effective house-to-house visitation. But, in the majority of cases, the Churches had no hospitality to offer them apart from the Sunday meeting. It was borne in upon the minds of those who were especially concerned that the Church should prosper in the industrial districts that something must be designed more satisfactory than the orthodox place of worship, with rigid pews, which is usually closed from Sunday night to Sunday morning. The Institutional Church was an inevitable product of the new-born ambition of the Church of Christ to minister to our modern social needs.

The Institutional Church, therefore, was a practical experiment along the lines indicated. It aimed at bridging the gulf between the Sunday School and the Church; it aimed at ministering to the development of a man's all-round nature; it aimed at making such provision as is necessary under social conditions which make true home-life impossible. In many instances old places of worship were modernized into halls, with seats instead of pews, platforms instead of pulpits, and equally serviceable for public worship, lectures, concerts, and other meetings. This becomes the central meeting-place of the Church, where its members receive their vows of dedication to the social service to which Christ calls His people. There, too, the obligations of the Christian life are pressed upon those who have not as yet accepted them. There the Gospel of Brotherhood, with its innumerable applications, is preached to gatherings of men and women. Then, round about the central building are smaller halls and rooms of various kinds, some of them for conferences and discussions, some of them for music or art, some of them for recreation and games, some of them for reading and writing, and some for social conversation. Clubs are formed for working lads or girls; and gymnastics, singing, elocution, cooking, wood-carving, dressmaking, signalling, and many other wholesome activities are organized. The settlement idea is conserved by means of sisterhoods, whose members conduct such classes, and do much of the visitation and administration of relief inseparable from a many-sided work like this; and who commonly live together either in rooms on the Church premises or in a house in the immediate neighbourhood. Lectures, scientific, literary, historical, and economic, bring the public together on the basis of some general interest. By all these means an attempt is made, and realized, to strengthen the social bond, and demonstrate that everything that makes for human happiness and efficiency is part of the mission of religion.

It will be seen from this that the Institutional Church is best able to carry out what is known as the policy of 'counter-attractions.' W. S. Rainsford, formerly rector of St. George's, New York, has described (*Preacher's Story of his Work*, New York, 1904) how this policy was gradually forced upon him by the necessities of the situation. The evil associations of the saloon compelled him to provide a social centre with wholesome food and drink; the undesirable dancing saloons drove him to permit dancing in his church hall; the doubtful dramatic exhibitions of all kinds led him to organize a dramatic society for the production of good, wholesome plays. Probably few, if any, of the similar experiments in England have been on so comprehensive a scale as Rainsford's; but the need to provide counter-attractions to the public-houses, and to supply refreshments, good and lively music, billiards and other games, and abundant social opportunities, apart from the unwholesome atmosphere of licensed premises, is just as great in England as in New York. Instances might be quoted in which social enterprises of an even more ambitious character have been successfully carried out, such as labour-yards, night-shelters, and even hospitals and orphanages; but there is an increasing disposition not to burden the Church with work which the State should properly undertake. Nevertheless, the Church has led the way in many new forms of work among the young. The *crèche*, or day nursery, where infants are well nursed and fed while their mothers are away at work, and the 'play-centre,' where, outside school hours, children who have no playground but the street are taught organized games, form part of the operations of nearly all Institutional Churches.

The ideal aimed at is of a Mother Church which thus offers hospitality to all men, women, and children, and applies herself to discover and to satisfy their needs. The centre of the whole organization is the society of avowed disciples of Christ, who are inspired by His example and teaching, and who, in His spirit, are dedicated to the ends of His kingdom. The members of the Institutional Church would always feel that they had failed in their mission to any one who had come within their influence, and joined one or other of their

institutions, unless they had converted him into a Christian citizen, and inspired a disinterested zeal for human betterment. This can be brought about only, as they would confess, by contact with a living Church. Thus the Institutional Church is not under any temptation to magnify its institutions and depreciate the Church. On the other hand, the necessity for keeping the institutions Christian leads to the emphasis of the Church and its ordinances. By common consent the highest success of the Institutional Church has been realized where the worship and teaching of the Church have been effectually central to all the manifold operations of the institutional work.

C. SILVESTER HORNE.

**INSURANCE.—1. Origin and development of insurance.**—The principle of the averaging and distributing of risks is one which, no doubt, existed from the time when commerce began to emerge from the more primitive needs of a pastoral community. Among Western nations there was a scheme for the insurance of slaves at Athens which is attributed to Antigenes of Rhodes (356–323 B.C.), and loans on 'bottomry' (that is, an advance on the hull or 'bottom' of a ship, which was repayable, with interest, on the return of the vessel, but was not repayable in case of a total loss) were well known among the Greeks. Such loans, under the title of the *fœnus nauticum*, were so common at Rome that legislation was devised to prevent fraud; thus at this early stage the problem of an 'insurable interest' had arisen. In the Greek Empire the rate of interest upon loans on bottomry was regulated by an edict of Justinian in A.D. 533. The incursions of barbarians disorganized the mechanism of commercial life, and it is not till the 13th or early in the 14th cent. that allusions to bottomry begin to reappear. These occur at Florence, Pisa, Bruges, and Barcelona. In the Laws of Wisby and the *Recessus Hansæ*—both being codes of the Hanseatic League—bottomry is mentioned, and the system was introduced into England, either by this body or perhaps earlier, through the shipments of wool to the Mediterranean by Italian merchants. Hence, when an Act was passed in 1601 'concerninge matters of Assurances amongste merchantes,' this practice was described as having been 'an usage tyme out of mynde.'

Meanwhile transactions of the nature of insurance had grown up independently among the gilds, which took quite a different direction (see FRIENDLY SOCIETIES, GILDS). Among the Anglo-Saxon gilds it was the custom to give to the members, in addition to opportunities for social intercourse, certain benefits which were provided from the contributions of the gildsmen, as, for instance, blood-compensation (*wer-geld*), where a gildsman slew another without wantonness, also what might be described as funeral benefit, namely the furnishing of a funeral, mourners, and masses by the agency of the gild. Again, in the gild at Exeter, in the event of the house of a member being destroyed by fire, a contribution was levied from each member. This practice constituted a rude approximation to the principle of fire insurance on a mutual basis, except that the amount of the contribution was limited (B. Thorpe, *Diplomatarium Anglicum Ævi Saxonici*, London, 1865). In the Anglo-Norman gilds the range of benefits was extended—while that for funerals remains most prominent, cases occur in which gilds made provision for the loan or the replacement of stock and the providing for the children of a deceased gildsman, by apprenticing the sons to trades and offering dowries for the daughters.

A species of insurance which related to persons and not to goods, and was no doubt one of the first of this type, was that for a ransom. There are traces of this in the statutes of gilds, and, in the 17th cent., this risk was undertaken by individual underwriters. Under this type of insurance, if the traveller was captured by pirates or an enemy, the assurer was bound to provide the necessary ransom.

The decay of the gild system after the Reformation left many blanks in the national life, and prominent among these was the absence of the compensation against some of the great risks of life which it provided. It is true that marine insurance was unaffected, and this system was gradually extended. Before the end of the 16th cent. the loan on bottomry had been supplemented by a type of policy which provided compensation on the loss of a ship in proportion to the premium paid (*Guidon de la Mer*, Rouen, 1607); and at the end of the reign of Elizabeth there was an 'Office of Assurances' or 'Chamber of Assurance' in London, where the whole risk on a ship was subdivided among a number of underwriters. During the first half of the 17th cent. there were few new ideas relating to insurance, though marine underwriting was increasing in popularity, and the grading of risks came to be better understood.

The period bounded on the one side by the Great Fire and on the other by the feverish promotion of companies in 1720 was one in which insurance made great strides, both in the insuring against new risks, or to provide new benefits, and in the prosecution of existing types of assurance by new methods. In the reign of Charles II. marine insurance was well understood, and, with the growth of coffee houses, those interested in shipping began to use certain of those resorts as meeting-places and offices. By 1688, Lloyd's Coffee House had been started, and *Lloyd's News*—a newspaper dealing with the movements of ships—was founded in 1696. Then, between 1717 and 1719, two companies were established, both of which received incorporation in 1720 as the Royal Exchange Assurance and the London Assurance. These bodies, at their foundation, were endued with a monopoly against any other companies, but not against individuals. Thus from 1720 marine insurance has been effected, partly by individual underwriters, partly by joint-stock companies. The Great Fire naturally turned attention to fire insurance. In Germany, mutual fire insurance societies had been founded at least as early as the 16th cent., and Sir William Petty mentioned associations of this type as being worthy of imitation in England. After the disaster of the Great Fire three or perhaps four distinct kinds of fire insurance were attempted. The Corporation of London opened an office in 1679 or 1680, that is, insurance by a municipality. Then there was a mutual society, known as the Friendly Society, which had issued proposals in 1683. The remaining methods were practised by an individual underwriting fire risks, or by several individuals in partnership. Nicholas Barbon had opened an office in 1667 which was transformed into a joint-stock company in 1680. Of these four types of fire insurance only two survived. Insurance by individuals never became prominent as regards fire risks, and municipal insurance was soon abandoned. There remained the mutual fire insurance societies and the joint-stock companies, both of which continued side by side in competition. The Hand in Hand Society was a mutual one. It was founded in 1696, and was absorbed by the Commercial Union

Assurance Company in 1905. On the other hand, the Sun Fire Office, which was founded by Charles Povey between 1706 and 1708, was a joint-stock company. In the first twenty years of the 18th cent. many fire offices were established in London, and some in the provinces.

Besides the provision made against losses by shipwreck or by fire, other risks to property were gradually insured against. Thus by 1684 goods sent by waggon or cart could be insured against thieves (*Merchant's Dayly Companion*, London, 1684). By 1720 schemes had been projected for insurances against losses by highwaymen, by the dishonesty of servants, for the payment of seamen's wages, and for making good losses sustained by owners of horses through disease, disablement, or theft. Thus schemes had been propounded resembling burglary, fidelity, guarantee, and live stock insurance, though, owing to the excessive number of promotions, long periods elapsed before all of these were established.

Meanwhile, the provision for life contingencies lagged behind marine and fire insurances. In the middle of the 17th cent. a species of life insurance could be effected whereby any one who borrowed money to purchase a place or office could arrange by means of payments from the income that, in the event of his death, the part of the loan outstanding would be repaid to the lender. It is after the Revolution that something of the nature of life insurance can first be traced. One of the methods by which the Government raised funds for the carrying on of the war against France was by the guaranteeing of annuities in return for loans. In 1698 the Mercers' Company also began to issue annuities. These schemes were very imperfect, owing to the want of anything approaching mortality tables. Even the population of the country was unknown. It is true that the labours of Petty and Halley were providing a basis for future statistical investigations, more particularly in relation to the Bills of Mortality; but, as yet, these inquiries were in such a tentative condition that they did not admit of practical application. Accordingly, insurance relating to life contingencies was developed in a different direction from modern life insurance, being concerned chiefly with such risks or eventualities as terminated at a comparatively early date as compared with that of the payment of the premium. Before the Revolution a scheme was considered for the State Endowment Insurance of children on their attaining the age of 20 years (Add. MS. 28,078, f. 462). Early in the 18th cent. there were many offices which transacted professedly provident business of this character. These were all dividend societies—that is, the premiums collected in a quarter or in a year, as the case might be, were divided among those claimants who, in the same period, ranked for the specified benefits. Thus, in a marriage society, all insured persons who had been married since the last division participated *pro rata* in the distribution. Similarly in other societies the parents of all children born in wedlock, who had paid premiums regularly, ranked for the benefit. Then again, in the same way, a sum could be secured to enable a young man to start in business for himself when his apprenticeship was finished. These were known as marriage, christening, and apprenticeship insurances respectively. In 1709 and 1710 there was quite a rage for participation in these schemes; since the amount of benefit varied greatly, the idea appealed to the gambling spirit of the times. There were many scandals, and insurance of this type was prohibited by legislation in 1710. It was out of these crude schemes that the earliest general life insurance emerged. It was based on the dividend principle. Just as in marriage insurance, the premiums were divided periodically among those who were entitled to claim. There was no distinction at first as to the age or sex of the life insured. One of the earliest life offices was the Society of the Assurance of Widows (1699), which was followed by the Amicable Society in 1706. The latter existed independently till 1866, when it was absorbed by the Norwich Union Life Insurance Society.

During the remainder of the 18th cent. the chief progress in marine and fire insurance was in the extension of the system. As the various offices acquired reputation, the number of persons insured increased. In life insurance, on the other hand, great progress was made. The researches of de Moivre, Kersseboom, Hodgson, Corbyn Morris, Simpson, and Price gradually provided materials for the construction of tables of the expectation of life, and these were used by the Equitable Society (which was founded in 1762) in the establishing of graduated premiums. In 1825 insurance began to attract the attention of the company promoter, and a great number of new offices were started, the majority of which were soon forced to discontinue business. The remainder of the century is marked by a more exact classification of risks, by the variation of the forms of policies, by the issue of policies against risks which were not previously insured, and, finally, by a great increase in the total sums insured.

In the early forms of insurance the benefits were confined to persons who were comparatively well-to-do. The working-class population was altogether outside most of the schemes which had been started. The amount and the times of payment of premiums were unsuitable to the wage-earner, nor were the benefits offered of the kind of which he stood most in need. As early as 1773 a bill was introduced into Parliament which was designed to extend some of the advantages of insurance to the poor, but it failed to become law. The gradual development of Friendly Societies tended to provide some of the benefits of which the wage-earning classes stood in need (see FRIENDLY SOCIETIES). Though the first Friendly Societies Act was passed in 1793, it was some time before the operations of these societies became general. While many of these bodies have proved insolvent, others have attained a high degree of financial stability, and the growth of the benefit side of Trade Unions has also aided in extending the benefits of insurance. The general method of the organization of a Friendly Society or of a Trade Union, in relation to the part of its activities resembling those of a Friendly Society, is by the collection of contributions from the members each week. Thus the payment of what is, in effect, a premium is arranged so as to accord with the budget of the contributors. The chief benefits provided for the members are sickness, medical, out-of-work, and funeral benefits.

The essence of a Friendly Society is that it must be a voluntary organization, though it may be assisted and controlled by the State. Naturally the membership of such bodies will consist of those workers who are most thrifty. Thus, even in a city or district where there are Friendly Societies, very many of the working classes remain uninsured; and to meet this situation State insurance has been devised. Unlike all the other kinds of insurance already described, it is not permissive but compulsory. In Germany and France the idea of insurance by the Government may be traced back to the beginning of the 19th cent., since it arises out of the conceptions of Fichte, Lassalle, and Sismondi. As early as 1854 Prussian miners were compelled to belong to one of the

*Knappschaftskassen*, or associations for sick funds; and in 1883 the same rule was applied to other labourers. The next year accident insurance was established, while in 1889 old age and invalidity insurance were provided. The old age pensions in Germany are to be distinguished from those in Great Britain, since the former are contributory, the latter are non-contributory. State insurance applies compulsion not only to the worker but also to his employer. The usual method is to provide that the worker, his employer, and the State contribute.

State insurance on a large scale was established in the United Kingdom by the National Insurance Act, 1911 (1 and 2 George V. cap. 55). This scheme has two main divisions, the one relating to health, and the other to unemployment. Thus an attempt is made to provide for two of the great risks of wage-earners, namely, sickness and unemployment. As regards the first of these, it is intended that, while the payment of contributions is compulsory for all employed persons as defined by the Act whose ages are between 16 and 65, and whose remuneration does not exceed £160 a year, the administration is committed to Friendly Societies under the supervision of a Government department. What may be described as the normal rate of contribution in Great Britain is 7d. per week for men and 6d. for women. The man pays 4d. per week, and the woman 3d. per week; while, in each case, the employer adds 3d. per week. The State adds a sum which amounts to 2d. per week for both sexes. Where the total earnings in Great Britain are less than 2s. 6d. per day these rates are modified, and there is a reduced scale for Ireland. The benefits consist of medical benefit (including medicines and such medical and surgical appliances as are prescribed by the Insurance Commissioners), sanatorium benefit (being the treatment in sanatoria, in other institutions, or otherwise, of persons suffering from tuberculosis), sickness benefit, disablement benefit (comprising periodical payments to persons rendered incapable of work by disease or disablement after termination of sickness benefit), maternity benefit (being a payment of 30s. on the confinement of the wife of an insured person or of any other woman who is insured), additional benefits, which are dependent on the financial success of the Friendly Societies working the Act, and which may include additions to the amounts of the foregoing benefits, or further benefits, such as dental treatment, superannuation allowances, payments to insured persons who are out of work through infection, etc. Though the intention of the Act is that it should be administered by Friendly Societies or similar bodies, account has to be taken of those persons who, while compelled to pay contributions, are not members of a Friendly Society. These become deposit contributors. The sums paid by and for them are lodged at the Post Office, and they are entitled to benefits only till the end of the year in which the amount standing to their credit may be exhausted. Though this system is described as 'deposit insurance,' it is clear that the element of insurance is relatively small. The second part of the Act—that relating to unemployment—deals with those trades in which irregularity of work is common, *e.g.* building, construction of works, shipbuilding, mechanical engineering, iron-founding, construction of vehicles, saw-milling. Contributions are provided by the workers in these trades, their employers, and the State. Subject to certain minor exceptions, the worker and the employer both pay 2½d. per week. The normal rate of unemployment benefit is 7s. per week; there are numerous rules to prevent malingering; and provision is made for a court of referees to which the insured person may apply in case his unemployment benefit is stopped by the insurance officer.

**2. Modern insurance.**—i. RISKS OF PROPERTY.—(*a*) *Marine insurance.*—Allusion has already been made to the resort of underwriters of marine risks to Lloyd's Coffee House, and from this grew the body now known as 'Lloyd's.' While insurances on ships are effected both by the members of Lloyd's and by marine insurance companies, Lloyd's is the centre of this class of business, since the society is not only an association of underwriters, but, in addition, it has gradually undertaken important functions in connexion with the obtaining and the circulation of shipping intelligence. By means of its agents, it is in touch with all places from which ships can be reported, and thus materials arrive in London which determine the positions of ships, as well as any casualties they may sustain. Since 1834, *Lloyd's Register* has been published annually; it provides for an elaborate classification of ships according to their condition. Lloyd's is a voluntary society resembling in its constitution the Stock Exchange. The affairs of the body are managed by a committee, and each 'underwriting member' is entitled to accept risks subject to the rules of the committee. In addition to the shipowner who is insured and the underwriter who insures, there sometimes intervenes an insurance broker who acts as an intermediary between the two interests, both in the initiation of the insurance and in the settlement of any claim that may arise through it. Besides the members of Lloyd's and marine insurance companies, there is another type of this class of insurance, namely, where a shipping company, owning a large fleet of vessels, insures them itself by paying to a fund the premiums which would otherwise be handed over to an underwriter; or a company may itself insure a part of the value of its ships and place the remainder with an insurance company or with members of Lloyd's. The method by which marine insurance companies maintain their financial solvency is similar to that adopted by fire and life companies, but the way in which the individual underwriter meets his losses is not so clear. This is effected by a minute subdivision and diffusion of any 'line' he may underwrite; that is, the member of Lloyd's who insures a ship for a large sum will at once re-insure the greater part of his risk with other underwriters. In this way the stability of a Lloyd's policy is very great.

(*b*) *Fire insurance.*—Fire insurance has long been standardized. The chief offices have formed a tariff association, according to which they charge identical rates of premium for risks classed as the same. To some extent this body serves a similar purpose to that of *Lloyd's Register*, though, in the case of fire risks, the property is not capable of the same exact graduation as is possible with

regard to shipping. Originally insurance began upon a basis of specialization—that is, the early offices were established in order to effect a particular class of insurance. It was not long before a tendency manifested itself to combine the underwriting of different classes of risks. Thus in 1720 the Royal Exchange Assurance added to its marine business that of fire insurance by the purchase of an undertaking which had been formed for the latter type of risk. While labour tends more and more to minute division, industry works on a larger and larger scale. In insurance the movement towards large scale operation finds expression in the combining of different classes of risks by the same office, either by amalgamation with other companies or by the adding of new branches to its business. Of recent years in both banking and insurance the grouping together of companies, which were previously independent, has been very marked, while the combination of other kinds of insurance with that against fire has become so common that among British offices there now remain very few which confine themselves to fire risks only. There are 138 companies which made returns under the Insurance Act of 1909 as being engaged in fire insurance. The business of some of these was small, and the number which transacted a fair amount of business was about 100. In 1910 the total net premiums of British offices effecting fire insurance were returned at £29,157,780. Some of these companies insure buildings and goods in America, other foreign countries, and the colonies; but, on the other hand, re-insurances with foreign companies have been deducted.

(c) *Other insurances of risks to property.*—In addition to marine and fire insurance, certain other classes of risks have been selected for regular insurance. The chief of these are boiler insurance, burglary insurance, insurance of horses, cattle, and other animals, insurance against hailstorms (*e.g.*, in tea plantations, where damage by hail is a serious risk), insurance of licences, insurance of mortgages, insurance of plate glass, insurance of motor cars. The system of registration of packages or letters sent by the Post Office is in effect an insurance of the contents against loss or damage, and the same principle is shown in railway rates in excess of those at owner's risk. While workmen's compensation insurance and guarantee insurance appear to relate rather to persons, in principle they belong to the class now under consideration. The compensation to a worker is secured to him, once the injury has been legally established. The insurance in this case relates to the liability for the payment of that compensation, which by this device is transferred from the employer to the office which insures him against it.

The foregoing may be described as risks to property which are constant. For instance, as long as a boiler is in use, there is the risk of an explosion; or, again, in any business where the clerks have the handling of large sums of cash, there is the danger of embezzlement. There are other risks which are occasional. A reduction in the tax on tea would mean, other things being the same, a loss to merchants who held stocks on which the former and higher duty had been paid. Such a reduction of duty will be announced only in the statement at the introduction of the Budget; and hence it is usual, when changes in indirect taxation are expected, for insurances to be effected against them by those who expect to be affected prejudicially. Necessarily no insurance of this kind prevents an alteration in taxation from taking place, but it secures pecuniary compensation to those who have insured. Circumstances of this kind are numerous, since almost any considerable alteration in trade will affect some one. A prolonged Court mourning will injure businesses which are largely interested in the West End trade. The danger of a war arouses anxiety among many important interests. Further, many social functions require favourable weather conditions. In fact, a list of adverse contingencies might be extended almost indefinitely. Though the actual occurrence of any one of these is comparatively rare in comparison with the number of transactions which are subject to that contingency, it often happens that the trader who encounters the actnal happening of prejudicial circumstances loses not only possible profits but also his original capital. Hence it is usual to insure against some contingencies of this kind. Such policies are effected at Lloyd's. Thus people who would suffer in their business from a general election will sometimes take out a policy against the dissolution of Parliament within a specified period. The premium is determined by the opinion formed by underwriters as to the degree of probability of the event insured against. Transactions of this type are often described as 'wagering insurances'; and, when the possibilities as to the occurrence of the event, which is the subject of a policy, are obscure, the rate often varies very rapidly.

ii. Risks of persons.—(*a*) *Life insurance.*—The payment of a fixed sum on the death of the insured to his legal representatives may be described as the fundamental type of modern life insurance. The system requires a number of conditions, among which may be mentioned the possession of a satisfactory mortality table. This will show the average expectation of life at each age, and is important in determining the amount of the premium. The assured pays premiums annually during life, and therefore the insuring office has the interest on these, less expenses, either to add to the premiums themselves or as profit. Assurance of this type is known as whole life insurance. Life insurance offices are of two kinds—proprietary and mutual. In the latter any surplus after providing for future claims is available for the benefit of the members insured, generally by way of additions to the sums originally insured. The proprietary offices allocate a portion of their surplus funds as bonus, and the bonus is available for those who insure subject to bonus additions, and in that case the premium for whole life insurance at a given age is slightly higher than for whole life insurance without bonus. In such insurances, in any individual case, there is a gain to the representatives of the insured if death takes place before the time indicated by the mortality tables; while, on the other hand, there is a loss if that time is passed. To lessen the latter contingency insurances are effected whereby premiums are paid for a term of years, and the specified sum is handed over by the office either at the death of the insured or on his attaining a specified age. A modification of the last type is that by which, on the birth of a child, premiums are payable against which a sum is disbursed on the child attaining the age of 21 years or any other age agreed upon.

(*b*) *Annuities.*—An annuity may be either for a term of years, or for a life, or for joint lives. The insurance principle enters into all annuities for lives, since the length of time during which such annuities will be payable depends on the chances of mortality. While the principles in life annuities and life insurance are the same, each is the complement of the other. In a life annuity the insurance office receives a capital sum and pays an annual income; in life insurance this process is reversed.

The progress of life insurance has been very marked. Excluding colonial and foreign offices in the United Kingdom and also industrial life com-

panies, the ordinary life companies had a premium income (after deducting re-insurances) in 1882 of £11,658,319—a figure which increased in 1910–11 to £28,994,404. At the earlier date the income from interest and dividends (less income-tax) was £5,369,007, while at the later one it was £13,166,857. In 1910–11 the ordinary life policies numbered 2,863,851, and the amount assured was £800,215,506.

(*c*) *Personal accident insurance.*—The number of offices filing returns in 1910 was 84, and their premium income for the year was £1,829,710. Many ingenious methods have been adopted to extend this type of insurance as, *e.g.*, the printing of coupons in diaries and certain periodicals, which entitle the holder to compensation should he sustain an accident of a specified character and under certain conditions within a fixed period.

(*d*) *Other contingencies relating to persons.*—Sickness insurance is the chief of these, whereby provision is made for the expenses of an illness and, if desired, for the loss of earnings through disease. Transactions of this character are of minor importance in the business of insurance offices, whereas these are most important in the work of Friendly Societies and of State Insurance in relation to the wage-earning classes (see above, § 1).

**3. The principles of insurance.**—The general principles of insurance are fairly obvious, but they have many ramifications which require to be traced with some care. Some of the uncertainties of life and business at times involve most serious consequences to the individual, unless some method has been devised by which he can provide against them or against their pecuniary results. When Shakespeare makes all the ventures of Antonio to miscarry and 'not one vessel 'scape the dreadful touch of merchant-marring rocks' (*Merch. of Ven.* III. ii. 269 f.), the owner is confronted with ruin. But, while some ships are wrecked, many complete their voyages in safety; while some houses are destroyed by fire, the great majority escape this catastrophe; indeed, there are certain risks to which property is liable which, on the one hand, involve the total destruction of the things, but, on the other, are comparatively rare. Similarly, in the case of labour, death or illness involves the total or the temporary cessation of earning power. It is clear that these risks can be divided into classes, and all those which fall within a certain class are subject to that risk, though it may result in a loss to a very few. Further, the damage sustained by those who suffer is relatively great. Hence it is to the advantage of the members of such a class to sacrifice a small part of their income, upon condition that the estimated amount of the loss shall be made good. In the special case of life insurance the sum assured may be regarded in most instances as a compensation for the loss of income, accruing to the person who insures, either by his labour or in other ways which may be of a terminable nature. Thus, in fact, the risk of loss by a calamity which may occur to any one of a certain group is distributed over the members of that class. The method by which what may be termed 'loss-sharing' is distributed depends on the law of averages, and requires a collection of statistics. Taking the period of adult life, every one is subject to the risk of illness which would interrupt the earnings derived from his occupation; but, as between individuals such illnesses fall unequally, some may have none, others may have a few, and others may have many. Where statistics of uncertainties are available upon a sufficiently extended scale, it is generally found that an average will be established for a special kind of risk; and, therefore, the average liability to that risk can be made the subject of actuarial calculation. Accordingly, it is on this basis that the premium to insure against it is arrived at. In the absence of statistical data, any calculation of a premium is impossible. Suppose, for instance, that insurances were effected against damage to aeroplanes which occurred through their flying. If existing offices undertook this risk, any mistake in the rate of the premium would not be serious, in view of the relatively small part of such insurance as compared with the total transactions of the insuring companies. In the event of a number of new offices being formed for this class of insurance, it is probable that at first, owing to the imperfection of the data, there would be considerable variations in the rates; and, as shown by the outcome, some would prove to have been too high and some too low.

The application of the theory of insurance in practice is modified by the conditions under which the event insured against takes place. In some cases there is the danger that this event may be simulated. Life insurance is least subject to this disadvantage. In fire insurance, fraud may take the form of arson, where the insured himself creates the conditions insured against, with a view to obtaining the proceeds of his policy, should the crime be undetected. In marine insurance there is the possibility of 'barratry' in order to defraud the underwriters. Sickness insurance is subject to a greater degree of difficulty, in so far as illness may be feigned. As a general rule, those risks commonly insured against are such as admit of easy proof of loss by the claimant, and verification of his claim by the insurer. Outside the risks usually insured against at insurance offices there are other uncertainties which are similar from the point of view of theory, but which are not usually insured against in this way. A business may not suffer from fire, accidents, or losses of ships, and yet may experience most serious losses. The reason why the latter risk is not undertaken by insurance companies is that such business risks are inseparably connected with the general management of the business; and thus an office underwriting them would in effect become responsible for the management of the business (A. Marshall, *Principles of Economics*[4], London, 1898, p. 470). At the same time fluctuations in profits, due to variations in trade, enter into and form part of the expenses of the business, and thus come to be added to the prime cost of its products. The amount which it is necessary to charge under this head represents a species of premium against this risk, and attempts are made to reduce it by the making of, or the dealing in, a number of commodities the demands for which are subject to varying conditions; or, again, by securing access to different markets for the same commodity in which there is some chance that changes in demand will operate in different directions. Again, a manufacturer may insure his machines against accident, but he is subject to the further risk of the wearing out of these instruments of production, against which he provides by a depreciation fund to which a sum is contributed each year that with compound interest

will replace the value of the machines by the time they are worn out. But machines suffer not only from wear and tear, but from the risk of being superseded. In so far as this contingency differs from that due to variations in trade, a further provision will be required, and depreciation and a contribution towards obsolescence together constitute a species of insurance resembling life insurance as applied to inanimate things. In fact, this analogy has been so fully recognized that it is usual to speak of 'the life of a mine,' and the process just described is often termed 'amortization'—*i.e.* the formation of a fund which will make good the capital outlay when the source of income will have expired. In like manner, any use of capital in a business which is subject to risk may be described as having only a limited life. The principle of the spreading of risks has been applied here, partly through the agency of the joint-stock system, whereby the investor, instead of risking his resources in one enterprise which may result in a total loss of his capital, distributes his funds in several investments, and, if he displays equal judgment in each case, both his income and his capital are likely to fluctuate less on a system of dividing the risk. The same result is attained by Investment Trust companies, where the stockholder who makes only a single investment has the advantage of participating in the united results of many employments of capital. In addition he should gain by the specialized knowledge of the officials, though the practice of forming investment trusts in order to place capital in a certain country or a certain industry may lessen the full gain from a system of averaging. It is obvious that, in these instances, the method adopted is an application of the principles of insurance.

If one asks, 'Why should people risk their capital in enterprises of a hazardous nature?' the answer is not quite so easy as it might appear at first sight. A little consideration will show that the gains in appreciation of investments must at least balance the losses in depreciation, after allowance is made for the interest which would have been received on a first class security. But, as is well known, uses of capital, which are subject to business risks, commonly return a higher rate of income per cent than those that are more secure. Accordingly, the difference between the rate of interest on a perfectly secure investment (known as 'interest proper' or 'economic interest') and that returned by capital employed subject to hazard constitutes a fund as against depreciation of the capital. This difference is known as 'insurance against risk.' Such insurance, it should be noted, is only a partial one. It may be supposed to suffice to make good wastage of capital (after allowance is made for increments to capital value of other investments) on the whole and over long periods. Thus it is insurance against depreciation of trading capital over the whole community. But this is not insurance for the individual. If what may be termed the expectation of life of his investment at the time he makes it is exactly borne out by events, even though at the end of that time his original capital will have disappeared, he will have received not only economic interest but, in excess of that, a sufficient amount to replace at least the amount of his first investment. Such a phenomenon is rare: the prospects of undertakings subject to business risks change from day to day. Even though, after the investment is made, these become less favourable, he has no opportunity of increasing his insurance against risk, since its rate is determined, once for all, by the price paid for the stock, the dividend then paid, and the rate of economic interest at that time. The decline in prosperity will contract the estimated sum available for insurance against risk; and, if ill success continues, a loss of capital will result. The converse would apply where the history of a company was more favourable than had been expected at the time when the investment was made; and there might well be an appreciation of capital altogether independent of the provision available in insurance against risk.

Insurance, both in its common forms and in its wider signification, has important advantages, both for the individual and for the community. It lessens the dislocation of industry which would otherwise arise through the cessation of production by some firm that has sustained a sudden calamity through a fire which destroyed all its works, or any other similar disaster. In fact, in so far as insurance tends to make production more uniform, it tends to augment its efficiency. Similarly it makes labour more efficient also, since it relieves all those workers who have persons depending on their earnings from the harrowing anxiety as to the pecuniary position of those persons in the event of the early death of the earner of the income. Further, the system undoubtedly prevents cases of actual poverty which would otherwise have arisen. It is thus beneficial not only to the families of persons insured, but to the community. Besides, there are important psychological effects. The necessity of the punctual payment of premiums tends to form habits of saving, which are valuable towards the accumulation of capital in a country. For these reasons Governments are disposed to encourage life insurance as well as certain other forms of insurance. The encouragement takes various forms, such as the provision of statistical material and departmental supervision. In Great Britain income tax is rebated on that part of an income, otherwise subject to it, which is employed in the payment of life insurance premiums. These aids are of the nature of indirect bounties on insurance, and on the Continent cases occur where direct bounties are paid by the State. In the National Insurance Act, the principle of a double direct bounty to the insured (*i.e.* in the contributions of the State and the employer) is adopted, reinforced by compulsion. The latter element conflicts with some of the accessory advantages of insurance, *e.g.* in the formation of habits of thrift. At the same time, even in the case of ordinary life insurance, while the person who insures himself is free in law to discontinue the payment of his premiums and to obtain the surrender value (if any) of his policy, once a policy has been begun, in the great majority of cases there is a feeling almost amounting to compulsion towards the maintaining of the insurance. The problem in relation to the insurance of the working classes is in reality a choice of the line of least disadvantage. Bounties would maintain the voluntary principle, and would extend its applications under a certain artificial stimulus. Compulsion secures at once that, in a properly devised scheme, a greater number of persons obtain the benefits. Every effort has been made to conserve as much individual action as is possible, within a scheme of general compulsion, by associating Friendly Societies with the actual working of the Act.

Finally, the tendency to the more exact gradation and valuation of general business risks has important social effects. Here, too, there is a development in averaging, and thus the hazard of uncertainty tends, on the whole, to be reduced. The element of 'uncertainty-bearing' in production thus becomes more efficient. Hence, on the whole, the provision required for insurance against risk can be reduced with safety; and, therefore, *pro tanto* there is an economy in production. Further, external circumstances co-operate in increasing the

saving. Outside the risks insured by underwriters, there remain many uncertainties, which are gradually being reduced by improvements in organization, by increase in commercial knowledge and experience, and by developments in communication. The last two always afford increased opportunities of averaging, while the first lessens the amount of uncertainty, and in favourable circumstances may remove large classes of transactions from this category altogether.

Pigou, *Wealth and Welfare*, London, 1912. In addition to the above works, reference may be made to the standard works on the theory of Political Economy, in which references to insurance against risk will be found—e.g., the treatises of Bullock, Chapman, Ely, Fetter, Flux, Gide, Hadley, Marshall, Nicholson, Seager, Seligman, Taussig, Walker, and Wicksteed.

W. R. SCOTT.

**INTELLECT.**—A. Bain says:

'Thought, Intellect, Intelligence, or Cognition includes the powers known as Perception, Memory, Conception, Abstraction, Reason, Judgment, and Imagination. It is analyzed, as will be seen, into three functions, called Discrimination or Consciousness of Difference, Similarity or Consciousness of Agreement, and Retentiveness or Memory' (*Mental and Moral Science*[4], London, 1884, p. 2).

Sully (*Human Mind*, i. 64) objects to the inclusion of retentiveness among the functions of intellect, on the grounds that it is not confined to the phenomena of intellect, but underlies the processes of feeling and willing as well; that the representation, like the sense-impression, is nothing but material for the process of intellection; and that the revival of past impressions takes place according to laws of association which are closely connected with the processes of assimilation and integration. Sully substitutes for retentiveness, as the third function of intellect, associative integration or the connecting of a given material with its concomitants in time and place.

If we exclude the presentations of sense and the representations of memory and imagination, 'intellect' is the name given to the higher cognitive powers of the mind. It may be considered as identical with what Sir W. Hamilton called Thought Proper, the Faculty of Comparison, and also to include what he called the Regulative Faculty—the Faculty of Principles. So understood, it includes the νοῦς and διάνοια of the Greeks, and stands opposed to merely sensitive knowledge, although always regarded as standing in close inter-connexion with the latter.

While the above may be taken as roughly describing what intellect means in almost any system of philosophy or psychology, yet the whole significance of the description depends on the way in which intellect is conceived to stand to sensation, feeling, will, and the psychic principle itself.

In the Platonic philosophy, the soul is, so to speak, externally related to the body. It exists in the body as a detached principle, which directs and controls it, as the charioteer the chariot. Although Plato distinguishes various parts of the soul, or even various kinds of soul, still it is only through the soul considered as intellect, as pure thought, that the passions of the irrational part are known (R. D. Archer-Hind, *Phædo*, London, 1883, Introd. p. 30). The same holds true of sensuous perception (Archer-Hind, *Timæus*, London and New York, 1888, p. 256, note). As Beare says (*Greek Theories of Elementary Cognition*, p. 273),

'It may help us to understand Plato's distribution better if, distinguishing αἴσθησις as we have done into two elements, the element of feeling and the element of cognition, we refer the latter element of αἴσθησις uniformly to the intellectual soul, which has its seat in the *cranium*.'

Sensation, therefore, as known, is an affection of the pure psychic principle, and is not to be regarded as something *sui generis*, distinct from intellect. It is rather to be regarded as a phase of intellectual activity itself—intellect entering into relation with phenomena.

In the philosophy of Aristotle, the psychic principle occupies a different position. It is not related to the body as agent to instrument, but as form to matter, as *relatum* to correlate, as entelechy, actualization of what the body potentially is. It is not, in itself, purely intellectual. Not only do the merely vital activities proceed from the same principle which exerts the cognitive activities, but the latter also, at least those which belong to sense and imagination, stand in the same conditioning and conditioned relation to the organism in which the vital activities stand. If Aristotle had remained at this standpoint, he would have held a position substantially identical with modern Sensationism, as we find it, for example, in Bain, which reduces intellect to a mere self-elaboration of the fundamental attributes of sensation—assimilation, discrimination, retention—a system in which relations of similarity and difference between sensations are conceived to become the conscious apprehension of resemblance and difference as such.

Aristotle, however, did not remain at this position. He postulated the presence of a Divine element in the human soul—the νοῦς, emanating from the Divine νοῦς, and constituting the really immortal part of man. It enters from without. Aristotle's doctrine of νοῦς has been a problem from his day until now. What is its relation to sensitive knowledge? The answer to this question is contained in the celebrated doctrine of the active and passive νοῦς—*intellectus agens* and *intellectus patiens*. The active intellect is that which illuminates the sensitive phantasm and transmutes what is there apprehended into the intelligible form which is then received by the passive intellect. But this process may be conceived in different ways. Of what nature is the transmuting process? On the one hand, the active intellect may be thought to create the form, as light does colours—in other words, to generate it on the occasion of the sensuous phantasm, so that the passive intellect does not really receive anything from the phantasmata or sensible species, but rather an entirely new creation produced from itself by the active intellect. In the Middle Ages it was maintained that no material agency could act on this immaterial intellect, nor could the latter fabricate intellectual species from the material phantasm (cf. Maher, *Psychology*, p. 308; and Hamilton, *Reid's Works*[7], p. 953 f., and the references there given). The species *intelligibilis impressa* is thus elaborated by the active intellect, and received by the passive intellect, where, together with the act of intellection, it constitutes the species *intelligibilis expressa*. It is consonant with this view that the active intellect and the passive intellect should be regarded as two powers or faculties, as was held by the majority of the scholastic philosophers. On the other hand, the active intellect may be regarded as playing a far less important rôle, as not producing the intelligible species, but as simply supplying the illumination, as it were, through which the passive intellect receives the intelligible form abstracted from the sensuous phantasm. From this point of view the passive

intellect is not a distinct principle, but simply the recipient phase of the active intellect.

In which form was the doctrine of the active and passive intellects held by Aristotle himself? Intellect, he says, is 'a distinct kind of soul' alone capable of separation as the eternal from the perishable (*de Anima*, 413$^b$, 26). In *de Anima*, 430$^a$, 10–25, he says:

'But, since in all Nature there is something which is the matter to each kind of thing and is all those things potentially; and another something which is the cause and efficient in making them all, as art is related to its material, it is necessary that in the soul also these differences should subsist. The intellect is one thing because it becomes all things, another thing considered as it makes all things—as an effective force like light; for in a manner light makes what are only potentially colours to be colours actually. And this intellect is separable and impassive and unmixed, being in its essence activity; for the efficient is ever held more in honour than the patient, and the principle than the matter. Knowledge in activity is identical with the thing; potentially it is prior in time in the individual, but universally it is not prior in time. This intellect does not at one time think, at another not think. When separated, it is alone what it is, and this alone is immortal and eternal. But we do not remember because this intellect is not passive. The passive intellect is, however, perishable, and thinks nothing without this.'

Aquinas and Duns Scotus regarded not only the active but also the passive intellect as distinct from the faculty of sensuous cognition.

The following modern interpretations of the passive intellect are cited by Hicks (*de Anima*, Introd. lxvii). F. A. Trendelenburg identifies it with 'all the lower faculties in contradistinction to the active intellect,' E. Zeller with 'the sum of those faculties of representation which go beyond imagination and sensible perception and yet fall short of that higher Thought, which has found peace in perfect unity with its object,' F. Ravaisson with 'the universal potentiality in the world of ideas,' F. Brentano with 'imagination,' G. Hertling with 'this cognitive faculty of the sensitive part,' and W. A. Hammond with 'the life of sensation as a potentially rational mass,' 'the sum of the deliverances of sense-perceptions and their re-wrought form in memory and phantasy, regarded as potentiality.'

These various interpretations, with the exception of those of Zeller and Ravaisson, really identify the passive intellect with sensitive perception, imagination, or with the *sensus communis*; that is, with something which is not intellect at all. This view has been ably controverted by Hicks:

'If these modern interpreters were right in equating the intellect which becomes with one or other of the lower faculties or with the sum of them, then the function of these faculties would be identical with the function of thought, so far as the intellect becomes all things. But the lower faculties, sense and imagination, never succeed in obtaining an object which is a true universal' (*op. cit.* lxviii).

If both the active and passive intellects are distinct from the inferior faculties of sense and imagination, are they to be regarded as two faculties, or one and the same faculty? The question has been debated both in mediæval and in modern times. The answer given by Wallace, Hicks, and many schoolmen seems to be the true one. They are not two intellects, but only two different modes of viewing the same intellect. This interpretation, as pointed out above, is naturally allied to that view of the active intellect which assigns to it a very unimportant rôle—that merely of illuminating the image. As Hicks says, 'the functions of the latter [the active intellect] are then reduced within the narrowest compass.' Moreover, it is the passive intellect which cognizes, and which, therefore, seems to be identical with the conscious side. It was precisely one of the difficulties urged against the separation of the active and passive intellects that it seemed to make of the former a faculty blindly and instinctively operating. The *intellectus agens*, if distinct and viewed as creating the intelligible species, has no perception beforehand of what it creates. This difficulty is not confined to ancient philosophy. It is precisely for this reason that E. von Hartmann (*Religion des Geistes*, Berlin, 1882, p. 145) refuses to regard the creative idea as conscious. In relation to God, von Hartmann identifies consciousness not with a productive ideal archetype of the world, but with a receptive ideal ectype. The parallelism of the distinction of the active and passive reason to the pure Ego and the empirical self of Fichte, and the consequent absence of consciousness in God both in Fichte's system and in Hegel's, as interpreted by the Hegelian Left, have been pointed out by Pringle-Pattison (*Hegelianism and Personality*, London, 1887, pp. 46, 226). The present writer has maintained (*Objectivity of Truth*, London, 1884, p. 106 f.) that, alike in the human and the Divine thinking, the two aspects coincide and are to be conceived as one. Intellect in its very receptiveness is determinative, and receptive in its determinativeness. If this determinativeness is regarded as a continuously acting timeless activity, we have, perhaps, the true conception of the Aristotelian active intellect, resembling the *intuitus originarius* of Kant. An opposite view is taken by A. E. Biedermann (*Christliche Dogmatik*[2], Berlin, 1884–85, §§ 698–717), who emphasizes the diametrical opposition in the relation of the Absolute and of the finite spirit to material existence. Cf. Spinoza, *Ethics*, i. prop. xvii. schol.

The mention of Kant's *intuitus originarius* brings before us another great problem in the interpretation of Aristotle's doctrine of the intellect which we have deferred till now. Is the intellect Divine or human? There are three views possible. (1) The active intellect, *νοῦς ποιητικός*, may be identified with the Deity and regarded as communicating itself to individual men, the passive intellect, *intellectus possibilis*, *νοῦς παθητικός*, belonging merely to the individual soul. This view was held by Alexander the Aphrodisian, and by Avicenna, who, however, substitutes for the Deity a lower intelligence that has proceeded by a series of emanations from Him (Stöckl, *Gesch. der Philos. des Mittelalters*, ii. 1. 42). (2) Averroes separates both the active and possible or material intellect from the individual soul, and regards it as one and the same intellect in all men, identifying it, however, not with the Deity Himself, but, like Avicenna, with an emanation from the Deity (*ib.* 113).[1] (3) Aquinas and the mediæval scholastics regard the intellect, active and passive, as a faculty of the individual human soul. The first of these interpretations is exposed to the difficulty that it separates the active and passive intellects so that they cannot act together (cf. Aquinas, *contra Gent.* II. clxxvi.). The second interpretation makes both the active intellect and the apprehension of the rational concept the act not of the human intellect, but of an intellect outside the individual human being, and one and the same in all men. Such a conception divorces intellect so completely from the individual soul that it is hard to conceive how any tie remains between them. The third interpretation is exposed to great difficulties. Unless conceived as a distinct faculty apart from the passive intellect, it becomes little more than a phase of the latter. It can only be regarded as illuminative of the Divine creative thought, already implicitly present in the phantasm. If the active intellect is conceived as something distinct from the passive—and Aquinas did so regard it—it is difficult to understand how a merely human faculty, acting instinctively or blindly, can be creative of an intelligible species which, nevertheless, has an ideal community or identity with the independently existing phantasm. Lastly, it seems impossible to understand how a human *intellectus agens* should be in perpetual activity, still more a speculative intellect that

[1] In mediæval philosophy the *intellectus possibilis* is, in general, identical with the passive intellect. They were distinguished by some of the Arabians, but, as in that case the passive intellect is identified with some of the interpretations already rejected, a bare mention of that fact is sufficient here.

combines both active and passive intellect (see Hicks' *de Anima*, note 430, a. 22).

A solution of these difficulties in Aristotle's doctrine may possibly be found if we view him as regarding νοῦς in its relation to the human soul as a Divine-human faculty or power—on the human side active and passive at once, on the Divine ever active, for the activity of intellect is life. This agrees with the language of the *Nic. Ethics* (x. 7), that νοῦς is 'something Divine'—'the true self.'

'Nor is it necessary, as the wiseacres have it, to think like a man because one is a man, or to think like a mortal because one is a mortal, but one ought to play the immortal, as far as in one lies, and leave nothing undone to live up to the highest part in one; for even if it be small in bulk, yet in power and preciousness it far surpasses all things' (Stock's tr., Oxford and London, 1886, p. 97).

The relation of the Aristotelian doctrine of intellect to the question of the immortality of the soul depends on the relation in which intellect and sense are conceived to stand to consciousness and memory. Hamilton (*Reid's Works*, p. 878) cites a passage from Aristotle (*Probl.* xi. 33) which he translates: 'To divorce Sensation from Understanding, is to reduce Sensation to an insensible process; wherefore it has been said—*Intellect sees, and Intellect hears.*' This would lead to a Platonic view, essentially identifying consciousness with the immaterial intellect. On the other hand, if the lower animals are not mere machines, their sensuous life implies some kind of consciousness. Balmes was consequently led to attribute to them an immaterial self and some sort of possible immortality (*Fundamental Philosophy*, bk. ii. ch. 2). That the mere animal soul is a simple immaterial substance, originating and perishing with the body, was held by S. Tongiorgi, and opposed by Stöckl, who held that matter was the substrate of the organic life of brutes (*Lehrbuch der Philos.*[2] ii. 168). Unless, therefore, intellect and sensibility can be regarded as still united in some common root, to use Kant's expression, the separability of intellect from the body seems to involve the division of consciousness itself. The doctrine of Aquinas regarding memory seems to involve a similar division of that faculty, the cognition of the past object in itself belonging to sense, and intellect preserving only the intelligible species, yet having, nevertheless, in relation to the act of intellect, though not to the object, a cognition of the past as such (*Summa*, I. qu. lxxix. art. 6). The real significance of Aristotle's doctrine of the intellect in its bearing on the immortality of the human soul has been disputed in every age. W. Archer Butler says:

'It it not sufficient to satisfy the demands of human anxiety on this subject, that an eternity should be pronounced essential to an active intellectual principle, which itself seems described as unable to exercise any conscious energies apart from the bodily structure; a quickening essence whose very existence retreats into nothingness when it is left nothing to quicken' (*Lectures*, p. 558).

The changed point of view from which intellect is regarded in modern philosophy appears in Spinoza. The intellect, whether finite or infinite, is regarded by him as only in actuality, not in potentiality; but then this intellect belongs, not to active but to passive nature, not to *natura naturans* but to *natura naturata* (*Ethics*, I. prop. xxxi.). Hence it does not represent a power standing over against nature, but one which is identical with nature. The same changed standpoint shows itself in Leibniz's addition to the scholastic formula, 'Nihil est in intellectu quod non fuerit in sensu, nisi intellectus ipse.' Intellect or reason is conceived in Leibniz and Kant as possessing a content essentially related to the objects of nature.

We have already had occasion to mention the conception of intellect which we find in the Association school. This school makes feeling, sensation, the fundamental phenomenon of psychical and of rational life. Intellect, intelligence, is only the development of the most fundamental features of sensation. Similarity, discrimination, retention, beget by means of the continued action of association the cognitive apprehension of objects distinct, or apparently distinct, from sensations themselves. It is unnecessary to repeat the well-known criticisms to which this doctrine is exposed. The unity of consciousness, through which similarity and difference are recognized, and which imparts significance to retention, is unexplained. In general, Associationists put the cart before the horse. In the most important activities of mind, phenomena are associated because they are cognized as related, not cognized as related because certain psychical events are associated. The same applies to the Herbartian school. As Höffding says, 'Consciousness is not merely a platform on which ideas carry on their struggle for existence; it acts itself in and through the individual ideas' (*Outlines of Psychology*, Eng. tr., London, 1896, p. 144).

Owing perhaps to the influence of A. Schopenhauer and F. Nietzsche, a tendency has shown itself in recent philosophy, especially in Pragmatism, to regard intellect no longer as the refined product of Association, but as the creature and instrument of the will.

According to Schopenhauer, 'nature has produced the intellect for the service of an individual will: therefore it is destined only to know things so far as they furnish the motives of such a will but not to fathom them or apprehend their essence in itself' (*Werke*, ed. J. Frauenstädt, Leipzig, 1877, iii. 156). To Nietzsche 'Reason is only a tool' (*Jenseits von Gut und Böse*, do. 1896, p. 122).

The possibility of conceiving the force in nature as will, impulse, does not directly concern us here, but the possibility of so conceiving the fundamental principle in mind does. When it was thought that we had in the sense of effort an immediate consciousness of energy expended, it was not unreasonable to regard the consciousness of effort not only as determinative of many of our most intellectual perceptions, but even as affording a glimpse into the metaphysical nature of reality. But, now that the existence of such a feeling is generally rejected, it is difficult to conceive the stream of consciousness merely as such as presenting a conative aspect. According to G. F. Stout, the process of consciousness is *in part* self-determining. There is in it a current, a current which it feels, a tendency towards an end (*Manual of Psychology*[2], London, 1907, p. 64 f.). Through this conative tendency the presentations of consciousness acquire objective meaning, and in general through conative continuity the processes of consciousness acquire meaning and significance. This theory seems exposed to the same objections as the Association theory. Such consciousness of an end, however vague, implies the presence of an intellectual power which already differentiates such end from the current tending towards it. Only so can the current feel itself to be tending towards an end.

A much more decidedly voluntaristic explanation of intellect is involved in H. Münsterberg's 'Action Theory' (*Grundzüge der Psychologie*, Leipzig, 1900, i. 525). According to that theory, the liveliness of a sensation depends on the strength of the centrifugal excitation propagated from it. Sensory excitation is not in itself accompanied by psychical processes, whether the excitation proceed from the periphery or from associated centres. The afferent process is thus wholly unconscious; only in its passage into motor discharge does it give rise to consciousness. The cerebral cortex,

which is the seat of the psycho-physical processes, must, in order to produce movements, act on sub-cortical centres. Every sub-cortical centre stands always in connexion with an opposite centre, viz. the centre which carries out the diametrically opposite movement. This fact, according to Münsterberg, is the basis not only of all motor antagonistic functions, but also of all psychical oppositions, even such as are purely intellectual and logical. Opposition of beliefs is reducible to difference of attitude in regard to our activity in the world. Upon the spatial variations in the discharge depend the varying intellectual values of the sensations. This theory is exposed to serious physiological and psychological objections, and its application in detail has not yet been given by the author. It is necessary only to mention that, at the point of transition to motor discharge, the author seems to postulate the action of a spiritual principle which determines the path of discharge and the consequent attitude of the agent to the world. It is here that the author's relation to Fichte comes in, whose ethical idealism he claims to unite with the physiological psychology of our time. The voluntaristic theory must not be confused with the practical Reason of the Scholastics. The latter refers merely to the application of reason to the harmony of action with nature and its final end.

The voluntaristic conception of intellect appears in an interesting form in the writings of H. L. Bergson. To Bergson intellect is but a special instrument created by that *élan vital* which lies behind the whole process of evolution. This instrument reveals not truth, but utility. It acts not by unveiling the nature of things, but rather by limiting and falsifying the larger intuition of reality which flows through the vital impulse out of which consciousness itself issues. The falsification, however, works; it is useful for directing our activities, and is justified by its results. In fact, it is these activities which give us the forms of things. It is with inert matter, the solid, that our intelligence deals: the fluid in the real escapes it in part. Of the discontinuous and immobile alone can it form a clear idea. 'Intellect is characterized by a natural inability to comprehend life' (Bergson, *Creative Evolution*, Eng. tr., London, 1912, p. 174). Intellect and matter have progressively adapted themselves one to the other 'because it is the same inversion of the same movement which creates at once the intellectuality of mind and the materiality of things' (*ib.* 217). It does not appear how such a movement, even if it existed, could explain the adaptation of intellect to the object. Thought may in determining its object be determined by it (Stokes, *Objectivity of Truth*, p. 58 f.), but, except in the individual, this reciprocal determination does not take place as a mere process in time.

But, just as much as the psychological theories we have considered, does Bergson's biological theory of the origin of intellect imply intellect itself as already existing. He postulates a consciousness or supra-consciousness lying behind intellect. The sympathetic insight by which we penetrate the mobility of things, the supra- and ultra-intellectual intuition by which there is a taking possession of the spirit by itself—these conceptions are but intellect itself, misconstrued and misunderstood. It is the problem of the *intellectus agens* once again. Philosophy here treads the same ground which the followers of Aristotle have trod, and meets the same difficulties.

Grant, however, that intellect is somehow evolved out of, and is grappling more or less successfully, if not with the mystery, at any rate with the practical working of things. What does this amount to? It means at least that the key fits the lock, and that the lock is fitted to the key. It means that nature in its working is relative, in large measure, to the concepts which intellect has framed; therefore, in still larger measure to the intelligence which has framed these concepts and will still frame others, by which nature itself will be better understood—a process which can be justified only on the presupposition, which is common alike to Aristotelian philosophy and Absolute Idealism, that nature is relative to intelligence, that *νοῦς* governs all.

**INTELLECTUALISM.**—In its popular and most general sense, 'intellectualism' means the belief in the supremacy in human life of the intellect. More precise, technical meanings of the term appear in the theory of knowledge, in ethics, and in theology.

1. In the theory of knowledge, intellectualism is the doctrine which derives knowledge chiefly, or mainly, from the intellect, *i.e.* from pure reason. Intellectualism is here practically synonymous with rationalism (*q.v.*), and stands opposed to sensationalism (*q.v.*). Whereas intellectualism affirms that reason is the unique or the principal source of knowledge, and that knowledge so derived is independent of, and superior to, the impressions received from the outside world through the senses, sensationalism affirms that general ideas arise from sensations. In its extreme form, sensationalism maintains that independently of sensation the mind is a *tabula rasa*, that there is nothing in the mind that was not first in the sense. One may also oppose to intellectualism the systems of thought represented by Schopenhauer's philosophy, in which the 'will' is given a dominant rôle in the determination of action and the discovery of knowledge. German philosophy has been dominantly of the intellectualistic type, while sensationalism has found its most numerous exponents in France (Condorcet, d'Alembert) and in England (Locke, Hume).

The method pursued in the search for knowledge will differ according to the conception formed of its source or sources. The pure intellectualist will rely altogether upon the *a priori*, deductive method, the pure sensationalist upon an empirical, inductive method, since knowledge comes, according to him, through sensory experience.

2. In ethics, the intellectualistic doctrine affirms that knowledge is in itself sufficient to determine action. Socrates is the first and the chief representative of ethical intellectualism. According to him, no one does wrong knowingly. Sin is error, *i.e.* ignorance; for no man purposely injures himself. This doctrine is opposed by the Stoics, on the ground that the will is not altogether determined by knowledge, but is, at least in some degree, self-determined. Aristotle differed from Socrates in that he held it possible for desires arising from insufficient knowledge to be stronger than those proceeding from full knowledge. He thought, therefore, that the practice of virtue required not

only right insight, but a training of the will, by which it became able to resist the stronger allurement of unenlightened desire and to follow the dictates of reason. Ethical intellectualism reappeared in the modern period, particularly in the English moralist, S. Clarke.

3. In theology and in the philosophy of religion, the intellectualistic tendency leads to a more or less complete neglect of feeling and of will, impulses, and desires, in favour of thought—this both in the problems of the origin and in those of the nature of religion. A consequence of this tendency is that certain ideas, or systems of ideas, necessary to religion are identified with religion, or are treated as if they constituted the whole of religion. Thus, religion is defined as 'a department of thought having for its object a self-conscious and intelligent Being' (G. J. Romanes, *Thoughts on Religion*, London, 1895, p. 41), or as 'an attempt to explain human experience by relating it to invisible existence' (G. T. Ladd, *Journ. of Phil., Psych., and Scientific Methods*, i. [1904] 9). Martineau's definition also puts the emphasis upon a belief: 'belief in an ever living God, that is, in a Divine Mind and Will ruling the Universe and holding moral relations with mankind' (*A Study of Religion*, Oxford, 1888, i. 1).

In the solution of the problems of origin, intellectualism leads to an exclusive concern for the genesis of the ideas upon which the existence of religion depends, to the neglect of the other aspects of religious life, in particular of the emotions and of the ceremonial. Intellectualism is here opposed to affectivism and to voluntarism. The first emphasizes the feeling and the emotion; it looks upon some particular feeling as being the 'essence' or the 'vital part' of religion. Schleiermacher's standpoint is an affectivism mitigated by an explicit recognition that feeling and activity are inseparable, though distinct. For him the essence of religion consists in the feeling of an absolute dependence upon God. In voluntarism a more comprehensive point of view displaces both intellectualism and affectivism. It recognizes that religion is a mode of life, and that it involves necessarily—as does every pulse of life—ideas and feeling; and, in accordance with contemporary psychology, it insists that these exist only as a part of a conative act. There can be no thinking and no feeling without desire or intention. Religion comes, thus, to be looked upon as a particular type of activity, or mode of behaviour (J. H. Leuba, *A Psychological Study of Religion*, London, 1912, pp. 35-45).

J. H. LEUBA.

**INTELLECTUALISM (Philosophical).**—1. **Historical survey.**—The term 'intellectualism' had originally nearly the same meaning as 'idealism,' and it is so used, *e.g.*, by Schelling. As the intellect was regarded as the proper representative of the human mind in its entirety, the word 'intellectualism' seemed to be the most fitting designation of the philosophical view that stands opposed to materialism. It is only within recent times that the word has acquired a derogatory sense, and has come to signify a theory which exalts the mere intellect at the expense of other elements of the mind, such as emotion and will.

Ever and again, in the course of historical development, there emerge periods in which the intellect—reflective thought—usurps the place of command, and these periods are always coincident with an advance in culture and a more conscious mode of life—conditions in which principles hitherto assumed to be self-evident begin to show themselves insecure. As a matter of fact, the intellect is originally by no means the decisive factor in all aspects of civilized life. The truth is, rather, that all primitive culture contains a non-rational and positive element. This is seen, *e.g.*, in the fact that the beginnings of human knowledge and action are at first traced to a divine source. Tillage, handicraft, measures, weights, art, language, moral laws, legal systems, and political constitutions are all believed to have been given by divine revelation, and anything like fundamental criticism of them is therefore debarred. Or ancestral custom and immemorial tradition continue to rule with an authority that seems self-evident. Then all at once the hitherto unchallenged is assailed by doubt. External conditions and the inner life have alike undergone a change. The question arises why any particular institution should be precisely as it is and not otherwise, and there springs up a desire for a rational vindication of things. The time has now come when the intellect asserts its independent power. In what had previously been received *simpliciter*, it now discovers defects, impossibilities, contradictions. Nothing shall count as authoritative that has not stood the scrutiny of the intellect. We have come to the stage exemplified in the Sophistic movement of Greek philosophy.

The beginning of the modern period shows a no less powerful advance of the intellectual factor. The unity of mediæval culture was broken up by the Renaissance and the Reformation. It is true that, although the Renaissance and the Reformation did not originate in purely intellectual considerations, they availed to liberate the intellect by setting up, alongside of the institutions of the Middle Ages, other institutions having equal claims. For, when rival forms of cultural life thus stand side by side, the questions arise which of them can give the best reasons for its existence, and whether some other form is not possible; and, when such questions arise, it is in reality the intellect that is called upon to give a decisive answer.

This is clearly shown with reference to the question regarding truth. To the mediæval mind truth was really tradition. The mediæval period was not one of rigid repose. It had its own spiritual movements and its own problems; witness the controversy between the Thomists and the Scotists. While Thomas Aquinas regards natural knowledge and the supernatural truth of revelation as combining to form the one vast and regularly graded kingdom of reason, Duns Scotus considers the truth of the Church's doctrine to be something totally irrational. But these antagonistic views are both at one in assuming that the truth is actually there; that it requires, not to be discovered, but simply to be handed on from one generation to another. The Church is in possession of the truth, and she is its guardian. The Renaissance and the Reformation brought about a change—though not, indeed, a radical one, inasmuch as the intellect as such was not yet invested with the function of discovering and safeguarding the truth. The Renaissance itself was partly involved in a tradition, though not so much in that of the Church as in that of classical antiquity, while for the Reformers the Bible, as the Word of God, came to rank as the foundation of all knowledge of the truth. But, when materially diverse truths, resting on different grounds, come into conflict with one another, the eventual result must be that the intellect acquires a larger measure of independence. The various truths must necessarily operate and dispute with the same principles of reason, and hence the conviction gradually gains ground that the credentials of truth are to be

found in the reason—in the intellect—and nowhere else.

But these movements give rise to great incertitude. All real, as apart from merely formal, truth is reduced to an unstable condition. In all things a new foundation must be laid, a new structure raised. The intellect finds itself face to face with a stupendous task. But it claims the right to believe that the solution of the difficulties is within its powers. For there is one kind of knowledge, viz. mathematics, upon which doubt has never been able to lay its hand. Now, mathematics is without question an affair of the reason; it does not rest upon divine revelation, or upon venerable tradition, but is entirely a product of the intellect. If, therefore, the intellect has succeeded so well in this sphere, why should it not prove equally successful elsewhere? Mathematics thus comes to be regarded as the pattern of knowledge, and a close alliance between it and philosophy is the result. The powerful influence of mathematics is clearly discernible in the systems of Descartes, Spinoza, and Leibniz. In alliance with mathematics the intellect gains a secure standpoint and a robust self-confidence. It now undertakes the task of framing clear and distinct conceptions, and of exposing to view the ultimate grounds of existence. It claims that the essential nature of the world, the fundamental unifying principle of all things, and thus also the decisive laws that regulate the life, action, and conduct of human beings, must all yield their secrets to thought and its methodical procedure. Nor is the intellect content to assert its supremacy only in the sphere of scientific knowledge; it extends its claim of authority also to morality, law, religion, politics, economics, and art. Men are fully persuaded that by means of intellectual action in all departments of human life obvious principles of truth can actually be drawn from a state of affairs which has proved unsatisfactory and is incapable of justification, and thus there spring up a natural jurisprudence, a natural morality, a natural religion; political constitutions are drafted, rules are drawn up for economic life, laws are formulated for art. In addition to the philosophers specially noted above, this movement is associated with the names of Hobbes, Shaftesbury, Montesquieu, Lessing, Adam Smith, and many others.

The intellectualistic tendency was enormously reinforced by the rise of modern physical science and technical craftsmanship. As in mathematics, so also here, we find an indisputable contribution of the intellect. By means of observation, calculation, and skilfully devised experiments, the most amazing results have been achieved. Intellectualism continued to make steady advance from the 17th cent., and, notwithstanding the rise of opposing tendencies, it reached its culminating point in the 19th cent.—in the philosophy of Hegel.

Great as was the reliance placed upon the intellect, however, it had been noted that its special function was exercised in discovering and elucidating, not in creating. In all that it had achieved it had proceeded upon something which it had not itself produced, which confronted it as something given and already existing. Even mathematics and kinematics were seen to depend ultimately on space and time—on entities, that is to say, which the intellect could not evolve from itself, but must in some sense recognize as given to it. The fact was still more obvious in the sphere of physical science, where the intellect could not advance a single step except in contact with the objective facts of perception. But in other spheres as well—in ethics, law, religion, politics, economics, art—intellectual activity encountered ultimate elements, such as God, freedom, immortality, enlightened self-interest, the struggle of each against all, etc., which the intellect could not create from its own resources, but could only expose to view. In the light of such considerations, however, the entire work of the intellect might seem to become insecure. For the question as to the relation between thought and reality might be answered in such a way as to deny that the intellect was capable of comprehending the real at all. In point of fact the Kantian philosophy had restricted the function of the intellect to the logical articulation of phenomena. It was then surmised that the intellect could without dubiety apprehend the veritably real only if what had hitherto been regarded as given, as prior to experience, was itself in the last resort the creation of the intellect. To show that this was actually the case was the task undertaken by Hegel. On the Hegelian theory all reality whatever is an absolute process of thought, a self-unfolding of the absolute idea, the essential nature of which is logical; thought and existence are identical. Hegel describes how the absolute idea externalizes itself and so becomes nature—the world of space and time; how the finite spirit issues from the world, and how in the process of historical development it realizes itself in its essential identity with the absolute spirit. The entire development proceeds with logical necessity. In this system, accordingly, the intellect assumed the position of absolute sovereignty, and, although it did not hold that position long—the Hegelian philosophy being soon superseded—yet intellectualism was not thereby set aside. It still continues to exercise a powerful influence, as may be clearly seen, *e.g.*, in the system of H. Cohen, whose great work, *Die Logik der reinen Erkenntnis*, Berlin, 1906, is based upon the idea that thought and being are one, that the foundations of being are actually created by thought. Whole sections of this work are thoroughly Hegelian in tone, and, in fact, Hegel's mode of thought has in our own time experienced a revival both in Britain and in Germany. On the other hand, intellectualism has always encountered a good deal of opposition. In every definite theory of empiricism, as represented, *e.g.*, by Locke and Hume—in every system, that is to say, according to which the function of the intellect is one of mere passive receptivity—there subsists also an anti-intellectualistic spirit. Reference has already been made to Kant. When Fichte and Schelling exalt moral volition or artistic intuition above the intellect, their thought really moves on anti-intellectualistic lines. Schopenhauer finds the ultimate cosmic force in a mysterious will, and in this connexion mention should be made also of von Hartmann, in whose system, however, there is a Hegelian strand. But the authority of intellectualism has been challenged above all by modern psychology. Wundt has endeavoured in his great works to win recognition for the volitional element in all life, so that his philosophical theory may be appositely described as voluntarism. Heinrich Maier, in a notable work entitled *Psychologie des emotionalen Denkens*, has drawn attention to the fact that besides 'cognitive' thought there is also an 'emotional' thought, which, while it contains logical elements, is nevertheless guided by feeling and will. An extremely anti-intellectualistic position is taken also by pragmatism—a product of British and American thought—of which the leading representatives are W. James, J. Dewey, and F. C. S. Schiller. According to this theory, the intellect is *per se* incapable of deciding what truth is. Only that which justifies itself to living experience is to be accounted true, so that the intellect is here subordinated to life. Reference should also be

made in this connexion to Vaihinger and his significant work, *Die Philosophie des Als Ob.* On Vaihinger's theory the function of the intellect is not the discovery of truth, but the pre-calculation of occurrences which are to be designated as sensations (*Empfindungen*). The most delicate creations of the intellect—those which it produces for that purpose—are not reproductions of the real, but fictions.

To these psychological and philosophical movements a fresh anti-intellectual tendency has been added by the recent emergence of a new æsthetic culture. The inadequacy of purely intellectual attainments is increasingly being felt on all sides. The over-estimation of the intellect, with its tendency to reduce all to a uniform level, its indifference to individual qualities, and its elimination of the subjective factor, is blamed for the impoverishment of the inner life and the repression of all true individuality of character, while, on the other hand, it is felt that art, with its eager interest in the concrete, its sympathetic understanding of individual characteristics, and its creative force, should be the guide to a richer, deeper, and fuller life. These considerations have brought about a complete revolution, as, *e.g.*, in the educational sphere. Thus, while the views disseminated by Herbart—views designed above all things to secure intellectual lucidity in education—held until quite recently a position of almost unchallenged authority, they are now to a very great extent discarded. 'Art in child life' has become a widely recognized maxim in contemporary pedagogics.

Yet the intellect, in spite of all these counter-movements, and in spite of the active depreciation which it has had to encounter, still continues to assert its power and its indispensability. It is obvious that mere negation will not answer here, and that the question regarding the significance of the intellect requires further investigation. Of contemporary thinkers, Eucken, in particular, has submitted the problem to searching treatment. He, too, strives earnestly to transcend anything like mere intellectualism. It is a fundamental doctrine of his philosophy of the spiritual life that the spirit of man involves more than intellectual activity, that the spirit in its entirety is richer than the intellect, but also that the intellect belongs to the spirit, and that the proper development of the spirit is impossible without intellectual action. He certainly admits that the intellect cannot of itself alone evolve any complete reality. It can act only when it has something else—something that does not originate in itself—to act upon, as can be clearly seen in the sphere of natural science. Here the intellect, however far-reaching and comprehensive its activity, is forced to keep in touch from first to last with given facts, with the world of experience. And the like holds good in every other department of human life. Ethical laws and ideals, religious convictions, and æsthetic intuitions are not products of the purely intellectual function, but have their rise in deeper regions of the spirit. If the intellect relies upon itself alone, it moves in a realm of merely formal concepts; and if, nevertheless, it aspires to create a reality, yet this reality has, in point of fact, come to it from elsewhere—only the intellect does not itself realize this, or else the fact is screened from view. In such cases the sources from which the intellect has surreptitiously drawn are empirical and spiritual experience. This, however, does not exclude the recognition of the fact that, conversely, knowledge and life, whatsoever their nature may be, can make no proper progress without the co-operation of the intellect. The intellect sifts and combines; it clarifies and moulds. It is present in all experience, and its presence is unconditionally necessary if a completely articulated and ordered reality is to be attained at all. What could we make of sensations, which to-day are often held to be the truly real, if the intellect did not impart itself to them? They would be something inert, orderless, chaotic, and, in the last resort, absolutely null. Similarly, morality, religion, and art can never attain lucidity apart from the action of the intellect. Its critical action is, indeed, essential to the very possibility of their progressive development and refinement. In what a rudimentary condition would not art have been doomed to remain if the intellect had not taught it how to look at human life and the surrounding world? By such considerations does Eucken seek to maintain the rights of the intellect, yet without making it the sole authority in human life.

We arrive at results similar to those of Eucken by a consideration of the fundamental character of reality. That fundamental character stands in a peculiar relation to the tendencies of the intellect. The intellect strives to rationalize all reality, to bring it under calculation, to view it as necessary; and its ultimate aim is to construct a formula which will embrace all that occurs in the world, and which is capable of determining the actual condition of things at any particular moment. To a large extent, moreover, reality submits to this procedure of the intellect. But there is always a point at which all the efforts of the intellect must necessarily fail. The great instrument of the intellect is law—the formula. Law and formula, however, are necessarily general in character, and may be made to comprehend as many particular instances as desired. But they cannot determine what particular instance will actually emerge. Thus the formulæ of the law of gravitation would hold good precisely as they do even if there were more or fewer planets in the solar system. It does not follow from the law of gravity that its formulæ shall apply to that particular system, and no other. In a word, laws and formulæ are in their nature merely general, while the real is in all cases special and concrete, and accordingly reality refuses to be completely rationalized. The real might be described, indeed, as an intermixture of the rational and the irrational, or positive—an intermixture in which, however, the latter factor predominates over the former, since the rational can operate only in contact with a positively given object, apart from which it moves in a mere vacuum, and with all its efforts produces nothing.

This is true not merely of the reality which meets us in our external experience, but also of that which we call spiritual. In the moral sphere, for instance, we are confronted by various alternatives: there may be a morality of enlightened self-interest and one of self-denial; a morality which affirms and one which negates the world; a morality of rigid justice and one of benevolence; a morality of natural selection and one of religious ends. The intellect cannot claim to have produced any of these, nor can it demonstrate that any one of them is exclusively authoritative. It may certainly be employed in combating or defending any of them, but the individual's acceptance of a particular ethical tendency rests ultimately upon a personal decision which is incapable of logical explanation. Once the decision is taken, however, the intellect may render valuable service in illuminating, elucidating, and developing the theory chosen.

Every genuine work of art, again, is an absolutely individual and unique creation. To interpret a work of art as due to an application of unvarying universal rules is utterly to misunderstand it; thus Richard Wagner was undoubtedly

right in protesting against the notion of an absolute work of art, *i.e.* a work which would be simply the result of universal laws valid for all time and under all conditions. To desiderate such a work would involve the establishment of an absolute intellectualism in the sphere of art. As a matter of fact, the general laws of art are mere abstract deductions from existing works of art or from the achievements of a particular period, and a new creation or a new period will give rise to new laws. Such laws may serve as a means of comprehending and interpreting what already exists, but they have no creative power of their own. Thus in ethics and art, precisely as in science, mere intellectualism always works to the prejudice of reality, while, on the other hand, the action of the intellect is not only valuable, but indispensable.

2. **Intellectualism in religion.**—It is not necessary here to refer to the various forms of religion; it will suffice to elucidate the relevant facts as they appear in Christianity. Christianity in its original form made not the slightest claim to serve as a rational interpretation of the world; the love of God, the expiatory death and the resurrection of Christ, immortal life, and eternal salvation—all these come before us as something absolutely incomprehensible, something which no human reason can attain to, and no human understanding excogitate, which eye has not seen, nor ear heard, neither has entered into the heart of man. That rational proofs are of no avail here was an emphatic conviction in the mind of St. Paul. Nevertheless, intellectualism very soon found its way into Christianity, and, indeed, by the time of the early apologists, Christianity had come to be regarded as the true philosophy. In Alexandria the endeavour of Clement and Origen to reconcile their religion with Greek philosophy served to further the process of rationalization. The fact that these theologians regard γνῶσις as the highest attainment possible to man, and that γνῶσις, as pertaining to the perfect, is considered to be unequivocally superior to πίστις, which is all that the ordinary member of the community can aspire to, simply implies that the Christian religion had opened the door to intellectualism. The conception of the Logos also played an important part in the rationalizing process. This conception, on the one hand, was in every respect a product of scientific thought; it signified the cosmic idea, and by means of it the world was to be made intelligible, to be rationalized, and interpreted, while, on the other hand, it is used in the Fourth Gospel to enunciate the eternal deity of Jesus Christ, and, although here the Logos is certainly brought into relation with the world, yet the conception is in no sense a scientific one, but purely religious, since the point in question is not the possibility of a rational interpretation of the world, but the dignity to be assigned to Christ. Nevertheless, the conception served in part to bring various types of thought into contact with one another, and even to fuse them together. Thus arose a disastrous intermingling of ideas, bringing great perplexities in its train. For one thing, correct knowledge was now considered to be the most important element in religion, and, on similar grounds, heresy was accounted the gravest of sins, while, again, this position was constantly disputed by the natural conviction that religion is concerned with something else—something more essential than mere knowledge. Religious knowledge, moreover, could not even attain to lucidity with regard to itself. On the one hand, it was regarded as being of the same nature as rational truth, *i.e.* the type of cogitation found in logic, metaphysics, and mathematics; on the other, the feeling that religion has essentially to do with an entirely different kind of truth, with a positive and non-rational truth, could never be wholly suppressed. A wavering between the two sides runs through the entire mediæval theology; and, while Christianity sought to defend itself against intellectualism, it was never able actually to free itself from its grasp.

The work of Luther, in virtue of which faith was once more invested with its proper prerogative, effected an emancipation of religion from intellectualism. Faith is now interpreted as trust in the grace of God manifested in Jesus Christ, and thus alike in its character and in its object is no mere matter of knowledge. Trust is never the outcome of purely intellectual reflexion, while the grace of God in Christ is something that transcends all rational credentials and intellectual demonstration. Nevertheless, intellectualism soon re-asserted its power in religious things, even in the Churches of the Reformation. Faith came to be identified with the recognition of true doctrine, and this intellectualistic interpretation proved most detrimental to religion, and long stood in the way of a better understanding of what religion really signifies. In orthodoxy, in the Illumination, in rationalism and supra-rationalism, intellectualism held unbroken sway. The substance of what was regarded as religious truth was certainly of a very heterogeneous character, but the essential interest was in all cases a kind of knowledge which is accessible to the intellect and upon which the intellect can arbitrate. The views of Bayle, who emphasized the non-rational character of religion, and those of Spinoza, as set forth in the *Tractatus Theologico-Politicus*, were of a different trend, but remained in great degree inoperative. Nor was the distinction which thinkers now began to make between religion and philosophy able as yet to deliver the former from the bonds of intellectualism, though it was certainly an earnest of better things.

It was in reality Kant who first succeeded in overthrowing the supremacy of intellectualism. By drawing a rigid distinction between theoretical and practical reason, by limiting the action of the former to the sphere of phenomena, and by denying its right to decide any question regarding religion or its object, Kant laid the foundation—we cannot, indeed, say more—of a truer understanding of religion. He himself did not attain to a well-grounded conception of the distinctive character of religion, inasmuch as, basing it upon morality, he virtually treated it as identical therewith. The first to see in religion a spiritual entity with a distinct character of its own was Schleiermacher, who maintained that the religious sense is *per se* neither knowledge nor action, but a condition of immediate self-consciousness—the feeling of absolute dependence upon God. Whether this definition is in all respects satisfactory is a question for separate discussion; but at all events the merit of having recognized the specific nature of religion, and thus of making it secure against the aggressions of intellectualism, is unquestionably to be ascribed to Schleiermacher.

A glance at the history of theology since Schleiermacher's day shows us, however, that the dangers of intellectualism were not removed all at once; on the contrary, we find everywhere a struggle between intellectualism and anti-intellectualism. Another mighty wave of intellectualism passed over religion as a result of the Hegelian philosophy. The influence of Hegel operated powerfully upon many theologians, and here special mention should be made of F. C. Biedermann, who sought to express the essential elements of religion in abstract logical categories. Reference should also be made to O. Pfleiderer, of whom it may be said that he considered the proper content of religion to be ultimately a type of truth capable of philosophical

proof. This new endeavour to rationalize religion was challenged by the Erlangen theologians and by the school of Ritschl, of whom in particular W. Herrmann has fought against the harmful influences of intellectualism in the religious sphere.

On the whole, we may venture to say that the danger of an intellectual interpretation of religion is now much less than it was. This is due variously to the insistent appeal of Ritschl and his followers to the Gospel as the criterion of all Christian belief and doctrine, to the historical investigation of religion, with its discovery of a vast mass of material which defies all rational explanation, and, finally, to religious psychology, which serves to bring the unique character of religion into fuller relief. It is not thereby implied, of course, that the history and psychology of religion may not be used in the interests of intellectualism, as, *e.g.*, when religion is repudiated altogether. In that case religious history may simply be drawn upon for materials to illustrate the story of human error, while religious psychology really becomes a study of the disorders of the human soul. Quite recently an endeavour to preclude this application of religious psychology has been made by Wobbermin (see Lit.), who makes a sharp distinction between the psychology of religion proper and the psychology which is concerned with religious phenomena. The former, according to Wobbermin, presupposes the existence of religion in the investigator himself; the latter does not. It is only the former, however, that can arrive at a true understanding of religion, while the other, dealing with religious phenomena, is concerned merely with the externals of religion. Religious psychology in this special sense is antipathetic to mere intellectualism. We are therefore justified in asserting that in the sphere of religion powerful anti-intellectualistic forces are in operation at the present day.

**3. The significance of the intellect in the religious sphere.**—It is quite obvious that the intellect is not the most important factor in the religious view of things. A fundamental element in every religious conception of the world is the conviction that God infinitely transcends all human existence. This involves the inscrutability of God, and thus also negatives the claim of the intellect to be supreme. The intellect finds itself confronted here by an absolute limit, since the inscrutable cannot be brought within its capacities. The inscrutability of God is the indispensable pre-condition of religion; it is not something that might be surrendered without detriment to religion; on the contrary, religion stands or falls with it. God would not be God if He were not inscrutable. Nor is the inscrutableness of God merely one postulate of religion among others; it permeates everything embraced by religion. Thus, the fact that the central element of Christianity is the redeeming love of God is a blessed, but at the same time an incomprehensible, mystery. Of every genuine religious utterance it will be found to hold good that it breathes the conviction that God is inconceivable. In religion there is something before which the intellect must abase itself, and its every claim to autocratic authority is utterly silenced.

On the other hand, disparagement of the intellect finds no justification in religion. It would be an error to regard the intellect as alone, of all the functions of the human mind, hostile to religion, and to assume that the others are more intimately allied with it. Even morality, for instance, is in itself no more akin to the divine than is intellect. It is possible to have a morality which positively surpasses the intellect itself in its antagonism to God and religion. Religion, moreover, must insist upon the fact that the intellect too belongs to God; that it is a gift of God which may be used in His service, and indeed ought to be so used. Hence religion itself requires that a high value shall be set upon the intellect, which, nevertheless, must be satisfied with a position below the highest.

Here, however, the question arises whether in at least one particular reference the last word does not lie with the intellect. When we come to deal with the unavoidable problem regarding the truth of religion, is it not the intellect alone that must decide? To what other competent tribunal can we appeal for judgment? Self-evident as the answers to these questions may appear, it is nevertheless to be observed that the intellect would be able to maintain its sovereignty only on one of two conditions, viz. that it creates religion, or else abolishes it. Hegel undertook the task of evolving religion from the intellect, but any such deduction must inevitably founder upon the fact that religion has to do with the inscrutable. Were it on any possibility to succeed, it would bring religion itself to naught. To derive religion from the intellect would certainly be to do away with the inscrutable, and therefore with religion too. We should in that case have only the second alternative to consider, *i.e.* the abolition of religion by the intellect. And, indeed, that the intellect has a right to assert its power in this way seems actually to be conceded by religion itself—in the admission, namely, that all its affirmations resolve themselves into antinomies: God is immanent and transcendent; He acts from necessity and in freedom; He is inviolable justice and redeeming love, etc. Thus, as Vaihinger seeks to make out (*op. cit.*), all these affirmations must be regarded as fictions, in which case, again, they would be divested of all real truth, and religion itself would fall to the ground. This conclusion, however, assumes the unconditional validity of the proposition that whatever involves antinomies is fictitious and unreal. Yet even the reality given in sensation, which is the only kind of reality recognized by Vaihinger, is permeated by antinomies; thus every sensation is at once limited and unlimited; related to other perceptions and yet posited absolutely. On Vaihinger's theory, therefore, sensation itself, and in fact everything, would be illusory, and this would simply imply that the term 'fiction' or 'illusion' had lost all meaning whatever, since it is only as contrasted with the real that we can put any true construction upon the term at all. It follows from these considerations that the mere presence of antinomies does not enable us to decide whether we are working with fictions or not. Accordingly, the question whether the intellect can abolish religion is lifted out of the intellectualistic sphere altogether The intellect cannot determine the matter merely on the ground of its having here discovered antinomies. Once more, therefore, we find that in religion, as in all other spheres of experience, the intellect encounters a reality which it has not evolved from itself, and that even in the question regarding the truth of religion it cannot lay claim to absolute authority. The decisive thing here is the spiritual force with which religion operates, for in its energetic action it transforms the antinomies of thought into evidences for its truth by showing that they constitute the most pertinent expression of its own peculiar nature, which, as we have seen, is permeated through and through by the inscrutable. If anywhere, then certainly in religion, it holds good that, as Kierkegaard has said (*Efterladte Papirer*, v. 269), it is not our reasons that support our convictions, but our convictions that support our reasons.

PAUL KALWEIT.

**INTELLIGENCE.—1. Use of the term.**—Probably no term in psychology is used with so many different shades of meaning by different writers as the term 'intelligence.' In Thomas Aquinas, from whom most of the Renaissance and modern controversies directly or indirectly originate, intelligence is the act or function by which the soul acquires knowledge of the universal—it is the spiritual function of the soul as participating in the divine nature, as a direct creation of God, and, therefore, immortal. The universal is reached by an extreme process of abstraction, abstracting from all material conditions of objective existence. There is also a lower form of abstraction found in animals, in the faculty called *æstimativa*. This might be translated 'practical judgment,' the power to appreciate the significance of objects for the needs of life. It is an instinctive judgment, a spontaneous impulse, implying choice, but not deliberation, an implicit generalizing, without any *notion* of the universal; there is abstraction, but abstraction only from conditions of space and time, not from matter as such. Animals, therefore, have no knowledge of general principles, of causation, of the relation of means to end, etc. In the development of man's natural faculties, *æstimativa* becomes *cogitativa*, 'understanding,' particular or empirical reasoning, inference from particular to particular, or from a series of particulars to a new case of the same kind, still without any conception of general principles, or intuition of the universal and necessary. It is only when the intellect or reason comes into action that this further step is taken, and knowledge in the true sense of the word—'science'—begins (see A. D. Sertillanges, *S. Thomas d'Aquin*, Paris, 1910, vol. ii. bk. v. ch. iii. f.).

In the long and still unsettled controversy as to the relation between animal and human soul and intelligence, the question—theological dogma apart—has turned upon: (1) psychological analysis; is there a difference in kind between the functions referred to, as Aquinas supposes, or a difference only of degree or complexity? (2) observed facts and their interpretation; do animals give evidence of behaviour the same in kind as that which in ourselves we term intelligent? Philosophical and scientific as well as theological bias made sometimes the one, sometimes the other, view prevail; but at the present day there can be no doubt that a large majority of psychologists, and a still larger majority of students of animal behaviour, would decide for difference of degree, not of kind, between animal and human intelligence.

**2. Instinct, intelligence, reason.**—In the ordinary usage, an animal or a child is called 'intelligent' when it seems to appreciate what is wanting in a given situation or given circumstances, quickly adopts some method of supplying the want, and, where one method fails, attempts others. Where such a power, however, is shown to be present without any previous experience of similar situations, it is referred either to *instinct* or, it may be, to *reason*.

Instinctive action in an organism is the product of a special structure, provided at birth, practically independent of experience, adapted to a special class of situation, and to that only; the reaction is, therefore, adequate, if not always perfect, the first time of asking; examples are the different forms of nest-building and the care of the young, the pursuit, recognition, and method of capture of prey, the recognition and avoidance of enemies, etc. If failure occurs, it is absolute, except that there are occasionally alternative reactions provided for special forms of a situation. On the other hand, reason, it is said, may achieve the same efficiency as instinct, with the same immediacy, and without experience of similar situations, by the direct perception of the causal relations involved; it is a general power, adapted to any kind of situation, and not tied down, as an instinct is, to a single class. In most cases, however, when a new contingency arises, the actions of an animal are not immediately effective; it appears to act blindly, with many fruitless efforts, until, by accident, as it appears, the right action may be hit upon, after a longer or shorter series of trials or essays. If the animal is again placed in the same predicament, it does not at once adopt the method by which it previously succeeded, but acts somewhat less at random, and usually lights upon the correct action in a shorter time or with fewer trials; ultimately, all unnecessary and inappropriate acts are omitted, and the one effective action is immediately adopted. This has been termed the 'method of trial and error,' and under its formula all individual learning, in man as well as in animals, may be brought. Animal species, and individuals in the same species, differ in the time or number of trials required to learn the same action, in the number of different actions they may learn, in the complexity of situation they can meet, in the extent to which previous experience is applied in new contingencies, and the like. Man's reason is itself an extension of the same process, and there are close approximations to it in the apes and other higher animals. But, while there is no ground for distinguishing between reason and intelligence, instinct and intelligence must be regarded as different in kind. They are not alternatives to each other, or different ways of achieving the same end, or 'lower' and 'higher' forms of action, or the like. Instincts provide the material on which intelligence builds; the intelligence of an animal is always limited and conditioned by its structure and habits, *i.e.* its instincts; intelligence develops progressively as the instincts become more numerous and more complicated. On the other hand, there is probably no species of animal which has instinct only, without intelligence, *i.e.* without any capacity to learn by experience. The method of trial and error has been found, by Jennings and others, as low as the protozoa. In the development of the individual also, instinct and intelligence are concurrent from the beginning, but intelligence is progressive, while instinct is stationary: hence in the adult of the higher animal species, and especially in man, the primitive instincts are so buried beneath the accretions of intelligence that the dependence of the latter upon them is apt to be ignored.

**3. Analysis of intelligence.**—What are the mental qualities involved in learning by experience? If we take the classical instance of the burnt child dreading the fire, we have to distinguish between the first and the later experiences of the situation. In the first an object is perceived, which the child instinctively feels to be pleasing, and the instinctive reaction of grasping results; this is immediately followed in the supposed case by a strong sensation of pain, for which a reflex or instinctive withdrawal of the hand is provided. If there were no intelligence, the same series of impressions and acts would be repeated as often as the situation arose, with damaging results. How does any change take place through intelligence? The simplest assumption, that the child sees the fire to be the *cause* of the pain, and avoids it in

consequence, is ruled out for numberless instances of such learning, although it may occasionally hold for a given child or animal in a given case. Let us suppose, then, that on the second experience the sight of the fire leads as before to the stretching out of the hand, that this associatively calls up in memory the painful sensation of the burn, and this in turn the actual drawing back of hand and arm, the net result being that, if the association is rapid, the hand is drawn back almost before it begins to move. For this to be possible we require initial sensitiveness and mobility, retentiveness of the impression, and associative recall, but above all intensity and *unity* of attention: the experience must have been appreciated as a single whole, otherwise the associative current would not run from 'fire' to 'grasp,' from 'grasp' to 'pain,' etc., but might be turned off at 'grasp' to any other of the hundreds of grasping experiences. This comprehensiveness of attention is the essential thing in intelligence; on it depends the number of trials required in the trial and error method before success is achieved; on it depends also the transition from concrete to abstract imagery and thought. Abstraction is the power of neglecting the irrelevant and concentrating on the important features of a situation, whether in perception, in memory, or in thought, *i.e.* it is a process of attention. In its turn, attention depends on the degree of sensitiveness of the individual, his quickness of reaction, and, at higher levels, his retentiveness and the strength of his interests, instinctive or acquired. It may be said, in short, that the intelligence of an individual is the degree of his ability to learn, and to apply what he has learned, and that this depends on his whole mental endowment. It is, therefore, absurd to ask whether animals have 'intelligence.' If they have any form of mental experience—sensation, *e.g.*, and no one denies this even of the lowest—then they have also intelligence. The task of comparative psychology is to determine the conditions of intelligent adaptation in different animals and in the child, to reconstruct the scheme of mental evolution and development, parallel to the scheme of physical evolution and development which biology already has within its grasp.

4. **Special problems.**—How complex the nature of 'intelligence' is may be seen by a perusal of the literature, already extensive, on two very modern problems—that of 'formal discipline,' and that of 'tests of intelligence.' The former is the question whether intelligence is a *general* power, which can be turned at will from one subject to another; whether high ability in one sphere is or tends to be accompanied by high ability in other spheres; whether improvement in any kind of mental ability carries with it improvement in other and different mental abilities, etc.; the probability being that intelligence is almost as specialized as memory, that ability in one subject gives no ground for inferring ability even in a closely similar subject, and that improvement in one subject carries with it improved ability in others only so far as these others involve the same forms of perception, attention, etc. The second problem is that of finding a scientific and tractable substitute for the teacher's or doctor's rough classification (and rougher tests) of children in regard to their intelligence—'bright,' 'average,' 'poor,' 'dull,' 'backward,' 'defective,' 'feeble-minded,' etc. What is generally agreed upon is that the most objective classification of children is by a comparison of the 'mental' with the 'physical' age; that for this an average mental ability for each physical age must be determinable; that the tests used in fixing the average, and in proving each child, must be of several kinds for each age, and must be graded for different ages, more difficult as the age is higher. But sex, social rank of family, school training, race, country, and many other factors are found to interfere with the projected average or standard, and experimenters are still far from united in agreement upon the tests suitable for each age.

LITERATURE.—G. J. Romanes, *Animal Intelligence*[6], London, 1895 (1st ed. 1882); J. Lubbock, *Ants, Bees, and Wasps*[14], do. 1898 (1st ed. 1882); G. J. Romanes, *Mental Evolution in Animals*, do. 1883; J. Lubbock, *Senses . . . of Animals*, do. 1885; W. Wundt, *Lectures on Human and Animal Psychology*, Eng. tr., do. 1894; E. L. Thorndike, *Animal Intelligence*, New York, 1911 (1st ed. 1898); C. Lloyd Morgan, *Animal Behaviour*, London, 1900; L. T. Hobhouse, *Mind in Evolution*, do. 1901; E. Wasmann, *Instinct und Intelligenz im Thierreich*[3], Freiburg, 1899, Eng. tr., St. Louis, 1903; H. S. Jennings, *Behavior of the Lower Organisms*, New York, 1906; G. Bohn, *La Naissance de l'intelligence*, Paris, 1909; H. Piéron, *L'Évolution de la mémoire*, do. 1910; Margaret F. Washburn, *The Animal Mind*, New York, 1908 (containing an ample bibliography on animal psychology).

On the questions of general intelligence, formal discipline, transfer of improvement, etc.: E. L. Thorndike, *Educational Psychology*[2], New York, 1910; papers by W. H. Winch, B. Hart and C. Spearman, W. S. Sleight, and others in the *British Journal of Psychology*, London, 1908 ff.; and S. S. Colvin, *The Learning Process*, New York, 1912, chs. 14–16.

On tests of intelligence, papers by A. Binet and T. Simon, in *Année psychologique*, Paris, 1905, 1908, 1911, etc.; a summary of the present state of the problem, with an account of the literature, in E. Meumann, *Archiv f. d. gesamte Psychol.*, xxiii.–xxv. (Leipzig, 1912).

## INTEMPERANCE.—See DRUNKENNESS.

**INTENTION (Theological).**—A sacrament involves some action of a minister, having a special significance; and, since the significance of a human action may depend in part upon the intention with which it is performed, it was inevitable that in the progress of theology a question should be raised whether a proper intention in the minister is requisite for the spiritual validity of a sacrament; if so, the nature of that intention would have to be considered.

In the Eastern Church this question has been generally avoided; a sacrament is regarded as an act of the Church at large; the πρόθεσις of which theologians speak is the purpose or spiritual meaning of the appointed rite, and the minister's only function is to exhibit that rite integrally. This applies even to the sacrament of marriage, in which, since it consists materially in the consent of the contracting parties, there is special room, because of the nature of a contract, for inquiry into their intention and the genuineness of their consent. Some systems of law will annul a marriage on the ground of defective consent, even when all formalities have been ostensibly fulfilled; but the Canon Law of the Eastern Church allows no such objection to be raised against a marriage publicly contracted with the blessing of the Church.

In the Western Church, however, a different theory and practice followed upon the final rejection of St. Cyprian's teaching about the baptism of heretics. When it was admitted that baptism administered by persons separated from the Church was possibly valid, the sacrament could no longer be regarded exclusively as a public act of the Church. It was then necessary to inquire whether a particular baptism was valid. The Easterns evade the difficulty by accepting such baptism κατ' οἰκονομίαν, in which case the consent of the Church is supposed to supply whatever may have been lacking; but the trend of Western theology and practice has always been to treat such baptism as absolutely valid if the necessary conditions are fulfilled, or otherwise as absolutely invalid. Inquiry into the conditions of validity was, therefore, necessary, and the practice of such inquiry spread from baptism to other sacraments.

In his *de Baptismo* (vii. 53), Augustine considers several questions about the *animus* with

which baptism is received as affecting the validity of the sacrament; and more incidentally, as though of less importance, he considers the *animus* of the minister: 'Quid enim prosit animus veraciter dantis fallaciter accipienti non video.' Taking the case where both alike 'fallaciter agunt in ipsa unitate catholica,' he asks: 'An plus valent ad confirmandum sacramentum illi veraces inter quos agitur, quam ad frustrandum illi fallaces a quibus agitur, et in quibus agitur?' In reply, he appeals to the practice of the Church: 'Si postea prodatur, nemo repetit, sed aut excommunicando punitur illa simulatio aut poenitendo sanatur.' His own opinion he was unwilling to give where there was no express conciliar decision; but in council he would be disposed to support the proposition: 'Habere eos baptismum qui ubicunque et a quibuscunque illud verbis evangelicis consecratum sine sua simulatione et cum aliqua fide accepissent.' This seems to exclude the notion that the *animus dantis* can affect the integrity of the sacrament; only the *simulatio* of the recipient or his complete lack of faith can mar it if administered in due form *verbis evangelicis*.

The general acceptance of this judgment is proved by the probably fictitious story of the actor Genesius, baptized in mockery on the stage. Augustine (*loc. cit.*) glances at the currency of such stories, and shows a curious reluctance to give any opinion on the case 'ubi totum ludicre et mimice et joculariter ageretur.' The story told by Sozomen (ii. 17) of Athanasius baptizing boys in play is less to the point, since it is implied that the children, though in play, had a more or less serious intention of doing what they had seen done in the Church.

The judgment of Augustine long prevailed. Nicholas I. (858–67; *Resp. ad Bulg.* 104) ruled that persons reported to have been baptized by a Jew, 'si in nomine sanctae Trinitatis vel tantum in Christi nomine . . . baptizati sunt,' are validly baptized, no question being raised about the intention of the minister. It should be observed that he presses (cap. 3) the necessity of *consensus* for a valid marriage, but without any indication that he would allow the intention underlying a publicly expressed consent to be called in question. In the early scholastics of the 12th cent. a contrary opinion appears. Hugh of St. Victor (*Summ. Sent.* v. 9) requires 'ut forma sacramenti servetur et intentio illud celebrandi habeatur.' Peter Lombard (iv. 6. 5) follows him, and the great vogue of the *Libri Sententiarum* made the doctrine dominant. The nature of the requisite intention, however, was not yet defined. William of Auxerre (*In iv. Sent.* iv. 7) seems to have been the first to adopt the phrase 'intentio faciendi quod facit ecclesia.' Albertus Magnus (*In iv. Sent.* iv. 6. 11) limited this by adding 'licet non credat hoc aliquid valere.' He held that the intention of performing the rite of the Church, indicated by the use of the ordinary form, is sufficient, even if the minister does not believe the rite to have any spiritual effect; and he used this to meet the objection that the minister might maliciously withhold his intention, and so invalidate the sacrament. Sinibaldo Fieschi, afterwards Innocent IV., in his commentary on the Decretals (iii. 42. 2), went further:

'Non est necesse quod baptizans . . . gerat in mente facere quod facit ecclesia, imo si contrarium gereret in mente, sc. non facere quod facit ecclesia, sed tamen facit quia formam servat, nihilominus baptizatus est, dummodo baptizare intendat . . . licet non credat ipsum posse aliquid operari.'

He denied that *specialis intentio* was necessary, and this was the intention to produce the *effect* of the sacrament, as the *Compend. theol. veritatis*, doubtfully attributed to Innocent V., has it (vi. 9): 'ut iste baptizandus mundetur.' Thomas Aquinas, however, stiffened the requirement, saying (*Opusc. iv. de Sacram.*): 'Si minister sacramenti non intendit sacramentum conficere, non perficitur sacramentum,' and strengthening the current formula into 'intentio conferendi et faciendi quod facit ecclesia.' Elsewhere he further defines the purport of the intention; Christ is the 'principal agent' in the sacramental action, and the minister must act as the representative of Christ; therefore 'requiritur eius intentio qua se subiiciat principali agenti, ut scilicet intendat facere quod facit Christus et ecclesia.' But to the objection that all certainty about the sacrament is thus destroyed, since no man's intention can be known, he replies:

'Minister sacramenti agit in persona totius ecclesiae, cuius est minister; in verbis autem, quae profert, exprimitur intentio ecclesiae, quae sufficit ad perfectionem sacramenti, nisi contrarium exterius exprimatur ex parte ministri vel recipientis sacramentum' (*Summa Theol.* iii. 64. 8).

This seems to deprive of all importance what he calls *mentalis intentio*, and we are back at the position of Augustine, except that a *contrary* intention openly expressed by the minister would invalidate the sacrament. A merely *defective* intention would do no harm; it must be positive and avowed. A *iocosa intentio*, however, 'cum aliquis non intendit sacramentum conferre, sed derisorie aliquid agere,' makes no sacrament; he adds, 'praecipue quando suam intentionem exterius manifestat' (*ib.* 10). The case in view is clearly a mimic representation. These same conclusions, supported by the similar teaching of Bonaventura, became dominant in the schools until the 16th century.

In the meantime the Scholastic doctrine was finding its way into dogmatic decrees. In the profession of faith imposed by Innocent III. on converted Waldensians, it is said that for a valid Eucharist is required 'fidelis intentio proferentis' (Denzinger, *Enchiridion*[11], Freiburg, 1911, no. 424). In the dogmatic definition of the 4th Lateran, cap. i., where something of the kind might be expected, there is nothing. At the Council of Florence, Eugenius IV., in his *Decr. pro Armenis*, adopted the language of the *Opusc. iv.* of Thomas Aquinas almost intact, for this as for other matters.

Luther made a brief and contemptuous reference to the Scholastic doctrine in the treatise *de Bab. Capt.* (ch. 'de Sacr. Baptismi'), citing the 'exemplum de quodam mimo per iocum baptizato.' Maintaining the position that the sacraments operate as visible signs of the grace of God rousing faith in the recipient, so that 'non in conferentis tantum quantum in suscipientis fide vel usu sita est virtus baptismi,' he brushed aside the whole discussion about the intention of the minister. His bold treatment of *iocosa intentio* had a large place in subsequent controversy, but as used by adversaries rather than as developed by his followers. One of the propositions extracted from his writings for condemnation by Leo X. was: 'Si per impossibile confessus non esset contritus, aut sacerdos non serio, sed ioco absolveret; si tamen credat se absolutum, verissime est absolutus.' The silence on this head of the Augustana, and of the Saxon Confession presented to the Council of Trent, is significant. The *Conf. Helvetica* (ch. xix. sect. 11), however, expressly excludes from the conditions requisite for a valid sacrament administration 'a consecrato, et qui habeat intentionem consecrandi.' Calvin's austere conception of the operation of the sacraments as exclusively divine, and resting on the eternal decrees, left no room for any effect to flow from the intention of the minister.

Ambrosius Catharinus, in a treatise *de Int. Ministr. Sacr.*, re-stated the Scholastic doctrine with an important difference. Maintaining with Thomas Aquinas that the requisite intention is secured positively by the serious use of the external forms appointed in the Church, he denied that the minister could by any individual intention of his own, however contradictory, destroy the effect of those forms. Thus he excluded from validity only a mimic or derisory representation

of a sacrament; the only intention required of the minister is the intention seriously to use the appointed rite. Pallavicino (ix. 6) asserts that the Council of Trent did not repudiate this teaching, though the language of sess. xiv. 6, denying the effect of absolution, 'si . . . sacerdoti animus serio agendi *et vere absolvendi* desit,' seems to look that way. In sess. vii. can. 11, the Council condemned the opinion, 'non requiri intentionem saltem faciendi quod facit ecclesia,' without further specification. The opinion of Catharinus, however, carried little weight; the contrary opinion, exaggerated by controversy so as to lay additional stress on the internal intention of the minister, had more vogue, running at length to its extreme statement in the words of J. B. Franzelin (*de Sacr. in Gen.*, ed. 1888, p. 225):

'Minister *extrinsecus simulans etiam iocum*, adhibendo tamen legitimam materiam et formam *cum interna intentione*, sacramentum conficeret.'

Controversy turned chiefly on this point, it being said that the sacraments were thus robbed of all assurance. Jewel, in his Reply to Harding (Parker Soc., i. [Cambridge, 1845] 139), used a phrase which became classic:

'This is the very dungeon of uncertainty. The heart of man is unsearchable. If we stay upon the intention of a mortal man, we may stand in doubt of our own baptism.'

Hooker (v. 58) fell back upon the position of Thomas, quoting, however, by preference the canonist Lancelot:

'The known intent of the Church generally doth suffice, and, where the contrary is not manifest, we may presume that he which outwardly doth the work, hath inwardly the purpose of the Church of God.'

The peril indicated by Jewel compelled defenders of the doctrine to diminish their demands; and Bellarmine (*de Sacr. in Gen.* i. 27) said almost the last word on this side:

'Non est opus intendere quod facit ecclesia Romana, sed quod facit vera ecclesia, quaecumque illa sit, vel quod Christus instituit, vel quod faciunt Christiani.'

Towards the end of the 17th cent. the teaching of Catharinus was once more brought up. There were stories current of a priest who declared that he had habitually perverted his interior intention when baptizing, and of a bishop who had done the same when ordaining, and relief was sought from the implied consequences. This relief was denied by a decree of Alexander VIII. in 1690, condemning among others the proposition:

'Valet baptismus collatus a ministro, qui omnem ritum externum formamque baptizandi observat, intus vero in corde suo apud se resolvit: Non intendo quod facit ecclesia.'

This authoritative locking of the 'dungeon of uncertainty' was resisted by some Thomist theologians, notably by J. H. Serry (*Ambrosii Catharini Vindiciæ*, Patavium, 1727); but the more exigent teaching prevailed, chiefly through the influence of Benedict XIV. and the Jesuit schools, until recent times. Thomism revived under the encouragement of Leo XIII., and in his bull *Apostolicæ Curæ* that pontiff laid down a principle which in practical effect differs little from that of Catharinus:

'De mente vel intentione, utpote quae per se quiddam est interius, ecclesia non iudicat: at quatenus extra proditur, iudicare de ea debet. Iamvero cum quis ad sacramentum conficiendum et conferendum materiam formamque debitam serio ac rite adhibuit, eo ipso censetur id nimirum facere intendisse quod facit ecclesia.'

This seems to bring the authentic teaching of the Roman Church exactly into line with that of Hooker (see above), and the conclusion may be held judicious.

LITERATURE.—This has been sufficiently indicated in the article.

T. A. LACEY.

INTERCESSION.—1. Connotation of the term.—The word is now usually restricted in its application to (*a*) pleading for others, as when a favour is asked for another from a fellowman; (*b*) praying for others, as when blessings are sought for another from God. When it is used of the intercession of Christ, it has a wider significance, and expresses the more general idea of (*c*) acting for others.

On the varying connotation of 'intercession' light is cast by its derivation and by the history of the Greek and Hebrew words of which it is the translation.

(1) *Intercessio* (*inter*, 'between,' and *cedere*, 'to pass' or 'to go') denotes (*a*) a passing between, as, *e.g.*, an intervening period of time. Hence, in 16th and 17th cent. writers 'intercession' is equivalent to 'intercessation'—a meaning now obsolete. Latimer could write: 'We must call upon God without intercession' (*OED* v. 386); (*b*) a going between, as, *e.g.*, the intervention of a mediator who strives to reconcile those who are at variance. The functions of a go-between may, however, differ greatly. The right of veto acquired by the Roman tribunes of the people was known as *intercessio*. These tribunes could forbid the carrying out both of the resolutions of the *senatus*, or deliberative assembly, and of the decrees of the *comitia*, or legislative assembly. Referring to a statute which the senators could not oppose by argument, C. Merivale says: 'They gained one of the tribunes to intercede against it' (*Fall of the Roman Republic*, London, 1853, viii. 216). The connexion of thought must, therefore, determine whether the intervention is *for* or *against*. But it is in accord with the tendency to limit the meaning of 'intercession' to an appeal for a favour that in Ro $11^{2}$ the RV reads 'how he [Elijah] pleadeth with God against Israel,' instead of 'how he maketh intercession,' etc. (AV).

(2) In the NT 'intercession' is once (1 Ti $2^{1}$) the translation of ἔντευξις, which is also once (1 Ti $4^{5}$) rendered 'prayer.' The corresponding verb (ἐντυγχάνειν, 'to fall in with,' 'to have an interview with') is four times translated 'to make intercession' (Ro $8^{26.27.34}$, He $7^{25}$). In Ro $11^{2}$ the rendering is 'to plead with,' and in Ac $25^{24}$ 'to make suit to.' In his note on the last cited passage, F. Field (*Notes on the Translation of the NT*, Cambridge, 1899, p. 140 f.) gives quotations from Greek writers which show that frequently the idea of a personal interview seems to be required. In 2 Mac $4^{8}$ the RV 'at an audience' is an improvement upon the AV 'by intercession,' for the reference is to 'a confidential interview, face to face, between Jason and Antiochus' (cf. R. C. Trench, *Synonyms of the NT*[11], London, 1890, p. 190). The root idea of ἔντευξις is, therefore, not prayer for others, but familiar intercourse such as obtains when confidential relationships are established, as between parent and child. In 1 Ti $4^{5}$ 'prayer' is the only possible translation, but it should also be noted that in EV 'intercession' is found (Jer $27^{18}$ $36^{25}$) when the petition has no reference to another's benefit. It is by a natural and suggestive transition of thought that ἔντευξις, which means prayer regarded as personal communion, familiar heart converse, should come to signify prayer regarded as supplication for others. The expression of this aspect of prayer is not, however, limited to this word; it is often represented by adding qualifying clauses to one or other of the synonyms for prayer.

(3) In the OT the subject of 'intercession' has great prominence, though the English word is of rare occurrence in EV. (*a*) The Hebrew verb פגע is translated 'to make intercession' in Jer $7^{16}$ $27^{18}$ $36^{25}$, Is $53^{12}$, and the corresponding noun is rendered 'intercessor' in Is $59^{16}$. This verb is closely related in meaning to ἐντυγχάνειν and signifies 'to encounter,' hence 'to encounter with a request.' In two passages the context makes it plain that the meaning is 'to pray for others' (on Jer $27^{18}$ $36^{25}$, cf. (2) above). In Jer $7^{16}$ 'pray not for this

people' is parallel to, and synonymous with, 'neither make intercession to me'; in Is 53$^{12}$ a defining clause is added: 'he made intercession for the transgressors.' (*b*) The Hebrew verb most frequently employed to express the idea of prayer for others is הִפְגִּיעַ, 'to intervene.' Typical examples of its use are found in passages referring to the prayer of Abraham for Abimelech (Gn 20$^{7.17}$), of Moses for Aaron (Dt 9$^{20}$), of Moses for the people (Dt 9$^{26}$), and of Job for his friends (Job 42$^{8}$). (*c*) Another verb which sometimes expresses the same idea is עָתַר. By most modern lexicographers it is connected with an Arabic root signifying 'to sacrifice,' and its earliest associations are with sacred rites. The usual rendering is 'to entreat,' and often the entreaty is for others. In Ex 8$^{8f. 28f.}$ 9$^{28}$ 10$^{17}$ this verb is six times used of the prayers of Moses and Aaron for Pharaoh; in Gn 25$^{21}$ it refers to Isaac's prayer for his wife, and in 2 S 24$^{25}$ to David's prayer for Israel.

2. **Intercessory prayer.**—When 'intercession' is defined as prayer for others, it is obvious that the objections raised against prayer in general apply to intercessory prayer. Indeed, the mystery which attaches to prayer of all kinds reaches its climax in prayer for another's blessing (cf. art. PRAYER). But the efficacy of intercession has been generally admitted by theists. Such controversy as existed in pre-Christian times was rather as to the nature of the gods than as to the propriety of invoking their aid.

'We may not say that the efficacy of prayer was admitted by *all* ancient Theists, but it does seem that this doctrine was not denied by any whose theology rendered its admission possible' (J. H. Jellett, *The Efficacy of Prayer* [Donnellan Lectures], Dublin, 1878, p. xxi).

It is held to be a *reductio ad absurdum* of Epicureanism that it rendered prayer nugatory (cf. Cicero, *de Nat. Deor.* i. 44). In Origen's treatise on Prayer (i. 196 ff., Benedictine ed.) the denial of the efficacy of prayer by later sceptics is represented as 'a necessary result of their fundamental principles.' In all ages men who have had knowledge of God have regarded it as a reasonable inference that to Him they might 'lift hands of prayer both for themselves and those who call them friend' (Tennyson, *Morte d'Arthur*). In this respect systems of religion agree, notwithstanding differences in many important particulars.

'Prayer is, and has ever been, an element of every system of Theism—of the polytheism of the Greeks and Romans, no less than of the monotheism of the Jews—of the religious systems of Zoroaster and of Mahomet no less than of the religion of Christ. The spirit of prayer breathes through the hymns to Indra and Varuna no less really than through the Psalms of David' (Jellett, 87 f.).

The conception of intercessory prayer, like the idea of prayer in general, presupposes not only a doctrine of God, but also a doctrine of man and of his relation to his fellowmen. That relation is best described by the word 'solidarity.' An intercessor is one with those for whom he pleads, and yet he differs from them in that he is nearer to God. The qualification for the work of intercession is twofold.

'The more eminent the great heroes of the Bible are for holiness of life, the more intensely do they realise their oneness with the people whose pastors and priests they are, and take upon themselves the burden of their nation's transgressions and sins' (Bersier, *Solidarity of Humanity*, quoted by D. W. Simon, *The Redemption of Man*², London, 1906, p. 334).

To make intercession for the nation was alike the duty and the privilege of the priests of Israel. Only once during a priest's lifetime could it fall to his lot to enter the holy place as intercessor for the people. The incense he offered there was the symbol of Israel's prayers presented with his own (Ex 40$^{27}$, Lk 1$^{9}$; cf. Ps 141$^{2}$, Rev 5$^{8}$ 7$^{3ff.}$). Once a year also the high priest exercised the highest function of his office when he entered the Holy of Holies; having first made atonement for his own sins, he became the people's representative, and in him the entire nation had access to God (Lv 16$^{15}$).

In the history of Israel it is the prophets who most frequently act as intercessors. Moses, Aaron, and Samuel are singled out as pre-eminent in this regard (Ps 99$^{6}$, Jer 15$^{1}$). So intense was Samuel's sense of obligation that he described neglect of the duty of praying for others as 'sin against the Lord' (1 S 12$^{23}$). 'Pray for us' was the request made to Jeremiah by Zedekiah (Jer 37$^{3}$), and again by 'all the people' (Jer 42$^{2}$).

'Practically all the intercessory prayers of the OT are offered either by prophets or by men—such as Abraham and Job—whom later ages idealised as prophets.' As a rule their intercessions were for the nation they loved, but occasionally the petitions have a wider range. 'Jeremiah, for example, urges the exiles [Jer 29$^{7}$] to pray to Jehovah for Babylon and to seek her welfare . . . and Darius, in his decree [Ezr 6$^{10}$], desires the prayers of the Jews for himself and his dynasty' (J. E. McFadyen, *The Prayers of the Bible*, London, 1906, p. 58 ff.).

Intercessory prayer has the sanction of our Lord's example during His earthly ministry. He 'continued all night in prayer to God' before selecting the twelve Apostles (Lk 6$^{12}$). That His prayer included intercessions is a reasonable inference, as well from His petitions for His disciples on the eve of His departure from the world as from His supplication for Peter in anticipation of the hour when that disciple's faith would be sifted (Lk 22$^{32}$). At the grave of Lazarus His words of thanksgiving for prayer heard and answered, according to the Father's wont, point to a habit of intercession (Jn 11$^{41f.}$), such as makes it natural for Him to use almost His latest breath in praying for His enemies (Lk 23$^{34}$). The command, 'Pray for them that despitefully use you' (Lk 6$^{28}$), falls from His lips with the authority of the teacher and Lord who could say of this grace, as of all others, 'I have given you an example that ye should do as I have done' (Jn 13$^{15}$). The true spirit of intercession breathes in the pattern prayer (Mt 6$^{9ff.}$). Our Lord teaches His disciples that they

'should not pray as atomistic individuals, not "singly," but as *members* of human society, of the believing Church, of the kingdom' (H. Martensen, *Christian Ethics*, i. [*Individual*], Edinburgh, 1881, p. 180).

T. von Haering rightly finds a sufficient warrant for intercession in the '*Our* Father' of the Lord's Prayer:

'"Our" and "us" instead of the natural "my" and "me" is for the Christian a really natural utterance. This faith in the Father cannot exist without love to the brethren, both to those who really are so and to those who may presently become so. . . . Love would not be Christian love if it were not true of it, "I am responsible in God's sight for my love." When intercessory prayer is taken in this obvious way, the objection need not arise . . . that intercession is an interference with our neighbours' freedom and with God's arrangements. The Christian idea of the Kingdom of God, which it is the purpose of its Creator and Builder to build by earthly means, transcends these objections. The task of each co-worker with God (1 Co 3$^{9}$) is to be faithful in the exercise of his influence on others outside, and in his intercession as the motive power of his work for them. And both are done in humility' (*The Ethics of the Christian Life*, Eng. tr., London, 1909, p. 288).

St. Paul has the mind of Christ when he exhorts, 'first of all, that supplications, prayers, intercessions, thanksgivings be made for all men' (1 Ti 2$^{1}$). The obligation to pray for others does not, however, depend upon the single word 'intercessions.' If ἐντεύξεις be translated 'petitions,' the clause 'for all men' still qualifies the four synonyms for prayer. Manifold as are the kinds of prayer, all men are to have the benefit of them. The prayers of St. Paul for his converts are the fervent outpourings of a heart that longed to share with others the fullness of the blessings of the gospel of Christ. Surprise has been expressed at the absence from his Epistles of allusions to prayer for the heathen; the explanation is that

'Such prayers are really involved in his prayers for the success of the gospel and in his requests for the similar prayers of others' (McFadyen, p. 153).

But, if *laborare est orare*, then the entire life of this strenuous missionary was a continual prayer that all men might 'know the grace of God in truth' (Col $1^{6}$).

As to the value of intercessory prayer there is little difference in theory amongst those who believe in the efficacy of prayer at all. But in practice many Christians fail to imitate the example of Christ and of the Apostolic Church. Nevertheless,

'the test of the purity of our petitionary prayers is whether they contain *intercession*. This shows if the individual be concerned about the whole kingdom of God. Without intercession, prayer becomes egoistic, the view and the heart narrow. When piety lacks expansion, it also lacks intensive force. And then our prayer is not prayer in the name of Jesus, our Head' (I. A. Dorner, *System of Christian Ethics*, Eng. tr., Edinburgh, 1887, p. 147).

Gore addresses an irresistible appeal to Evangelicals, urging them to 'emphasize this priesthood of the whole body in its rich positive meaning' (in *Priesthood and Sacrifice*, ed. Sanday, London, 1900, p. 148). All who believe in the universal priesthood of believers should give intercession a prominent place in their private devotions and in public worship. Every member of the kingdom of priests should realize that on him rests a positive obligation to obtain for himself and for others in intercourse with God those blessings which, under the old dispensation, it was the purpose of the priest's intercession in the holy place to obtain for the people.

3. **The intercession of Christ.**—The NT teaches that Christ's intercession is not confined to His earthly life. 'Jesus Christ the righteous' is now our 'Advocate with the Father' (1 Jn $2^{1}$; cf. art. ADVOCATE). The climax of St. Paul's argument before he triumphantly inquires, 'Who shall separate us from the love of Christ?' is the statement that He who has all power 'at the right hand of God' in His compassion 'also maketh intercession for us' (Ro $8^{31f.}$). But the fullest exposition of this truth is in the Epistle to the Hebrews.

Contrasting our great High Priest with the Levitical high priest, the writer of this Epistle declares that no defilement unfitted Christ for His sacred ministry. As a Son He was perfected for evermore, and had no need either to offer for His own sins or to repeat His sacrifice made once for all when He offered up Himself. B. F. Westcott shows that the fulfilment of the Levitical type by Christ takes three forms: (1) He intercedes for men as their present representative before God (He $7^{25f.}$ $9^{24}$); (2) He brings man's prayers to God (He $13^{15}$); (3) He secures access for man to God (He $4^{16}$ $10^{19ff.}$).

'The modern conception of Christ pleading in heaven His Passion, "offering His blood," on behalf of men has no foundation in the Epistle. His glorified humanity is the eternal pledge of the absolute efficacy of His accomplished work. He pleads, as older writers truly expressed the thought, by His Presence on the Father's Throne. Meanwhile men on earth in union with Him enjoy continually through His Blood what was before the privilege of one man on one day in the year' (B. F. Westcott, *The Epistle to the Hebrews*, London, 1892, p. 230).

A. J. Tait discusses the subject fully in *The Heavenly Session of our Lord* (London, 1912), rightly insisting (p. ix) that

'it is as King that Christ is also Priest, it is as seated on the Throne that He intercedes.'

The Session of our Lord signifies the cessation of propitiatory offering, and therefore the intercession of Christ is not to be conceived as a continual process of propitiation.

'Propitiatory sacrifice and offering are alike over: the Intercession, consisting in the Presence of Christ on the Throne, is continual' (Tait, p. 151).

Discussion has arisen as to whether or not the intercession of the Son is to be understood as made through words. A. B. Davidson (*Handbooks for Bible Classes*, 'Hebrews,' Edinburgh, n.d., p. 142, note on He $7^{25}$) takes the negative view; but he makes a suggestion which approximates to the positive view when he refers to the example of Christ (Jn 17):

'He interceded in human speech to God in the days of His flesh, and translating this into the modes of heavenly communion, so far as we can imagine them, we may form some conception of it.'

In our Lord's intercessory prayer it is important to note the significance of the simple past tenses which the RV substitutes for the perfect tenses of the AV. Our Lord is already in thought at the right hand of the Father when He says: 'I glorified thee on the earth,' etc.

'The words of the prayer belong at least in spirit to that upper sanctuary. They are the concentration of all the prayers of the heavenly Intercessor, as He bore on earth, as He bears now, and will bear for ever, the wants of His people before the Father, who is both able and willing to supply them' (W. Milligan, *The Ascension and Heavenly Priesthood of our Lord*[2], London, 1901, p. 156).

Milligan also gives expression to a needed caution when he reminds us that the intercession of Christ is not to be interpreted 'as if He were asking aid from an external source' (p. 153). If this be borne in mind, the idea of the intercession of Christ may be extended so as to include every way in which He acts for others (cf. art. MEDIATION).

4. **The intercession of the Holy Spirit.**—'Advocate' is a title of the Holy Spirit as well as of Christ, and to the Holy Spirit the work of intercession is ascribed. He is 'our Advocate within,' and, like Him who is our 'Advocate with the Father,' He is 'touched with the feeling of our infirmities.' St. Paul assures us that

'the Spirit also helpeth our infirmity: for we know not how to pray as we ought; but the Spirit himself maketh intercession for us with groanings that cannot be uttered; and he that searcheth the hearts knoweth what is the mind of the Spirit, that he maketh intercession for the saints according to the will of God' (Ro $8^{26f.}$).

The spirit of true prayer is identified with the voice of the Divine Spirit in man.

'There are times when we cannot pray in words, or pray as we ought; but our inarticulate longings for a better life are the Spirit's intercessions on our behalf, audible to God who searches all hearts, and intelligible and acceptable to Him since they are the voice of His Spirit, and it is according to His will that the Spirit should intercede for the members of His Son' (H. B. Swete, *The Holy Spirit in the NT*, London, 1909, p. 221).

In the verses just quoted (Ro $8^{26f.}$, cf. v.$^{16}$) the Spirit of God is distinguished from the spirit of man, even when in the mystery of prayer His relations with the human consciousness are most intimate. When the Christian is oppressed with the weight of 'this unintelligible world' (cf. v.$^{22}$), when he longs for light to shine on its perplexities and for deliverance from its evils, when in his ignorance he fails to express his spirit's yearnings in words, even then he is not alone, for he has the sympathy of a Divine friend.

'Perhaps the best periphrasis of "Paraclete" for modern readers would be "*the Friend in Need*"' (E. A. Abbott, *Paradosis*, London, 1904, p. 188).

There is One whose intercessions are prompted by perfect knowledge of the blessing that is really desired; His inarticulate petitions are understood by the Searcher of hearts, for His 'mind' is ever in accord with the Father's will. It is the idea of 'representation' which is common to the intercession of Christ and the intercession of the Holy Spirit.

'Jesus glorified represents us before the Father's Throne; the Holy Spirit abiding with us represents in us Jesus gone to the Father.' The Holy Spirit 'brings the Redeemer in such a manner home into our hearts that, in the innermost depths of our nature, we see and judge and feel with Him; that His requests for us become our prayers for ourselves; and that the unity of Father, Son, and redeemed humanity is in Him completely realised' (Milligan, p. 159 f.).

LITERATURE.—In addition to the works referred to in the art., F. Buhl, 'Gebet im Alten Testamente' in *PRE*[3] vi. 393 f.; E. von der Goltz, *Das Gebet in der ältesten Christenheit*, Leipzig, 1901; D. G. Monrad, *The World of Prayer*, Eng. tr., Edinburgh, 1879; W. B. Pope, *The Prayers of St. Paul*, London, 1876; L. Andrewes, *Preces Privatae*, tr. F. E. Brightman, do. 1903 (gives 'Reflections before Intercession' and 'Schemes of general and particular Intercession,' p. 263 ff.); A. J. Wor-

ledge, *Prayer*, do. 1902; D. Stone and D. C. Simpson, *Communion with God*, Edinburgh, 1911; J. G. James, *The Prayer Life, its Philosophy and Practice*, London, 1912; W. A. Cornaby, *Prayer and the Human Problem*, do. 1912; W. T. Davison, *The Indwelling Spirit*, do. 1911.

J. G. Tasker.

**INTERCESSION** (Liturgical).—The custom of offering intercessions at the Eucharist seems to have been universal, at any rate from the middle of the 2nd cent. onwards. It would doubtless be considered the best way of carrying out St. Paul's injunction to Timothy 'that supplications, prayers, intercessions, thanksgivings (δεήσεις, προσευχάς, ἐντεύξεις, εὐχαριστίας) be made for all men' (1 Ti 2[1]), whether the εὐχαριστίαι were interpreted as having any reference to the Eucharist or not. We accordingly find that intercessions formed part of the Eucharistic service at least from the time of Justin (c. A.D. 150), and that in the 4th and 5th centuries they were developed into three different forms, of which two still remain in all liturgies.

1. **Second and third centuries.**—We do not get much information on the subject from the *Didache*. If the prayers there given are those used for the Eucharist proper, the only approach to an intercession is in the prayer over the 'broken bread' (κλάσμα), and in the thanksgiving 'after being satisfied,' where there are clauses praying for the gathering in and protection of the Church (§ 9 f.). If, as is suggested in art. Agape, they are the Agape prayers, while those for the Eucharist proper were extemporaneous, we cannot tell how far the feature of intercession was introduced. Justin Martyr, however, is explicit. In describing the baptismal Eucharist (*Apol.* i. 65), he says that after the newly-baptized is brought 'to the place where those who are called brethren are assembled,' they offer 'hearty prayers in common (κοινὰς εὐχάς) for themselves and the newly-baptized (illuminated) person, and for all others in every place.' Then follow the Kiss of Peace and the Offertory, bread and the mixed cup being brought to the president, who 'gives praise and glory . . . and offers thanks at considerable length.' Justin adds that, 'when [the president] has concluded the prayers and thanksgivings, all reply Amen'; and the administration by the deacons follows. So in the description of the Sunday Eucharist (*Apol.* i. 67) after the lections, at which the 'reader' officiates, the president preaches, and all 'rise together and pray'; then, 'when their prayer is ended,' bread and wine and water are brought and the president 'in like manner offers prayers and thanksgivings according to his ability,' the people answering 'Amen.' We are not here concerned with the rest of the description.

It would seem probable that the 'prayers and thanksgivings' of the president did not include intercessions, and this is borne out by the earliest 4th cent. evidence (see below, 2 (*c*)). The intercessions would be confined to the 'prayers in common,' at which all the people stood up. What this phrase means is not quite clear, but we may perhaps suppose it to signify that the minister (the deacon?) bade the prayers and that the people answered each petition responsorially, somewhat after the manner of an ectene or litany, though that, in the written form which it afterwards attained, was not yet invented (see below, 2 (*b*)). Thus Brightman remarks (*JThSt* xii. [1910–11] 322) that Justin's κοιναὶ εὐχαί must have been some inchoate form of a litany in order to be κοιναί at all. See also *JThSt* x. [1908–09] 506.

It is noteworthy, as J. Wordsworth points out (*Holy Com.*, Oxford, 1891, p. 64 ff.), that neither in Justin nor in the *Didache* is there a trace of intercession at the Eucharist for any one outside the Church. For Justin's words 'all others in every place' are shown by the context to mean 'all Christians'; and this custom of confining the liturgical 'offering' to those of the household of faith is found long after in Augustine's rule that it is wrong to 'offer' for any unbaptized:

'Who would offer the body of Christ except for those who are members of Christ? . . . For the non-baptized the sacrifice of the body and blood of Christ may not be offered' (*de Anima et ejus origine*, i. 10, 13; cf. ii. 15, 21, iii. 18; but for the interpretation of this see below, 2 (*b*)).

Thus we gather that both in the 2nd and in the 5th cent. there was some clear limit to the liturgical intercession. On the other hand, St. Paul emphatically orders prayers 'for all men,' including 'kings and all that are in high place'; indeed, he emphasizes prayer for those who are outside, that they may 'come to the knowledge of the truth' (1 Ti 2[1-4]). And Clement of Rome in the long prayer at the end of his epistle has a somewhat elaborate intercession, which includes 'our rulers and governors upon the earth' (*Cor.* 60 f.); there is, however, no evidence that this was offered at the Eucharist (for a discussion of the prayer see J. B. Lightfoot, *Clement*, London, 1890, i. 382 ff.). Tertullian says (*Apol.* 39) that 'we pray for Emperors, for their ministers, and for those in authority (*potestatibus*),' etc.; and (*ad Scap.* 2) that 'we sacrifice for the health (*salute*) of the Emperor, but to Him who is our God and his, but, as God commanded, in pure prayer'—probably an allusion to the Eucharist as opposed to the animal sacrifices of the heathen.

Cyprian speaks of penitents when restored to communion having the privilege of being prayed for by name at the Eucharist (*Ep.* ix. [xvi.] 2, 'To the clergy'; the true reading seems to be 'offertur nomine [not nomen] eorum,' but this does not greatly alter the sense; if the Eucharist was offered in their name, they must have been named as the object of prayer). In *Ep.* lix. [lxii.], writing to the Numidian bishops, Cyprian asks them to present their captive brethren in their sacrifices and prayers, and subjoins the names of each of these and of others for whom he asks their intercessions.

The Eucharistic intercessions in the 3rd cent. included prayers for the faithful departed. These appear first in Africa. Tertullian (*de Cor.* 3) says: 'We make oblations for the departed.' Cyprian, writing to the Church at Furni (*Ep.* lxv. [i.] 2), says that, in the case of a certain offender,

'no offering is to be made for him, nor any sacrifice be celebrated for his repose (*dormitione*). For he does not deserve to be named at the altar of God in the prayer of the priests . . . no offering may be made by you for his repose, nor any prayer be made in the church in his name' (for the recital of names in Cyprian's time see W. C. Bishop in *JThSt* xiii. [1911–12] 258).

We may here anticipate a little, and give testimony of a somewhat later date for the custom. In the *Canons of Hippolytus* (probably, in their present form, of the 4th cent., though slightly added to at a later date), at the commemoration of the departed (which must not be on a Sunday) the people 'first partake of the mysteries' and 'after the oblation' receive the bread of exorcism and sit at an Agape (can. xxxiii.; ed. H. Achelis, *TU* vi. 4 [Leipzig, 1891], § 169 f.). In pseudo-Pionius's *Life of Polycarp* (probably of the 4th cent.) we read that the people took Bucolus's body to the cemetery at Smyrna, and 'when all was over they offered bread for Bucolus and the rest' (§ 20 [Lightfoot, *Ignatius*[2], London, 1889, iii. 452]). Of the other Church Orders, the *Testament of our Lord* (c. A.D. 350?, i. 23, 35), the *Arabic Didascalia* (c. A.D. 400?, § 38), and the *Apostolic Constitutions* (c. A.D. 375, viii. 13) may be mentioned as including prayers for the departed in their Eucharistic liturgies. For Sarapion and Cyril of Jerusalem see below, 2.

2. **Fourth century and later.**—From the middle of the 4th cent. at least, the liturgical intercessions began to take written and fixed forms, and were developed in three lines: (*a*) the diptychs; (*b*) the Litany, or Ectene, or Synapte, or [Deacon's] Proclamation, and other forms of the 'people's prayers' before the Offertory; (*c*) the Great Intercession in the middle of the Anaphora. Technical names did

not at first arise, but all these three classes of intercession are found in the 4th century.

(*a*) *The diptychs and their predecessors.*—In the *Testament of our Lord* the priest, chief deacon, and readers, at some time not stated, sit in a special place to write down the

'names of the offerers of the oblations and of those for whom they have offered them, so that, when the holy things are offered by the bishop [*i.e.* at the Eucharist], the reader or chief deacon may name them by way of commemoration, which the priests and people offer for them with supplication' (i. 19).

In other words, the names of those who made offerings, and those for whom the prayers of the congregation were asked, were 'commemorated' at the Eucharist, though the point of the service at which this was done is uncertain (in this manual 'to commemorate' also means 'to say the Litany' [i. 35]). In the *Pilgrimage of Silvia* or *Etheria* (*c.* A.D. 380?, though some have suggested a later date) the bishop on certain occasions 'commemorates' the names of persons to be prayed for; but this is not at the Eucharist. In the middle of this century we find a recital of the names of the departed in the Liturgy of Sarapion (see below). At the end of the century Jerome says that the names of those who offered for the Church were publicly read by the deacon (*in Jerem.* ii. 11, *in Ezech.* vi. 18).

Thus in the second half of the 4th cent. there is a regular recital of names; and even at the beginning of the century there is an allusion to the custom, at the Council of Elvira, in Spain (can. 28 f.); the bishop may not accept the oblation of a non-communicant, and the name of a demoniac is not to be recited at the altar 'cum oblatione,' *i.e.* as an offerer at the Eucharist. On the other hand, there is no clear evidence of a recital of names in Cyril of Jerusalem (A.D. 348) nor in the *Apostolic Constitutions*; and it has been denied that there is any, except in the case of martyrs and deceased bishops, in Augustine (E. Bishop, in Connolly's *Lit. Hom. of Narsai*, p. 113 n.; Srawley, *Early Hist. of Liturgy*, pp. 147, 215; on the other side see W. C. Bishop, in *JThSt* xiii. 258 f.). In view of these facts we cannot affirm that the practice was *universal* in the 4th century.

In the 5th cent. the name 'diptychs' came into common use. It is derived from the fact that the names of the living and of the departed respectively were inscribed on two-leaved tablets, 'normally' made 'of ivory like the consular diptychs inscribed with the consul's portrait and name, distributed on his accession'; many of these were transferred to ecclesiastical use (Brightman, *Liturgies Eastern and Western*, p. 575). The reading of the names of the dead became at this time a test of orthodoxy. The letters that passed between Cyril of Alexandria and Atticus, bishop of Constantinople, early in the century describe the controversy as to the insertion of St. Chrysostom's name, some enthusiastically demanding its recital, others as enthusiastically demanding its omission. The letters show that the living and the dead were at that time commemorated in two separate tables, the latter arranged in categories; and that the diptychs contained a list of the bishops of Constantinople from the first. The public recitation was an important and popular part of the service, and the inclusion or omission of a name might lead to a riot or at least to very serious disturbance among the congregation (Brightman, p. 485, n. 7; E. Bishop, p. 102 f.; *DCB* i. 208).

The diptychs now become universal. We find them inserted in the Arabic translation (date uncertain) of the *Test. of our Lord*; they were used *c.* A.D. 500 by the East Syrians, for the *Lit. Hom. of Narsai* (ed. Connolly, pp. 10, 112) attest the recital of the names of both the living and the dead, though the contemporary pseudo-Dionysius Areopagita mentions only the names of the dead. Edmund Bishop points out (*op. cit.* p. 101) that the evidence tends to show a divergence of usage in East and West; and that the recital of the names of the offerers was early abolished in the East, those of the departed being retained, while in the West the former were read and the latter not until a later period.[1] In Gaul and Spain we do not read of the names of the dead being recited till the 6th cent.; Innocent I. mentions (*Ep. to Decentius*, early 5th cent.) the reading of the names of the offerers, but not of the departed. The commemoration of names is explicitly mentioned in the oldest Gallican book, the *Missale Richenoviense*, thus: '*Post nomina.* Auditis nominibus offerentum,' etc. (C. E. Hammond, *Lit. East. and West.*, Oxford, 1878, p. lxxxiii). A similar phrase is found in many later Gallican books.

The place of the diptychs in the Eastern liturgies varies. In the Byzantine rite (Greek and Armen.), they come during or in connexion with the Great Intercession; and so in the Egyptian rite (Melkite, Coptic, and Ethiopic, including the Abyssinian *Anaphora of our Lord* derived from the *Testament*), and in the West Syrian (Greek) rite.[2] But in the East Syrian or Persian (Nestorian) rite they came during or before the Kiss of Peace, in connexion with the Offertory,[3] and similarly in the Gallican rite as given by Hammond (p. xxviii); and it is probable that this is the original position. The names were connected with the Offertory, as including those of the offerers. In the Greek St. Mark (Egyptian) rite there is, just after the Kiss of Peace and the Creed, a prayer for those who offer. In Narsai and in pseudo-Dionysius the diptychs are read during the Kiss of Peace or after the Offertory and the Creed. Thus there seems to be good reason for thinking that in the Byzantine and Egyptian rites the diptychs have been moved from the neighbourhood of the Offertory to that of the Great Intercession. On the other hand, in Sarapion's sacramentary (*c.* A.D. 350), the ὑποβολή (recitation of names) of the departed comes in the middle of the Great Intercession.

An elaborate Nestorian example of diptychs may be seen in Brightman, p. 275 ff.; for those of Jerusalem see *ib.* p. 501 ff.; for those of the Stowe Missal see L. Duchesne, *Christian Worship*, Eng. tr.[4], London, 1912, p. 209 f.

(*b*) *The Litany.*—The intercessions before the Offertory took, at least in some places, the form of a written litany not later than the 4th cent.; but probably before that they were tending in this direction.

The technical names of this form of devotion seem to have been invented later. In Greek-speaking countries it was (and is) usually called the *Ectene*, which has been interpreted as 'the extended prayer' (Brightman, p. 596), or, perhaps more probably, as 'the fervent prayer' (Lightfoot, *Clement*, i. 385; note how Clement lays stress on the prayer and supplication being fervent, ἐκτενῆ [*Cor.* 59], and cf. *Ap. Const.* viii. 6–10, where the catechumens, the penitents, and the faithful after the dismissal of the others are repeatedly bidden to pray 'fervently,' ἐκτενῶς; see also Brightman, *loc. cit.*). Other names are the *Synapte*, or suffrages 'linked together,' and the *Eirenika* (Brightman, pp. 596, 602). In Syriac-speaking countries the litany is called the *Kārōzūthā*, or 'Proclamation.'

We have two written litanies of the 4th cent. extant, as said before the Offertory in the liturgy, one in the *Test. of our Lord* and one in the *Apost. Const.*, both being of the same form; and this form has survived in the East with scarcely any alteration to the present day. The deacon asks the prayers of the people for various persons and objects; *e.g.*, 'For the exalted powers [the Emperor] let us beseech, that the Lord may grant them prudence and the fear of Him.' No response is given in either of these manuals; but probably, as in *Silvia* (above, (*a*)) and in the later forms, the people answered 'Kyrie eleison' to each petition. But in Augustine (if, indeed, he refers to a litany; see below) the answer is simply 'Amen'; and in the latter part of the daily litany of the East Syrians the people answer 'Amen' to each suffrage, not, as in the former part, 'Kyrie eleison' (Brightman, p. 265).

[1] See some curious facts bearing on this in E. G. C. F. Atchley's *Ordo Romanus Primus*, p. 100.

[2] In the West Syrian (Jacobite) rite the names are read both before the Kiss of Peace and at the Great Intercession (Brightman, pp. 83, 94).

[3] When a memorial is made of persons departed, their names are read at the Great Intercession (Brightman, p. 296 n.).

In the Appendix to the *Arabic Didascalia*, which contains a Church Order based on the *Testament of our Lord*, and which describes the liturgy, but does not give it in full (c. A.D. 400 ?), the lections read by the deacons follow the Offertory (?), and the deacons then pray for the sick and travellers, for those in necessity, concerning the weather and crops, for kings and those in authority, for the departed, for penitents, for benefactors of the Church, for catechumens, for the universal Church, for the bishop and clergy, and for the assembled congregation. Then the bishop 'makes the liturgy' within the veil (F. X. Funk, *Didascalia et Const. Ap.*, Paderborn, 1905, ii. 132; Brightman, p. 510). The place of the Offertory before the lections is very curious; but this may not be the exact meaning of the writer. He probably intends a litany by his description.

In the *Testament* and *Apost. Const.* the suffrages said by the deacon are concluded by an intercessory prayer said by the bishop, the text of the prayer being given in the latter but not in the former manual, where it was probably an extemporaneous utterance. In the *Apost. Const.* there are two other diaconal litanies (ii. 57, viii. 13), much shorter than that described above, but both concluded by the bishop. At first, as it would seem, the people stood throughout these intercessory devotions, as in Justin, the older *Didascalia* (Funk, i. 160), and probably in *Apost. Const.* ii. 57 (*ib.* p. 165); but in bk. viii., as in the *Testament*, the people knelt for the suffrages and stood for the concluding prayer.

The further development of the intercession on these lines, by which, and by its conjunction with the Penitential Procession, the modern Western litany arose, does not belong to this article; but it is noteworthy that the ancient place of the litany, just before the Offertory and after the lections, is preserved in the English Book of Common Prayer on one occasion only—at the consecration of a bishop. In the Roman Church it was said at the ordination of deacons just after the Epistle and Gradual (Atchley, *Ordo Rom. Prim.*, p. 37).

It has been doubted if there is other evidence for formal litanies in the 4th century. It seems probable, however, if *Silvia* was written at the end of that century, that at Jerusalem they were then in use, though perhaps not at the Eucharist. The description in *Silvia* might apply to a mere recital of names; but the authoress can hardly mean that the boys cried 'Kyrie eleison' after each name. If she refers to litanies, it follows that they were used, as at the present day among all Eastern Christians, at the daily morning and evening services; also that at Jerusalem, while the deacon said the evening litany, the bishop said the morning one.

In some other countries the Eucharistic intercessions before the Offertory perhaps did not take a litany-form so soon as the 4th century. No litany is given in any Egyptian document of that period, nor, indeed, are any fixed intercessory forms found. Cyril of Jerusalem mentions no intercessions before the Offertory (see below, (*c*), for his detailed intercession at a later stage). The Council of Laodicea in Phrygia (*c.* A.D. 380) says that after the dismissal of the catechumens and penitents three prayers for the faithful were said, one in silence and the others aloud, and that then the Kiss of Peace was given and the oblation offered (can. 19). This seems to exclude the litany, at any rate at this point in the service. It has been thought that in Augustine's writings also there is no trace of a litany. He calls, however, the intercession 'common prayer' (*communis oratio*), which, as in the case of Justin (above, 1), would seem to imply something of this nature. He speaks of the bishop (*antistes*) praying with a loud voice, and the 'common prayer' being repeated by the voice of the deacon (*Ep.* lv. 34, Ben. [cxix] *ad inquis. Januarii*). The priest prayed for the heathen: 'Thou hearest the priest of God at the altar exhorting the people of God to pray for the unbelievers that God may convert them to the faith' (*Ep.* ccxvii. 26, Ben. [cvii] *ad Vitalem*; the people's response is given as 'Amen'). Thus Augustine's rule about not 'offering' except for the faithful (above, 1) must be interpreted as meaning only that private individuals could not be prayed for by name at the Eucharist unless they were Christians. Augustine also mentions the prayer for the catechumens (*Ep.* ccxvii. 2), and for the faithful (*ib.* and *de Dono perseverantiae*, 63, Ben. [23], where again the response is given as 'Amen'). For a re-construction of the African liturgy from Augustine's writings see W. C. Bishop in *JThSt* xiii. 250, and Atchley, *Ord. Rom. Prim.*, App. iv. p. 182.

It is more remarkable that the Nestorian Narsai (*c.* A.D. 500) mentions no litany, though he refers to the deacon's exhortations. Brightman, indeed, says (*JThSt* xii. 325) that the omission is due only to Narsai's beginning his exposition at a point after that where the litany would occur. Yet the description includes the expulsion of the catechumens. The same omission is found in the Monophysite Jacob of Edessa (7th cent.), who describes the liturgy in his letter to the presbyter Thomas (Brightman, p. 490 ff.). After the Creed, which by that time had become part of the Eucharistic service, come three prayers of the faithful (cf. Laodicea above), and the deacon admonishes the people to stand in becoming order for the Kiss of Peace. Later on Jacob uses the word 'commemoration' for the Great Intercession, perhaps meaning that the diptychs were then said.

The conclusion from the evidence is that the formal litany was known in the 4th century, in Syria, as the *Apost. Const.* show (this Church Order probably does not emanate from Antioch itself [see A. J. Maclean, *Ancient Church Orders*, p. 150]), and in the country where the *Testament of our Lord* was written (perhaps Asia Minor). At least something of the nature of a litany was probably in use at the end of the century at Jerusalem and in North Africa. In some other countries its place seems to have been taken by continuous intercessory prayers (Phrygia and the farther East), but we must guard against the fallacy of supposing that absence of evidence of its use means evidence of its non-use. At a later period the formal litany in the Eucharistic service became universal.

(*c*) *The Great Intercession.*—The third form in which the prayers for all men developed belongs entirely to the 4th and later centuries, and was almost certainly not in use before that. This was the 'Great Intercession' in the liturgy, the 'Prayer for the whole state of Christ's Church.' This has exactly the same object as the Ectene—to intercede for all who need the prayers of the faithful. But two noteworthy facts show that it came into existence after the rest of the central part of the Eucharistic service had assumed a written, as opposed to an extemporaneous, form. Firstly, the Great Intercession is remarkable for the variety of its position in the service; and, secondly, it is not found at all in the two earliest liturgies that we know, those of the Ethiopic Church Order (Brightman, p. 189), and of the *Verona Fragments of the Didascalia, etc.* (ed. Hauler, Leipzig, 1900, p. 107), and it is found only very slightly developed in the *Test. of our Lord* and in Sarapion. As described in Chrysostom's Antioch writings, it is much more elaborate, if Brightman's re-construction is right (p. 474, and notes 25, 26 on p. 480); and in the *Apost. Const.* (viii. 12) it is a long one.

Thus this feature of the service grew only gradually and slowly in the 4th century. There is, however, by way of exception, an instance of early development of the Great Intercession in Cyril of Jerusalem (A.D. 348). This is one out of many instances in which Jerusalem led the way with regard to liturgical customs. In Cyril's description (*Cat.* xxiii.) the Great Intercession prays 'for the common peace of the Church, for the tranquillity of the world, for kings, soldiers, allies, the sick and afflicted and all who need succour; then we commemorate also those who have fallen asleep before us; first, patriarchs, prophets, apostles, martyrs, that at their prayers and intervention God would receive our petition; afterwards also on behalf of the holy fathers and bishops who have fallen asleep before us, and, in a word, of all who in past years have fallen asleep among us, believing that it will be a very great advantage to the souls for whom the supplication is put up, while that holy and most awful sacrifice is presented.' This intercession is expressly said by Cyril to have come after the Invocation, and 'after the spiritual sacrifice is perfected.' But so elaborate an intercession in this part of the service must at that date have been exceptional.

The most ancient place of the Great Intercession would appear to have been after the Invocation. It is found there in the only 4th cent. liturgies where it occurs at all—those of the *Testament*, of

the *Apost. Const.*, and of Sarapion, and also in Cyril of Jerusalem's description. And this is its place also in the Byzantine (Greek and Armenian) and West Syrian rites. In the East Syrian rite, however, it comes between the Commemoration of Redemption and the Epiclesis, and this is the case as early as Narsai (*c.* A.D. 500). In the Egyptian rite (Greek, Coptic, Ethiopic) it precedes the Commemoration of Redemption; and so in the Abyssinian *Anaphora of our Lord* (see art. INVOCATION, [Liturgical], below, p. 411[b], note 1; for a translation see J. Cooper and A. J. Maclean, *Test. of our Lord*, Edinburgh, 1902, p. 245 ff.), where there is also a shorter intercession after the Invocation, as in the *Testament* from which it is derived.

In the Roman rite the Great Intercession is divided into two parts, that for the living, with a commemoration of saints, being said directly after the Sanctus, and that for the departed, with another commemoration of saints, following the prayer for Divine intervention *Supra quae* and *Supplices te* (see art. INVOCATION [Liturgical], § 6). The Ambrosian liturgy has the same feature. In the old Gallican and Mozarabic, the Great Intercession comes, with the names of the living and the dead, before the Kiss of Peace (Duchesne, p. 211). This custom was reprehended by Innocent I. in A.D. 416 (*PL* xx. 553 f.; see Atchley, *Ordo Rom. Prim.*, p. 99).

The main difference between the Great Intercession and the 'people's prayers' at the earlier part of the service is that the former was a prayer by the priest, the people answering 'Amen' at the end, while the latter were at least usually responsorial, the deacon addressing the people and bidding their prayers a clause at a time, and the people responding to each clause, usually with an ejaculation addressed to God. In the modern Coptic rite (Brightman, p. 165) the people respond 'Kyrie eleison' in the Great Intercession also, and the deacon interjects some short exhortations.

3. **Conclusion.**—To sum up the evidence: it appears that the liturgical intercessions have developed in three directions, into the diptychs, the Ectene, and the Great Intercession. These devotions seem not to have taken a fixed or written form quite so soon as the other central parts of the service. The development went on in parallel lines, the Ectene keeping the form of a dialogue and being said (as in Justin) before the central act; the Great Intercession growing into a long prayer of the celebrant; while the diptychs, which are in reality the essence of the whole intercession, became in time a mere list of somewhat meaningless names, and in most countries have fallen into complete desuetude.

**INTERIM.**—Three documents bearing the name of *Interim* figured in the Church history of the South of Germany during the troubled decade in the 16th cent. which contained the death of Martin Luther. They were drawn up as bases of reunion between the Roman Catholic and Reformed factions in the Empire. The unswerving policy of the Emperor Charles V. to keep the German Church one and in communion with Rome, though organized in a distinctive fashion of its own, sought a solution of the problem in the imposition of articles of compromise upon the recalcitrant Protestants and Roman Catholics alike. They were of an *interim* or provisional character, meant only to form an accommodation or *modus vivendi* until a free General Council of Western Christendom should determine a final settlement of the matters in doctrine, ritual, and government at issue within the Church. They represent, without any genuine constructive or reconstructive genius, the effort of the imperial authority, all but grown desperate, to heal in a hurry the fresh schism of Christendom and to close the Christian ranks against the menacing advance of Islām. Charles V., anxious though he was to check the power and claims of the papacy whenever it crossed his own imperial path of ambition, was resolved that no one else should thwart the bishop of Rome. Even when his own envoys were demanding that the Tridentine Council should be withdrawn from Bologna and from Italian or Roman dictation, and in his name (Jan. 18, 1548) declined to recognize its decrees until it had returned to Trent, he had no thought of undermining the papal authority. It was his fixed conviction that in the hopelessly divided and exhausted state of the forces of Protestant Reform a moderate Catholic Reform, which should allow play and scope for the German national genius, could be trusted to appeal in the long run to all parties. Already in 1540 and 1541 conferences had taken place at Hagenau, at Worms, and at Ratisbon (Regensburg), the last of which made some real progress towards a compromise. In May 1548, at the Imperial Diet which met at Augsburg, the principal Interim was enacted, and in December of the same year the Saxon Diet, met in Leipzig, passed a similar document for its own territory. There are thus three Interims, that of Ratisbon in 1541, that of Augsburg in 1548, and that of Leipzig in the same year. Of these it is the second which is familiar to history as 'the Interim.'

1. **Ratisbon Interim.**—The Conference at Ratisbon in 1541 could not vie with its immediate predecessor at Worms either in numbers or in talent. The earlier gathering included Melanchthon, Brenz, Capito, Bucer, and Calvin among the eleven who formed the Reformed side; Eck, Gropper, Malvenda, Granvelle, and the nuncio Morone among the eleven on the papal side. Its discussions gave little promise of an agreement in favour of traditional authority, and it was speedily terminated by adjournment till the Diet met in the Emperor's presence at Ratisbon. At Ratisbon, Granvelle, bishop of Arras, again presided, this time in association with Frederick the Count-Palatine, and over against Eck, Gropper, and Julius von Pflug were set Melanchthon, Bucer, and Pistorius, while the conciliatory Contarini represented the Vatican. With Melanchthon, Bucer, Pflug, and Contarini on the commission, progress was speedily made, for their desire to reach an understanding was sincere and intense. Bucer had been indefatigable in promoting communication and compromise, and had taken a considerable part in the preparation of the 23 articles which formed the *Regensburg Book*, the basis of discussion at the Conference. Melanchthon had proved the sincerity of his attachment to the cause of reconciliation four years earlier, when the Articles of Schmalkald were drawn up by Luther, at the request of the Elector of Saxony in view of the promise of Pope Paul III. to call a General Council to meet at Mantua in 1537. It was natural that articles which were to represent Protestant conviction in a far from sympathetic gathering should

be militant; but Melanchthon, who furnished them with an appendix on the papacy, did not hesitate to qualify his subscription to them with the clause:

'. . . in regard to the Pope, I hold that, if he would admit the Gospel, we might also permit him for the sake of peace and the common concord of Christendom to exercise by human right his present jurisdiction over the bishops who are now or may hereafter be under his authority.'

Agreement was reached on the first four subjects of discussion, which concerned man's original state, free will, and sin, and even on the doctrine of justification by faith, an inhering as well as imputed righteousness being affirmed on the strength of Christ's merit. But, when the subjects of the Church, the sacraments, and the papal authority were dealt with, it became clear that the two sides were irreconcilable. To concede the cup to the laity and marriage to the clergy of Germany was but to touch the fringe of the problem, and to concede primacy to Rome without delimitation of its prerogative was merely to postpone a settlement. Moreover, when the results of the discussion were submitted to the pope and to Luther, it was ascertained that each was profoundly dissatisfied. The Emperor made the most he could of the disappointing situation. Although the Roman Catholics would not allow themselves to be bound by the agreed articles, he imposed these upon the Protestants as the substance of the 'Ratisbon Interim.'

2. Augsburg Interim.—Despite the fact that the Ratisbon Colloquy thus virtually came to nothing, and the antagonistic interests were destined never again to come so near to a settlement of their differences, the Emperor clung to his project. Luther's death in 1546 removed one obstacle. The summoning of the Council of Trent in 1545 removed another, although Charles soon charged the pope with infringing its freedom, and thus defeating its purpose of promoting reunion. The Schmalkald League was broken up. The defeat and capture of the Saxon Elector John Frederick, last champion of the Protestant cause in arms, at Mühlberg in 1547 left the Emperor, for the time being, master of the political situation and gave a new opportunity to his great design. Despairing of successful action by the Council, he set himself, as Lindsay writes (*History of the Reformation*, i. 389 f.),

'to bring about what he conceived to be a reasonable compromise which would enable all Germany to remain within one National Church. He tried at first to induce the separate parties to work it out among themselves; and, when this was found to be hopeless, he, like a second Justinian, resolved to construct a creed and to impose it by force upon all, especially upon the Lutherans. To begin with, he had to defy the Pope and slight the General Council for which he had been mainly responsible. He formally demanded that the Council should return to German soil (it had been transferred to Bologna), and, when this was refused, he protested against its existence and, like the German Protestants he was coercing, declared that he would not submit to its decrees. He next selected three theologians, Michael Helding, Julius von Pflug, and Agricola—a mediævalist, an Erasmian, and a very conservative Lutheran—to construct what was called the *Augsburg Interim*.'

The Interim was enacted on May 15, 1548, and was put in force by the Emperor throughout the Empire, many Lutheran preachers and teachers, *e.g.* Brenz, Osiander, and Bucer, being sent into exile for refusing to submit. But it was vain to force it on Protestants while Roman Catholics declined it and had to be furnished with a *Formula Reformationis* for themselves. Where the preachers were banished the churches stood empty. In a short time the Interim was a spent force.

The document is an example of what Thomas Carlyle calls 'concoctive science.'

'Nothing that Charles ever undertook proved such a dismal failure as this patchwork creed made from snippets from two Confessions. . . . It is a hopeless task to construct creeds as a tailor shapes and stitches coats' (Lindsay, i. 390 f.).

Its propositions are cast in terms of studied ambiguity. To conciliate the party of reform it affirmed a doctrine of justification by faith, conceded the marriage of priests and the use of the sacramental cup by the laity, and revised the doctrine of the Mass. But the number of the sacraments, the retention of ceremonies, the worship and invocation of Mary and the saints, the doctrine of transubstantiation, and the sovereign authority of the pope were regularly maintained in favour of Rome.

3. Leipzig Interim.—In Saxony the Elector Maurice, assisted by Melanchthon, whose heart was set upon the restoration of his beloved University of Wittenberg after the war, and upon the speedy return of peace to his distracted country, imposed upon his subjects the Leipzig Interim, the counterpart of the Augsburg settlement. The policy of Melanchthon, for which he was never wholly forgiven by ardent Lutherans, was to yield to Rome and the Emperor well-nigh all that concerned ritual and usage so long as the essentials of the Reformed doctrine, in particular justification by faith, were conserved. Luther had remonstrated again and again with his scholar-colleague on this very point, but Melanchthon was content at this time of ebb in the fortunes of the Reformation to sacrifice ceremonies if doctrines were kept pure. Brenz, Bucer, and Calvin (see Schaff, *History of the Creeds of Christendom*[6], p. 301) all saw deeper into the perils of Melanchthon's 'adiaphorism,' and deplored his attitude. Not till the Formula of Concord took shape in 1577 did the controversy thus originated reach a termination. But the Interim which gave rise to it was set aside by the sudden change of front of the Elector Maurice, and the dramatic success of his bold stroke on behalf of the cause which he had betrayed, and by the establishment of the Peace of Augsburg, which authorized finally the profession of the Confession of Augsburg.

**INTERMEDIATE STATE.**—See STATE OF THE DEAD.

**INTERNATIONALITY.**—The term 'internationality' may be used with reference to both law and morality in their international aspects. In its legal bearing, it can apply only to the relations existing between those States which are within the sphere of international law. This circle of States includes the Christian nations of Europe and their offshoots in America, the Ottoman Empire, and Japan—which had been admitted even before the Russo-Japanese War. China and Persia, too, have now a recognized international status of some kind. How the circle comes to be so restricted may be explained as follows. International law, according to a well-known authority (W. E. Hall, *International Law*[6], pt. i. ch. i.), primarily governs the relations of those States called independent States which voluntarily submit themselves to it, although to a limited extent it may also govern the relations of certain analogous communities. The marks of an independent State are: that the community constituting it is permanently established for a political end; that it possesses a definite territory; and that it is independent of external control. But, as international law is a product of the special civilization of modern Europe, and forms a more or less artificial system, such States only can be presumed to be subject to it as are inheritors of that

civilization. States which are outside European civilization must enter in a formal way into the circle of those governed by the law, although an express act of accession is not to be regarded as necessary. When a new State comes into existence, its position is determined by the same considerations; and its origin decides whether it is *presumed* to belong to the circle or not. Recently, however, the tendency has been for admitted States to conduct their relations with States which are outside the circle, so far as the case permits, in accordance with the legal standard which they have themselves set up. And so the spirit of international law is making itself felt all over the world.

There are some principles of State action which are, as it were, just over the borders of the law. For example, the State's duty to extradite criminals is said on good authority to be a moral and not a legal one. And such bordering rights and duties are supplemented by others more clearly moral, and by many duties in which the State's relationship is not so clearly extended to other States, but rather to masses of foreigners or to the world in general. Thus the duty of a State to permit intercourse with it to be maintained by foreign nations is said to be a moral duty, as opposed to a legal one. But, whether it is a moral or a legal one, it is subject to the limitation that the State may take what measures of precaution it considers needful to prevent the right of access and intercourse from being used to its own injury. And, when we come to consider the laws actually in force preventing the access of alien vagabonds, destitute persons, and so forth, the interest and importance of the subject lie primarily in its ethical and economic aspects, and not in its strictly international bearing.

Mention must also be made, more specifically, of uncivilized peoples. Obviously the principles by which a civilized State is to regulate its conduct towards the people of less highly developed races give rise to many burning questions, though in a legal sense such problems might be ruled out of discussion. A civilized country possesses in its army and navy instruments of the most powerful kind for assuming the offensive. In treating with a barbarous people, it probably knows the dangerous fact that, whatever be the soundness of its arguments, it has the power to enforce its wishes. And, when a civilized nation has acquired dominance over an uncivilized, its political and commercial organization must be employed with due regard for the inferior race. By the establishment of protectorates, States frequently acquire rights over countries the inhabitants of which are in an uncivilized condition; and the States are then expected to see that a reasonable measure of security is afforded both to their own subjects and to foreigners who are members of other States within the protectorate. The native inhabitants must, on their side, be protected from harm to a reasonable extent; and there must be some provision for the administration of justice between man and man. It is generally not possible to administer a European law with its systematic completeness, and the problem of justice must be solved according as the local circumstances dictate. Protectorates of this newer kind, it must be remembered, ought not to be classed with those of our Indian Empire. A 'sphere of influence,' again, is a looser and vaguer term than protectorate. The State here assumes a much less definite responsibility; but it is expected to exercise such influence as it possesses in the direction of good order.

W. A. WATT.

**INTERPRETATION.**—**1. Introduction.**—A sacred book, like a legal code, calls for interpretation, as a means of bridging the chasm which, in religion as in law, exists between the progressive development of life and the fixed letter. The book and the legal code do not supply all the information that may be required; to many questions they give no satisfactory answer; while, again, they contain much that can no longer be used, and much that to a more advanced stage of thought seems antiquated, erroneous, and objectionable. Interpretation thus comes to be a process partly of supplementing the original record, partly of giving it a new significance. It is a feature of all book-religions, and appears also among peoples who invest ancient poetry (*e.g.* the Vedas in India and the Homeric epics in Greece) with canonical prestige—with the authority of a Bible. Even prior to Buddha's time Indian scholars had compiled huge commentaries to the Vedas—the so-called *Brāhmaṇas*; while the Stoics built their philosophy very largely on the interpretation of Homer (Heraclitus of Pontus, *Quæstiones Homericæ* [ed. Leipzig, 1910]; Cornutus, *Theologiæ Græcæ compendium* [ed. C. Lang, do. 1881]).

This feature appears in its most definite form in later Judaism: the *Hălākhā* and *Haggādā* (see art. RABBINISM), the one practical, the other theoretical, were in reality such supplements to or re-interpretations of the OT; and this feature is equally marked in Christianity, which, by conjoining the OT, the religious document of the inferior dispensation, with the NT, was in a special way confronted with the problem of bringing its own religious convictions into harmony with the letter of Holy Scripture. It is true that the parables of Jesus speak in the same homely language to people of all ages, and that the Gospels tell clearly and plainly of the life which brought light to the world. But what was the Christian to make of the sacrificial legislation of the OT, and of what use was the history of Israel to him? The Prophets contain much that is obscure, and even in the Psalms there are many things that cannot but jar upon the Christian consciousness. What had become a customary procedure in the case of the OT was soon extended also to the NT, and all the more readily as the latter had difficulties of its own, and especially as it presented much that was repugnant, and omitted much that would have proved acceptable, to the Greek mind. Along with a sacred book, Christianity found current also a method of exegesis which merely needed to be developed in accordance with its own peculiar character. Greek, Jewish, and Christian exegesis differ from one another, not in method, but in purpose: they respectively seek to elicit philosophy, law, and Jesus Christ.

**2. Development of exegetical theory.**—The human mind endeavours to reduce such exegetical practice to rules, to a theory. Rabbi Hillel formulated seven rules of exegesis, which Rabbi Ishmael further extended to thirteen, and Rabbi Eliezer to thirty-two, most of them simply showing how to foist an extrinsic sense into the text by arbitrary and artificial devices. They include the argument *a minore ad maius*, the analogy, the combination of two passages, the *nôṭārîqôn* ('abbreviation') (e.g. *selāh* = שׁוּב לְסַקְלָה סב = *da capo*), *gᵉmaṭriā* ('numerical value of letters') (cf. Rev 13[18]), the *tᵉmūrāh* ('form,' 'shape') (e.g. *Sheshach* = Babylon [Jer 25[26]]). The Greeks went more deeply into the subject. What writers like Aristotle (in the *Organon*), pseudo-Demetrius of Phaleron,

Dionysius of Halicarnassus, etc., include in περὶ ἑρμηνείας was a subdivision of rhetoric, dealing with the formation of thought or judgment in word and sentence, *i.e.* the mode of expression in the choice and combination of words, diction in the grammatical sense, and, finally, style in the rhetorical sense (*elocutio*; Arist. λέξις). With this, again, was closely allied the analysis of this process of thought in a single writer; and, just as the terms ἑρμηνεύειν and *interpretari* were used to denote translation into another language (*transferre*), so they were also applied to the explanation of a sentence in itself obscure (*explicare*). The latter sense was also expressed by ἐξηγεῖσθαι, a word originally connected with the sacred mysteries.

In the exegesis of Holy Scripture, however, it was not merely the thoughts of the human writers that had to be taken into consideration; the idea of inspiration, along with the notion of an incomprehensible and mysterious God, required men to search for a more profound hidden meaning behind the natural sense. Hence Philo of Alexandria, the Jewish philosophical theologian, adopted the 'allegorical method' of the Stoics, and the Christian theologians followed his example. As he assumed that the Biblical history was not in the real sense history at all, but was rather eternal, unchanging truth under a historical veil, so they maintained that what was told in the OT about Joseph, David, or Solomon was in reality the story of Jesus. The tabernacle and its sacrificial worship stood for the Christian Church and its services. If the true sense was to be discovered, every detail must be read as implying something else, as in a pictorial enigma; or, to put it more precisely, the allegorical interpretation was something given in its entirety beforehand, and only required to be fitted into the text as a whole in such a way as to harmonize the greatest possible number of details. See, further, art. ALLEGORY.

But, besides the allegorical method, which was a product of the Greek spirit and had an inner link of connexion with Plato's theory of ideas, there was another method—more congenial to the Semitic mind, and also more just to the idea of historical development—viz. the method of 'typology,' which recognized the historicity of the narrative, but in its system of prediction and fulfilment postulated a kind of pre-established harmony between the OT and the NT history. Thus, *e.g.*, it is a historical fact that Abraham was ready to sacrifice Isaac, but the true significance of the incident is its being a prefiguration of God's sacrifice in Christ. Typology, no less than allegory, puts an extrinsic meaning into the text; but it looks at the relation between the literal and the added sense in a somewhat different way.

The allegory, after its excessive cultivation by the Gnostics, found a footing chiefly among the Platonizing theologians of Alexandria, while typology, to which Jewish Christians had resorted from the outset, was brought to its highest development in the so-called School of Antioch (cf. art. ANTIOCHENE THEOLOGY). There is no good reason for connecting the difference between the two with the antagonism between the Alexandrian and the Pergamenian schools of Hellenistic philology. It was believed by the ancient scholars that the two methods worked quite well side by side.

Of the Christian theologians, the first to formulate a theory of interpretation was Origen (Περὶ ἀρχῶν, bk. iv.); by the hypothesis of the manifold sense of Scripture (somatic, psychic, and pneumatic, *i.e.* verbal, moral, and mystical) he showed that the several modes of exegesis were all valid in their own place. This was expanded by the Greek theologians of the 4th cent. into the theory of the 'fourfold' sense of Scripture, which was in turn adopted in the West by Augustine, and then fixed and brought to maturity by the Scholastics.

Like the κλεὶς of Melito of Sardis, the treatise of Diodorus 'on the difference between theory and allegory' and that of Theodorus 'on allegory and history' are unfortunately lost; and the notes of Isidore of Pelusium (*Ep.* iv. 117, 203 [*PG* lxxviii. 1192 f., 1289–92]) and Nilus (*Ep.* i. 118–127, ii. 223, etc. [*PG* lxix. 133–137, 320]), as also the *Instituta regularia divinæ legis* of Junilius Africanus (A.D. 551 [*PL* lxviii. 15–42; also ed. H. Kihn, Freiburg, 1880]), which emanated from the school of Paul of Nisibis, make but a poor substitute for them. The most valuable contribution, here as elsewhere, was made by Augustine, who, in his *de Doctrina Christiana*, with the distinction between *res* and *signum* as his starting-point, arrived at an almost modern theory of interpretation, although, like all the exegetes of the ancient Church, he confined himself to the task of explaining difficult passages of Scripture.

The other extant manuals of hermeneutics—the *Liber regularum* of the Donatist Tychonius (ed. F. C. Burkitt, *TS* iii. 1 [1894]; its seven rules were adopted by Augustine, Isidore, Thomas Aquinas, etc.), the *Formulæ spiritalis intelligentiæ* and the *Instructiones* of Eucherius of Lyons (ed. K. Wotke, *CSEL* xxxi. [1894]), as well as the Εἰσαγωγὴ εἰς τὰς θείας γραφάς of the monk Adrianos (*c.* A.D. 500; *PG* xcviii. 1273–1312)—are simply practical directions for the allegoristic interpretation of Scripture, and treat of the OT and the NT in exactly the same way.

Scarcely any further advance was made by the mediæval writers Cassiodorus (who merely combined the last-named three with Augustine and Junilius), Isidore, Bede (*de Schematis et tropis sacræ scripturæ*), Notker Balbulus (*Notatio de interpretibus divinarum scripturarum*), Hugh of St. Victor (*Prænotatiunculæ de scripturis et scriptoribus sacris*), or the Scholastics. The allegorical method dominated all of them, and was systematized as the fourfold sense of Scripture. In the later mediæval period, however, a new feature, due to the independent thought of men like Roger Bacon, and also to a revived knowledge of Rabbinical interpretation, was introduced into the ecclesiastical exegesis, as seen in Nicolaus of Lyra (1270–1340) (*Prologus in moralitates bibliæ*), J. Gerson (1363–1429) (*Propositiones de sensu literali sanctæ scripturæ*), and others. Santes Pagninus of Lucca (1470–1541) reinstated the mystical sense in his *Isagoga* (Lyons, 1536), and Sixtus of Siena (1520–69), in his *Bibliotheca sacra* (Venice, 1566), collected with vast erudition all the learning of the past that was necessary for Biblical exegesis. The new and decisive impulse, however, came from a different quarter. Humanism revived the study of the ancient languages, and the Reformation made that study subservient to an exegesis that centred in the plain historical sense. But the real turning-point was that, whereas the entire ancient and mediæval theology had regarded Scripture as abstruse, as something that could and should be interpreted only by learned men with the help of allegory and under the control of the Church, it was now asserted, in virtue of the new evangelical ideas of a revealed God and the assurance of salvation, that Scripture was easy to understand (its *perspicuitas*): the devout reader of the Bible, once he was furnished with the necessary linguistic aids, would discover the meaning without difficulty. Hence, in addition to the philological *Ars critica* of G. Scioppius (1662), J. Clericus († 1736), and H. Valesius (Amsterdam, 1740), we have the *Clavis scripturæ sacræ* of Matthias Flacius Illyricus (1567) and the *Philologia sacra* of Salomo Glassius (1623–36), which are chiefly concerned with the lexical

and grammatical material required to bring out the verbal sense of the text.

It was Biblical exegesis, and not classical philology, that—as W. Dilthey (see Lit.) also holds—gave rise to modern hermeneutics. The term 'hermeneutics' (a reminiscence of Plato, *Epinomis*, 975 C ?) first occurs in a work of J. C. Dannhauer (Strassburg, 1654), while others still spoke of the *ars interpretandi* (Rudorff, 1747; 'Auslegekunst,' G. F. Meyer, Halle, 1756). Through the renewed study of the ancient treatises Περὶ ἑρμηνείας a great many topics came in which belonged properly to rhetoric, and do not, strictly speaking, fall under hermeneutics in the modern sense. In the 18th cent. hermeneutics was a favourite study; scarcely a single year passed without the issue of a handbook on the subject. The outstanding theologians of all confessions added their quota, and of these J. A. Turretini of Geneva (1728), his friend S. Werenfels of Basel, and the semi-Pietistic, semi-Wolffian S. J. Baumgarten of Halle (1742) deserve special mention. The most influential of them all was J. A. Ernesti of Leipzig, whose *Institutio interpretis* (1762) is distinguished by its philological sobriety and lucidity.

The necessity of a purely historical mode of understanding the text, however, was not yet fully realized. In place of the ecclesiastical authority of the Roman Catholic exegesis, the orthodox theologians of the Reformed Churches, notwithstanding their maxim 'scriptura scripturæ interpres,' substituted the authority of their respective creeds. The Cartesians found the standard of Biblical interpretation in philosophy (L. Meyer, *Philosophia s. Scripturæ interpres*, Amsterdam, 1666; J. Amerpoel, *Cartesius Mosaizans*, Leovardiæ, 1669), and the champions of the Enlightenment, in their desire to keep their exposition of Scripture within the bounds of reason, did the same thing in their own fashion. The Pietists, on the other hand, like the mediæval mystics, wished to use the Scriptures only for edification, and were not concerned to understand them historically (A. H. Francke, *Manuductio ad lectionem Scripturæ Sacræ*, Halle, 1693, [2]1700, *Prælectiones hermeneuticæ*, Halle, 1717); while Kant desired to have them expounded with a view to moral perfection. The infallibility of the divine revelation given in the Scriptures was assumed by all these writers, and they were thus impelled, unwittingly, to find extrinsic meanings in the text.

Apart from all the theologians of this period stands Baruch Spinoza, the Jewish philosopher, who, in his *Tractatus theologico-politicus* (1670), first ventured to question the fundamental axiom of all previous theology and Biblical exegesis. What Luther had intuitively felt, but had not consistently carried out, viz. that the value of the Bible lies simply in its being a religious book, was made explicit by Spinoza, who thus prepared the way for a distinctively religious estimate of the contents of Scripture, and for a historical interpretation that should do justice to the different world-views of various lines.

The pioneer of a fresh movement was F. D. E. Schleiermacher, in whose hands hermeneutics (cf. 'Hermeneutik und Kritik, mit besonderer Beziehung auf das NT,' *Werke*, I. vii., ed. F. Lücke, Berlin, 1838), which had hitherto been an aggregation of knowledge and devices needed for exposition, became a philosophy of 'comprehension' ('Philosophie des Verstehens'). While Augustine had analyzed the materials to be understood, Schleiermacher deals with the process of understanding itself. For him there is no distinction between difficult and simple passages, and nothing is self-evident. The interpreter's task is to understand the religious personality of the writer as manifested in every single word, to look from the details to the whole, and from the standpoint of the whole to set the details in their true light. Accordingly, hermeneutics is one and the same for all literature, sacred or profane, and yet it assumes a special character for each individual writer, even within the Bible itself. Schleiermacher's views were maintained by his pupils F. Lücke (*Grundriss der NT Hermeneutik*, Göttingen, 1816) and H. N. Klausen [or Clausen] (*Hermeneutik*, Leipzig, 1841).

The rehabilitation of orthodoxy in the 19th cent., with its deepened Christian piety, revived the demand for an exegesis recognizing a twofold sense of Scripture (H. Olshausen, *Ein Wort über tieferen Schriftsinn*, Königsberg, 1824; R. E. Stier, *Andeutungen für gläubiges Schriftverständnis*, 1824), for a pneumatic exposition (J. T. Beck, *Zur theologischen Auslegung der Schrift*, 1838; J. L. S. Lutz, *Biblische Hermeneutik*, Pforzheim, 1849), and for a believing, *i.e.* a doctrinally correct, exegesis (E. W. Hengstenberg); on these, again, J. C. C. Hofmann's biblico-historical principle of exegesis (*Biblische Hermeneutik*, ed. W. Volck, Nördlingen, 1880) certainly marks a distinct advance. Exegetical theology, however, refusing to be led astray by these ventures, partly, indeed, in sharp conflict with them, and moving on various lines—from the dogmatic attitude of H. A. W. Meyer and his continuator B. Weiss of Berlin, through the so-called mediating theology of E. Reuss, F. Bleek, and others, to the Tübingen School of F. C. Baur—has, with constantly increasing emphasis on the historical element (H. J. Holtzmann, C. Weizsäcker, A. Jülicher), striven to the utmost to gain a grammatical and historical comprehension of Scripture. Nevertheless, it has failed to provide its ever-expanding industry with a proper rationale in a theoretic discussion of the hermeneutic problem. This failure is now beginning to bring its retribution, inasmuch as an art that does not reflect upon its own essential function readily degenerates into a mechanical routine.

3. **The principles of exegesis.**—(1) ***Fundamental hermeneutics.***—Hermeneutics is not simply a congeries of practical rules, but a science built upon a theory of comprehension—just as logic is not a mere organon (Aristotle), but a canon (Galileo); it proposes to explain why a given work is to be understood in one way and not another. Thinking, speaking, and writing are three marvellous gifts which man possesses. They are acquisitions whose discovery we cannot associate with any human name, and are, as the ancients believed, gifts of the deity.

To these three productive capacities correspond three reproductive, viz.—to give them in the reverse order—silent reading, reading aloud, and interpreting. Knowledge of the script, whether the script be ideographic or phonetic, makes reading possible, and reading attains its full realization in reading aloud. Even silent reading involves an inward phonetic element, as, *e.g.*, in accentuation, grouping of words, etc., and the special difficulty in reading aloud is that the cadence of the spoken language is not indicated in the script; certain marks of punctuation are but a make-shift. Thus, ἐρευνᾶτε in the phrase ἐρευνᾶτε τὰς γραφάς (Jn $5^{39}$) may mean either 'you search,' or 'do you search?' or 'search,' and, moreover, the tone of the indicative form may imply approval or reproach. It is only when the separate signs in writing and speech, and also the thought as a whole, are fully understood—by interpretation—that reading to oneself or to others is brought to perfection. It is a long step from spelling out a text to reading fluently to others; interpretation is usually treated as something that comes of itself until experience has shown with how many possibilities of misconception it is attended.

When these operations are applied to an entire literary document, they become a process of comprehension and interpretation; *i.e.*, the thought expressed in word and script is, in virtue of the general laws of thinking, speaking, and writing, apprehended and reproduced by another mind (and may then be given once more in speech and writing). Modern psycho-physics has shown by observation and experiment what difficulties have to be overcome in the process, even under normal conditions, when the individual possesses the ability to hear, to see, to read, to think, etc.; the process demands an effort of the will, *i.e.* attention. Where there is congeniality of spirit, no doubt, this process often takes place spontaneously, like the sympathetic vibration of strings tuned alike. The task of skilfully understanding the text is a different matter; this proceeds by rules, and is conscious of both its method and its aim, though here also affinity of spirit and sympathetic intuition are necessary. The work of comprehending culminates in exposition—*i.e.* in making a thing comprehensible to others, in 'discovery and transmission of the sense' (G. Heinrici in *PRE*[3] vii. 718). The decisive proof of one's having understood is the ability to reproduce with clearness, although we must here guard against the intrusion of the practical and hortatory element. The psychological laws of association show—what was already noted by Augustine—how necessary a wide knowledge and how important a good memory is for the expositor, who, in order to grasp the peculiar significance of details, must assign them to their proper place in the whole, and compare them with as many similar facts as possible.

The final test of exposition is in the free reproduction of the thought expressed in the text—in translation and paraphrase. It is easy to repeat verbally what one has heard, but difficult to reproduce it in its true sense; and unless every detail is brought out by ample paraphrase,[1] something will usually be lost. The task of conveying the thought in another language presents special difficulties; a translation must not be slavishly literal, nor yet merely a free rendering of the sense, but must be in keeping as much with the genius of the original as with that of the foreign language.[2]

Exposition, however, is more than a mere reproduction of the thought. It is rightly required of the expositor that he shall be above his text, *i.e.* that he shall in a sense understand its thought better than the original writer, so that he is in a position to criticize the thought itself as well as its formulation. Just as in the interpretation of a law it is an acknowledged duty of the expositor to elicit and make good the intention of the lawgiver, as something in certain circumstances actually opposed to the letter of the law, so also in literature: what the author intended to say; how he ought to have said it; whether a particular thought is relevant to his general argument, and whether it is in itself a right thought; whether the form is artistic and the reasoning sound—all these questions must be considered by the exegete, so that the exposition really resolves itself into a criticism. Here again, no doubt, a strong subjective element emerges—certainly a source of danger for the exegete, yet an involuntary expression of his personal interest in the work he has to expound. From this point a path leads directly to the homily, which does not, however, belong to the proper function of the expositor, but for which the critical exposition is an indispensable preparation.

(2) *General hermeneutics.*—This science of comprehension forms the groundwork for the technique of exegesis proper, or general hermeneutics, which deals with the following topics. (*a*) The fixing of the true text.—There is often a difficulty even in reading an autograph, but it is specially difficult to re-construct a lost autograph from copies of various grades (Textual Criticism), as due consideration must be given not only to the genealogical relations of the derivative documents, but also to the psychological possibilities of error. (*b*) Words and sentences as the vehicles of formulated thought.—For the sense of the words mere etymology is of much less importance than statistics of linguistic usage (Concordance), variations of meaning (Lexicon), and comparison with similar words (Synonymics). Foreign words, poetical words, and archaisms require special treatment; the construction of sentences must be studied in connexion with historical grammar. (*c*) Restraints upon natural expression, *i.e.* forms of composition, and quotations.—This is of great importance; the non-literary man speaks and writes as he thinks, but the orator or author is under the necessity of making his productions conform to certain recognized forms of literature. Poetry differs in its structure from prose, having a peculiar metrical form conditioned by exigencies of rhythm, rhyme, etc.; and history is not composed in the same way as a speech. Even style in its modern sense, *i.e.* as denoting the mode of expression peculiar to an individual writer, involves a certain limitation. The exegete, moreover, must be specially careful in passages where his author has not himself framed the expression of his thought, but has borrowed it, as, *e.g.*, where there is imitation, use of sources, or quotation; here it will often be necessary to note three distinct things—the author's own thought, the original sense of the passage quoted, and the sense in which the author uses it. (*d*) The materials of thought—terms and ideas.—As a means of understanding the matter of the work before him, the exegete must be acquainted with the relevant archæology, history, geography, etc., while, in order to grasp the ideas and judgments, he must make himself familiar with the thinking of the age from which the document dates; here he must carefully guard against making unwarranted additions to, and putting false constructions upon, the original. (*e*) The motives of the utterance as determined by the general character of the work and the special purpose of the passage.—The exegete must endeavour to comprehend the composition in its entirety, taking account of every sentence in its relation to the whole, and tracing out the arrangement; hence the practical rule that, before entering upon a detailed exegesis, he should try to gain a general survey of the whole by a cursory reading; he must seek to understand the work from the position of the author, and must, above all, be cognizant of the latter's relations to his readers. (*f*) The personality of the writer.—It is of the utmost importance that the exegete should by painstaking psychological analysis gain an insight into the personality of his author. A literary work, like a work of art, is, in the highest sense, but the outward manifestation of a creative mind, and even the exegesis of details is conditioned by a knowledge of the personality behind them: '*si* duo dicunt idem, non est idem.'

The fact that the proper understanding of details rests necessarily upon information which the original readers could supply for themselves, but which

[1] M. Kähler's reproductions of the thought in the Pauline Epistles (*Hebräerbrief*, Halle, 1880, *Der Brief des Paulus an die Galater*, do. 1884, and *Der sogenannte Epheserbrief*, do. 1894) are models of this kind of paraphrase.

[2] On the difficulties of translation cf. the *Prologue* to Sirach, and Iamblichus, *de Mysteriis*, vii. 5 (p. 257, Parthey), also Jerome, *Ep.* lvii. *ad Pammachium de optimo genere interpretandi* (*CSEL* liv. [1912] 503–526); Luther, 'Sendbrief vom Dolmetschen an Wenceslaus Linck,' 1530 (Erl. ed., 1850, lxv. 102–123); Schleiermacher, 'Über die verschiedenen Methoden des Übersetzens,' *ABAW*, 1813; U. von Wilamowitz-Moellendorff, 'Was ist Übersetzen?' in *Euripides' Hippolytos*, Berlin, 1891.

could subsequently be provided by exegesis only, justifies the time-honoured practice of prefacing a literary work with an Introduction.

(3) *Special hermeneutics.*—General hermeneutics, when applied to a special field, becomes special hermeneutics, *i.e.*, in the present case, Biblical hermeneutics. It is not thereby implied, however, that the Bible, as a book, is distinct from other books, and, in virtue of its inspiration, above the ordinary hermeneutical rules; but the particular conditions in which it took shape, its peculiar contents, and our special interest in them naturally require a specific application of the rules in question. To leave the Heb. text of the OT entirely out of account, it is not every classical philologist who can deal critically with the original text of the NT, who can rightly estimate the character of its Greek, or rightly judge the style of what is essentially a popular literature; while the explanation of the material calls for special knowledge, and the principle of congeniality demands a receptivity for religious thinking, though this, again, must not be used to support the claim for a peculiar theological or 'believing' exegesis.

(4) *Individual hermeneutics.*—The conception of special hermeneutics carries us still further. The Bible is not a literary unity, but an aggregation; and, just as the OT and the NT must, in the present position of exegesis, be dealt with separately, so for every single book of the Bible it is necessary to institute an individual hermeneutic, *i.e.* to determine the modifications undergone by the general rules of hermeneutics in consequence of the peculiar problems raised by the individual book. We cannot interpret the writings of the Synoptists, Paul, and John all in one and the same way, and it would be a crude error to transfer thoughts from Paul to the sayings of Jesus, or from the Epistle to the Hebrews to those of Paul or John; the word πατήρ as used by Jesus, Paul, and John has in each case a different meaning. The Apocalypse has a hermeneutic of its own. The exegesis of the Synoptic Gospels must have regard to the literary problem of the sources; that of Paul must consider the epistolatory style; that of Hebrews the rhetorical form. Everywhere in the NT the relation to the OT presents peculiar difficulties, and this is specially true as regards the quotations; moreover, the relation varies with each NT writer. Individual hermeneutics must also take into consideration the history of interpretation for every single book, or, at least, the exegetical development of the last hundred years.

**4. The history of exegesis.**—The exegesis of earlier times is now of almost no practical importance. As compared with the work of recent years, it proceeded upon entirely different principles and worked with very different means. It is nevertheless necessary, in the interests of science, to study the earlier work; we must know upon whose shoulders we stand, and what our predecessors had already attained. We distinguish here between (1) the history of exegetes and (2) the history of exegesis.

(1) The biography of exegetes forms part of the general history of Christian literature. It deals with many outstanding figures in the life of the Church who were engaged in practical work as well as in other kinds of literary work, and only one phase of whose work is to be considered here. It is also concerned with many whose names are all but forgotten, and whose writings have been lost, but who were of some importance in their own day, and had an influence upon later writers; such names appear in great numbers in Eusebius, *HE*, in Jerome, *de Viris illustribus* (copied largely from the *HE*), and in his continuators Gennadius, Isidore, and Ildefons. A considerable mass of material from these lost works is to be found in the *Catenæ*, and the first thing to be done is to disengage and restore it—a task which has been taken in hand by H. Lietzmann, J. Sickenberger, M. Faulhaber, and others. A great deal can be recovered from quotations in extant commentaries, and, while there is a difficulty in the fact that the Fathers in their polemical remarks seldom give the relevant names, careful observation enables us to assign not a little to the original writers; *e.g.*, portions of Apollinaris of Laodicea can be reconstructed from Chrysostom and Jerome. The history of exegesis would present a much more vivid picture of the learned discussions of the period if we could but endow these *anonymi* with distinct personalities. The Latin exegetes of that age depend as much upon the Greeks as Cicero and his contemporaries on Posidonius and others. Ambrose might almost be called the echo of Origen. From a Latin translation Swete has been able to re-construct a great commentary by Theodore of Mopsuestia (*Theodori episcopi Mopsuestini in epistolas beati Pauli commentarii*, Cambridge, 1880-82). How the work of the earlier Latin exegetes may be recovered from the later has been shown by A. Souter, A. L. Ramsay, and J. Haussleiter with regard to Pelagius, Beatus of Libana, and Primasius respectively. A thorough investigation of the Carlovingian commentaries would assuredly yield as rich materials as would that of the Greek *Catenæ*.

The individual exegetes must next be grouped in schools. The Gnostics (*e.g.* Heracleon) form a party of their own, while Hippolytus and Methodius stand apart from the main development. With Origen are associated, on the one hand, Eusebius of Cæsarea and the Cappadocians; on the other, the later Alexandrians, as, *e.g.*, Didymus the Blind, and also Cyril of Alexandria. To Lucian are attached the so-called Antiochenes (Theodore of Heraclea, Eusebius of Emesa, Diodore of Tarsus, John Chrysostom, Isidore of Pelusium, Theodore of Mopsuestia, Theodoret of Cyrus), and the Syrian Nestorians, *e.g.* Išō'dādh. Others, such as Apollinaris of Laodicea, Hesychius of Jerusalem (†433), and Severian of Gabala, must be more thoroughly examined before they can be classified. Of the later Byzantians, Aretas, Œcumenius, and Theophylact are mere compilers; Photius is more independent. There is no such close connexion among the Latin exegetes, though those of Africa (Tertullian, Cyprian, Tychonius, Augustine) and of Spain (Gregory of Elvira, Beatus of Libana, Isidore) had in each case a common tradition. The Roman Decimus Hilarianus Hilarius, the Roman convert Isaac ex Judæo (probably the so-called Ambrosiaster and at the same time the author of *Quæstiones Veteris et Novi Testamenti*, ed. A. Souter, *CSEL* l. [1908]), the British Pelagius, and the Arian *Opus imperfectum in Matthæum* (among the works of Chrysostom, *PG*, lvi. 611-946) merit special attention.

In the Middle Ages we have the Venerable Bede, with whom as leader a number of less independent Carlovingian theologians, such as Alcuin, Haymo, Hrabanus Maurus, Paschasius Radbertus, Angelomus of Luxeuil, Remigius of Auxerre, and—the most eminent of them all—Christian Druthmar of Stavelot, are associated. Walafrid Strabo with his *Glossa Ordinaria* laid a foundation for the succeeding period, in which Peter Lombard, Hugh of St. Caro, Aquinas, Albertus Magnus, and Bonaventura composed their great scholastic commentaries; along with these we have the mystics, Rupert of Deutz, Bernard of Clairvaux, Hugh and Richard of St. Victor, Herveus, etc. The 14th cent. saw the production of the comprehensive *Moralitates* (*Speculum morale*, etc.) of Vitalis a

Furno, Peter Berchorius, and Robert Holcott. A new beginning was made by Nicolas of Lyra († 1340) and his continuators Paul of Burgos and Matthias Doring. Of the Humanists, besides Erasmus, mention should be made of Faber Stapulensis, Cajetan; of the Reformers of various tendencies, Luther, Melanchthon, Bugenhagen, Justus Jonas; Zwingli, Oecolampadius, Pellican, Bullinger; Bucer, Capito; Calvin, Beza, Marlorat. The 17th century was, in the sphere of exegesis as elsewhere, the century of polemics. On the Roman Catholic side there were, in addition to Maldonat and Salmero, N. Serarius, Escobar, Cornelius a Lapide, J. Tirinus, and Menochius; on the Lutheran, N. Selnecker, D. Chytræus, Hunnius, Balduin, Erasmus Schmid, Dorsch, Calovius, and Sebastian Schmidt; on the Calvinistic, Piscator, Pareus, Amyraut, Gomarus, Heidegger; on the Socinian, Faustus Socinus, Crell, and others. Exegesis in the historical spirit begins with Hugo Grotius († 1645), J. Clericus († 1736), and J. J. Wetstein (1751). Valuable collections are [J. Pearson] *Critici sacri*, London, 1660; M. Poole, *Synopsis criticorum*, London, 1669–76; C. Starke, *Synopsis Bibliothecæ exegeticæ in Vetus et Novum Testamentum*, Leipzig, 1733–41 ($^{5}$1763). The work of the 18th cent. is for the most part embedded in dissertations; but commentaries of a more general kind were written by J. L. von Mosheim († 1755), J. D. Michaelis (1769–1790), S. J. Baumgarten (1757), J. S. Semler (1769 ff.), and, somewhat later, by J. G. and E. F. C. Rosenmüller, and H. E. G. Paulus, of Heidelberg († 1851), the last eminent representative of rationalism. Of 19th cent. exegetes the following deserve special mention: Schleiermacher, F. Lücke, W. M. L. de Wette; A. W. Knobel, F. Hitzig, O. F. Fritzsche, L. J. Rückert, H. A. W. Meyer, E. Reuss, H. Ewald; F. C. Baur, K. C. J. Holsten; F. A. G. Tholuck, F. L. Godet, E. W. Hengstenberg, J. C. K. Hofmann, T. F. K. Keil, Franz Delitzsch, J. P. Lange, J. T. Beck; in the latter half of the century: A. Dillmann, F. Baethgen, C. Siegfried, O. Zöckler, H. Strack, J. Wellhausen, A. Merx; B. Weiss, W. Beyschlag, G. Haupt, T. Zahn, P. Ewald, H. J. Holtzmann, R. A. Lipsius, P. W. Schmiedel, H. von Soden; J. B. Lightfoot, B. F. Westcott, J. M. S. Baljon; of the present day: B. Duhm, H. Gunkel, K. Marti, W. Nowack, R. Kittel, C. Steuernagel, G. Heinrici, A. Jülicher, R. Knopf, F. Spitta, J. Weiss, W. Bousset, W. Heitmüller, H. Lietzmann, E. Klostermann, M. Dibelius, H. Windisch, E. Riggenbach; S. R. Driver, A. Plummer, W. Sanday, H. B. Swete, C. A. Briggs, G. A. Barton, W. R. Harper, G. F. Moore, H. P. Smith, B. W. Bacon, E. D. Burton, J. E. Frame, J. H. Ropes.

(2) The history of exegesis, in so far as it is separable from the history of exegetical theory, can deal only with the exegesis of single books and, more specifically, of single passages. Where it treats of single books, it falls most conveniently under the so-called individual hermeneutics (§ 3 (4)), while, where it is concerned with special passages, it is a study as interesting as it is profitable, guarding the exegete against many an error. If it often seems a mere labyrinth of aberrations, yet it frequently exhibits the various possible views more clearly than a purely argumentative analysis of the text would do. Further, it shows which views have already been refuted and may therefore be left out of account, and it thus brings the exegete to the point where he can begin to work afresh with a prospect of success. Many of the interpretations proposed from time to time in periodicals, etc., would never see the light if their proposers had a knowledge of the history of exegesis.

Thus, while J. G. B. Winer (*Pauli ad Galatas Epistola*, 1828, p. 125) speaks of some two hundred and fifty interpretations of Gal 3$^{20}$, the later history of exegesis shows us that the variations fall under two main types, and that the choice of the exegete must lie between these. It would not be right, however, to take account of modern exegetes only; in many cases the various possible theories are found from the very outset, and thus run parallel to one another throughout the entire history of exegesis. The Greek exegetes, slight as may be the value of their theoretical principles for us, had the immense advantage of a living knowledge of Greek (though we must certainly bear in mind the linguistic development that took place between the 1st and the 4th century, and the difference between the popular idiom of the Bible and the literary language of the Fathers), and the advantage also of an accurate knowledge of details. With reference to the fourth petition of the Lord's Prayer, we learn more from Origen's statement that ἐπιούσιος does not occur elsewhere than from all etymological attempts to explain it; the comparison of the ancient versions gives a synopsis of all possible renderings of the word; Augustine's classification in *de Sermone Domini in monte* (*PL* xxxiv. 1229) shows the three lines on which all subsequent exegesis of the passage proceeded—the natural, the spiritual, and the sacramental; while the history of exegesis since the Reformation shows that the last two have gradually been given up, so that the first alone is possible to-day. As regards the Lord's Supper, again, a truly historical exegesis of the narratives may be said to begin with L. J. Rückert (1853). All previous exegetes had started from the dogmatic question, 'What is the Holy Communion?' instead of asking, 'What actually took place at the last meal of Jesus?' It is true that here and there in the older exegesis, as in Chrysostom, Augustine, Luther, and Calvin, we find glimpses into the historical aspect of the institution, and these the modern exegete must also take into account.

Exegesis is an art; and of exegesis, as of all art, it is true that its highest merit consists, not in originality, but in the sureness with which the right thing is seized; for, however often the right thing has been thought and said before, it still remains both true and new.

**INTERPRETATION (Vedic and Avesta).**—The history of the exegesis of the Rigveda is not without value in its implications for the interpretation of other sacred texts. This Veda possesses an elaborate commentary by Sāyaṇa, a South-Indian scholar (latter half of 14th cent. A.D.), and in the earliest stage of European study of the Veda it was believed that it would be sufficient to translate the text according to this commentary—a process which is actually exhibited in the version by H. H. Wilson (London, 1866–88). There is, however, an earlier source in the *Nirukta* of Yāska, who was eighteen centuries prior to Sāyaṇa, and who not merely diverges from him, but declares that his own predecessors, whose works are no longer extant, differed both from himself and from each other. In other words, the meaning of a large number of Vedic words and passages was lost in

India. This fact, together with the many contradictions found in Sāyana's commentary, led R. Roth to urge that the Rigveda must be explained from itself, together with the assistance furnished by comparative philology and the closely cognate language of the Avesta (*q.v.*). The results of this method are admirably presented in the translation by H. Grassman (Leipzig, 1876–77). Yet, if the 'traditional' school inclined to one extreme, the 'linguistic' school went to the other. The result was a growing conviction that the golden mean should be followed, and on this basis A. Ludwig re-translated the Rigveda (Prague, 1876–88), not disregarding the native commentaries of Yāska and Sāyana, and at the same time taking into account the data afforded by comparative philology, etc. Some scholars, however, have not been satisfied with this general principle, and have sought to interpret the Rigveda along other lines. Thus A. Bergaigne explained practically the entire text allegorically (cf. his *Religion védique*, Paris, 1878–83), and his pupil, P. Regnaud (*Le Rig-Véda*, Paris, 1892), endeavoured to prove that the whole Rigveda was composed for the sacrificial ritual. On the other hand, an 'Indian' school arose, headed by R. Pischel and K. Geldner, who, in their *Vedische Studien* (Stuttgart, 1889–1901), maintain that the Veda is to be interpreted from the India of the classical period, a round millennium later. Both the 'ritual' and the 'Indian' schools have a certain justification: some Vedic verses may well have been composed for the liturgy, and, even where this is not the case, the ritual use of Vedic passages may assist in casting light upon the meaning attributed to them (whether rightly or wrongly) in the early Brāhmanic period; and for the 'Indianists' it must be said that there would be—at least if the Rigveda had not been composed under very different circumstances and views of life from those which prevailed in the classical period—relatively little change in the course of a thousand years in the East. Curiously enough, comparative religion has thus far played little part in Vedic interpretation, though its importance has been recognized by H. Oldenberg (*Religion des Veda*, Berlin, 1894, pp. 33–38), and has been sanely applied by L. von Schroeder in his *Mysterium und Mimus im Rigveda* (Leipzig, 1908). In some cases, moreover, it is by no means impossible that the religions of modern India may illuminate some of the problems of Vedic religion. The ideal translation of the Rigveda, which shall take into consideration native tradition and the sciences of comparative philology and comparative religion, the liturgy and classical Indian thought, is still to be done.

The process of development in the exegesis of the Avesta has not been dissimilar. The major portion of the Avesta possesses an elaborate gloss in Pahlavi, with a Sanskrit version by Neriosangh (fl. *c.* A.D. 1200). The first to attempt a translation of the Avesta, Anquetil du Perron (Paris, 1771), was naturally restricted to the native Parsi tradition, which was itself based, in his day, on an inadequate knowledge not merely of Avesta, but even of Pahlavi. But Roth on the Vedic side had a counterpart on the Avesta in E. Burnouf (*Commentaire sur le Yaçna*, Paris, 1833–35), and a savage controversy now broke out between the 'traditionalists' and the 'linguists.' The 'traditional' school was represented chiefly by F. Spiegel (*Avesta übersetzt*, Leipzig, 1852–63, *Commentar über das Avesta*, do. 1864–68) and F. Justi (*Handbuch der Zendsprache*, do. 1864), followed, with considerable reservation, by C. de Harlez (*Avesta traduit*[2], Paris, 1881), as well as by L. H. Mills (*Gathas*, Leipzig, 1894–1913), while the translation of the Avesta by J. Darmesteter (*SBE* iv.[2] [1895], xxiii. [1883], and especially *Le Zend-Avesta*, Paris, 1892–93) is little more than a reproduction of the Pahlavi version. The 'linguistic' school, inspired largely by Roth, found defenders in such scholars as H. Hübschmann, also J. and T. Baunack (*Studien auf dem Gebiete des Griech. und der arischen Sprachen*, i., Leipzig, 1886–88). As in Vedic exegesis, however, the best method has been found to be one of combination of 'traditional' and 'linguistic' methods. M. Haug, who began as a pronounced antagonist of traditionalism (*Fünf Gathas*, Leipzig, 1858–60), became almost a traditionalist himself after residence in Bombay (*Essays on . . . the Parsis*[4], London, 1907); and C. Bartholomae, who in his *Arische Forschungen* (Halle, 1882–87) was pronouncedly a 'linguist,' now gives full credit to the tradition, weighing both sides impartially, and deciding strictly according to the merits in each case (*Altiran. Wörterb.*, Strassburg, 1904, from which he has compiled his *Gatha's des Awesta*, do. 1905, and his pupil, F. Wolff, his *Avesta . . . übersetzt*, do. 1910). In the interpretation of the religion of the Avesta it is not impossible that a new stage has been inaugurated by the researches of J. H. Moulton (*Early Zoroastrianism*, London, 1913), who holds that much that has hitherto been believed to be Iranian is Magian, and that the Magi were neither Indo-germanic nor Semitic (see art. MAGI). The 'higher criticism' of both Veda and Avesta is as yet only in its initial stages, though a beginning has been made by H. Oldenberg (*Die Hymnen des Rigveda*, i., Berlin, 1888) and E. V. Arnold (*Ved. Metre*, Cambridge, 1905) for the one, and by K. Geldner (*Über die Metrik des jüngeren Avesta*, Tübingen, 1877) for the other. For an account of the interpretation of the Qur'ān, see art. QUR'ĀN.

**INTROSPECTION.**—'Introspection,' briefly defined, is turning the mind inward upon itself, and is thus practically synonymous with self-consciousness to that extent. It is distinguished from both external and internal events considered as a mere stream of experiences that are not held in the field of attention as phenomena of self. External events may occur in a series, or be a stream of facts in a sequential or a causal order, but they are not aware of this fact, nor of themselves as individual events. They simply occur and do not know. Ordinary states of consciousness, such as sensations, memories, and thoughts, occur also more or less like outer events, but they also represent some kind of knowledge. In one's waking states one is continuously conscious, perhaps usually conscious only of what is going on about one. One may not be inspecting the states themselves. But, at any moment in which one may wish to look at these states as one's own, one may turn the mind's attention to these internal events and distinguish them as mind and not outer facts. This is an act of introspection. It is identical with self-consciousness in so far as it represents awareness of one's own states, but it also implies more persistency of attention than is necessary for an act of self-consciousness. Hence it has come to denote the habit of the reflective psychologist who studies or examines his own mental states and their laws, considered as such and apart from their causal relation to external events. We thus contemplate our own action and its relation to the 'self,' and become observers of our mental states as they pass, whether these states are the result of external stimuli or are the inner and spontaneous actions of the mind.

So far as we know assuredly, man is the only being that practises introspection, and it is cer-

tainly one of the most important incidents in his intellectual and moral development. It is the point at which the mind arrests its native tendency to let its thoughts take their own course, or to let the will express the passing impulses. Without this power and habit of introspection man would be a mere passive spectator of outer events, and would take no voluntary part in his own development, but would be the blind result of his environment. Introspection, however, shows his partial independence of this environment, and his capacity for controlling his own thoughts and interests.

Locke calls this power of introspection the 'internal sense,' and distinguishes it from sensation, which he regards as 'external sense.' As an 'internal sense' he names introspection 'reflexion,' and says that he 'would be understood to mean that notice which the mind takes of its own operations, and the manner of them, by reason whereof there come to be ideas of these operations in the understanding.' But he carries his discussion of it very little beyond that of definition, though he means to include in it all those functions which are related to the body of our subjective knowledge. Locke deliberately compares the function of internal sense to that of external sense, and so implies thereby that it receives its 'ideas' by impression, though, in the opinion of the present writer, he did not intend readers to suppose this. The falsity of the implication was no doubt the reason that later students of the question lay no stress on reflexion as a distinct faculty. Leibniz apparently does not mention it, save to accept it as a functional action of importance in knowledge. In Hamilton 'self-consciousness' is the term for this function, and he carefully admits that, as a function of knowledge, it does not determine the basis of any non-sensational philosophy. But he regards it as a presentative function of knowledge.

It is probable, however, that we too often forget what it is that makes this function an important one in the economy of intellectual and moral development. This is its relation to attention (*q.v.*). However else we may regard attention, it is the movable aspect of consciousness, so to speak, and enables the mind to arrest its interest in the panorama of events naturally passing before it, and in this arrest it discovers its own part in the drama itself. That consciousness is a variable function in the scene becomes thus a factor in the total product of observation, and the attention can seize this part in its progress and make it a part of our analyzed knowledge, as well as the phantasmagoria of external objects. Introspection is thus the means of arresting, through attention, the purely automatic or reflex course of events in the natural sensory life.

It has been customary on the part of a certain group of scientific philosophers, if 'scientific' can apply to them, to ridicule introspection as an organ of knowledge. Possibly this attitude of mind was due to the habit of the opposing school of trying to assert certain truths which were supposed to be unanalyzable and unamenable to scepticism. But, whatever the faults of a dogmatic method, it was easy to show that the very critic of introspection could not make any contention in his own favour without the use of introspective and analytic habits of thought and reflexion. Human intercourse is practically impossible without that examination of our own ideas and conceptions which enables us to ascertain and understand the mental processes in beings like ourselves, and some agreement must exist preliminary to all mutual intercourse in such matters. Introspection simply establishes the rationale on which rest all social relations, and makes possible the interchange of ideas and adjustment of our moralities.

JAMES H. HYSLOP.

**INTUITIONALISM.**—**1. Introductory.**—The term 'intuition' (*intueri*, 'to look upon') symbolizes the conception that one among the sources of knowledge is the direct and immediate apprehension of truth. It opposes the notion that all wisdom is based, whether directly or indirectly, upon intellectual processes and reasoned judgments.

In the 18th and early 19th cent. the advocates of intuitionalism were engaged in combating the view of utilitarianism, which believed that the groundwork of moral judgments consists, in the last analysis, in the estimation of the greatest good to the greatest number, and that of hedonism, which claims that the source of moral judgments is and should be in the determination of that line of conduct which will bring, in the long run, the highest happiness. On the contrary, intuitionalism claimed that there is that within us which will, independently of any calculation of facts or expediencies, furnish an inviolable criterion of right and wrong, good and bad, true and false.

In the present state of the theory of knowledge, the chief contention of intuitionalism is against empiricism, which reduces all rational verities and moral and religious certainties back not simply to individual and tribal experiences, but to those also of the race which have been harvested throughout a long stretch of biological evolution in the form of instincts and the predisposition of the organism towards right behaviour.

Intuitionalism still tries to make the distinction, as Kant did in *The Critique of Pure Reason* (1783), that the necessary truths of morality and religion are not caused and produced by experience, but conditioned and called out by it. Apriorism has also antagonized the point of view of empiricism. Intuitionalism differs from apriorism in emphasizing usually the importance of affection rather than, or in preference to, cognition as being itself a direct source of knowledge. The unlikeness of the two is represented, *e.g.*, in the fondness of apriorism for the doctrine of innate ideas—a point of view with which intuitionalism has latterly little sympathy. The relationship between apriorism and intuitionalism is, however, often a friendly one, as, *e.g.*, in the intellectual intuitionalism of Plato and Fichte and in the claim of other students that, while affection is fundamental as a source of knowledge, it is essential that the content of the affective life be cognized and thus organized before it can constitute knowledge of an effective sort or consciousness of a high order.

**2. Classification of intuitionalists.**—It is customary to classify intuitionalists according to what they regard as the predominant source—within consciousness or outside of it—of moral and religious truth. The following view-points may be mentioned: (1) the mythical intuitionalists, who simply affirm that conscience and the love of righteousness are the voice of a Supreme Ruler who hovers about and dominates the personal life; (2) the juristic intuitionalists, who posit God as the Law-giver, who speaks to the heart through Church, creed, or revealed word; (3) the mystical intuitionalists, who have a sense of the *rapport* between the personal life and the higher personality who operates as indwelling spirit; (4) the rationalistic, or intellectual, intuitionalists (Chrysostom, Augustine, Cudworth, Clark, Calderwood), who believe that it is in the very nature of reason or the understanding to apprehend the unchangeable truths of moral life, and who sometimes appeal by way of analogy to the axioms of mathematics, which they

claim to be finished truths that could not have come through experience; (5) the emotional or æsthetic intuitionalists (Shaftesbury, Hutcheson, Rousseau, Herbart, Kant in his later years, and Schleiermacher), who discover finality in the feeling of the beauty or the rectitude of certain kinds of thought and conduct as opposed to other kinds; Herbart, *e.g.*, has used the analogy of our appreciation of consonant and dissonant notes which are universally appreciated as such without the necessity of training and without the need of description or analysis; the Hebrew religionists were predominantly of this type and were fond of appealing to the heart as the source of wisdom; (6) the perceptual intuitionalists (Butler, Martineau, W. E. H. Lecky, and Kant during his middle years), who claim that the perception of right and wrong, which is never mistaken by a normal mind, can be compared to the perception of colour by the eye, extension by the hand, or the relationship among discrete objects by the mind.

Such a classification, while convenient, is unsatisfactory. There are those like Locke and Paley, who, while claiming to be consistent empiricists, naively accept as ultimate the intuitions of the law of causality, of God, and of the axioms. Others, of whom Descartes is typical, make a show of extreme intellectualism and at the same time accept the non-rational intuition as a starting-point and constant criterion of truth (*Meditations II., et al.*). In like manner, Spinoza, a strict moral logician, posits 'a third kind of knowledge'—'scientific intuition'—which transcends the knowledge of the qualities and attributes of things given by reason and arrives at the apprehension of the essence of things (*Ethics*, Eng. tr.[2], London, 1894, pt. ii. prop. 40, scholium 2; pt. v. prop. 25, *et al.*).

We find, too, an unclassifiable type of intuitionalism in Plotinus and the Mystics, which might be termed negative intuitionalism. The reason is constantly defining truth *in order* to be able to transcend its formulations. The classifications usually suggested do violence to the facts, since so many of the writers cultivate a sort of eclecticism which would recognize the value of essentially all the sources of wisdom. Martineau, in letter and spirit, is as much an æsthetic as he is a perceptual intuitionalist. Price, Reid, Butler, and others of the 'common sense' school accept the ultimate theistic origin of the moral consciousness and at the same time find within it a rational principle of action alongside of the natural impulses, instincts, and appetites which, when normal, are useful.

A valuable instance of the refusal to accept a single faculty or function as the source of wisdom is that of Fichte (*The Science of Ethics*, tr. A. E. Kroeger, London and New York, 1897, p. 183): 'Conscience is *the immediate consciousness of our determined duty*. . . . The consciousness of a determined somewhat is never immediate, but can only be found through an act of thinking; and hence, so far as its material is concerned, our consciousness of duty is never immediate; but the consciousness *that* this determined somewhat is duty, is an immediate consciousness as soon as the determined is given. The consciousness of duty is *formaliter* immediate; and this formal part of consciousness is a mere feeling.'

**3. History of theory.**—The 19th cent., particularly the latter half of it, has witnessed the falling of intuitionalism into disrepute. 'Pure' intuitionalism, which assumes a final, though latent, form of ethical and religious consciousness, waiting only to be called out by experience, has had almost no advocates. The whole trend of thought has been inimical to such a view. Comparative ethics has shown that the moral standards among peoples in different parts of the earth are as diverse as are the social customs by which they are governed (*e.g.*, L. T. Hobhouse, *Morals in Evolution*, London, 1906; E. Westermarck, *MI*, do. 1906). Developmental ethics has been able to trace out the laws of the evolution of morality from animal and tribal life to its higher types (H. R. Marshall, *Instinct and Reason*, New York, 1898; A. Sutherland, *The Origin and Growth of the Moral Instinct*, London, 1898). The study of instincts and their evolution has seemed to account for the content of the moral and religious life in terms of the content of instinct (T. A. Ribot, *The Psychology of the Emotions*, London, 1897; W. McDougall, *An Introduction to Social Psychology*, do. 1908). It has been easy to describe how the laws of imitation bind humanity together so closely that the 'sanctions' are supremely authoritative (G. Tarde, *Les Lois de l'imitation*, Paris, 1895; J. M. Baldwin, *Social and Ethical Interpretations*, London and New York, 1906). The laws of suggestion have been so well described that one can understand how social judgments can perpetuate themselves from generation to generation through 'social heredity,' and how they can become so authoritative that they assume the majesty of a transcendental authority; hence also the sifting of standards in the same tribe or people until there is such a unity, time-wise and space-wise, within the united group that the social judgments (*i.e.* moral precepts as felt within the individual) seem absolutely universal, necessary, and changeless. It has been understood, too, how in the lives of growing children all the commands of those in authority, all the precepts, and all the emotional appeals leave their traces or fringes until the mind is clothed finally with a moral 'atmosphere' that is irresistibly impelling. The effect of the environment on the child who is constantly submerged within the social complex is not unlike that of hypnotic suggestion, which can alone and of itself produce effects indistinguishable from moral impulses. Indeed, the person undergoing the suggestion will not believe his impulses other than of subjective origin, personal and original (cf. M. J. Guyau, *Education and Heredity*, London, 1891). If one combines in his thought the effect of all these influences upon the personal consciousness, and keeps well in mind the accumulated predispositions towards certain types of thought and sentiment which are passed on from generation to generation, it does not seem unreasonable to share the conviction of those who look upon conscience as a refined hereditary memory. It is not to be wondered at that, with the prevailing passion for the developmental explanation of all things, intuitionalism should have been well nigh swept away.

This irresistible evolutionary habit of thinking has recently found expression in the two widely accepted doctrines of radical empiricism and pragmatism. It would seem to the devotees of these schools that all the old landmarks of thought—time, space, causality, freedom, God, conscience, the axioms—had been swept from their base and swallowed up in the current of a changing order. To be sure, they re-establish themselves as postulates, perhaps necessary postulates, of thought. But, even so, the doctrine of intuitionalism has seemed to suffer a deluge of destruction, for it has been its genius to claim to base the unsteady thought and wavering faith of mankind upon foundations that are changeless and eternal.

What is there left, then, of intuitionalism? Very little, indeed, in its older form, except to those who still cling to a conception of a static as against a plastic and changing universe. It is a remarkable fact, however, that during the last two or three decades the tide has been turning in exactly the opposite direction. There has been a revival of a modified intuitionalism as lively as was the English ethical intuitionalism in the days of Hume. It is particularly noticeable among the recent students

of the origin, development, and meaning of religion. It has arisen not in spite of, but by reason of, the evolutionary conception of the world and of morals and religion. The point of departure of the newer intuitionalism is the study of instinct and feeling; its method of procedure is the description of the processes of consciousness in their genetic relations, and the analysis of the nature of thinking; and its culmination is the notion that intelligence and reason are not primary and controlling facts of consciousness, but secondary functions of a consciousness which is fundamentally of a pulsing, energistic kind, for the sake of aiding it in making finer and fuller adjustments. It looks as if the life of lower animals and plants is essentially dynamistic or voluntaristic. The first fact of organic life seems to be an impulse towards action, a want, a need. Probably in its early stages it does not cognize, much less rationalize, its behaviour; still it leads a relatively happy and successful career of delicately intuiting the situations it meets. If the lower and higher kinds, including the mind of man, belong to a single order, if nature makes no leaps, but each 'new' thing is but the variation upon and refinement of some old fact or function, then there is no difference in kind between the 'native reactions' of simpler organisms and the conscious behaviour of men, between the instinctive adjustments of animals and the logical judgments of a scientist. Genetic logic is approximating to a satisfactory description of the relationship between these apparent extremes. It is not uncommon for the students of the mental life to speak of the 'intellectual instinct.' Genetic psychology is making many advances towards discovering the kinship between the instinctive wisdom of animals and the refined intuitions of cultivated minds. They differ essentially in two respects: the ability of higher creatures to 'fix' more definitely, through cognition, ideation, and judgment, their states and processes; and the refinement, from within, of the 'values' that accompany conduct, which have flowered into the inner life of art, morality, and religion. If the direct source of the wisdom of these higher aspects of life is the 'wisdom' that is bound up in instinct, and if there has been an evolution, not simply of intelligence, but of the mechanism for the immediate, affective interpretation of experience as well, then we should seem to have a basis for a confidence in the worth of the higher intuitions. And such is the case—so that many students now believe that intuitionalism has gained a more substantial foundation in philosophy than it has ever enjoyed.

The history of intuitionalism has been, indeed, a record of the knocking out, one after another, of false bottoms in the theory of knowledge, each time accompanied, on the one hand, by the fear that this doctrine had permanently collapsed, and, on the other, by the hope that it had established itself more securely upon a permanent basis. When science, during the 15th and 16th centuries, was destroying the conception of an 'absentee' God who spoke and operated upon the heart, the only alternative seemed to be atheism. Rationalism, however, came to the rescue and promised to establish intuitionalism upon the surer foundation of truth, a copy of which is somehow reflected in the eternal verities of the understanding. Empiricism and associationism then dissolved the certainties of rationalism by showing that the axioms and conscience are built up out of experience. The impending consequence seemed to be pluralism and sensationalism; but the 'common sense' philosophers found in the experiences themselves the saving grace of truth, and thought that they had found a more substantial ground for morals and religion in the common experience of common men. Since latterly the dominant way of thinking about the mental life is in terms of evolutionary psychology, it seemed at first flush as if nothing were left but 'pure' experience, or even, in the last analysis, the facts and laws of physics and chemistry, until there set in the reaction already mentioned.

**4. Criticism.**—At every stage in the ebb and flow of the doctrine, important considerations have been overlooked. It is as if the mind could entertain but one impelling conception at a time. Atheism was failing to entertain a possibility of the divine immanence; associationism, a sort of 'mental chemistry,' was obtuse to the simple truth that the blending or fusion of 'pure' experiences would be the summation of nothings which could give only nothing as a resultant. This careless thinking has persisted through two centuries, and has begun to yield at last, as the outcome of more highly disciplined judgment and a more careful analysis of the facts of pathology and of physiological and experimental psychology (consult, *e.g.*, two articles by J. Ward on 'Assimilation and Association' in *Mind*, new ser., ii. [1893] 347–362, and iii. [1894] 509–532). 'Association is wholly confined to ideas that, to begin with, are distinct and to the end are separable' (*ib.* iii. 531). Perhaps it is true, as Ladd, Baldwin, and other psychologists contend, that apperception is found in every sensation. The notion of pure sensation is an artificial abstraction. No less false is the abstraction of the 'pure experience' of evolution and the supposition of radical naturalism that consciousness can be built up out of 'organic memories,' the fusion of original chemical elements, and of 'behaviour' that is void of any ability to evaluate the quality or fitness of its reactions. Perhaps it is always impossible rightly to assume that something can come out of nothing. It may be true that an organism is always doing something to the environment at the same time that environment is forming consciousness. If so, it is wholly consistent to say that, while consciousness is constructed out of experiences, the very condition that they are experiences at all is that they are, at every step in the process, parts of a personal consciousness. Then there would be the elements of moral and religious insight resident somehow within all experiences. The only absurdity of such a belief would arise in the thought of one who holds still to a static and finished, as against a plastic and developing, truth. With this amendment the old question assumes a new meaning.

**5. Modern statement of theory.**—The central problem of the newer modified intuitionalism, however, is this: are the hereditary moral predispositions harvested up solely out of cognized experiences, or are there other of the higher affirmations of morality and religion than cognition, intellection, and judgment? There are several lines of evidence that the cognitive life is only one of the sources of such wisdom; that intuition is, in a certain sense, *sui generis*, our present intuitions having arisen not out of cognitions, but out of other intuitions; and that intuition is always more or less successful in guiding life into making 'wise' adjustments.

(1) It is clear from embryology, comparative anatomy, and genetic psychology that the intellectual processes are not primary in biological evolution, but are a later 'afterthought' or 'by-product,' a specialized mode of carrying out that which is fundamental—behaviour. Reason has arisen out of conduct, and exists for the sake of improving it. The original means of interpreting the fitness of conduct and of distinguishing right behaviour from wrong was through the affective life—immediate intuitions, we may say, of its fitness.

(2) There has been a progressive refinement of the mechanism of affection, which has kept pace with that of cognition. The latter has been refined through the agency of the cerebrum and the logical functions. The former has developed through the instrumentality of the sympathetic nervous system and its connexions with the special senses, the glands, intestines, and the circulatory system, as the mechanism for the immediate evaluation of higher experiences as wholesome or unwholesome, good or bad, right or wrong. As indicated by the generally accepted James-Lange theory of the emotions, the organic responses often, if not generally, precede the cognitive reactions, and do much towards determining their character. The higher instincts and sentiments are the direct outcome of the refinement of the coarser, simpler instincts.

(3) There is 'wisdom' in instinct. Judging by the behaviour of animals, this wisdom is more like intuition than cognition. Low organisms will 'learn' how to meet a novel situation successfully; a sea-anemone, *e.g.*, when tricked a few times into the vain attempt of assimilating filter-paper saturated with beef-juice, will soon refuse the tempting morsel. Every reaction of every animal seems to carry with it a tang or tone or flavour of its worth or value to the organism, and the ability to move in the direction of the accentuation of the valuable reactions and away from those which bode ill. This evaluating quality of consciousness is itself probably a primary instinct. Should one care to give it a name, it might be designated 'cosmæsthesia,' a feeling of relation, a sense of fitness. There is also in instinct the peculiarity, usually overlooked, of feeling after the consequences of a reaction before it has completed itself, a dim awareness of ends *about to be* attained. It might be useful to give this quality a name, as, for example, 'telæsthesia.' This prophetic quality of instinct has been observed by several recent writers.

C. S. Mayer, *e.g.*, says ('Instinct and Intelligence,' *British Journal of Psychology*, vol. iv. [1910] 210 f.): 'But there is even more than this "feeling of activity" at the very first performance of an instinct. There is another element which, so far as I am aware, has hitherto been completely ignored. To my mind it is certain that, on the occasion of the chick's first peck or the duckling's first swim, the bird is dimly, of course very dimly, conscious of the way it is about to act.' G. F. Stout agrees with this view, and adds: 'But the instinctive equipment will not, in my view, be sufficient to account for the animal's actual behaviour. . . . The animal will be on the alert to mark whatever new phases the developing situation brings with it. This will be so because it feels interested in the situation, and especially in the situation as having a future. It will, accordingly, show more or less initiative in watching or searching for coming experiences. It will, so to speak, go to meet them' (*ib.* p. 240 f.).

The developed equivalent of these two endowments of consciousness, cosmæsthesia and telæsthesia, which designate the essential nature of the wisdom of instinct, is the higher wisdom of the heart, much of which cannot be cognized.

(4) There is always operative the act of subconscious incubation, which presents to the field of clear consciousness new and unexpected results. These often arise from lines of conveyance among the instincts, impulses, and imperfect ideations, whose combined effect is a 'revelation' to the mind of that which before had been at most but dimly felt. The study of the subconscious, indeed, has robbed intelligence of the credit it had claimed for its control of life, and for our scientific, philosophical, and æsthetic heritage.

(5) The analysis of the processes involved in invention and discovery shows that something like intuition has played a most important rôle in this sphere, where clear consciousness is supposed to be at its point of highest efficiency and in complete control (consult E. Mach, 'The Part Played by Accident in Discovery and Invention,' *Popular Scientific Addresses*, Chicago, 1897).

(6) Clear concise judgments are often derived from the summation of imperceptible factors in experience. There is a vast array of evidence from psychological experimentation pointing in this direction, and much that proves the law conclusively.

A case in point is the work of A. Brückner upon touch sensations (*Zeitschr. für Physiol. und Psychol. der Sinnesorgane*, xxvi. [1901] 33 ff.). Two simultaneous tactual impressions, each of which is below the threshold of consciousness will produce a definite perception if the sum of the two is above the threshold (see also G. M. Stratton, *Experimental Psychology and its Bearing upon Culture*, London, 1903, ch. iv. f.).

It amounts to a turning-point in the history of thought that the proof is forthcoming that even our clear conscious judgments are based upon evidences that must be felt out rather than cognized.

It is not strange that with the many conspiring lines of evidence, of which the above are only typical, of the fact of an intuitive source of knowledge, there should recently have arisen a predilection for belittling the value of intellection as compared with that of intuition (see W. James, *Varieties of Religious Experience*, London, 1903, ch. on 'Philosophy'; H. Bergson, *Creative Evolution*, do. 1911). The genetic view of consciousness hinted above would tend to bring the two aspects of life into a satisfactory harmony. It would suggest the validity of the progressively enriching content of the moral, æsthetic, and religious life, drawn from the content of all the instincts, independently of conscious description, and mayhap often transcending it. It would assume, too, that reason and judgment are the articulated organized aspects of the entire stream of processes, not different in kind from the life of instinct and intuition. The intellect, being but a specialized expression of the rest of life in certain of its phases, preserves as its own content the inner life of the instincts. It does not furnish 'values' to life *because* of its formulations; on the contrary, its formulations are for the sake of describing, so far as possible, the values that consciousness already apprehends.

It is likely that most of life will remain below and above the reach of accurate description and formulation, and that mankind will continue to derive much of its truth or values from 'the recesses of feeling, the darker, blinder strata of character,' which 'are the only places in the world in which we catch real facts in the making, and directly perceive how events happen and how work is actually done' (James, *op. cit.* p. 501 f.).

**INVESTITURE CONTROVERSY.**—Investiture (from *vestire*, 'to put in possession') was the act of installation by which the vassal in the feudal period entered into possession of a property or an office, and acknowledged that he held it on condition of fulfilling certain duties to the suzerain who invested him. The formal acts which accompanied

investiture were symbolic of the new relation into which vassal and suzerain entered. The vassal did homage and tendered the oath of fealty to his liege-lord; thereupon the suzerain invested him by delivering over some object which was the symbol of his new rights. The object might be a clod of earth to symbolize his possession of the land, or a sword, which at once symbolized his power over those beneath him and the nature of the service he must render to his superior. Investiture, therefore, marked how, whenever a man entered into possession of office or land, he took his place in the feudal system, and enjoyed certain rights on condition of rendering certain service.

1. **In the Empire.** — The controversy which sprang up on the question between Church and Empire, and which bulks so largely in the mediæval period, was the natural result of the increased wealth and social importance of the clergy. So long as the Church was the communion of the faithful and was supported by their gifts, its clergy were elected by those who valued their services, and owned no allegiance save to the flock whom they served. They were chosen in view of their capacity to fulfil spiritual functions, and were invested with spiritual authority over all who owned themselves their subjects. The ring and crozier, which became the symbols of investiture of the higher clergy, were symbols of spiritual authority. The ring symbolized the marriage between the Churchman and his bishopric or monastery; the crozier stood for the cure of souls which was delivered into his charge. He held his office from the Church to serve the ends of the Church: he was the Church's 'man.'

But the Church came into possession of great donations of land, and, since the Church never died, it rarely surrendered any of this property. As holders of land, Churchmen became at once involved in the responsibilities which, according to the feudal tenure of all land, attached to such possessions. They became incorporated in the feudal system. Bishops and abbots became secular lords in virtue of their lands. As such, they held their property of secular lords on condition that they fulfilled their duty to their suzerain. They became responsible also for courts of justice among their own vassals, and required the secular service of their vassals. The king of France was vassal to one of his own bishops for his possessions in the Vexin. The bishop-counts held their temporal possessions as the king's men, even as their own vassals in turn held property as their men. The system, which gave Churchmen rights and privileges in connexion with their temporal possessions, could be safe only if the Churchmen fulfilled in turn the responsibilities to their superiors which the possessions implied. But, because the superior needed the service of the holder of an ecclesiastical property, he needed also some guarantee that a new holder was competent to fulfil that side of his duty. He interfered, therefore, in the election of bishops, not out of wantonness, but from the natural desire to have a loyal and capable vassal. Hence there was a tendency to construe the ecclesiastical benefice, not as a spiritual office, but as a feudal fief, which, like every other feudal fief, involved allegiance to a secular lord and conferred on him the right of investiture. The suzerain received homage and oath of fealty from the Churchman, and thereupon invested him with ring and crozier. While the claim was naturally most eagerly pressed in the case of the bishops, the situation was the same, though in an inferior degree, in connexion with the abbeys and the majority of ecclesiastical benefices. The suzerain could say that he only invested the beneficiary into the temporalities, but practically it was his fitness to hold the temporalities from the suzerain that determined the beneficiary's election.

The reasons which caused the controversy to break out in an acute form between the Empire and the Church were many. It is necessary to point out only the principal. On the one side, the sacrosanct character which attached itself in men's minds to the Holy Roman Empire had enabled the Emperors to go further than other rulers in claiming the right to invest Churchmen. The Emperor even claimed the right to appoint the pope; much more could he invest a bishop. Since, therefore, the Emperor had gone furthest in the claim to invest, the effect of the claim in secularizing the whole tone of the Church was most patent in the Empire. As has already been pointed out, the freedom of the electors, who stood for the faithful choosing a spiritual director, was overridden by the suzerain, who desired a competent vassal. Further, since during a vacancy the suzerain drew largely on the revenues of a see, it was in his interest, as it was in his power, to obstruct the efforts of the electors in choosing a bishop. But, above all, the suzerain's power stimulated simony. It is always easier to bribe one man than to bribe a court of electors, and to do it secretly; men bought their sees more readily when the court of electors had become an individual.

The chronicles and acts of synods during the 11th cent. prove how strong the custom had grown in the Church. In 1049, at a synod in Reims, the three bishops of Nevers, Coutances, and Nantes acknowledged that they had purchased their promotion. The bishop of Toulouse, at a synod held in the city in 1056, was accused of having paid 100,000 solidi for his see, and of having sold the holy vessels of his cathedral to buy a bishopric for his brother.

The increased wealth and power now attaching to Church offices were sure in themselves to tempt men to use any method of attaining them; but the fact that those who could confer office were more open to bribery increased the temptation. What added to the temptation was that the Church had not yet succeeded in carrying its absolute prohibition of clerical marriage. Churchmen had children, and were not yet so ashamed of them as to conceal the fact. They openly schemed to obtain their offices for their sons. Many abbeys and churches had been founded by men who stipulated that the right of appointing the holders of the benefices should be reserved to them and their heirs. Hence high dignities in the Church came to be regarded as the appanages of great families, and the means of providing for younger sons and bastards. Men who owed their appointment to such claims were likely to regard their offices as the natural property of their children.

The connexion of clerical marriage with the disappearance of the rights of electors who stood for the Christian people is seen in the synod of Pavia, 1018, which was largely concerned with the issue of decrees against Churchmen who, living with wives and children, diverted Church property to their relatives.

On the other hand, what forced the question to the front in the Empire was the rising tone of the Church itself. The Roman Church became more conscious of its spiritual functions, and at once began to claim the power to govern itself with the view of fulfilling its special functions. Laying weight on the office and duties of the clergy, it insisted that a spiritual function could be conferred only by spiritual men. Churchmen must be chosen by the Church with a view to their religious qualifications, and must be free to act as the Church's 'men,' owning only one allegiance. Naturally, the Church failed to recognize that such a change in the status of the clergy within mediæval society must bring with it their renunciation of functions which they had hitherto fulfilled and dignities which they had hitherto enjoyed. No kingdom dared allow the establishment in its midst of a body of men who enjoyed all the privileges, but

were not to be relied on to fulfil the duties, of their temporal possessions.

The rising claim for autonomy on the part of the Church found expression in the Lateran synod of 1059, which, in its sixth decree, forbade clerics to accept any spiritual office from lay hands; and the claim thus made in Italy was echoed by the synods of Vienne and Toulouse in the following year. It was not, however, until Hildebrand became Pope Gregory VII. that the battle was joined with increasing consciousness of all that was involved in the issue.

This was partly due to the uncompromising temper of the new pope, but still more was it due to the fact that he knew his own mind, and had no hesitation about uttering it. He saw, with the instinct of a born ruler, that the only justification for a government is that it should take the responsibility and the risks of governing. All Christendom recognized a certain privilege resting in Rome, but practically Christendom was going on in its several provinces as though Rome did not exist. Gregory grasped the reins and actually drove. He saw that the first aim to be sought was the Church's liberty to choose its servants. He reconstituted the College of Cardinals, with the sole right to elect a pope; the Church, not the Emperor, must choose its head. That carried with it the free choice of the bishops by their chapters and their confirmation by the pope; no archbishop could assume authority till he had received his pallium, the symbol of his authority, from Rome. He extended the practice of sending legates from Rome in order to bind the Church into unity with the head that it itself had chosen. His attack on simony and clerical marriage was meant to free the clergy from secular control.

The key to the situation lay in investiture. Who invested a Churchman with his authority? If the secular power, then he was chosen for his fitness to fulfil the ends of that power, and, as its 'man,' must take its orders in his duties. If the Church, then his qualification was a religious one, and he must throughout serve religious ends. Accordingly, in the famous Lenten synod of 1075, Gregory denounced the married clergy, excommunicated five of Henry IV.'s councillors because they had obtained their ecclesiastical offices by simony, and forbade every layman to grant investiture to an ecclesiastical dignity.

It was impossible for the Empire to submit to this decision *simpliciter*. So long as Churchmen held high office in the Empire and large fiefs in every kingdom in Europe, they must hold these under pledge to fulfil the duties to the secular authorities involved in their dignities; and the secular authorities must have some guarantee at their election that the beneficiaries were loyal subjects. The revived power of Rome only made more intolerable the position which Gregory claimed. So long as the practical government of the Church was lodged in each provincial Church, the secular ruler could acknowledge beneficiaries who were loyal to a Church over which the provincial government held some control. But, when Rome not only claimed but exercised power over every section of the Church, the admission of Gregory's claim meant the institution in every kingdom of a body of men, holding large secular authority, who were liable to remain free to follow the dictates of a foreign power. The only terms on which the newly formulated demands of the Church were admissible in their full scope were that the Churchmen should surrender their territorial power and secular dignities, and, since they claimed to be free to exercise spiritual authority, undertake to fulfil only spiritual duties. In the course of the struggle, many of the high dignitaries of the Church saw that this was involved in Gregory's demand, and were distinctly lukewarm in their support of the pope.

It is unnecessary to follow the course of the struggle between Gregory and the Emperor. It is enough to note that Henry's humiliation at Canossa in 1077 was followed in 1085 by Gregory's death in exile; and that the sudden and dramatic changes in the situation prove that the question in debate was not ripe for settlement. Church and Empire could alternately win; but no lasting settlement had been arrived at. The popes who followed Gregory were content to reiterate the claims of the Church, Victor III. at the synod of Benevento in 1087, Urban II. at the synod of Melfi in 1089. Paschal II., however, made a significant admission. At Sutri his legates in 1111 met Henry V. and offered, if the Emperor would grant freedom of election and the abolition of lay investiture, that Paschal was prepared to surrender all the temporalities which the clergy had received since the time of Charlemagne. But, when Henry arrived at Rome to be crowned on those terms, the bishops present entered a strong protest against what they accounted a surrender. The Church, apart from the pope, was not willing to pay the price of its liberty.

There followed more than ten years of confused debate and struggle. Paschal, whom Henry had taken prisoner after his abortive visit to Rome, was cowed or persuaded into a renunciation of the right of investiture. But a Lateran Council (1112) rejected the pope's submission on the ground that Paschal was not at liberty; and the synod of Vienne, with the consent of the pope, renewed the uncompromising claim of the Church. Many other factors entered to complicate the quarrel between the Church and the Empire, but the main principle which divided the two powers, in that period of antipopes and rival Emperors, was still the question of investiture.

A compromise between the conflicting principles was reached by Henry V. and Calixtus II. in the Worms Concordat (1122), to which the Church set its seal in the 8th and 9th canons of the Lateran Council (1123). The election of bishops and abbots was to take place in presence of imperial commissioners, and the elected dignitary was invested with his temporalities by the Emperor. The Church, however, retained the power of electing, though the elected must be accepted by the Empire, and the Church alone could confer ring and crozier, the emblems of spiritual authority. The worst abuse connected with lay investiture thus fell away at once, for the Emperor was unable to keep a benefice vacant, since he could not prevent the electors from meeting. Otherwise the Concordat is a compromise, and, as such, theoretically open to criticism. The Church safeguarded the claims of the electors to whom belonged the right of declaring who was a fitting person to fulfil an ecclesiastical office; it preserved the recognition of every church dignitary as the holder of a spiritual office, since he was invested with ring and crozier by the Church. The State retained the power to make its influence felt by the presence of its commissioners, and the Emperor was acknowledged as feudal suzerain over Church fiefs as over all fiefs. Both parties, in fact, owned that the situation needed delicate handling, and could not be determined by either side pressing its claims to their logical issue. The practical utility of the Concordat was proved by the fact that, though it did not and could not prevent encroachments on one side or the other, its principles regulated the tenure of church dignities in the Empire till its dissolution in 1806. Then the situation was wholly changed, since Christendom no longer owned only one Church;

the investiture question passed into the issue of Church and State.

2. **In France.**—The controversy arose in France, but there its course was different, because the Church was not dealing, as in the Empire, with one central authority. The settlement, for the same reason, was different. There could be no Concordat, since any decision at which the king arrived did not bind the great nobles. Hence, for a full statement of the struggle and its settlement, it would be necessary to review all the greater fiefs. It need only be noted that by the Pragmatic Sanction under Paschal II. the king abandoned all claim to homage from Churchmen and the right of investiture. He demanded, however, an oath of fealty before any beneficiary was allowed to enter on his temporalities, and thus retained suzerainty over church dignities, so far as they were fiefs. The agreement, though different in its terms, shows the same essential and inevitable features of compromise as the Worms Concordat. The arrangements, made by the feudal lords, varied according to their power and the condition of the Church in their territories. In the South of France, where the clergy were less amenable to the influence of Rome, homage was long exacted from bishops.

3. **In England.**—In England the controversy was clearly raised by Archbishop Anselm under Henry I. Anselm's conduct in the matter illustrates vividly the service which the monastic orders rendered to the Church in the long debate. Monks, who held high dignity, were indifferent, to a degree that the more secularized Churchmen were not, to the emoluments and dignities of office and were specially disciplined to obedience to the Church. Anselm, appealing to the decrees of Gregory and Urban, refused to do homage for his own see on Henry's accession (1100), or to consecrate bishops who had done such homage. The controversy which followed was sharp and decisive, as was to be expected from two men who were intelligent enough to respect each other's position. The compromise at which they arrived and which Paschal confirmed (1106) was practically the Worms Concordat. It came to be embodied in Magna Charta.

A. C. WELCH.

**INVINCIBLE IGNORANCE.**—The question as to how far ignorance in its various degrees affects the voluntary character of action calls for consideration in any ethical system which aims at completeness. Only in so far as it is voluntary is an action imputable. In the moral theology of the Roman Catholic Church a broad distinction is drawn between 'invincible' ignorance and 'vincible' ignorance. A man is said to be in a state of invincible ignorance if, when he acts, he is altogether unaware of the law or of the facts of the case, and hence is unconscious of the obligation of further inquiry on the point; or, again, if after reasonable effort he is unable to arrive at certain knowledge. Ignorance is vincible when a man is conscious of his lack of knowledge and of the duty of making some further inquiry, and nevertheless neglects to use his opportunities of so doing. Vincible ignorance presents several varieties. A man may actually foster his own ignorance for fear lest the obligation should become known to him (*ignorantia affectata*); or, while not deliberately fostering ignorance, he may neglect all means to acquire knowledge (*ignorantia crassa* or *supina*); or he may make some efforts, but such as are incommensurate with the gravity of the matter (*ignorantia pure vincibilis*). It will be noted that the terms 'invincible' and 'vincible' ignorance have reference to the state of mind in which a particular action (or series of actions) is performed. Invincible ignorance in no way signifies that the mind is incapable of further enlightenment on the subject. New information may transform it into clear knowledge. As regards the degree of effort to attain knowledge in default of which ignorance cannot be regarded as invincible, no hard and fast rule can be given. It varies with the gravity of the matter and with the circumstances of the individual. There are certain callings (*e.g.* that of a judge) which carry with them heavier obligations as regards the acquisition of professional knowledge than do others. In these, invincible ignorance cannot be pleaded as an explanation of errors due to want of such knowledge, unless considerable efforts have been made to attain it. All are bound to make very great efforts to escape ignorance in matters affecting the salvation of their own souls or those of others. Yet even here much will depend on the circumstances and capacity of the person concerned. What would be invincible ignorance in the case of the uneducated or of one much occupied with duties from which there was no escape would be vincible ignorance in those less unfavourably situated.

Invincible ignorance excuses from all culpability. An action committed in ignorance of the law prohibiting it, or of the facts of the case, is not a voluntary act. The true character of what he is doing is unknown to the agent. Such is the unanimous teaching of Roman Catholic moralists. This position was, however, traversed by the Reformers. According to Luther, invincible ignorance renders breaches of human law alone inculpable; it is otherwise as regards the law of God. For here our ignorance is due to original sin, and is itself sinful. It cannot, therefore, invincible though it be, be pleaded in excuse.

'In politicis negotiis potest esse locus invincibili ignorantiae . . . sed haec ad res sacras et conscientiae negotia transferenda non sunt. Sumus enim nati in caecitate peccati originalis: id malum invincibile est . . . sed non adeo excusabile est, sicut Scholastici invincibilem ignorantiam dixerunt excusabilem' (Comment. *in Gen.* xii. 17).

Calvin goes so far as to deny the possibility of invincible ignorance as regards the divine law. Our ignorance, he says, is always vincible ignorance of the crass or supine sort.

'Certum est ignorantiam nostram supinae crassaeque negligentiae semper esse comitem' (*in Lucam*, xii. 47).

Jansenius on this point followed the teaching of Luther (*de Stat. nat. laps.* ii. 6); and, even after the condemnation of the five propositions, his doctrine on this subject continued to be upheld by some of his adherents. In 1690, Pope Alexander VIII. authoritatively condemned the proposition:

'Even if there be such a thing as invincible ignorance as to the natural law, he who in the state of fallen nature acts out of such ignorance, is not thereby excused from formal sin' ('Tametsi detur ignorantia invincibilis iuris naturae, haec in statu naturae lapsae operantem ex ipsa non excusat a peccato formali,' Denzinger, no. 1292).

This thesis had been maintained by the Jansenist theologians Jean de Witte and Macaire Havermans (A. Vacant, *Dict. de théologie*, Paris, 1903, i. 752). The doctrine that invincible ignorance excuses from sin is, indeed, of great importance in Roman Catholic theology. It renders the seemingly rigorous doctrine of the Church, that communion with the See of Peter is by God's ordinance necessary to salvation, compatible with the confident hope that many who are outside all visible communion with the Roman Catholic Church will enter heaven. This point was clearly expressed by Pius IX. in his Encyclical to the bishops of Italy (10th Aug. 1863):

'It is known both to ourselves and to you (venerable brethren) that they who are in the state of invincible ignorance regarding our holy religion, and who carefully observe the natural law and its precepts written by God Himself on the hearts of all . . . can, through the action of God's light and grace, attain eternal life, since God . . . will by no means suffer any to perish who has not incurred the guilt of wilful sin' (Denzinger, no. 1677).

On the other hand, vincible ignorance regarding those matters which a man is under obligation to know is culpable. Here the want of knowledge is voluntary, either directly, as in *ignorantia affectata*, or indirectly, as in *ignorantia crassa* or *pure vincibilis*. And no man is justified in remaining voluntarily ignorant as to the duties of his state of life or as to the truths essential to his salvation. On this point Roman Catholic moralists find themselves at issue with the very prevalent opinion that speculative error can never be a breach of the Moral Law. Where the speculative error relates to vital matters of religion, and is due to negligence, such error, they hold, is gravely culpable. Further, since vincible ignorance is voluntary, the responsibility for the acts resulting from it remains with the agent. The guilt, however, of sin due to this cause is proportioned, not to the objective character of the thing done, but to the degree of culpable negligence to which it is due. Moreover, an act done through ignorance, even if that ignorance be crass or supine, is less culpable than an act done with clear knowledge; for it is less fully voluntary, and, therefore, less imputable. As regards the ignorance which is deliberately fostered, there is a divergence of opinion among moralists.

How far can invincible ignorance extend? It would seem that there are limits beyond which it is impossible. There are certain broad principles of the natural law which can never be altogether obscured. No one, *e.g.*, can be invincibly ignorant that he should not do to another what he would be unwilling to have done to himself. As soon, however, as we pass to derivative principles, invincible ignorance appears. To the Christian moralist it is evident that polygamy is contrary to the law of nature. Yet many a pagan and Muhammadan is certainly in invincible ignorance on this matter. Duelling provides a case in which invincible ignorance prevails in certain more civilized countries. A question of special interest in view of opinions now often maintained is whether it is possible for a man to be invincibly ignorant regarding the existence of God. The general reply of Roman Catholic theologians is that, even if such ignorance be possible, it is altogether abnormal and can last at most but a short time: the evidences for God's existence both in the created world and in the human conscience are so manifest and clear that it is impossible for ignorance on this point to remain long invincible (J. de Lugo, 'de Incarn.,' disp. v. n. 106, in *Opera*, Paris, 1868, ii. 351). It is plain that this view is incompatible with the admission that any one can continue long to be a conscientious agnostic. Agnosticism appears as vincible ignorance on a question as to which a man is under the gravest obligation to acquire certain knowledge and as to which such knowledge is easy of attainment.

G. H. JOYCE.

**INVISIBILITY.**—The attribute of invisibility is one which is shared by gods, spirits, demons, the dead and the region of the dead, or the world of the gods, while the power of becoming invisible belongs to those beings as well as to certain mortals. Where invisibility was ascribed to gods or spirits, one simple reason probably was that in the case of most of them, apart from animal-gods or worshipful parts of nature, they were in fact unseen. When man begins to people his world with spirits, which, as many savages believe, swarm everywhere, so that one cannot move without striking against them, their quality of invisibility is obvious. In the case of the dead it was more a power which could be exercised by them or a property hiding them from bodily eyes, since they could be seen in dreams, and it was then considered that the soul of the dreamer had been with the dead. Gods or spirits are not always invisible; they have the power of becoming visible or invisible at will, assuming in some instances a bodily form for the former purpose. In the case of favoured mortals, the supposed power of invisibility was ascribed to or claimed by them because it was a desirable thing. What men wish for is often what they think they or others possess. Such a supposed power might easily then be reflected back upon supernatural beings, otherwise material and visible. It should be observed that medicine-men often claim the power of seeing invisible beings whom ordinary mortals cannot see. In some instances it is thought that, formerly, when gods and men dwelt together, the gods were visible; but, now that separation has taken place, they are no longer seen, except on occasion. Hence perhaps one reason of the wide-spread belief that it is dangerous to see a god or spirit, when he takes a visible form.

**I. Spirits and gods.**—The *Andamans* believe that their high god Puluga is nowadays invisible, even when he descends to earth. Ju-ru-win, the evil spirit of the sea, is also invisible, and so, too, are the soul and spirit of the dead.[1] In general the high gods of *Australian* blacks—Baiame, Daramulun, etc.—are invisible and unknown, though they may be heard.[2] Codrington writes of the *Melanesian nopitu* that they come invisibly and possess men. Should such spirits chance to be seen, they disappear at once. Some *vuis* are visible; others are not, being incorporeal. There is a belief that, if the latter could be seen, it would be as a grey indistinct something.[3] In *Polynesia*, gods generally were invisible, or visible only in so far as they became incarnate (though not always then) or embodied themselves in a visible shape. Such a god as Taaroa (Leeward Islands) had a body, but was invisible to mortals, and he sustained the world by his invisible power. Men lived in an invisible world of spirits and ghosts, which might occasionally, however, make themselves seen.[4]

Among the savage races of the *Malay peninsula* many of the gods (*e.g.*, the creator Pirman of the

savage Malays of Johor, who dwells in the sky), spirits, and demons are invisible, or, if seen, disappear at once.[1] The Dayaks believe that gods are invisible, even when (as with many gods of other races) they come to a house to feast. *Antus* (spirits) surround men invisibly, though they may assume various visible forms.[2] The *Araucanos* believe that supernatural beings can make themselves visible or invisible at will. The *pilli* ('other-self,' 'soul') of men can leave them invisibly in dreams, but they are visible to other wandering *pilli*, as are also the dead, though these are invisible to bodily eyes.[3] The Indians of *Guiana* believe in countless invisible beings surrounding them—a belief common to most savage peoples and others more advanced in civilization.[4]

The gods of *Babylon* 'constituted a countless multitude of visible and invisible beings,' their bodies of a more rarefied substance than that of mortals. The hosts of demons were invisible and impalpable, though possessed of some form, and could creep into houses through the narrowest possible openings.[5] In *Greece* the gods had powers of invisibility or they could surround themselves with a mist, but they could also make themselves visible to mortals in various forms. They would also enshroud their favourites in darkness or a mist to save them in time of danger.[6]

Early *Hindu* literature shows that the gods were invisible, yet could assume any visible form at will to favoured worshippers. They did not, however, possess a purely spiritual form. Such deities as Vāta, the wind, are naturally regarded as invisible: 'his sound is heard, but not his form.' Here also we find the belief in an earlier visible intercourse of gods with men, broken off because of men's solicitations which wearied the gods. Formerly they drank with men visibly; now they do so unseen.[7] Holy men formerly beheld the gods and the mighty *ṛṣis*. Hosts of spirits surrounded men invisibly.[8] In modern Hinduism, while invisibility is an attribute of gods, as well as of most spirits and demons which surround men, the decidedly anthropomorphic forms ascribed to them make the belief in their visible appearance possible, as does also the conception of visible incarnations. Thus Rudra 'by himself or by the numberless spirits whom he commands is omnipresent, but he manifests himself to neatherds and water-carriers.'[9]

The numerous gods of *Northern Buddhism* are invisible; *e.g.*, they are invited to attend the ceremonies and are believed to arrive unseen. Household gods occupy various parts of the house unseen, and these are religiously guarded while the god is in possession. The earthly Buddhas have ethereal and invisible counterparts in the formless worlds of meditation.[10] In *Shintoism* the invisibility of gods is explained 'by the theory that since the Age of the Gods they have removed further from the earth, so that they are now beyond the scope of human vision.'[11]

In *Celtic* belief similar views must have been entertained. The divine *sīd*-folk appeared or disappeared at will, often from or into a supernatural mist, and one of them is represented as saying, 'We behold and are not beheld.' They may be seen by favoured persons, but not by others present at the same time, and some of the gods possess objects which cause invisibility—*e.g.*, Manannan's magic cloak. Of him it is said that he makes the gods invisible and immortal.[1]

The narrative of Gn $3^{8f.}$ shows that in early *Hebrew* belief the idea of a time when God visibly had intercourse with man was prevalent. In later times God is thought to be more withdrawn; and, though certain persons see Him or some part of Him or His glory,[2] or theophanies of the Angel of Jahweh are granted to certain persons,[3] or God is seen in visions,[4] or He appears in symbolic form, *e.g.* as fire, yet the idea is also strongly prevalent even in some of these instances that it is dangerous to see Him. Thus 'no man shall see me and live.'[5] The finest expression of God's invisibility is to be found in the words of Job.[6] That God is invisible is also a doctrine of the NT[7] and is finely stated by St. John.[8] God in Christ—the Incarnation—is the full manifestation of the invisible God. The idea of the danger of seeing God is found in the NT.[9] Angelic orders of beings are also invisible,[10] yet they appear occasionally to men.[11]

The *Christian* doctrine of God's invisibility is a natural correlate of the doctrine that God is spirit, but it does not mean that God does not manifest Himself as in the Incarnation and already in other ways—'the invisible things of Him . . . are clearly seen, being understood by the things that are made.'[12] The vision of God of the mystics, Neo-Platonist and Christian, is entirely a spiritual experience, 'not with the eyes of the body, nor of the soul.'[13] But the vision of God is enjoyed by angels, and is the reward of the pure in heart.[14]

The invisibility of God is also a doctrine of *Islām*, and here, too, it is held that such supernatural beings as the *jinn* can become invisible 'by a rapid extension or rarefaction of the particles which compose them, or suddenly disappear in the earth or air or through a solid wall.' They can manifest themselves in any form which they please.[15]

In folk-belief fairies, elves, dwarfs, etc., are supposed to have the power of invisibility, often by wearing a hat or garment, or by means, *e.g.*, of fern-seed. They also confer their power on mortals. By a magical salve with which the eyes are anointed it is possible to see invisible elves.[16]

**2. Invisibility of the dead.**—That the spirits of the dead are invisible is a general belief among most peoples. This is obvious when we consider how, in so many instances, where they are supposed to haunt the grave, or their former abode, or some particular locality, they are not usually seen, but their presence is known or felt, or they make

themselves heard, or, as in Manahiki, where certain grounds were occupied by ghosts, those spots were known by their repulsive odour.[1] On the other hand, they can be seen by the living—*e.g.*, in dreams or trances—or they manifest themselves as apparitions, more or less impalpable, or they can be seen or communicated with by wizards. In many instances to see a ghost is dangerous to the percipient, causing death, disease, or madness. A few instances will illustrate the general belief in the invisibility of ghosts.

According to the *Araucanos*, they are invisible, but may be seen by the *pilli*, *i.e.* the other selves of dreaming men.[2] The *Andaman Islanders* believe that the soul and spirit of the dead are invisible to human eyes, yet may be seen by dreamers with supernatural power (*ôko-paî-ad*), who can also see the invisible powers of good and evil.[3] Ghosts among the *Melanesians* 'do not appear in visible form, but if anything is seen of them it is as fire or flames.'[4] The *Semang* think that souls of the dead are visible to each other, but invisible to mortal eyes.[5] At the *Dayak* feast of the dead the spirits are present invisibly—an idea which is constantly found in connexion with all such feasts among savages and in folk-survivals.[6] In *Samoa*, where the soul is thought to have the same form as the body, it is dreaded by those who profess to see it after death.[7] Men lived in a world of invisible spirits of the dead surrounding them, but they might be seen at night.[8]

In most cases, as Crooke has said, 'the dead have joined an invisible army.'[9] This is illustrated by the story told by Procopius[10] of the fishermen on the coast opposite Brittia who were summoned by night to ferry across the shades of the dead, who were unseen by them.

**3. Invisibility of the Other-world.**—The Other-world, or the world of the gods, being a spiritual or quasi-spiritual region, is generally held to be invisible under ordinary circumstances. But, like the dead, it may be seen in dreams and visions, the soul being supposed to go thither, or actual visits are paid there by medicine-men or specially favoured mortals.[11] Examples of this belief are found in the *Polynesian* conception of Rohutu, the aerial paradise, invisible save to spirits;[12] in the idea of the *Duke of York Island* natives regarding the place of the dead, *matana nion*, that, 'if our eyes were turned so that what is inside the head were now outside, we would see that *matana nion* was very near to us and not far away at all';[13] in one of the *Celtic* conceptions of Elysium as a mysterious region on the same plane as this world or entered through a mist—a conception also entertained in later times regarding fairy-land;[14] and in the *Jewish* idea that the righteous dead 'will behold the world which is now invisible to them.'[15] The unseen nature of the Other-world is a fact of ordinary experience, but in all ages and all religions it has been visible to select persons on occasion.

**4. Invisibility as a power.**—Invisibility, like shape-shifting, is a power frequently claimed by medicine-men, wizards, and witches, or various recipes or charms exist by which other persons can become invisible, or invisibility is produced by some magical means. A native told Count de Cardi that the Ju-ju priests in W. Africa could make themselves invisible so quickly that one could not tell when they had done so.[16] Usually the means employed is a spell or potion. The *Sinhalese* think that a number of 'medicines' mixed and charmed in a grave less than seven days old and rubbed on the face near the eyes makes one invisible at night.[17] The *Hausa* priests make charms which give the wearer the power of invisibility.[1] In *Dahomey* the potion used was made from the body of a male infant pounded in a mortar.[2] In a *Kashmir* tale collyrium rubbed on the eyes causes invisibility.[3] In modern folk-survivals similar powers are ascribed to magic potions. According to a belief current in the *S. Sporades*, a snake should be killed on 1st May, and its head buried with a bean in its mouth. When the beans are grown, all should be gathered and placed one by one in the mouth before a mirror. As soon as a bean is found which makes the face invisible, this particular bean should be kept, and, when put in the mouth, will make one invisible.[4] Witches in *Long Island* take the ear of a black cat, boil it in the milk of a black cow, and wear it on the thumb to produce invisibility.[5] Fern-seed, gathered between 12 and 1 on Midsummer Eve, caused one to walk invisibly.[6] The ancient *Druids* were believed to possess the power of invisibility, either by means of a spell or by producing a magic mist. This spell, the *faeth fiadha*, was also used by *Christian saints*, and survives in one form as St. Patrick's *Lorica*, by which he and his companions were made invisible to their enemies, or changed into deer—probably a late corruption of the earlier story through a confusion of the name with *fiadh*, 'deer.' The charm *fith-fath* is still remembered in the W. Highlands.[7] The gods of *Greece* frequently made their favourites invisible by means of a magic mist when they were in danger (see above).

A cap of invisibility is often mentioned in *Märchen*—German, Greek, Italian, Kalmuk, etc.[8] This corresponds to the helmet of Orcus which made Athene invisible, the *tarnkappe* of Alberich and Siegfried—a hat or cloak, which is also a common property of elves and dwarfs, causing their invisibility, the *Hulitshjálmr* of Norse tales, and the cap of Perseus.[9] Similar invisibility-producing articles are the ring of Gyges, Manannan's cloak, and many others mentioned in myth and legend. The cap or cloak of invisibility may have taken its origin from the disguises to which clothes lend themselves so easily, coupled with the natural desire of becoming invisible as a protection against danger.

In some myths of the *Mandæan* religion, Hibil Ziwa descends to the seven lower worlds, and remains invisibly in them for long periods, acquiring their mysteries.[10] *Gnostic* descriptions of the descent and return of the heavenly æon Christ through the spheres of the archons sometimes tell how it was accomplished invisibly to them, as in the Basilidean system, where He probably descended through His mystic name 'Calacau.' Gnostic souls, ascending through these spheres, were invisible to their rulers, because of their baptism or initiation, or because they had mastered the Gnosis and knew the names and nature of the archons.[11]

The power of becoming invisible is still believed in sporadically, even by educated people, the process suggested being perhaps a kind of dematerialization of the body.[12]

**5. Invisible weapons.**—As sickness or death is usually ascribed by savages to invisible demons, so they are often supposed to effect the evil by invisible weapons.[13]

**INVOCATION** (Liturgical). — Invocation or Epiclesis is the technical term for the prayer for Divine intervention, especially in the consecration of the Eucharist, but also, more rarely, at Confirmation.

1. **The Eucharistic consecration conceived as effected by a prayer.**—The universal practice of the Church in early times was to use a prayer for the consecration of the Eucharist, just as it was the practice to use a prayer rather than any declaratory formula for Ordination.[1] In both cases, however, we must make a distinction between what our Lord did and the manner in which the Church followed His example. It does not follow that, if our Lord used a declaratory form in consecrating the Eucharist, or in ordaining, the Church would think it right to do the same. In instituting the Eucharist, our Lord 'blessed' or 'gave thanks'—with what words we do not know—and then gave the sacrament to the disciples with a declaratory formula, 'This is my body,' etc. We remark that the 'blessing' (Mt $26^{26}$, Mk $14^{22}$) and 'giving thanks' (Mt $26^{27}$, Mk $14^{23}$, Lk $22^{17.19}$) over the bread and wine are identical. St. Paul, who uses the latter phrase in 1 Co $11^{24ff.}$, speaks in 1 Co $10^{16}$ of 'the cup of blessing which we *bless*'; and this explains why the form used in consecrating the Eucharist was in after ages called the 'Thanksgiving,' although it consisted of prayer as well as giving of thanks (cf. 1 Ti $4^{4f.}$ 'Every creature of God is good if it be received with thanksgiving, for it is sanctified through the word of God and prayer'; here prayer is part of thanksgiving). At a later time the question arose whether Jesus consecrated the Eucharist by this 'blessing' ('thanksgiving') or merely by declaring it to be His body and blood. The mediæval theologians seem generally to have taken the latter view (and so perhaps Tertullian; see below, 3); yet the Council of Trent apparently inclined the other way, for it says (sess. 13, cap. 1):

'Our Redeemer instituted this wonderful sacrament at the Last Supper, when, *after the blessing of the bread and wine*, He testified in express and clear words that He was giving them His own body and His blood.'

We have, however, to consider what the early Christians thought to be the essence of the consecration as celebrated by the Church, whether the invocation of Divine assistance, or the declaratory words, 'This is my body,' etc. It will appear from what follows that, though there was probably some difference of opinion in the early Church as to how our Lord consecrated the Eucharist at the Last Supper, yet all agreed that the Church could consecrate only by praying God that what was done then by Jesus might be done at each Christian Eucharist. To use a mere declaratory formula, whether in Holy Communion or at Ordination, would have appeared to the early Church as presumptuous and irreverent.

2. **Early period.** — No clear deduction can be made from the *Didache*, as it is uncertain whether the prayers there given were used for consecrating the Eucharist or not (see art. AGAPE). But Justin Martyr uses language which, however interpreted, shows that he conceived the consecration to be effected by a prayer. He says (*Apol.* i. 66):

'As Jesus Christ our Saviour, being incarnate by the Word of God [for the possible confusion here of the Word and the Spirit, see below, 8], took (ἔσχεν) both flesh and blood for our salvation, so we have been taught that τὴν δι' εὐχῆς λόγου τοῦ παρ' αὐτοῦ εὐχαριστηθεῖσαν τροφήν . . . are both the flesh and blood of that incarnate Jesus.' For our purpose the words left untranslated are the important ones; but they are very obscure. They might be rendered 'the food which has been given thanks over [eucharistised, consecrated] by the formula of prayer which comes from Him' (so Batiffol, *Études*, 2nd ser., p. 146). Similarly C. Gore renders εὐχῆς λόγου by 'word of prayer' (*Body of Christ*, London, 1901, pp. 7, 289 f.). Brightman thinks that 'the "word of prayer that is from Him" must be the liturgical thanksgiving derived from the εὐχαριστήσας of the Institution, which Justin proceeds to quote' (*JThSt* i. [1899–1900] 112). So Dods (in *Ante-Nic. Chr. Lib.* ii., Edinburgh, 1870, p. 64), who, however, translates 'prayer of His word.' The difficulty of these explanations is that there *is* no form of prayer derived from our Lord, and that they give an unusual order of the words. By others it has been proposed to translate this difficult phrase by 'prayer for the Word' (cf. Sarapion, below, 8). Swete (*JThSt* iii. 169 f.) takes the phrase to mean the Divine command called into operation by prayer; he paraphrases the sentence thus: 'As our Lord was made Flesh by the Divine Word, so the word which issues from Him, when invoked by the prayer of the Church, makes the Bread and Cup to be His Flesh and Blood.'

Now, whatever view be taken of Justin's language, it is clear that the change (μεταβολή) of which he speaks is thought of as effected by a prayer for Divine intervention, or, in other words, by an invocation. The nature of that invocation does not appear from his words. In the two descriptions of the Eucharist (*Apol.* i. 65, 67) the central action of the president is described as 'prayers and thanksgivings,' and the communion of the people is called a 'participation of the things over which thanks have been given.'

3. **Second period.**—When we come to Irenæus, the matter is clear. This Father tells us (*Haer.* I. xiii. 1, 2) that the Gnostics used an Epiclesis. Mark the Valentinian, who came from Asia to Gaul, used (apparently at his Eucharist) a cup full of wine and water which was at first clear, and continued 'the word of invocation' till (by some conjuring trick) it became dark purple. It was pretended that the æon 'Grace' mixed its blood with the wine in answer to the invocation. Here we see a parody of the Christian Eucharist. The Orthodox also used an Epiclesis. In *Haer.* IV. xviii. 5, Irenæus says:

'Bread from the earth receiving the Epiclesis (the ἐκκλησις of the printed editions seems to be a misprint [A. Harnack, *TU* v. 3, Leipzig, 1900, p. 56]) of God is no longer common bread, but Eucharist.' The bread and wine 'receive the word of God, and the Eucharist becomes the Body of Christ' (*Haer.* v. ii. 3).

Here the 'word of God' may be personal, as perhaps it is in Sarapion (see 8, below), but more probably it is impersonal; it may mean the prayer of consecration (so Batiffol, *Études*, 2nd ser., p. 159), or may have exactly the same force as Justin's phrase δι' εὐχῆς λόγου. Swete cautions us not to assume 'that any form of invocation existed in the time of Irenæus; the εὐχή was itself the ἐπίκλησις τοῦ θεοῦ' (*JThSt* iii. 171 n.).

In the Gnostic *Acts of Thomas* (2nd or 3rd cent.?) there is an invocation at the Eucharist. 'O Jesus Christ, Son of God, who didst vouchsafe to make us partakers of the Eucharist of thy holy body and precious blood, lo, we make bold to approach thy Eucharist and to invoke thy holy name; come now, make us partakers, . . . come, perfect compassion; come thou that knowest the mysteries of the chosen one; . . . come thou that disclosest secrets, and makest manifest things not to be spoken; the sacred dove which hath brought forth twin young; come thou secret mother,' etc. (§ 46, ed. M. Bonnet, Leipzig, 1903, p. 35 f.; *Ante-Nic. Chr. Lib.* xvi., Edinburgh, 1870, p. 416; for the Ethiopic *Acts*, of which the text differs somewhat from the above, see E. A. W. Budge, *Contendings of the Apostles*, London, 1901, ii. 453). This invocation is noteworthy as being addressed to our Lord; it shows also some approach to a prayer for the Spirit. The Syriac *Acts* (given in W. Wright, *Apocr. Acts of the Apostles*, London, 1871, i. 258, ii. 146 ff.) name the Holy Spirit in the invocation explicitly; but they may have been revised by an orthodox hand. The Gnostic *Acts of John* (§ 85, ed. Bonnet, 1898) has no Epiclesis; the work is earlier than the *Acts of Thomas*.

Tertullian approaches the matter from a somewhat different point of view. He says that the Eucharist is the body and blood of Christ, because our Lord distinctly called it so:

'Acceptum panem et distributum discipulis corpus illum suum fecit, Hoc est corpus meum dicendo, id est, figura corporis mei' (*adv. Marc.* iv. 40).

This passage does not, indeed, deny that Jesus used words of blessing or thanksgiving to consecrate the Eucharist at the Last Supper, and it need not mean more than that the words 'This is my body,' etc., were those by which our Lord made the change in the elements known to the disciples;

[1] In the Church Orders of the 4th (or possibly 5th) cent., bishops, priests, and deacons are ordained simply by a single prayer, with laying on of hands.

but it undoubtedly gives us a fresh point of view. Yet it tells us nothing of the usage of the African Church in Tertullian's time.

The usage of the Cappadocian Church in the 3rd cent. may indirectly be gathered from the words of Firmilian in a letter to Cyprian (Cypr. *Ep.* lxxiv. (=*Ep.* lxxv. in *PL* iv. 426] 10). He says that a prophetess in Cappadocia had arisen 22 years before, had administered the sacraments, and in consecrating the Eucharist had used 'no contemptible invocation.' Firmilian, though a Cappadocian bishop, shows no knowledge of Cyprian's usage being other than the Asiatic in this respect.

The Alexandrian usage of that time was, doubtless, the same, for Origen (*c. Cels.* viii. 33) speaks of the bread becoming 'a sacred body through the prayer,' and (*in Mt* 15[11]) of the Eucharist as 'sanctified by means of the Word of God and prayer.' In his comment on 1 Co 7 he speaks of the Eucharistic loaves 'over which the name of God and Christ and the Holy Ghost has been invoked' (ἐπικέκληται).

The *Pistis Sophia*, an Ophite work of Egyptian origin (early 3rd cent., perhaps based on an earlier work), describes a sort of Eucharist with bread and wine; when the invocation is pronounced, the wine on the right of the oblation (θυσία) is changed into water (Srawley, *Early Hist. of Liturgy*, p. 43).

The older *Didascalia*, a work of the 3rd cent., perhaps testifies to an invocation of the Holy Spirit; but the text is not quite certain (Srawley, p. 88 f.).

These quotations show that an invocation of some sort was in general use in the 2nd and 3rd centuries, but give us, except in the case of the Gnostics, very little idea as to its nature. The Eucharistic worship of that time was probably in the main extemporaneous; the invocatory prayer had no fixed form, and all that we learn is that a calling down of Divine power was, to all appearance, universal.

4. **Period of development.**—When we come to the 4th and 5th centuries, a great era of liturgy-making, we have quite clear evidence as to the Epiclesis. The *Hippolytean Canons*, which perhaps represent Egyptian usage in the 3rd cent., though in their present form (allowing for some slight additions of a later period) they are probably of the 4th cent. (Maclean, *Anc. Ch. Orders*, p. 156 ff.), when describing the Eucharistic service, say that the priest, after the Salutation and Sursum Corda, 'recites the prayer and finishes the Offering' (can. iii.; ed. H. Achelis, *TU* vi. 4, Leipzig, 1891, §§ 21–27). The *Egyptian Church Order* (early 4th cent.? [Maclean, p. 160 f.]) has almost exactly the same words. But, in addition to descriptions of the service, we now possess five 4th cent. liturgies, of which at least the central part is extant in full: those, namely, of the *Ethiopic Church Order*, the Latin *Verona Fragments of the Didascalia, etc.* (these two are almost the same, so far as they run parallel), the *Testament of our Lord*, and the *Apostolic Constitutions*, and that of Sarapion, bishop of Thmuis in the Nile Delta. In all these, after the Sursum Corda, there is (in some cases with the Sanctus added) a Eucharistic Thanksgiving, giving thanks for our redemption, among other blessings, and, in doing so, introducing the narrative of the Last Supper, mentioning more or less fully (see below) our Lord's words and actions at it. Then come the Offering of the elements to God and the Invocation, asking for the Divine intervention (see 8, below). These three elements—narrative with thanksgiving, offering of the elements, and prayer —will be found to be the essence of all later liturgies, whatever else may have been added.

Before dealing with the comments on the Eucharistic liturgy of this period, it will be convenient to consider the omission of our Lord's words in some authorities. Cyril of Jerusalem (A.D. 348) describes the service at Jerusalem (*Cat. Lect.* xxiii. 6 f.); he deals fully with the 'preface' with its mention of the heaven, earth, sea, the angels and archangels, and the Sanctus, and yet he says nothing of the commemoration of redemption, or of our Lord's words, 'This is my body,' etc. Immediately after mentioning the Sanctus he says:

'*Then* we call upon God to send forth His Holy Spirit upon the gifts lying before Him, that He may make the bread the body of Christ and the wine the blood of Christ; for whatsoever the Holy Ghost has touched is sanctified and changed.'

This is what strikes him as the essential feature of the service. So in xxi. 3 he says that the bread of the Eucharist, after the invocation of the Holy Ghost, is no longer mere bread, but the body of Christ. There is no evidence of the existence of the Words of our Lord in the Jerusalem liturgy of the 4th cent., and Cyril's silence is significant as showing at least that they did not appear to him to be the principal act in the service. He comments on them elsewhere (xxii.) as used at the Last Supper, but not in connexion with the liturgy (Brightman, indeed, thinks that there is a liturgical reminiscence about this chapter, just as the phrase 'His undefiled hands and feet' in xx. 5 [*On Baptism*] has a parallel in the *Liturgy of St. James*, Greek and Syriac [*Lit. East. and West.*, p. 469, n. 11]). However this may be, half of the Words of our Lord—those over the cup—are omitted in the liturgy of the *Test. of our Lord*, which only alludes to them; and so in the Abyssinian *Anaphora of our Lord* (below, § 7), which is derived from the *Testament*, and which, though it has inserted several later features, leaves the narrative of the Last Supper in the same mutilated state. The East Syrian *Lit. of the Apostles Adai and Mari*, which in its essential features is probably to be dated before A.D. 431 (though it has received additions in course of time),[1] omits the words entirely. That this was not regarded, even at the beginning of the 7th cent., as an essential omission, however unusual, appears from the curious opinion of Gregory the Great, that

'it was the custom of the Apostles to consecrate the sacrificial oblation *solely* with [the Lord's] prayer' (*Ep.* ix. 12 [26]).

He contrasts the prayer in use in his day, 'composed by some scholar,' with our Lord's own words:

'Inconveniens visum est ut precem quam scholasticus composuerit super oblatione diceremus, et ipsam traditionem quam Redemptor noster composuit super ejus corpus et sanguinem non diceremus.'

He appointed the Lord's Prayer to be said directly after the Canon for this reason. There is no question whether Gregory's opinion was right or wrong; but the fact that he held it shows that he did not consider the essence of the service to lie in the declaratory formula, but thought of the consecration as being effected by a prayer.

5. **Patristic comment in this period.**—Turning to the comments of the Fathers of the 4th and 5th centuries, we find the same conception of the consecration by a prayer. Basil (*de Spir. Sanct.* xxvii. [66]) says:

'Which of the saints has left us in writing the words of invocation at the making (ἀναδείξει) of the bread of the Eucharist and the cup of blessing?'

This shows the absence of any fixed form. Athanasius (or pseudo-Athanasius?), in a sermon to the newly-baptized quoted by Eutychius of Constantinople in the 6th cent. (*de Paschate et de sacrosancta Euch.* 8 [Brightman, p. 533, n. 17; *PG* lxxxvi. 2401, fr. 7]), says:

[1] Connolly (*Liturgical Hom. of Narsai*, p. lxiv) more cautiously says that the extra-Anaphoral part, in so far as it is represented by Narsai's description of the Liturgy, is before A.D. 450. But we may probably go further than this.

'When the great prayers and holy supplications are pronounced (ἀναπεμφθῶσι), the Word descends on the bread and the cup, and [the bread] becomes His body' (καὶ γίνεται αὐτοῦ σῶμα: cf. Sarapion, below, 8).

Other Alexandrian writers speak of prayer for the *Spirit*. Thus, Athanasius's successor, Peter, says that at the altar 'we invoke the descent of the Holy Ghost' (Theodoret, *HE* iv. 19). Optatus, a Numidian bishop (*c.* A.D. 363) speaks (*c. Parmenianum*, vi. 1) of Almighty God being invoked, and the Holy Ghost being prayed for ('postulatus') and descending (cf. *c. Donat.* vi. 1).

Jerome (*Ep.* ci. [lxxiii. or cxlvi.] 'ad Evangelum') says: 'The body and blood of Christ is made ('conficitur') at the prayer of the priest.' Ambrose (*de Fide*, iv. 10 [125]) speaks of the 'sacrament which by the mystery of the sacred prayer is transfigured into the flesh and blood.' Elsewhere, if (as is probable) the *de Mysteriis* is his authentic work, Ambrose uses words which recall Tertullian:

'[In the consecration] the very words of the Lord, the Saviour, operate; for that sacrament which thou receivest is made by the word of Christ. . . . The Lord Jesus Himself proclaims, "This is my body." Before the blessing of the heavenly words another nature is spoken of, after the consecration the body is signified,' etc. (*de Myst.* ix. [52, 54]).

If these two passages are both by Ambrose, we must interpret the latter, in the light of the former, to mean that our Lord's command operates through the prayer of the priest (cf. Justin, above, 2). The *de Sacramentis*, which is almost certainly later than Ambrose (see below, 6), has a similar passage, but in more explicit terms (iv. 5).

Chrysostom's evidence goes both ways. He says that

'the priest stands, not bringing down fire [like Elijah; cf. § 178], but the Holy Spirit, and prays at length . . . that the grace falling on the sacrifice may through it inflame the souls of all' (*de Sacerdotio*, iii. 4 [179]); and that 'the priest stands before the table stretching forth his hands to heaven, calling on the Holy Ghost to come and touch the gifts set forth' (*Hom. de Cœmet.* 3).

Yet elsewhere he says:

'It is not man who makes the gifts set forth to become the body and blood of Christ. . . . The priest stands filling a part (σχῆμα πληρῶν), uttering those words; but the power and grace are of God. "This is my body," saith he. This saying changes the gifts set forth; and as the word which said "Increase and multiply" . . . was uttered once, but gives actual power to our nature to beget offspring through all time, so this word once spoken makes the sacrifice perfect at every table' (*de Prod. Judae, Hom.* i. 6).

The last passage, like that quoted above from the *de Mysteriis*, recalls Tertullian, but it stands alone among Eastern writings. It certainly suggests that it was the custom of Chrysostom to recite the words of our Lord at the Eucharist; but that these words as uttered by the priest in the narrative form found in all liturgies are those which consecrate the Eucharist, he does not say; indeed, he would seem rather by implication to deny it. He thinks of our Lord as consecrating the bread and wine at the last Supper by this declaration, or at least as consummating the consecration thereby; but he says that that declaration, once made by Jesus at the Last Supper, consecrates the Eucharist for all time. Putting with this passage those quoted immediately before it, we may take Chrysostom as teaching that every Eucharist is consecrated by the priest praying that our Lord's declaration at the Last Supper may make effectual the particular act on which he and the people are then engaged. There is not in Chrysostom, or in any other ancient writer, any approach to the idea that, if a priest were merely to say over bread and wine the words 'This is my body' and 'This is my blood' with a proper intention, a valid Eucharist would result.

Augustine in one place (*Serm. ined.* vi.; *PL* xlvi. 835 f.) speaks of the 'Word' (*Verbum*) being added to the bread and wine and of their becoming thereby the body and blood of the Word:

'Accedente verbo fit corpus et sanguis Verbi . . . [the Salutation, 'Sursum Corda' and Thanksgiving mentioned] . . . et inde jam [succedunt] quae aguntur in precibus sanctis . . . ut accedente verbo fiat corpus et sanguis Christi . . . adde verbum et fiet Sacramentum.'

In *Serm.* 227, Ben. (*in die Paschae*, iv.), he says that the bread and cup are sanctified 'per verbum Dei.' What is the 'word' here? In *de Trin.* iii. 4 [10], Ben. (A.D. 396), Augustine speaks of the elements being consecrated by the 'mystic prayer,' and only by the invisible operation of the Spirit of God. This last passage seems, especially when taken with the teaching of his countrymen Optatus (see above) and Fulgentius (see below), to show that Augustine used an invocation of the Holy Ghost at the Eucharist, and this would suit also the first passage about 'adding the word'; the 'verbum Dei' in the second passage would suit better the Divine command at the Last Supper, and, if so, we have a conception very like that of Chrysostom. It should be added that Srawley thinks that at Hippo there was no invocation of the Holy Ghost in Augustine's time (*op. cit.* p. 150).

The Cappadocian Fathers of the 4th cent. attest an invocation without stating its exact form. For Basil, see above. His brother Gregory of Nyssa speaks of the Eucharistic bread as sanctified by the Word of God and prayer (he interprets this Pauline phrase personally), and of the virtue of the benediction by which the change is accomplished (*Cat.* 37). So Gregory of Nazianzus begs Amphilochius to pray for him in his illness at the Eucharist and to 'draw down the Word by your word' (*Ep.* 171). On the usage of the Cappadocian Church in the 4th cent. see below, § 8.

That the Eucharist is consecrated by a prayer is an idea not confined to orthodox circles. Nestorius believed the same thing. In a fragment of his (F. A. Loofs, *Nestoriana*, Halle, 1905, p. 241) we read: 'Christ is typically crucified [in the Eucharist], being slain with the sword of the priestly prayer.' And we may add the comment of a distinguished Nestorian on the subject. The newly published *Liturgical Homilies of Narsai* gives us the nearest approach that we have in Eastern books at so early a date (*c.* A.D. 500) to the doctrine of what has by some writers been called 'the moment of consecration.' After saying that the chosen apostles have not made known to us what our Lord said, when 'He gave thanks and blessed' at the Last Supper, and after describing what is recorded in the Gospels, with a traditional comment of Theodore, Narsai adds that to this effect 'the priest gives thanks before God,' *i.e.* commemorates the Last Supper; then, after mentioning the Great Intercession which here, in East Syrian fashion, follows, he describes the Epiclesis: 'The priest . . . summons the Spirit to come down and dwell in the bread and wine and make them the Body and Blood of King Messiah. To the Spirit he calls, that He will also light down upon the assembled congregation, that by His gift it may be worthy to receive the Body and Blood. The Spirit descends upon the oblation without change (of place), and causes the power of His Godhead to dwell in the bread and wine, and completes the mystery of our Lord's resurrection from the dead. . . . The Spirit comes down at the request of the priest, be he never so great a sinner, and celebrates the Mysteries by the mediation of the priest whom He has consecrated. . . . Then the herald of the Church [the deacon] cries in that hour: "In silence and fear be ye standing: peace be with us. Let all the people be in fear at this moment in which the adorable Mysteries are being accomplished by the descent of the Spirit"' (ed. Connolly, pp. 16–22). It will be noticed that even here there is no cut-and-dried theory of a 'moment of consecration,' but only a statement that at the Epiclesis the consecration of the Eucharist by the power of the Spirit is completed. A similar proclamation by the deacon is still on some occasions used in this place by the East Syrians.

We may close this review of Patristic comment by two quotations from Fathers of the 6th cent., which tend in somewhat different directions. Fulgentius, bishop of Ruspe in North Africa, says (*c.* A.D. 507):

'The Holy Ghost is asked of the Father for the consecration of the sacrifice' (*ad Monimum*, ii. 7; cf. 10, 12); so the fragment of the same writer *c. Fabianum*, 25, 28.

Cæsarius of Arles in A.D. 502 writes:

'When the creatures that are to be blessed with the heavenly words are placed on the sacred altars, before they are consecrated by the invocation of the holy name, the substance of the bread and wine is there, but after the words of Christ, the body and blood of Christ' (*Hom.* v. *de Pasch.* [*PL* lxvii. 1056]). Cæsarius's thought seems to run on the same lines as Chrysostom's, as described above.

**6. Place of the Invocation.**—Taking first the 4th cent. liturgies of the Church Orders and of Sarapion, and the Great Liturgies of the four families designated by Brightman as Syrian, Egyptian, Persian (*i.e.* East Syrian or Nestorian), and Byzantine (this includes the Armenian), and omitting the Great Intercession, which varies in position (see art. INTERCESSION [Liturgical], 2 (*c*)), the order of the central part of the service in all (except the Egyptian in one detail) is as follows. After the Sursum Corda (which is prefaced by a benediction or salutation) comes the Eucharistic Thanksgiving, with a reference, in most cases, to the work of creation (cf. Irenæus, *Haer.* IV. xviii. 4, 6, where emphasis is laid on the oblations being God's creatures), and in all to that of redemption, introducing (except in some 4th cent. forms)[1] the Sanctus in reference to the angelic creation (which seems to be the reason of its occurrence here), and ending, except in the cases mentioned above (§ 4), with the recitation of our Lord's deeds and words at the Last Supper. Then comes the oblation of the elements, which usually takes up the words, 'Do this in remembrance of me,' and gives them as the reason for the act (hence this is often called the Anamnesis); and after it, in close conjunction, comes the Invocation. In this scheme the words of Jesus are introduced in the recital of what happened at the Last Supper as part of the Commemoration of Redemption.

Next let us take the *Roman rite.* It is not known for certain how the Eucharist was celebrated at Rome before the 5th century. Extemporaneous worship may have lingered there much longer than elsewhere, for in early ages it was Jerusalem that ordinarily led the way with regard to liturgical matters, and Rome showed the most conservative spirit. When we first meet with the Roman rite, there are two differences in detail from the scheme given above. (*a*) A prayer is found in the Eucharistic Thanksgiving *before* the Commemoration of Redemption, which in its earliest known form (in the *de Sacramentis*, iv. 5 f. [*PL* xvi. 463], a North-Italian work, probably written at a place where the Roman and Milanese uses were combined, *c.* A.D. 400; see Duchesne, *Chr. Worship*, p. 177) runs as follows:

'Make this oblation for us (nobis) established (ascriptam), valid, reasonable, acceptable, for it is the figure of the body and blood of Jesus Christ, who, in the day before He suffered, took bread,' etc.

This is slightly altered in the present Roman canon, which probably goes back, at least in its main features, as far as Gregory the Great (6th cent.), to the following:

'Which oblation do thou vouchsafe to make blessed, established, valid, reasonable, and acceptable, that it may become for our sakes (nobis . . . fiat) the body and blood of thy most beloved Son our Lord Jesus Christ, who in the day before,' etc. This prayer, the *Quam oblationem*, was developed by Cranmer in the First English Prayer-Book (1549), and afterwards in the Scottish Liturgy of 1637, into a more detailed Epiclesis, with an invocation of the Holy Ghost.

(*b*) After the Commemoration of Redemption and the oblation of the elements comes a prayer for the Divine intervention, as in the other liturgies described above. It is made up of two parts, the *Supra quae* and the *Supplices te.* But, instead of asking that the Holy Ghost may come down to the earthly altar, it asks that the elements may be taken up by God's holy angel to the heavenly altar. The two conceptions, though differing in form, are really one, and are both justified by NT usage.

A writer in *CQR* (xxix. [1890] 379) remarks that 'the same facts of grace are presented in two forms: we are said to be raised up with Christ and made to sit with Him and to be in the heavenly places (Eph 2[6f.] 6[12]): and on the other hand the Holy Ghost is sent forth into our hearts, and is in us, and we are strengthened by the Spirit so that Christ comes to dwell in our hearts (Gal 4[6], Jn 14[17], Eph 3[16f.]).'

The earliest form of the prayers *Supra quae* and *Supplices te* is found in the *de Sacramentis* (*loc. cit.*). After the narrative of the Last Supper in the liturgy described in that work comes the oblation of the elements, followed by the words:

'We ask and pray thee to take up this oblation on thy sublime altar by the hands of thy angels, as thou didst deign to take up the gift of thy servant just Abel and the sacrifice of our forefather Abraham and that which Melchisedek the high priest offered to thee.'

The present Roman canon has inverted these clauses, has changed 'angels' into 'angel,' and has made some additions; notably it expresses the purposes of the prayer:

'that all we who receive the holy body and blood of thy Son . . . may be filled with every heavenly benediction and grace.' For the meaning of these passages see below, 9. The idea of the heavenly altar is first found in Irenæus (*Haer.* IV. xviii. 6).

We may next take the *Gallican rite.* The peculiarity of this rite is that the central parts of the Eucharistic service vary with the day and season, instead of being fixed, as in other liturgies, Eastern and Western. In other words, the Mass for each day is a distinct liturgy. The only part which need detain us is that which corresponds to the Eastern Epiclesis, the 'Post pridie,' so called because it comes after the narrative of the Last Supper ('Qui pridie quam pateretur'). On some occasions the 'Post pridie' contains an explicit prayer for the Holy Ghost, on others it does not; but apparently it always or almost always asks for the Divine intervention in the mystery (see examples in Scudamore, *Not. Euch.*[2], 589, 594; Duchesne, p. 217 f.; Gummey, *Cons. of the Euch.*, 334 ff.). On some days, also, the 'Post Sanctus' (a prayer said after the Sanctus and before the Narrative of the Last Supper) contained an invocation, or an anticipation of the invocation (see the 'Post Sanctus' for Easter Even in the *Missale Gothicum* [Gummey, p. 337]). So in the *Mozarabic Missal* we find anticipatory invocations, sometimes mentioning the Holy Ghost and sometimes not, as well as invocations in the 'Post pridie' (Gummey, pp. 339, 350 f., 353, 358).

The *Egyptian rite* is noteworthy in this connexion as having an anticipatory Epiclesis before the Narrative of the Last Supper in addition to the normal one afterwards, though the anticipatory one is not usually very explicit. The words of Sarapion, 'Full is the heaven, full also is the earth of thy excellent glory; Lord of hosts, fill also this sacrifice with thy power and thy participation,' are taken up and amplified in the Greek *Liturgy of St. Mark* (Brightman, p. 132) and in the Coptic *St. Mark and St. Cyril* (p. 176). The latter amplifies the last sentence thus:

'Fill this also thy sacrifice, O Lord, with thy blessing that is from thee, through the descent upon it of thine Holy Spirit, and in blessing bless and in purifying purify these thy precious gifts which have been set before thy face, this bread and this cup.'

The most marked development of this invocation before the Narrative is in a newly-discovered fragment of an Egyptian Anaphora, perhaps of the 6th or 7th cent., which has:

'Fill us also with the glory that is with thee, and vouchsafe to send down thy Holy Ghost on these creatures, and make the bread the body of our Lord and Saviour Jesus Christ, and the cup the blood of the New Testament. For our Lord Jesus Christ himself, in the night in which He was betrayed [the narrative of the Institution follows] . . . ye announce my death and confess my resurrection. We announce thy death, we confess thy resurrection, and pray . . .'; here the fragment abruptly ends, and all the rest is wanting (P. de Puniet, *Report of the Nineteenth Euch. Congress* [1908], London, 1909, p. 382 f.; Cabrol, *DACL* ii. 1882 ff.).

There is no reason to suppose that an Anamnesis and Epiclesis did not follow, as in the other Egyptian Anaphoras which have an anticipatory invocation before the Narrative. There is no trace of

[1] In some Abyssinian Anaphoras the Sanctus is thrust in without any connexion with the context (Brightman, *JThSt* xii. [1910–11] 325). This may show that even later liturgies lacked this element.

any such anticipatory Epiclesis in the liturgies of the Church Orders, and from the evidence given above it is clear that the invocation in this fragment is a development (for we can see it in the process of growing) and not the survival of an antique feature. The development may have been due to an imitation of the Roman rite. A still more striking instance of an anticipatory Epiclesis may be seen in a prayer to the Son in the Coptic *St. Mark and St. Cyril* and in the present Ethiopic Liturgy (Brightman, pp. 148, 204; E. Renaudot, *Lit. Orient. Coll.*[2], Frankfort, 1847, i. 2); this is said when the elements have just been put on the altar, before the lections are read, and is called in the Coptic the 'prayer of (or over) the Prothesis' (see Renaudot's note, p. 168). It runs thus:

'O Master, Lord Jesus Christ, . . . make thy face to shine on this bread and on this cup which we have set on this thy priestly table: bless, sanctify, and hallow them, and change them that this bread may become indeed thy holy body, and that which is mixed in this cup indeed thy precious blood; and may they become to us all for participation and healing and salvation of our souls and bodies and spirits.'

On these anticipatory invocations it may be observed that, however puzzling they may be to the more logical Western mind, to the more subtle Eastern mind they would be natural enough. In Divine mysteries there is no such thing as time, just as there is no such thing as space.

7. **The Person or Persons addressed in the Invocation.**—In the most ancient authorities sometimes the Holy Trinity is addressed, sometimes the Son or the Holy Ghost, but more often the Father. Doubt occasionally arises because the phrase 'invocation *of* a Person' may mean a prayer for Him to come, or a prayer addressed to Him; but an 'invocation of the Holy Trinity' can only mean prayer addressed to the Holy Trinity. In the 2nd cent., Irenaeus speaks of the invocation of God or of the Father, or of the Holy Ghost, or of the Holy Trinity. In the 4th cent., Cyril of Jerusalem speaks of invoking the Father in the Eucharist to send the Holy Ghost (*Cat. Lect.* xxiii. 7), and by 'invocation of the Holy Ghost' (xxi. 3) he probably means prayer *for* the Holy Ghost. On the other hand, in xix. 7 he speaks of the 'holy invocation of the adorable Trinity' to consecrate the Eucharist, and contrasts it with the 'invocation of unclean spirits.' This can only mean invocations addressed to the Holy Trinity and to unclean spirits respectively. Thus in Cyril's time it was perhaps the custom sometimes to address the Father, sometimes the Holy Trinity. In the liturgies of the *Ethiopic Church Order*, the *Verona Fragments*, the *Apostolic Constitutions*, and Sarapion, the Father is addressed. But the Oblation and Invocation (such as it is) in the *Testament of our Lord* are addressed to the Holy Trinity (i. 23):

'We offer to thee this thanksgiving, Eternal Trinity, O Lord Jesus Christ, O Lord the Father . . . O Lord the Holy Ghost; we have brought [this is the best reading] this drink and this food to [the MSS have 'of'] thy holiness; cause that it may be to us not for condemnation,' etc.

Just before this our Lord had been addressed:

'Remembering therefore *thy* death and resurrection, we offer to thee bread and the cup,' etc.

It was perhaps in view of such formulæ that the Council of Hippo in 393 (can. 21 [C. J. Hefele, *Councils*, Eng. tr., Edinburgh, 1876, ii. 398]) forbade Eucharistic invocations to be addressed to any but the Father:

'In prayer no one shall address the Son instead of the Father, or the Father instead of the Son, except at the altar when prayer shall always be addressed to the Father. No one shall make use of strange forms of prayer without having first consulted well-instructed brethren.'

If this is aimed at books like the *Testament*, the language is not unsuitable, for the Prayers in that manual show considerable confusion in the Persons addressed. The Abyssinian *Anaphora of our Lord*, derived from the *Testament*, retains the peculiar features (as to the Oblation and Epiclesis) of its prototype; but before the address to the Holy Trinity (which it slightly modifies) it inserts an invocation of the more usual type, asking for the Holy Ghost, and addressed, as we see from its wording, to the Father, though from what had immediately preceded we should have thought that it was addressed to the Son. It is, in fact, a very clumsy insertion (this Anaphora is given in Cooper-Maclean, *Test. of our Lord*, p. 245 ff.).[1] In the Great Liturgies the Invocation is addressed to the Father.

8. **The object of the Invocation.**—We may group Invocations in three classes: (*a*) those which do not explicitly pray for the Holy Ghost; (*b*) those in which the intervention of the Holy Ghost is asked for, without any explicit mention of a change in the elements; and (*c*) those (the great majority) in which the intervention of the Holy Ghost is asked for that He may change the elements and make them to be our Lord's body and blood.

(*a*) The invocation in Sarapion's sacramentary (*c.* A.D. 350) exhibits some confusion between the Word and the Spirit, and prays that the Word may descend (for the Gr. text, with notes by Brightman, see *JThSt* i. 88 ff., 247 ff.; for an Eng. tr. see J. Wordsworth's ed., London, 1899). It runs thus:

'O God of truth, let thy holy Word come upon this bread, that the bread may become body of the Word, and upon this cup that the cup may become blood of the Truth, and make all who communicate to receive a medicine of life. . . . For we have invoked thee, the Uncreated, in [the] Holy Spirit.'

It is possible that λόγος is used in two senses here, the first time as the Divine command ('thy holy word'), and the second time, by a sort of paronomasia, as the Eternal Word. But probably there is merely a confusion of thought, of which we find some instances elsewhere in early times (*e.g.*, Tertullian, *adv. Prax.* 26, 'hic Spiritus Dei, idem erit Sermo'; cf. also Justin, *Apol.* i. 33, 66, Hermas, *Sim.* v. vi. 5 ff., IX. i. 1, ps.-Clem. *2 Cor.* ix. 5, xiv. 3, 5, and perhaps Aristides, *Apol.* 15). It may be permissible to conjecture that the reason of this confusion of language, such as it is, comes from the fact that all that the Eternal Word does for us is done through the Spirit. He is with us 'alway, even unto the end of the world' (Mt $28^{20}$), but it is through the Comforter that He comes to us (Jn $16^{14}$). Perhaps, therefore, before the Macedonian controversy arose, it seemed immaterial to some of the early Fathers whether they prayed for the Word or for the Spirit to come. It is probable that Athanasius's invocation prayed for the descent of the Word (above, 5); this was perhaps an Alexandrian peculiarity (for Origen see 3). After Sarapion the invocation of the Word disappears, though, as Swete remarks (*Holy Spirit in the Ancient Church*, London, 1912, p. 292), 'the thought of the Logos descending on the elements was not altogether abandoned' (see passage in Eutychius given above, 5). But, while we find the same thought in the Cappadocian Fathers (above, 5), whose literary affinities were Alexandrian, there is no evidence of a Logos-invocation in Cappadocia. Srawley (*op. cit.* p. 126) regards it as practically certain that the Holy Spirit was named in the invocation of that Church.

The most eminent example of the omission of the mention (or, at least, direct mention) of the Holy Ghost is the Roman liturgy. Neither the *Quam oblationem* nor the later prayer for the Divine intervention (*Supra quae* and *Supplices te*) mentions the Holy Ghost; the latter asks that the

[1] It had been suggested by the present writer (*Test. of our Lord*, p. 167) that this curious Anaphora was a connecting link between the *Testament* and the modern Abyssinian liturgy. But E. Bishop (*JThSt* xii. [1911] p. 399) gives reasons for thinking that it is rather a version of the *Testament* liturgy enriched from the already existing Abyssinian rite.

elements may be taken up by 'the holy angel'[1] to the heavenly altar, as has already been described (above, 6).

(*b*) The implicit form is that found in the *Ethiopic Church Order* (Brightman, p. 190) and the *Verona Fragments* (ed. E. Hauler, Leipzig, 1900, p. 107):

'Send thy Holy Spirit on the oblation of this Church; give it together unto all them that partake [for] sanctification and [*Ver. Frag.* better: all saints who partake] for fulfilling with the Holy Ghost,' etc.

The liturgy used by St. Chrysostom at Antioch was probably similar in this respect (see the first two quotations from his writings given above, 5). The *Testament of our Lord* is even less explicit in its invocation; the Holy Ghost is not directly asked for, though He is named in the address to the Holy Trinity, and only the blessing to the communicants is explicitly mentioned (above, 7). The Nestorian or East Syrian *Lit. of Adai and Mari* (above, 4) has an invocation of this implicit form, though it has in addition a prayer for the blessing and hallowing of the oblation:

'May thy Holy Spirit, O my Lord, come and rest upon this oblation of thy servants, and may He bless and hallow it, and may it be to us, O my Lord, for pardon,' etc.

(*c*) The explicit form is found already in the 4th cent.; Cyril of Jerusalem has it (above, 4), as also have the *Apost. Constitutions* (viii. 12):

'We implore thee . . . to send down upon this sacrifice thy Holy Spirit . . . that He may show (ἀποφήνῃ[2]) this bread as the body of thy Christ, and this cup as the blood of thy Christ, that they who partake thereof may be strengthened in godliness,' etc.

Similar explicit invocations are found in the Abyssinian *Anaphora of our Lord* (above, 7), in the Egyptian Anaphora described in the *Sahidic Eccles. Canons*, § 66 (Brightman, p. 462), and in all the Great Liturgies (except *Adai and Mari*) if they have an express invocation of the Holy Ghost at all. Sarapion also has an explicit invocation, though it does not invoke the Holy Ghost.

It seems clear from the evidence here detailed that the implicit type of invocation is somewhat older than the explicit; and, indeed, it would be almost impossible for the former to be evolved out of the latter.

9. **Interpretation of the evidence.**—If we approach the evidence without any theory as to what are the words or the moment of the Eucharistic consecration—and to deal with evidence *after* we have made our theories is a fatal mistake—we shall be impressed by the fact that, however much different ages and different countries may have used divergent details in their Eucharistic worship, the general scheme of the service was one and the same throughout Christian antiquity. The Eucharist, at least from the 2nd cent., was consecrated by a prayer, whether the prayer asked for the Holy Ghost, or for the Word, or for neither explicitly. But how are we to regard the invocation of the Holy Ghost? It would appear that before the rise of the Macedonian controversy about the Holy Spirit, the Third Person was not even in the East always mentioned in the Eucharistic Epiclesis. Indeed (now that the Pfaffian fragments of Irenæus have been dismissed as modern forgeries [Harnack, *TU* v. 3]), there is no certain evidence of the Holy Spirit being mentioned in the invocations before the 4th cent.; the evidence is only consequential, and E. Bishop (App. to Connolly's *Lit. Hom. of Narsai*, p. 136 ff.) even treats the kind of Epiclesis which became universal in the East and common in the West (see the Gallican and African evidence, above, 5, 6) as an *invention* of the 4th century. He rightly calls attention to the fact that, in combating the Pneumatomachi, the Orthodox did not appeal to the work of the Holy Ghost in consecrating the Eucharist, while they did appeal to His work in baptism. But the argument from silence here, as so often, is precarious; for at the very time when the controversy arose, and when it is said that the silence of the Orthodox shows that they were not in the habit of using an Epiclesis of the Holy Ghost at the Eucharist, we find Cyril of Jerusalem (A.D. 348) and the liturgies of the *Ethiopic Church Order* and of the *Verona Fragments* (which, or their common original, must almost certainly be dated about then) attesting its use, and (what is important) betraying absolutely no idea that it was a novelty. It will be remembered that Cyril and Sarapion were contemporaries. Is it possible to explain the extraordinarily widespread—almost universal—use of the custom from that time forward, without a protest from any one, in most diverse countries, if it were an invention of that period? Is it not much more probable that the prayer for the Holy Ghost goes back to a much more remote time, although it was not the only form in use? It would seem that in this matter, as in others, the rise of heresy had indirectly a beneficial result; it forced the Church to think more clearly about the work of the Third Person. In the invocation of the Holy Ghost we have an instance of the experience of Christianity, after various trials, showing what were the forms most suitable for liturgical use.

Again, if we start with no pre-conceived theory, there seems to be no reason why the invocation should always be in the same place, or why there should not be more than one invocation in the same service. The Egyptian rite has a sort of invocation before the Narrative of the Last Supper, or even in the preliminary service, and a fuller one after the Narrative (see above, 6). The Roman rite has the same feature. But there is no reason for denying that both prayers are, in their own way, invocations. No doubt, if we start with a theory that the consecration takes place at a particular moment, as when it is said that at the word 'meum' in the phrase 'Hoc est enim corpus meum,' the bread is transubstantiated,[1] then we shall be obliged by the theory to hold that the *Supra quae* and the *Supplices te* in the Roman rite are merely petitions for a blessing on the communicants; but this is a very difficult position. It is, indeed, common ground that almost all known liturgies have, at the place where these prayers occur, a petition for the communicants; the Epiclesis states this as the reason for its petition for Divine intervention. But that is a very different thing from saying that the Roman prayers in question were designed by their author merely to pray for this blessing, and that the consecration was conceived as having already taken place. Several considerations make such a supposition improbable. In the *de Sacramentis* (iv. 6), where these prayers are first found, there is no prayer for a blessing on the communicants. And, if the prayers have only this meaning, why should the elements already consecrated be taken up by the angel to the heavenly altar? What would be the significance of the reference to the offerings of Abel and Melchizedek and the rest? Further, if a prayer for a blessing is all that is meant, it is unnecessary, as such a prayer already occurs in the *Quam oblationem* ('nobis fiat'). And the difference of nomenclature shows that these prayers were regarded as completing the consecration. After the narrative of the Institution the oblation is called bread (in the *Unde et memores*); but after

[1] An attractive theory identifies the angel with the Holy Spirit (see de Puniet, *op. cit.* p. 393); but the *de Sacramentis* has the plural 'angels.'

[2] Cf. Basil's use of ἀνάδειξις, above, 5. For other parallels see Srawley, p. 105 n.

[1] The theory that, in the Roman rite, by the time the Words of our Lord have been uttered the consecration is complete is not quite the same thing as this, inasmuch as it does not bind the holder of it to the idea that the consecration is effected only by a declaratory formula.

the *Supplices te* it is always called the body and blood of our Lord—*e.g.*, at the commixture (cf. Duchesne, p. 182). It appears, therefore, that the interpretation of writers of the school of Duchesne takes a view of the case which is more in accordance with the facts, namely, that the *Supra quae* and *Supplices te* exactly correspond to the Epiclesis after the Narrative of the Last Supper which is found in the Eastern and usually in the Gallican liturgies, and are intended to be at least a part of the words of consecration.

The devout Christian need not ask too particularly, nor can he expect to know, at what moment God consecrates the elements; it is enough for him to be assured that, when all has been said, the consecration has been completed.

10. **Invocation at baptism and confirmation.**—The prayer for the gifts of the Holy Ghost is also in some early authorities called an Epiclesis. The bishop, in normal cases, was present at the administration of baptism, though he did not usually himself baptize; and directly after the immersion the newly-baptized were brought to him, and he prayed for them (either before or at the laying on of hands) that the Holy Ghost might be given to them (cf. Ac $8^{15, 17}$). Tertullian, who mentions the laying on of hands as an act distinct from the anointing, says:

'Having come out of the laver, we are anointed with the blessed unction. . . . After that, a hand is imposed, calling on (advocans) and inviting the Holy Spirit by a benediction' (*de Bapt.* 7 f.).

In the *Verona Fragments* (ed. Hauler, p. 111) the bishop, after the newly-baptized have been anointed by a presbyter and clothed and brought into the church, lays hands (or a hand) on them and 'invokes'; the prayer is given. In the *Testament of our Lord* the same thing is found; the prayer is expressly called 'the invocation of the Holy Ghost' which the bishop 'says and invokes over them' (ii. 9). In other Church Orders a similar prayer is given, but it is not expressly called an invocation. It may perhaps be added that in the Gnostic *Acts of Thomas* there is an invocation of Christ and of the Holy Spirit *before* the baptism, at the anointing (ed. Bonnet, p. 68; *Ante-Nic. Chr. Lib.* xvi. 404).

The invocation after the immersion has no connexion with the invoking of the Divine name at the immersion, of which we read in Justin (*Apol.* i. 61: 'the name of God, the Father of all, the Lord, is named upon him') and in the *Apost. Const.* (iii. 16: 'naming the Epiclesis of Father and Son and Holy Ghost, thou shalt baptize them in water'), for these refer only to the words used in baptizing. The same may be said of the allusions in Ac $15^{17}$ (from Am $9^{12}$) and Ja $2^{7}$ ('the honourable name which was invoked [ἐπικληθέν] upon you'; cf. Nu $6^{27}$).

A. J. MACLEAN.

**INVOCATION** (Roman).—It was believed by the Romans that, if a prayer was to be truly effective, it must be directed specially to the deity within whose sphere of power its fulfilment lay, and that this deity must be invoked by his right name; so Arnobius, iii. 43:

'Usque adeo res exigit propriatim deos scire nec ambigere nec dubitare de unius cuiusque vi nominis, ne si alienis ritibus et appellationibus fuerint invocati, et aures habeant structas et piaculis nos teneant inexplicabilibus obligatos.'

To know the right name of the competent deity was to possess a real power of compulsion over him (cf. A. Dieterich, *Eine Mithrasliturgie*[2], Leipzig, 1910, p. 110 f.); hence the names of the specific tutelary deities of Rome were kept secret, in order that they might not be used for evil ends by the enemies of the State (Serv. *Æn.* ii. 351: 'iure pontificum cautum est ne suis nominibus dei Romani appellarentur, ne exaugurari possent'; cf. *Georg.* i. 498; Plin. *HN* xxviii. 18; Macr. *Sat.* iii. 9. 3). This explains also why it was regarded as of the utmost importance to invoke the gods in the proper form, and why every precaution was taken to avoid mistakes. If a suppliant was in doubt as to the right name of the deity he desired to address, he either uttered a variety of names for the deity to choose from (so Hor. *Sat.* ii. 6. 20: 'Matutine pater seu Iane libentius audis') or added some such formula as 'sive quo alio nomine fas est nominare' (Macr. *Sat.* iii. 9. 10; cf. Serv. *Æn.* ii. 351; Apul. *Metam.* xi. 2; *CIL* xi. 1823) or 'quisquis es' (*e.g.*, Verg. *Æn.* iv. 577, and the note of Servius: '"quisquis es" secundum pontificum morem, qui sic precantur: "Iuppiter omnipotens vel quo alio te nomine appellari volueris"'; cf. E. Norden, *Agnostos Theos*, Berlin and Leipzig, 1913, p. 144 f.).

If, however, the suppliant did not know which deity was concerned with the matter in hand, a variety of expedients was open to him. He might omit the divine name altogether, and substitute for it a phrase like 'Genio urbis Romae sive mas sive femina' (Serv. *Æn.* ii. 351; cf. Macr. *Sat.* iii. 8. 3; Plut. *Quæst. Rom.* 61) or 'sive deo sive deæ in cuius tutela hic lucus locusve est' (so among the Arval Brothers [*CIL* vi. 2099, ii. 3; cf. G. Henzen, *Acta fratrum Arvalium*, Berlin, 1874, pp. 144–146])—a *dubitationis exceptio* (Arnob. iii. 8; cf. Gell. ii. 28. 2 f.), of which we have numerous instances in extant formulæ of prayer alike in literature (Cato, *de Agric.* 139; Macr. *Sat.* iii. 9. 7) and in inscriptions on altars (*CIL* vi. 110 = 30701, 111; *Ephemeris Epigraphica*, v. 1043, ix. 608); on these cf. C. Pascal, in *Bull. archeol. comun.* xxii. [1894] 188 ff. = *Studi di antichità e mitologia*, Milan, 1896, p. 85 ff. In many cases, however, the worshipper simply applied a new name to the deity. It is certain that many of the recognized Roman deities derived their origin from the practice of invoking as divine things lying close at hand (*e.g.*, *ianus*, 'the door,' *vesta*, 'the hearth'), or of using the names of the evils which the prayer was designed to avert (*e.g.*, *febris*, 'fever,' *robigus*, 'mildew on grain'), or of the virtues and conditions prayed for (*e.g.*, *fides*, 'fidelity,' *concordia*, 'agreement') as the names of divine beings. In such cases it was of importance to define clearly the conception of the higher power thus invoked, and to express its connotation fully. Hence the gods frequently received double names, meant to indicate their character from two contrasted points of view, as, *e.g.*, Anna Perenna, who could grant a favourable year's beginning (*annare*) and year's end (*perannare*); Genita Mana, who presided over birth and death; Patulcius Clusivius, the god of the opening and shutting of doors or gates, etc. Again, the suppliant might break up the action for which he sought divine aid into its several component elements, and frame for each of these an appropriate divine name. Thus, while in the *sacrum Ceriale* the flamen offered the sacrifice to the goddesses Tellus and Ceres, he gave definite expression to what he asked of them by invoking

twelve names which covered the husbandman's work from the first ploughing to the delivery of the grain from the granary, viz. Vervactor, Redarator, Imporcitor, Insitor, Obarator, Occator, Sarritor, Subruncinator, Messor, Convector, Conditor, Promitor (Serv. *Georg.* i. 21), and, similarly, the Arval Brothers, by way of expiating the acts of bringing down, cutting, and burning a fig-tree that had grown on the roof of their temple, offered sacrifice to three newly created deities, viz. Deferunda, Commolenda, and Adolenda, while on another occasion of the same kind they sacrificed to Coinquenda and Adolenda (Henzen, *op. cit.* 147 f.). In the case of gods whose range of power was very wide, it was necessary to specify the particular matter in which their help was required; and from this arose the practice of dividing the personality of certain deities and investing the component elements with distinct epithets, of which quite a number might appear together in a single prayer. Thus, *e.g.*, the Arval Brothers, in the vow which they made for the triumphant return of Trajan from the Dacian campaign in A.D. 101 (*CIL* vi. 2074, i. 25 ff.), invoked not only Juppiter Optimus Maximus and Mars Pater, but also Juppiter Victor and Mars Victor. In the case of so multiform a deity as Fortuna, the suppliant was above all concerned to direct his prayer to the proper quarter, so that, if, *e.g.*, he prayed for the favourable issue of a battle, he appealed to 'Fortuna huiusce diei,' *i.e.* the particular Fortuna in whose hands lay the destiny of the day of battle (Wissowa, *Rel. und Kult. der Römer*[2], Munich, 1912, p. 262). Great care was also taken that no divine power who had a right to be invoked should be passed over. Hence, after all the deities specially concerned had been duly invoked in a prayer, it was customary to add a 'generalis invocatio' which should include all the others:

'Post specialem invocationem transit ad generalitatem, ne quod numen praetereat, more pontificum, per quos ritu veteri in omnibus sacris post speciales deos, quos ad ipsum sacrum quod fiebat necesse erat invocari, generaliter omnia numina invocabantur' (Serv. *Georg.* i. 21; cf. *Æn.* viii. 103, *Georg.* i. 10).

This practice finds parallels in Greek prayers (cf. O. Crusius, *Untersuchungen zu den Mimiamben des Herondas*, Leipzig, 1893, p. 80***; R. Wünsch, in *ARW* vii. [1904] 100).

In forms of prayer that have come down to us, accordingly, the group of deities addressed is very frequently rounded off with some such formula as 'di deaeque omnes,' or, more definitely, 'di omnes coelestes vosque terrestres vosque inferni' (Livy, i. 32. 10), or 'di novensiles, di indigetes, di quibus est potestas nostrorum hostiumque' (*ib.* viii. 9. 6). With this custom is connected the requirement that in every prayer, no matter to what god it was addressed, Janus and Juppiter should be invoked first of all (Macr. *Sat.* i. 16. 25; cf. Cato, *de Agric.* 141 [see also 134]: 'Ianum Iovem vino praefamino'), and that the series of gods invoked should always begin with Janus and end with Vesta (Cic. *de Nat. Deor.* ii. 67, and other passages, as cited by Wissowa, *op. cit.* 103).

**INWARD LIGHT.**—See EXPERIENCE (Religious); FRIENDS, SOCIETY OF.

**IONIC PHILOSOPHY.**—The schools of philosophy that arose in Ionia, on the coast of Asia Minor, and among the adjacent islands, during the 6th cent. B.C., are above all remarkable for their originality and vigour. With them begins the great march of Greek philosophy, and even their fragments are stimulating to this day. It is hard to fix precisely the limits of the term 'Ionic.' In so active a period of thought, systems gave birth to other systems with astonishing rapidity, and Xenophanes, Heraclitus, Pythagoras, and Anaxagoras, all of them bred in Ionia, were deeply influenced by the speculations around them. All historians would agree, however, that Thales, Anaximander, and Anaximenes, the earliest in time, form to some extent a class apart, and most would confine the distinctive name to these three and their immediate disciples. But Xenophanes seems to come nearer to them than to their great successors, and we may include him here, especially as he gives particular expression to the religious side of their views. Dominant in the four is the recognition of matter, motion, and physical causation—*i.e.* of objects extended in space, and orderly movements and changes in space—as being themselves manifestations of the Absolute Reality. There is a marked aversion to earlier anthropomorphic ideas, and to all such mythology as that in which a storm at sea would be explained simply as due to the incalculable wrath of a Poseidon. At the same time this 'matter' with which our philosophers are concerned does not appear to be conceived as anything apart from spirit. They shrink from imagining it in terms of mere mechanism, but do not ask themselves the precise distinction between mechanism and spirit, or the precise connexion between them — questions, certainly, that no one has answered yet. But, with the possible exception of Xenophanes, these early thinkers do not even raise such questions, at least not expressly: in Hegelian language, they do not ask how far space can be taken as an adequate manifestation of the Absolute; they are absorbed rather in the simple feeling that it is *a* manifestation. They feel that things do happen in the way of mechanical and physical 'causation,' one event in space and time being followed by another as its necessary 'effect'; that a cloud, *e.g.*, is formed and will be formed by an exhalation from the sea, not by the god choosing to send his messenger wrapped in a magic veil. At the same time, they insist that these physical processes are, in some profound sense which they do not determine, bound up with life, mind, and divinity. Thus they have been called 'hylozoists' (ὕλη = 'matter,' ζωή = 'life'), since they assert a union, though an undefined union, between the two; or, rather, they do not assert it, they assume it, for they have hardly reached the stage of distinguishing the two as two. Aristotle sees the danger of this indefiniteness, one result of which was to make extended things and movements in space *as such* appear to be the sole causes of all that existed, including the movements themselves and the glory and beauty of the universe (*Met.* A 3, 983[b] 6–984[b] 20). But no criticism can do justice to these pioneers that does not recognize the immense service done to thought by initiating research into the properties of space and the physical qualities of things, and connecting with this, rather than with mere mythological fancies, the search for the absolute truth about the universe and God. Science and mathematics are not in themselves metaphysics and theology, but there will never be a great metaphysic that does not take account of them, and never a great theology that does not take account of metaphysic.

**1. Thales.**—It is significant that Thales, the first of these thinkers, is said to have brought the elements of geometry to Greece, having studied the science in Egypt and made discoveries of his own (Ritter-Preller, *Hist. Phil. Græcæ*, 9 E and reff. there). But how far it was a true deductive science and not a mere collection of rules learnt empirically, it is difficult to say. Our direct information for Egypt is derived from a document written, probably about 1500 B.C., by the priest

Ashmes (on the Rhind papyrus now in the British Museum). Mathematicians who have studied this treatise state that it refers to a rule for 'determining the trigonometrical ratios of certain angles' (see W. Ball, *A Short History of Mathematics*, London, 1888, p. 8 ff.), but they are not sure whether this rule could not have been discovered by mere observation of special instances, without the general reason being known. On the other hand, the Greek Democritus, writing in the 5th cent. B.C., and boasting of his proficiency in mathematics, asserts that he has not found himself surpassed even by the Egyptians in the construction of diagrams 'accompanied by demonstration' (μετὰ ἀποδέξιος [Ritter-Preller, 188]). This at once suggests that, though by that time the Greeks had outstripped the Egyptians, they recognized that demonstration and deduction were present from the first in the foreign teaching. This agrees with Aristotle's remark that mathematics arose first in Egypt, because there the priests had leisure, and leisure is necessary for all the liberal studies that go beyond utility (*Met.* A 1, 981ᵇ 20). Thus it seems quite possible that Proclus had good foundation for his opinion that there was a true 'general' element in the mathematics of Thales, *i.e.* a true element of deduction (Proclus, *in Euclid.* 19 [Ritter-Preller, 9 E]). Proclus is writing *c.* A.D. 450, but he quotes Eudemus (*c.* 325 B.C.), who undoubtedly thought that Thales must have grasped the general principle that a triangle is determined when the base and the angles at the base are given; for otherwise, Eudemus held, he could not have measured the distances of ships at sea, as he is said to have done (his base, apparently, 'being a tower, and the base angles being obtained by observation' [Ball, p. 14; Proclus, p. 352. 14]).

Thus we may see in Thales the first beginnings of that insight into the real importance of mathematics both for science and for metaphysics which so deeply influenced Greek thought, from the time when the Pythagoreans believed that the very essence of all things was to be found in number down to the days of Archimedes.

Herodotus tells us (i. 74) that Thales foretold the eclipse of the sun which took place in the sixth year of the war between the Lydians and the Medes. Incidentally this gives us a date for Thales' life, since astronomers calculate that an eclipse was visible in Asia Minor on May 28, 585 B.C. (Ritter-Preller, 8*b*). We cannot suppose, without authority, that Thales had discovered the true cause of eclipses, but we know from Assyrian records that the Babylonians watched for eclipses at fixed dates (Burnet, *Early Greek Phil.*² p. 42). Thales may have had access to this knowledge in his travels, possibly at the court of Crœsus, king of Lydia (Herod. i. 29). In any case we can understand how such knowledge, coupled with his mathematical studies, would stimulate his search after one universal physical cause for all the changes in the world. This, he held, was water. Aristotle, our nearest authority, suggests that he was led to this view by observing that the seed of all living things is moist, and also the nutriment of all things, 'and that heat itself is generated from the moist and kept alive by it' (*Met.* A 3, 983ᵇ 18). It is not clear whether the last passage refers to animal heat alone, as the context certainly suggests, or, as later writers thought, to the belief that the fire of the sun and the stars was fed by exhalation (Ritter-Preller, 12; Plut. *Plac. Phil.* i. 3; Diels, *Doxographi*, p. 276). It is quite possible that Thales had both in mind. Aristotle also states (*de Cœlo*, ii. 13, 294ᵃ 28) that he believed the earth to float on water, as a piece of wood might float. This recalls the Semitic belief of the waters under the firmament.

How exactly Thales conceived the ordered universe to be evolved from this fundamental water is quite unknown to us. Diog. Laert. states (i. 22) that, according to some authorities, he left nothing written, and certainly no writings of his have come down to us. Aristotle, whenever he refers to his doctrines, speaks of them in a tone of conjecture. From a passage in the *Physics*, however (i. 4 *init.* 187ᵃ 12), where Aristotle is dealing with those early thinkers who assumed one definite substance underlying all the forms that we see, it may be inferred that Thales believed in a process of rarefaction and condensation. Still, this is only an inference, and Simplicius seems to have held that Theophrastus (the pupil of Aristotle) considered Anaximenes the first to state such a theory (Ritter-Preller, 26*b*; Diels, p. 164³). Perhaps Anaximenes was the first to state it fully.

Of greater interest is Aristotle's remark that Thales is reputed to have said that the magnet had a soul, because it could make iron move (*de Anima*, i. 2, 405ᵃ 19 [Ritter-Preller, 13*a*]). As Aristotle saw, this suggests that Thales was not satisfied with mechanism as providing an ultimate explanation for the cause of movement, and held that in some fashion (cf. Plat. *Laws*, x. 899 B: ὅπῃ τε καὶ ὅπως) soul must be that cause, and must be present throughout the universe (*de Anima*, 411ᵃ 7). This feeling, Aristotle thinks, may be the source of the saying ascribed to him that 'all things were full of gods' (*ib.*; also ascribed to Heraclitus [Ritter-Preller, 46*d*; Diog. Laert. ix. 7]).

It is plain, however, from Aristotle's criticisms, both here and in *Met.* A 3, that Thales did not attempt to work out any relation between soul and matter, or even definitely to state the two as distinct, if interconnected, principles. Hence we cannot trust a later writer, such as Stobæus, who attributes to him a fully-formed doctrine about the 'mind of the world' being God (*Ecl.* i. 56 [Ritter-Preller, 14; Diels, p. 301]).

Like all thinkers of Greece in the great period, Thales showed a deep interest in matters of State. He was classed with Solon among the Seven Sages (Diog. Laert. i. 42), and Herodotus recognizes the wisdom of the advice that he gave the Ionians, in view of their danger from Persia, to form a united confederation among themselves (i. 170). He was certainly a citizen of Miletus, and, according to Herodotus (*loc. cit.*), of Phœnician extraction, but the latter statement seems far from certain (see Burnet, p. 39 ff.).

**2. Anaximander.**—Anaximander, also a Milesian, and probably a pupil of Thales (Ritter-Preller, 15), astonishes us by the boldness and subtlety of his speculations. According to Aristotle, and also, apparently, to a tradition preserved in Simplicius (Arist. *Met.* A 2, 1069ᵇ 18; Simpl. *Phys.* 24, 26 [Ritter-Preller, 16, 26]), he struck out the idea of one primitive substance, infinite in extent, but otherwise undetermined in character, something that was thus none of the things we know, but something that was capable of becoming all things and manifesting all qualities. That the primitive substance was thus conceived as indeterminate has been disputed (see Burnet, p. 57 ff.), chiefly on the ground that Aristotle may have read into his predecessor an approximation to his own theory of matter as something that is essentially potentiality, *i.e.* something with the power of receiving form and character, though not of generating it by its own force alone. But there is no real reason why Aristotle should have misrepresented his forerunner, whose book was in existence at the time, and, moreover, we must account for the tradition in Simplicius. If we accept Aristotle's account, we have a significant connexion between Anaximander and Heraclitus,

who found the very life of the world to lie in the incessant process of change, everything coming to be something which as yet it was not. It must be admitted, however, that the word ἄπειρον (which Anaximander uses to describe his substance) is not conclusive, meaning simply 'limitless'; and, though this certainly may imply 'indefinite in character' as well as 'infinite in extent,' we cannot be positive that it does. So far as we can follow Anaximander's development of his theory, we seem to notice, as with Thales, an uncritical union of mechanical and spiritual conceptions, vaguely grasped. This 'infinite-indefinite' is said to 'surround all things and govern all things,' to be divine, deathless, and indestructible (Arist. *Phys.* iii. 4, 203$^b$ 7 [Ritter-Preller, 17]). But, when we come to ask how this divine government brings the diversified world into being, we only learn that in some fashion *the opposites are separated out* from the primitive source (Arist. *Phys.* i. 4, 187$^a$ 12 [Ritter-Preller, 16c]). Now, this kind of statement can be taken in two ways, as Aristotle seems to suggest with regard to the later theory of Anaxagoras, who conceived a primitive state in which all physical substances were somehow mingled together so as to be indistinguishable, a conception which has interesting points of likeness to Anaximander's (*Met.* A 8, 989$^a$ *fin.*–989$^b$ *init.*). It is open to us to imagine 'the opposites'—*e.g.*, the hot element and the cold—as already there actually, fully developed, but divided into such small amounts that we do not perceive their presence. In this case the primitive substance is not really undefined in all its parts, and we must admit so much inconsistency in the theory. It then becomes natural to assume the 'separating out' as a merely mechanical process due to the sifting action of a perpetual motion, without any intrinsic qualitative change. Such an interpretation for Anaximander is suggested by a passage in Simplicius:

*οὐκ ἀλλοιουμένου τοῦ στοιχείου τὴν γένεσιν ποιεῖ, ἀλλ' ἀποκρινομένων τῶν ἐναντίων διὰ τῆς ἀϊδίου κινήσεως* (*Phys.* 24, 13 D [Ritter-Preller, 16]).

Or else—and this other interpretation seems more in harmony with the general drift both of Anaximander and of Anaxagoras—the primitive quality of the substance is throughout indeterminate, possessing no special characteristic anywhere at all; and then we are almost driven to seek some further cause, other than the substance itself and other than motion, to account for the growth of the various definite characters that do appear (cf. Theophr. *ap.* Simplicius, 154. 24 D, 27. 17 D [Ritter-Preller, 16c; Diels, p. 479]). Now, Anaxagoras, whatever his view of the process in detail, did definitely assert that mind (νοῦς) was the ultimate cause of this ordered variety—a step for which Aristotle puts him far in advance of his predecessors (*Met.* A 3, 984$^b$ 11–18). This step Anaximander certainly did not take, but the affinity between the two systems is real: each assumes a primitive matter that is unformed, either relatively or absolutely, possessing no characteristics that are discernible, but capable of changing, under the influence of *something*, into the ordered world which we know. Anaxagoras names that something, Anaximander does not, and perhaps he has a still nearer affinity to a modern such as Tyndall, who spoke of matter as endowed with 'the promise and potency of all life,' and left the subject there. Or it might not be fanciful to say that he conceives the world in the beginning as without form and void, and, though he thinks of the spirit of God as brooding on the face of the waters, he will not say so definitely.

Simplicius adds another important point, illustrated by a direct quotation (Ritter-Preller, 16). The generation of the various elements, as we know them, is followed by their dissolution into the primitive substance, and this re-absorption is felt to be right and seemly (κατὰ τὸ χρεών):

'At the appointed time they make reparation and satisfaction to one another for their injustice' (Burnet's tr., slightly altered).

Thus Anaximander seems to hold that the diversity and multiplicity of the world depend on a struggle of opposites (*e.g.*, of warmth against cold, of wet against dry), and that the definite emergence of one element is a wrong done to the other. Heraclitus carries on this idea of struggle, but rejoices in it and justifies it. Anaximander held also, it would appear, that this double process of generation and destruction was repeated incessantly: 'generation could never fail,' for the infinite fountain was always there (Arist. *Phys.* iii. 8, 208$^a$ 8 [Ritter-Preller, 16a]). Thus Anaximander may really have reached the idea, which later writers say he held, of innumerable universes, rising and passing away for ever (Ritter-Preller, 21). It is not clear whether they think he imagined many universes in existence at the same time, or meant that they followed singly, one after the other. But the latter is suggested by the coherent system which he conceived for the present universe, comprising all we know, earth and sun and stars, in one complete whole. He came very near to realizing that the earth was a globe: he conceived it, apparently, as shaped like a stumpy cylinder, with a convex lid, in dimensions three times as broad as it was deep, swinging free in the centre of the universe, and surrounded by hollow rings of compressed air (or vapour) which contained the fire of the different heavenly bodies, the rings with apertures in them through which the fire showed (Ritter-Preller, 19, 20; Burnet, pp. 70, 71). His biological speculations were equally bold, and in many ways acute. He anticipated the modern theory of hereditary connexion between all animals by his suggestions that the earliest living creatures were of the nature of fishes, and that man was developed from these, supporting his view by the sound observation that man now requires a longer period of nurture than any other creature, and considering that it was hard to imagine how he could have survived from the first if this had been always so (Ritter-Preller, 22).

3. **Anaximenes.**—Anaximenes, his successor, also a Milesian (*ib.* 23, 26), was a man of much tamer intellect. He fell back to the old idea of the earth as a flat disk, and to the simpler, clearer, but less profound and fruitful, conception of the primitive substance as one of the recognizable elements. This was air, infinite in extent, but definite in quality. Rarefied, air became fire; condensed, it appeared successively as wind, cloud, water, earth, and stones. Motion existed from all eternity and was the cause of change, but no explanation of motion itself was given (*ib.* 24, 26, 28). Soul, he said in so many words, was air:

'Just as our soul, being air, holds us together, so do breath and air encompass the whole world' (tr. Burnet, p. 77; Ritter-Preller, 24).

We cannot say, however, whether he meant that the air encompassing the universe was conscious, as it is in man; he is said to have thought it 'divine' (Ritter-Preller, 28a), nor need we doubt that he did; but he is unlikely to have formulated the conception of divinity any more precisely than his predecessors. There is little new in his thought, but he too has a claim to what Hegel regards as the great merit of these thinkers—that they were the first to announce that the bewildering variety of the world could be explained as the manifestation of one principle, a principle that was indestructible (*Gesch. der Phil.*, i. 'Griech. Phil.' A 1 [Thales], p. 203). The theory of Anaximenes was revived a century later by Diogenes of Apol-

Ionia, whose system, however, shows the mark of other influences (Zeller, *Pre-Socratic Phil.*, i. 280 ff.).

4. **Xenophanes.**—In Xenophanes the mental enthusiasm of the time seems to blaze out into a sane and splendid religious fervour. The best introduction to him is still the brief sentence of Aristotle (*Met.* A, 986$^b$ 21), that Xenophanes was the first to believe in the unity of all things (cf. Plat. *Soph.* 242 D: 'All that we call many is really one,' an Eleatic tenet derived 'from Xenophanes'). Not that Xenophanes made any clear statement, or distinguished what was one in matter from what was one in principle;

'he simply looked up at the whole heaven and said the One existed, and was God' (ἀλλ' εἰς τὸν ὅλον οὐρανὸν ἀποβλέψας τὸ ἓν εἶναί φησι τὸν θεόν. For ἀποβλέπων cf. Hipp. *Ref.* i. 1, ἀποβλέπων πρὸς τὸν οὐρανόν: Diels, *Dox.*, p. 555).

We may compare the famous passage in Sext. Emp. (*adv. Phys.* ix. 26 f.), which, no doubt, refers to Aristotle's opinion, telling how some have thought that the first conception of the providence of God came to man from the sight of the starry heavens:

'The men who first looked up at the sky (οἱ πρῶτον εἰς οὐρανὸν ἀναβλέψαντες) and gazed at the sun running his course from his rising to his setting, and watched the ordered dances of the stars, these men set themselves to discover the creator of so glorious a harmony, believing that it could not have arisen by chance, but through a mightier and immortal power, and that this power was God.'

Xenophanes made no clear statement (οὐδὲν διεσαφήνισεν), says Aristotle, cutting to the root of the matter in his trenchant way; as with Xenophanes' predecessors, so with himself, we are unable to discover any articulated theory of the relation between space and spirit, either in the universe or in man. But his fragments are instinct with the sense that these two conceptions are of ultimate importance, and must somehow be brought together. How to bring them together he does not know; one is tempted to say that he simply claps them together, but he has got hold of what neither philosophy nor religion must ever let go again. He will have nothing of the old anthropomorphic fancies by which the real grandeur and mystery of the physical universe are juggled out of sight:

'What men call Iris is a cloud, coloured purple and scarlet and green' (Ritter-Preller, 103).

But that does not make him write the rainbow 'in the dull catalogue of common things.'

If 'all things come from the earth and all things end in the earth' (*ib.* 103*a*), and if we ourselves and all living things are 'born from earth and water' (103), yet also everything that he sees leads him back 'to the One' (101*b*), everything is somehow in the charge of 'one God, mightiest among gods and men, not like mortals in shape or mind' (100). Not like them in mind—but that does not imply that He is without mind, rather He is the mind of which ours is but a faint reflex, He is νοερώτερον ἢ νόημα: 'more intelligent than intelligence' (102*a*). God's thought embraces every thing, 'without effort He rules all things by the thought of His mind' (103*b*). There is a striking enigmatic line, οὖλος ὁρᾷ, οὖλος δὲ νοεῖ, οὖλος δέ τ' ἀκούει (*ib.* 102), which may be translated variously: (1) 'He is all eye, all ear, all thought' (Zeller, Murray); (2) 'The whole sees, the whole hears, the whole thinks'; or (3) 'He sees all over, thinks all over, and hears all over' (Burnet).

We ask ourselves whether Xenophanes meant: (1) that in the divine there was nothing but sight and hearing and the activity of thought; or (2) that every scrap of matter was somehow linked up into a coherent system, which *as a whole*, though not otherwise, was instinct with the highest powers of perception and thought; or (3) that matter throughout the universe was somehow conscious in every part. The second interpretation seems most in harmony with his conception of 'the One,' but the third is supported by passages in the pseudo-Aristotelian treatise *de Melisso, Xenophane, Gorgia* (*Zenone*) (chs. 3, 4; Ritter-Preller, 108), and the line may express Xenophanes' belief in the omnipresence of the divine. In any case it is a good illustration at once of his suggestiveness and of his vagueness. The world conceived as a physical whole is, in his view, *somehow* a manifestation of one God whose influence is present in every part, and who has the attributes of reason and perception, but we do not understand *how* it is such a manifestation. Does he conceive it to stand to the mind of God as body to soul? Or is space the first appearance to us of something which, in its ultimate nature, is free from the limitations of space, as we know space? This seems perhaps too subtle a theory for so early a period, but there are accounts strongly suggesting something of the kind. For instance, Simplicius, on the authority of Theophrastus, the scholar of Aristotle, says that Xenophanes conceived the One, the Unity of all things that was God, as neither limited nor limitless, neither at motion nor at rest (οὔτε πεπερασμένον οὔτε ἄπειρον, κτλ. [Ritter-Preller, 106*a*, *init.*]; cf. *de Melisso, Xenophane, Gorgia* [*ib.* 109, 110], which *may*, however, only be derived from Theophrastus). Again, sometimes Xenophanes is said to have described the One as spherical in form and limited (πεπερασμένον δὲ καὶ σφαιροειδές [*ib.* 108, 108*b*]), and, on the other hand, we hear that he spoke of 'the limitless roots of the earth' (Arist. *de Cælo*, ii. 13, 294$^a$ 21; ἐπ' ἄπειρον αὐτὴν ἐρριζῶσθαι; Ritter-Preller, 103*b*)—all of which conflicting statements could be reconciled if we did suppose him to have thought that God could appear to us in one aspect as spatially limited, in another as spatially unlimited, but that in His ultimate nature He was something that was above either (cf. Ritter's interpretation of 'the sphere' as the self-limited, neither limitless nor externally limited, quoted by Zeller, *op. cit.* i. 548[2]). All this, however, is very doubtful, and perhaps we ought only to say that Xenophanes may have used spatial images to describe his God just because he was feeling after, but had not yet grasped, a conception in which God could be known to be as much the source of space as of mind and spirit. Certainly the desire for a vast monotheism which will somehow include both personality and impersonality seems to underlie his vivid satires on the current anthropomorphism of his day.

'The Ethiopians make their gods black-haired and flat-nosed, and the Thracians make theirs red-haired and blue-eyed' (Ritter-Preller, 100*b*). 'Yes, and if the beasts had hands and could paint and carve, the horses would make their gods like horses, and the oxen make theirs like oxen.' 'Men think the gods are begotten as they are, and dress as they do, and look and speak as they' (*ib.* 100).

His own God is unbegotten, uncreated, and everlasting (*ib.* 98), infinitely beyond the reach of the 'immoral' myths invented by the poets.

'Homer and Hesiod have credited the gods with every shame, thefts and adulteries and lies' (*ib.* 99).

It is very probable, as Murray points out, that the anthropomorphism of Homer is itself superimposed on an earlier, less personal, mythology of nature, and Xenophanes might almost be said to lead the reaction. Crude anthropomorphism is full of dangers, and not the least arise when symbols of the great generative forces in the world are turned into tales about 'a god of enormous procreative power and innumerable amours' (*Four Stages of Gr. Religion*, London, 1912, ch. ii. p. 89). Not that Xenophanes shows any wish to restore older mythologies, if such there were, any more than he shows sympathy for the transmigration fancies of the Pythagoreans. His way lies forward along the path of sober thought and inquiry. He is aware of our ignorance, and does not hope to dispel it entirely.

'No man has ever known, nor ever will know, the full truth about the gods. Though he should utter it, yet he himself cannot know that it is true' (Ritter-Preller, 104).

But this does not involve, for Xenophanes, a

sceptical despair; the possibility of advance towards knowledge still remains:

'The gods do not reveal all the truth at once; men must search, and at length they find the better' (*ib.* 104*b*).

The greater part of what we hear about his physical speculation is neither well attested nor of much interest. It was his revolt against a low mythology, and his conception that all things must somehow form a unity, that had the profound and far-reaching results. There is much in both Plato and Euripides that recalls his attacks on the 'Olympian' creed, and there can be little doubt that Parmenides, whose philosophy centres in the conception of the One, is in the direct line of succession from Xenophanes, who thus forms the link between the Ionian and Eleatic schools. Aristotle says in so many words that Parmenides was reported to have been his pupil (*ib.* 101), and it is quite possible that Xenophanes, in his long years of wandering, came to Elea in Italy, the city of Parmenides (*ib.* 97). His own native city was Colophon in Lydia, but it is natural to suppose that he left it when the Mede appeared (*ib.* 95). The date given by Diog. Laert. for his *floruit* is Ol. lx. (=540–536 B.C. [*ib.* 97]). Besides his religious writings we possess some charming fragments, half-lyrical, half-didactic. A very lovable nature appears in them, typically Greek in its union of sunny enjoyment with self-control, and high above all luxury, tyranny, and superstition. His picture of a drinking-feast is characteristic: the clean floor and the clean cups and the clean hands of the guests, the flowers and the flower-scented wine and the fresh cool water, the dance and the song and the drinking, but such drinking that a man needs no servant to help him home after it, the feast itself beginning with prayer to the gods 'for strength to do right,' and ending with songs that have no lies in them, no worn-out fancies about gods and Titans and giants, and no bitterness, no rancorous memories of party-strife (Bergk and Hiller, *Anthologia Lyrica*, 'Xenophanes,' 1 and 2).

LITERATURE.—H. Ritter and L. Preller, *Historia Philosophiæ Græcæ*[8], Gotha, 1898 (indispensable for a conspectus of the leading original authorities); H. Diels, *Doxographi Græci*, Berlin, 1878 (the standard work on the later Greek commentators); T. Bergk, *Anthologia Lyrica*, ed. E. Hiller[4], Leipzig, 1897 (for Xenophanes' poems); E. Zeller, *Pre-Socratic Philosophy*, tr. S. F. Alleyne, London, 1881; J. Burnet, *Early Greek Philosophy*[2], do. 1908; T. Gomperz, *Greek Thinkers*, Eng. tr., vol. i., do. 1901; J. Adam, *The Religious Teachers of Greece*, Edinburgh, 1908; G. W. F. Hegel, *Gesch. der Philosophie*, vol. i., Berlin, 1833–36, section on 'Philosophie der Ionier.'

F. M. STAWELL.

**IRANIANS.**—1. *Irān*, the modern name of Persia, comes from the adjective seen in Avestan *airyana*, used generally as an epithet of *vaējah* (of uncertain meaning) to describe the land from which the *airya* folk came; its identification has not been achieved. *Airya*, Old Pers. *ariya* (cf. Gr. Ἄριοι), is cognate with Skr. *ārya*; and it seems to have been the name by which the undivided Aryan people called themselves, a race of invaders from Europe,[1] who, perhaps about the middle of the 2nd millennium B.C., occupied Bactria and the neighbouring country, and imposed their form of Indo-European speech upon the inhabitants. This admittedly speculative reading of the facts of a dim pre-history seems to suit best the evidence at present at our disposal. Whether the term 'Aryan' may be accurately used of a wider unity, as in British popular phrase (cf. O. Schrader's art. ARYAN [*i.e.* Indo-European] RELIGION, vol. i. p. 11 ff.) need not be discussed here; for the purposes of the present article the term will be restricted to the Indo-Iranian branch of the family. The division of the branch took place relatively late, the ancestors of the Aryan Indians migrating into the Panjāb, where we find them in the Vedic period, and leaving the Iranians in possession of the wide belt of territory from Bactria to Media, down to the frontiers of India. The linguistic tests of Iranian as against Indian dialect are very simple, the two groups lying closer together than any other distinct languages in the Indo-European family; it is as close a connexion as that between French and Italian. In Avestan and Old Persian, for instance, *Hindu* is the name for India, answering to the Skr. *Sindhu*. This illustrates two characteristic Iranian developments—the prevocalic change of *s* to *h*, and the loss of the original aspirates. The application of a few phonetic laws enables us to transform the oldest extant Sanskrit into the corresponding Iranian of our early texts, and *vice versa*, with quite a small residuum of new developments to be allowed for. Apart from some linguistic complications, involving certain speculations on pre-historic movements described in the present writer's 'Notes on Iranian Ethnography,' our material enables us to reconstruct with considerable fullness the cultural conditions of the Aryan people before the Indian trek. We restrict ourselves here to matters affecting religion.

Our evidence is collected partly from the comparative treatment of words, names, and ideas occurring in the older Indian and Iranian literature, and partly from historical notices of Iranian tribes found in ancient writers, of whom Herodotus is the most important. It will be remembered that the term 'Iranian' properly connotes a language only; and there is no reason to presuppose racial affinity among the wild nomad tribes who spoke, or may have spoken, an Iranian dialect. It is, accordingly, unsafe to depend much upon customs or beliefs of Massagetæ or Scythians in framing our picture of proto-Iranian religion. It is at least as probable that such traits may be purely aboriginal.

2. Naturally the most certain elements in this reconstruction are those which we can prove to have been Aryan. The combination of Vedic evidence with that of Herodotus, in his description of the popular religion of Persia, presents us with a system which agrees closely with that of the later Avesta (excluding the later prose and the ritual parts). Now these Avestan texts represent apparently a counter-reformation, a relapse from the too drastic reform of Zarathushtra into the old Iranian nature-worship, conformed to Zarathushtra's most emphatic tenets, but mostly in phrase alone, and compounding for its abandonment of Zarathushtra's essential teaching by an apotheosis of the prophet himself. In language and thought alike we find the Rigveda closely paralleled by the Yashts, and even more closely by the 'Gāthā of Seven Chapters' (prose), which is actually composed in the archaic dialect of Zarathushtra's own verse Gāthās. So great is the difference in religious standpoint, that, if we omitted one line (*Ys.* xlii. 2, which offers adoration to Zarathushtra and Ahura in a breath), we might plausibly argue total ignorance of the reform. The religion resulting would be practically identical with that of the Rigveda, allowance being made for the small compass of the Gāthā. We should have to provide only for some innovations like the cult of Indra on the Vedic side, and that of Mazda and the Holy Immortals (*Amesha Spenta*, now first collectively named; see art. AMESHA SPENTAS) on the Iranian.

3. Leaving the reform of Zarathushtra and the dualism of the Magi to be described in special artt., we may delineate here the religion professed by the Iranian people when Zarathushtra arose. According to Herodotus (i. 131), the Persians sacrificed on mountain-tops to Zeus, 'calling the whole vault of the sky Zeus.' It is highly probable that the Greek

[1] It should be noted, however, that S. Feist (*Kultur, Ausbreitung und Herkunft der Indogermanen*, Berlin, 1913, p. 518 ff.) is strongly inclined, in part on the evidence of the recently discovered Tocharic language, to revert to the older view and seek the original home of the race in Asia, more specifically in Russian Turkestan. This is chronicled without suggesting that the writer finds himself shaken by this novel and able argument.

traveller records the native name, *_Diyauš_, identical with Vedic _Dyaus_, _Ζεύς_, _Dies(piter)_.[1] 'They sacrifice also,' he proceeds, 'to Sun, Moon, Earth, Fire, Water, and Winds.' All six divinities belong to the circle of the 'heavenly ones,' Indo-European *_deiwōs_, whose name declares them of the company of _Dyēus_, 'Heaven' or 'Sky.' While the name of their chief is not certainly found outside the South Indo-European tribes, the general term is universal in our speech area from India to the British Isles: the 'heavenly ones' disputed with the ancestor spirits the primacy in Indo-European religion. So far, accordingly, we have set down only what the Iranians still observed of a cultus common not to the Aryans alone, but to the whole of our family. We may add that they kept plentiful traces of the primitive ancestor-worship as well (see art. FRAVASHI). In Īrān the _manes_ were wholly beneficent, and the darker side of the tendance of the dead separated itself entirely from association with them. Plutarch (_de Is. et Osir._ 46) tells us of Magian libations to 'Hades and Darkness,' offered in a sunless place with the blood of a wolf; and Herodotus (vii. 114) records the sacrifice of Amestris, wife of Xerxes, to the god who is said to dwell beneath the earth, when she buried alive fourteen children of high rank. Out of this primitive practice arose the Mithraist offering, _DEO ARIMANIO_. From the pre-Aryan period also may have come other elements of Iranian religion, as is suggested especially by comparisons with Roman divinities and cultus.

4. Aryan religion has by the side of the 'heavenly ones' (Skr. _devās_, Av. _daēva_) another term, _asura_ (Av. _ahura_), which in Veda and Avesta, as A. A. Macdonell remarks (_Vedic Mythology_, Strassburg, 1897, p. 7), 'is applied to the highest gods, who in both are conceived as mighty kings, drawn through the air in their war chariots by swift steeds, and in character benevolent, almost entirely free from guile and immoral traits.' The similarity of these attributes to those given in the Avesta to the Fravashis, who are largely _manes_, suggests the otherwise probable inference that, if Aryan *_daiva_ meant an elemental deity, *_asura_ originally meant a 'hero' in the Greek sense. This fits very well the etymological connexion traced by Schrader (_ERE_ ii. 15) between _asura_ and the Germanic _anses_, 'semidei.' From the first, then, the two divine names denoted different classes of gods, whose ultimate rivalry was assured. The rivalry started largely, we may conjecture, in conditions differing with social status. Rude elemental powers were likely to be popular deities, adored by uncultured nomads who could not understand gods of shadowy and abstract character. The latter, especially if connected closely with the _manes_, would appeal to the nobles, prone everywhere to reverence ancestors from the very fact that they knew who they were, and therein showed their superiority to the common people. In some aristocracy of Eastern Īrān, it would seem, one _Ahura_—or rather *_Asura_, for the weakening of the _s_ had not yet set in—was elevated above other such powers by the epithet *_Mazdās_, 'wise,' or 'wisdom.' Closely linked with him were some important _Sondergötter_, abstractions of the same type as the Roman _Salus_ or _Fides_, and equally primitive in origin, or presiding over departments like the sacred fire, the cattle, or the plant world. So conspicuous did this cultus become, as early perhaps as the 15th cent. B.C., that Assyrians borrowed the name as _Assara Mazāš_, which is found in a catalogue of divinities during the reign of Aššur-bani-pal, associated with the Seven Igigi. This association shows that the conceptions were thoroughly assimilated, and with the very primitive form of the name proves that the date of its annexation by the Semites was centuries earlier than the time at which it is actually found. This discovery (for which see F. Hommel in _PSBA_ xxi. [1899] 132) makes it necessary to date the name _Ahura Mazdāh_ long before the days of Zarathushtra. The Reformer, in the writer's opinion, was a member of the aristocratic caste which worshipped this deity as 'god of the Aryans,' by which title he is known in one of the Behistan Inscriptions (Elamitic version, iii. 77, 79). 'Aryans' here will mean simply 'nobles.' The religious _milieu_ already sketched will account excellently for the first hints which Zarathushtra improved so as to make the system underlying the Gāthās.

5. Meanwhile the masses were worshipping the _daivās_, like their cousins who had migrated into India. Chief among them was the Light-god _κατ' ἐξοχήν_, Mithra. His later history, in Zoroastrianism and in Mithraism (_qq.v._), involves us in some complex problems which may be left to the articles concerned. According to A. Meillet (_JA_ x. x. [1907] 143 ff.), this Aryan deity originated in an ethical conception, that of the 'compact' (_miϑra_, which occurs as a common noun in the Gāthās). Mithra's Vedic companion, Varuṇa, is plausibly traced to a similar origin, his name being compared with Skr. _vrata_, 'ordinance,' Av. _urvata_, _urvaiti_, 'contract,' and _urvaϑa_, 'friend.' The present writer thinks it probable that two independent conceptions have been united, perhaps by the aid of popular etymology, in the history of Mithra. A possible connexion with the 'waters that are above the firmament,' explaining his later association with the non-Aryan river-genius Anāhita[1] (_q.v._), may have been taken over at a very early date from a Semitic source during a pre-historic contact. In any case, Mithra is essentially the firmament in the early Iranian period, and his title _μεσίτης_ (Plutarch, _loc. cit._) suits the physical conception of that which lies between high heaven and the earth—the _δῖος αἰθήρ_ of Æschylus. From this elemental character came the development of the purely solar divinity who is at the centre of Mithraism. The total absence of Mithra from the Gāthās suggests that Zarathushtra knew him only on this elemental side. When he returns to prominence in the Yashts, he is conspicuously ethical, the god of compacts, combining the splendour of a god of the bright sky with the functions of a _Sondergott_ of human intercourse in exactly the same way as the Roman _Dius Fidius_. Probably the elemental and the ethical conceptions predominated in different parts of Īrān, and the fusion seen in the later Avesta represents a compromise.

6. The cult of the nature-powers in the list of Herodotus (above, § 3) calls for little further comment. Sun and Moon are objects of worship in the Vedas and (to a limited extent) in the later Avesta. For the popular cultus in Īrān, Herodotus's notices of what he saw in Persia are much better evidence than the Avesta. (We might cite one striking proof that the historian got his information among the people and not only in Court circles—his note [iii. 67] that the Magian usurper, pseudo-Smerdis, 'was lamented by all in Asia except the Persians themselves.') The worship of Earth, as spouse of the Sky, is seen in the Indian coupling of Dyaus and Pṛthivī, and on Iranian soil among the Scythians (Herod. iv. 59). The Aryan genius _Aramati_ (Vedic; Av. _Ārmaiti_, scanned as a quadrisyllable) has the Earth as her province in the Avesta from the first; and on the evidence of the commentator Sāyaṇa (on Rigveda VII. xxxvi. 8, VIII. xlii. 3) it is generally allowed that this was an Indian (and therefore proto-Aryan) association (see Moulton, _Early Zoroastrianism_, p. 10). Primarily, she is a _Sondergott_ of piety, or proper tendance of

[1] See Moulton, _Early Zoroastrianism_, p. 391 f.

[1] Cf. Moulton, _op. cit._, pp. 66, 238.

the gods; and her connexion with the Earth is possibly another case of popular etymology. (The detachment of later Avestan thought from the primitive Iranian in this matter may be noted in the fact that Armaiti was daughter, not spouse, of the supreme deity.) The Waters—which term, except among the probably non-Aryan Magi, did not include the Sea—received adoration in Indian and Iranian tribes alike. So did Fire, which in Aryan cultus was the messenger that called the *daivās* to come down to the sacrifice. The special sanctity of the house-fire was inherited by the Iranians from Indo-European antiquity (cf., further, art. FIRE). The Indian tribes lost this naturally when they migrated into the tropics. It may be observed that the later Parsi manifestations of reverence for Earth, Fire, and Water were not Iranian, but due to the Magi. Burial certainly, cremation probably—among the Indian folk, from the earliest known period—were practised without any thought of outraging a sacred element. Indeed, Zarathushtra even connected the future resurrection with the committal of a body to the divine Earth-spirit (see Moulton, *Early Zoroastrianism*, p. 163 f.). For the cult of Winds, the later Avesta sufficiently endorses Herodotus. Chief among *daivās* which the Greek writer does not mention is *Haoma* (Skr. *Soma*), who is indeed even excluded by the remark (Herod. i. 132) that in worship the Persians 'used no libation.' The statement is conjecturally explained (Moulton, *op. cit.* p. 72 f.) in connexion with the change of character apparent in Haoma when he returns in the later Avesta from a very palpable exile. Zarathushtra himself both knew and banned him as an 'intoxicant' bringing 'pollution' (*Ys.* xlviii. 10); the Gāthās have his fixed epithet, though not his name (*Ys.* xxxii. 14). He was, therefore, in Gāthic times still what he was in Vedic. But the Haoma of the later Avesta has no such traits: he is a magical drink, but seemingly harmless. It may be suggested that the (unknown) plant from the juice of whose crushed stalk the Aryan 'drink of immortality' was fermented—a literal *eau de vie*—had failed the Aryan tribes in their migrations. The Haoma in the country of the later Avesta would thus be a substitute, while in Persia no substitute for the lost drink was attempted (see further, art. HAOMA). Other presumable members of the primitive Iranian pantheon need not be catalogued here. The equation *vṛtraghna* (Skr.) = *verethraghna* (later Av.), 'assault-repelling,' makes a *Sondergott* like Νίκη certain for the Aryan period. Of chthonian cult we have spoken already (§ 3); and for the two strains of ancestor-worship and external soul that meet in the *Fravashis* of the later Avesta reference may be made to the article on that subject.

7. For Iranian worship we can follow the *locus classicus* in Herodotus as closely as we followed its list of Iranian divinities. That it was strictly aniconic and without temples (in the Greek sense) is certain (cf. Schrader's account of Indo-European shrines in *ERE* ii. 44–47). The worship of the Sky upon the tops of mountains is there paralleled with Greek cults. When the Persians laid the strips of sacrificial flesh upon a 'carpet of tender grass' (Skr. *barhis*), and invited the gods by an incantation to come and partake of the spiritual essence of the food, they were doing what their Indian kin did in Vedic times. Probably the Yashts and Vendīdād are quite primitive in the stress they lay on the tendance of fire. The Skr. word *hotar*, Gāthic *zaotar*, according to C. Bartholomae (*Altiran. Wörterbuch*, Strassburg, 1907, col. 1653), combines the ideas of two separate roots, one seen in Skr. *juhóti* (χέω), 'pour,' the other in *hávate*, 'invoke'—the latter supplying the passive participle that gives us the Germanic word 'God.' The sacred formula, which lies behind the important equation of Skr. *brahman* and Lat. *flāmen* (orig. neuter),[1] is thus included with the libation in the name of the conductor of the rite. There is no direct evidence on Iranian soil that such priests held hereditary office; but we may recall the combinations of Schrader to prove that traditional lore was handed down in certain families. The Magi succeeded to these sacerdotal functions in Persia, largely because of their influence over the non-Aryan population, which had more or less perfunctorily adopted the forms of Iranian worship and a few features of Zarathushtra's reform (on this subject see art. MAGI).

LITERATURE.—For evidence in favour of several statements briefly made above reference may be made to J. H. Moulton, 'Notes on Iranian Ethnography,' in *Essays and Studies presented to William Ridgeway*, Cambridge, 1913, to his Hibbert Lectures on *Early Zoroastrianism*, London, 1913, and in small compass to the 'Cambridge Manual' on *Early Religious Poetry of Persia*, Cambridge, 1911. F. Spiegel, *Die arische Periode*, Leipzig, 1887, reconstructs features of the Aryan unity. Cf. also O. Schrader, *Reallex. der indogerm. Altertumskunde*, Strassburg, 1901, *passim*, and art. ARYAN RELIGION, vol. ii. pp. 11–57; A. V. W. Jackson, 'Iran. Religion,' in *GIrP* ii. [1904] 612 ff.; H. Oldenberg, *Religion des Veda*, Berlin, 1894.

JAMES HOPE MOULTON.

**IRISH.**—See CELTS.

**IROQUOIS.**—The name 'Iroquois' was given by the French settlers in Canada to the great confederation of the Five Nations—Mohawk, Oneida, Onondaga, Cayuga, and Seneca, to which was added, after 1726, the Tuscarora, thus making the famous Six Nations. The most advanced of all American Indians in statecraft and political organization, they were the leading members of a linguistic family which ranged from the St. Lawrence River (the Saguenay on the north bank, and the Gulf of St. Lawrence on the south) through south Quebec and Ontario, the greater part of New York and Pennsylvania, and the north-eastern half of Ohio, with an exclave running south-west through portions of Virginia, Tennessee, the Carolinas, Georgia, and Alabama. Excepting the exclave, they were entirely surrounded by Indians of Algonquian stock. The name 'Iroquois' is itself Algonquian—*Iriⁿakhoiw*, 'real adders' (with the French termination *-ois*).

The chief Iroquoian tribes were the Huron (*q.v.*); the Tionontati, or Tobacco People (the 'Nation du Petun' of the *Jesuit Relations*), who lived in Grey and Simcoe counties, Ont., and who combined with the Huron to form the modern Wyandot; the Attiwendaronk, or Neutrals (so called because they took no part in the wars between the Huron and the Iroquois), living north of Lake Erie; the Conestoga, along the Susquehanna River; the Erie, or Cat Nation (in allusion to the panther or wild-cat), south of the Neutrals; the Tuscarora in North Carolina; the Nottoway in South-East Virginia; the Meherrin, along the river of that name, on the border between Virginia and North Carolina; and the Cherokee (*q.v.*).

1. **Government.**—Iroquoian government was essentially a congeries of clans, each composed of a number of gentes or families, which might, in turn, consist of several firesides. The family (Mohawk *ohwachira*) was matriarchal, its members being the male and female offspring of a woman and her female descendants in the female line, together with such persons as had been adopted into the *ohwachira*. The head of an *ohwachira* was usually its oldest woman, and each of its members possessed the right of inheritance from deceased fellow-members, and of participation in its councils. In the process of development, *ohwachiras*, either actually or theoretically akin, tended to coalesce, in which case certain

[1] This equation is not, however, undisputed (see A. Walde, *Lat. etymolog. Wörterb.*[2], Heidelberg, 1910, p. 298).

*ohwachiras* gained the custody of the titles of chief and sub-chief, and the married women could, accordingly, take the initial steps not only in choosing, but also in deposing, a chief or sub-chief—in both cases subject to confirmation and installation (or deposition) by the tribal council. The strong matriarchate of the *ohwachira* also appears in the fact that all the land of a family was exclusively owned by women.[1] Each *ohwachira* possessed its own tutelary deities (*oyaron* or *ochinagenda*), normally in charge of certain wise women, specific songs and rites, the right to certain personal names, etc., and, of course, shared in the privileges and responsibilities inherent in membership in the tribe as a whole. The clans were to the *ohwachiras* what the latter were to the firesides (families in our sense of the term, except that they were matriarchal instead of patriarchal); and the clans were combined, in analogous fashion, into phratries, two of which normally constituted a tribe.[2] The clans composing a phratry were brothers and sisters to each other, and cousins (or progenitors) to the other phratry. Consequently, marriage within a phratry was originally forbidden, though later only the clans were exogamous.[3]

2. **Family life and culture.**—As would be self-evident in a matriarchal society, the power of women was in many respects paramount over men. Woman's right to land and her privilege of choosing the chiefs have already been noted. Being the source of life, she alone could independently adopt an alien (a man could do this only with the expressed or implied consent of his wife); she had the primary right to decide whether a captive should be put to death or adopted; and she might even forbid her sons to go on the warpath. Chieftainesses elected by the women provided the food for festivals, etc., watched over the treasury, and, when of extraordinary ability, might even, in case of need, act as substitute during the vacancy of a male chieftainship. The penalty for killing a woman was double that for the murder of a man (see art. BLOOD-FEUD [Primitive], vol. ii. p. 722b).

Yet, although a son belonged to his mother's clan, a husband retained his own clan, as the wife retained hers. Their offspring had, therefore, a relation to both clans; and the father's clan gave the son his tutelary (*oyaron*), supplied a prisoner or a scalp if he fell in battle or was murdered, and performed the sepulchral rites in case of death in his wife's clan.

The principle of adoption (*q.v.*) was one of prime importance in Iroquoian organization. As among the Huron (see *ERE*, vol. vi. p. 883 f.), a captive might be adopted to replace a fallen warrior, and, as Hewitt points out (*HAI* i. 15), to restore the *orenda* (on which see below) lost by the clan through the death of its member. Not only individuals, but entire tribes, might be adopted. This was notably the case when, about 1726, the Tuscarora were adopted by the Five Nations, through the successive stages of infant, boy, youth, man, assistant to the official women-cooks, warrior, and peer. The Tuscarora were Iroquoian; but Algonquins (Leni-lenape and Nanticoke) and Siouans (Saponi and Tutelo) were also adopted.

The general character of the Iroquoians has been described in art. HURON; but that their reputed savagery was not inherent in the race is shown by the gentleness of the Tuscarora, who suffered from the whites the cruellest wrongs, perhaps the least of which was the constant kidnapping of both men and women into slavery (Hewitt, *HAI* ii. 843 ff.).

The Iroquoian dwellings were the famous 'long houses,' often over 100 ft. in length, and correspondingly wide, the framework being of poles, which were covered with bark (as was also the roof), usually of the elm. Within, each fireside had its own apartment, curtained off, while through the centre ran a passage for general use (cf. *HAI* i. 555, ii. 61, 126, 128).[1] Among the Tuscarora, however, the round bark lodge was in use (*ib.* ii. 851). In war, body-armour of twined wooden rods or slats was used (W. Hough, in *Rep. U.S. Nat. Mus.* 1893, p. 648 f.), and, besides the ordinary Indian weapons, blow-guns were frequently employed, while, at least among the Erie, poisoned arrows were not unknown.

3. **Religion.**—The underlying concept of Iroquoian religion is *orenda*, a term which has passed into the vocabulary of comparative religion. *Orenda* is closely analogous to the Polynesian concept of *mana* (*q.v.*), and denotes

'the fictive force, principle, or magic power which was assumed by the inchoate reasoning of primitive man to be inherent in every body and being of nature and in every personified attribute, property, or activity, belonging to each of these and conceived to be the active cause or force, or dynamic energy, involved in every operation or phenomenon of nature, in any manner affecting or controlling the welfare of man. This hypothetic principle was conceived to be immaterial, occult, impersonal, mysterious in mode of action, limited in function and efficiency, and not at all omnipotent, local and not omnipresent, and ever embodied or immanent in some object, although it was believed that it could be transferred, attracted, acquired, increased, suppressed, or enthralled by the orenda of occult ritualistic formulas endowed with more potency' (Hewitt, *HAI* ii. 147).

The object of sacrifice is to secure the exercise, in behalf of the sacrificer, of the *orenda* possessed by worshipful beings; and the phenomena of nature are simply contests between different *orenda*. *Orenda* may be beneficent or maleficent; the beings who use *orenda* for injurious ends are called *otkon*. The chief defence of the individual against the *otkon* is the *oyaron*, or tutelaries, which were also possessed by tribes, clans, and families. The normal mode of acquiring one's *oyaron* is detailed in art. COMMUNION WITH DEITY (American). Like the *orenda*, the *oyaron* differed in potency and in character. Those possessed of powerful and beneficent *oyaron*, and hence controlling similar *orenda*, were the wise men and beneficent magicians, whose *oyaron*-revealed knowledge enabled them to foretell the future, divine remedies for disease, interpret dreams, and, if sufficiently potent, overcome evil *orenda*, *otkon*, and *oyaron*. Those whose *oyaron* were malignant were the evil wizards, who bore the significant name *agotkon* or *hoñnatkon* ('he is an *otkon*'), whereas the benignant type was *arendiouanen* ('his *orenda* is powerful'), *saïotkatta* (Huron, 'one who examines another by seeing'), etc. The good will of the *oyaron* must be retained by feasts and sacrifices to keep it in health and strength, or it would turn against its possessor; neither could its dictates, as revealed in dreams, be denied without most serious consequences (for details see *ERE*, vol. vi. p. 885 f.). If the object manifested as the *oyaron* was an animal, its possessor's life was conditioned by that of the living creature in question; but in any case the material creature or object was not the *oyaron* itself, but merely

'its embodiment, the symbol or outward sign of the union subsisting between the soul and its tutelary or guardian genius, through the guidance and potency of which the soul must know and do everything' (Hewitt, *HAI* ii. 178).

[1] As in so many other cosmologies, the earth was female to the Iroquoians.

[2] Hewitt holds (*HAI* ii. 816 f.) that the number of the phratries was based on the dualism of natural sex.

[3] When, in the middle of the 16th cent., the Cayuga of Oneniote became greatly diminished through war with the Huron, they sent to the Mohawk for men to wed their women (W. M. Beauchamp, *HAI* ii. 128; for another explanation see Hewitt, *ib.* 123).

[1] A 'council-house' of the Iroquois is preserved at Portage, N.Y., but, if genuine, is a very recent development, being simply a log-cabin. A similar dilapidated structure exists at Conesus, N.Y., and is claimed to have been the home of an Indian family at the time of Sullivan's destructive invasion in 1779.

The personal *oyaron* was carefully carried by warriors, and thus served as a fetish. A symbol or representation of it was made by the father's clan at the New Year ceremony after the dream of the youth who was to bear it had been properly interpreted. In the *oyaron*-concept lies at least one of the bases of totemism (*q.v.*).

The chief deities of the Iroquois were Teharonhiawagon and Tawiskaron. They were twins, and antagonistic to each other, one being the creator and preserver of life and the other the deadly winter god. They were not, however, gods in the usual sense of the term, but 'man-beings' (*oñgwe'*), and their origin is inseparably connected with the cosmologic myth of the Iroquois.

According to this cosmology, there were three cosmic periods. In the first a race of man-beings—*i.e.* superior to man in every way, and uncreated and eternal, but in life and customs entirely like the men of earth—dwelt on the farther side of the visible sky. In course of time one of these man-beings died (an event hitherto unknown), and his posthumous daughter, Awĕⁿ'hā'ī' ('mature [fertile] flowers *or* earth'), continuing to converse with her dead father, was sent by him to the lodge of her future husband, the chief Haoⁿ'hwĕñdjiawā'gī' ('he holds the earth'). After performing an impossible task, her husband directed her to return home, speaking to no one who might address her, even as she had been silent on her way to him. At the bidding of her father, she went back to her husband's lodge. On her first visit she had become pregnant from Haoⁿ'hwĕñdjiawā'gī''s breath, but, not knowing this, he suspected her fidelity. She gave birth to a daughter, Gaĕñde'soⁿ'k ('gusts of wind'). Later, her husband fell ill of vexation, and, as a result of his dream-feast, the great tree (the only source of light at that time) beside his lodge was uprooted, leaving a vast abyss. Through this he thrust his wife, who fell toward the world, at that time only water. Earth was brought from the bottom of the water by the musk-rat and other animals and placed on the back of the Great Turtle, and water-fowl broke the fall of Awĕⁿ'hā'ī'. Her daughter, who had been re-incorporated with her during the fall, was re-born. In like manner, Corn, Tobacco, Deer, Beaver, and other man-beings transferred their kind to earth. Gaĕñde'soⁿ'k became pregnant by a man-being, who passed two arrows (one flint-pointed) over her body, and was delivered of twins, one—Teharonhiawagon—being born in the normal way, and the other—Tawiskaron—coming through his mother's armpit and killing her. After the twins grew up, the benevolent plans of Teharonhiawagon, counselled by his father, who had recovered and had set the tree back in place, were exposed to the machinations of his grandmother, who created the sun from Gaĕñde'soⁿ'k's head, her body becoming the moon; but they were fixed in position, and began to move only through Teharonhiawagon and his allies, the motive of Awĕⁿ'hā'ī''s anger being Tawiskaron's false charge that Teharonhiawagon had killed his mother at his birth. Teharonhiawagon created all things for men, and each thing Tawiskaron and his grandmother sought to mar. Thus they imprisoned the beasts in a cave, and, though Teharonhiawagon released nearly all, some were re-imprisoned and became *otkon*. Only after all this did Teharonhiawagon form human beings.[1]

Among the most beneficent exploits of Teharonhiawagon for the welfare of mankind were his victory in the game of bowl and plum-pit (for which see S. Culin, *24 RBEW* [1907], p. 105 ff.), by which he won the government over all living things, and his conquest of the deformed Hadu'ī', the man-being of disease and death, who, to save his life, promised to cure the diseases arising from his infection of the earth, thus giving rise to the society of Mask-faces who, at the New Year ceremony, endeavour to exorcize and expel disease and death (see W. H. Dall, in *3 RBEW* [1884], p. 144 f.).

Among the other divine man-beings were Gaĕñde's (wind), Hodoñni'ā' (Aurora Borealsi), Hadawinethā' (fire dragon of storm), Hi'noⁿ' (thunder), Daga'shwine'dā' (spring wind), etc., as well as the man-beings of living creatures of every kind. Mention must also be made of a war-god Aireskoi (Mohawk *Aregwĕⁿs'gwā'*, 'master of war'), to whom the Mohawk offered human sacrifice (cf. also *ERE*, vol. vi. p. 884 f.). Prisoners of war, after being tortured to death, were eaten, at least in part, by the Huron and other Iroquoians, and especially by the Mohawk, whose name (cognate with Narragansett *Mohowaùuck*, 'they eat [animate] things') expressly implies cannibalism, though they termed themselves *Kaniengehaga*, 'people of the flint place.'

In addition to human sacrifices, which might also be offered in honour of the dead—as when the Onondaga Aharihon sacrificed forty men to show his esteem for his brother—many other forms were practised. If war was unsuccessful, the Mohawk offered a bear to the war-god; but the most characteristic Iroquoian sacrifice was that of the white dog, which was the centre of an elaborate ritual performed at the New Year (late in January or early in February).

The object of the whole rite is to fulfil the dream-desire of Teharonhiawagon, and thus to recruit his vigour, that he may prove victorious over Tawiskaron, the god of winter.[1] Before the sacrifice proper, all old fires must be removed and the new fire must be lighted; next comes the 'asperging with ashes' (Huron *aoutaenhrohi*; cf. *ERE*, vol. vi. p. 885), when all pass through the fire to escape fevers and other maladies produced by the fire-god. After the fire-rites, which occupy three days, comes the dream-rite (mistakenly described in the *Jes. Rel.* under the name *ononharoia* [see *ERE*, vol. vi. p. 886ᵃ]), involving a number of minor rites (summarized by Hewitt, *HAI* ii. 942 f.), and also taking three days. The next rite is the strangling of a white dog (formerly partially burned and eaten), which is dressed, adorned, and painted to represent Teharonhiawagon, and, placed standing on the song bench, is addressed with prayer and sacrifice of tobacco. The man-being Teharonhiawagon accepts the victim and the tobacco, but rejects a proffered bow and arrow. Thus the dream-desire of Teharonhiawagon is satisfied. The four or five days following are taken up by the great Feather and Drum dances, the Personal clan chant, and Great Wager (ceremonial game of plum-pits).[2]

The other great Iroquoian festivals are the tapping of the maple tree, maple-gathering, maize-planting, strawberry-gathering, bean-gathering, green-maize feast, and maize-gathering. At the more important of these—White Dog, maize-planting, green-maize, and maize-gathering—confession of sins is one of the chief rites; and all festivals are accompanied by ceremonial games and dances.

Belief in immortality was strong among all Iroquoian peoples (cf. *ERE*, vol. vi. p. 886ᵇ); and they attributed to animals the same intelligence as to men, so that in hunting they killed all game that they could find, lest the survivors should warn their fellows that they were being pursued.

LITERATURE.—The chief source is the *Jesuit Relations and Allied Documents*, ed. R. G. Thwaites, 73 vols., Cleveland, 1896–1901; other early sources are J. F. Lafitan, *Mœurs des sauvages amériquains*, Paris, 1724; S. de Champlain, *Voyages*, do. 1830; P. F. X. de Charlevoix, *Hist. et description générale de la Nouvelle France*, do. 1744 (Eng. tr., J. G. Shea, New York, 1866–72); C. C. Le Roy Bacqueville de la Potherie, *Hist. de l'Amérique septentrionale*, do. 1722; of modern writers the most important is L. H. Morgan, *League of the Ho-dé-no-sau-nee, or Iroquois*, Rochester, N.Y., 1851; see also H. R. Schoolcraft, *Notes on the Iroquois*, Albany, N.Y., 1847; H. Hale, *Iroquois Book of Rites*, Philadelphia, 1883; D. Cusick, *Sketches of anc. Hist. of the Six Nations*², Tuscarora, N.Y., 1828; J. V. H. Clark, *Onondaga*, Syracuse, N.Y., 1849; C. Colden, *Hist. of the Five Indian Nations of Canada*, London, 1747; F. Martin, *Hurons et Iroquois*, Paris, 1877; E. Johnson, *Legends, Traditions, and Laws of the Iroquois, or Six Nations*, Lockport, N.Y., 1881; W. W. Canfield, *Legends of the Iroquois*, New York, 1902; W. M. Beauchamp, *Iroquois Trail*, Fayetteville, N.Y., 1892; S. H. Stites, *Economics of the Iroquois*, Bryn Mawr, Pa., 1905; E. A. Smith, 'Myths of the Iroquois,' *2 RBEW* [1883], pp. 47–116; J. N. B. Hewitt, 'Iroquoian Cosmology,' *21 RBEW* [1903], pp. 127–339, and numerous artt. in *Amer. Anthropologist*, and *HAI*.

For the southern tribes, in addition to such general works as J. de Laet, *Novus orbis, seu descriptio Indiae occidentalis*, Leyden, 1633, the chief sources are R. Lane, in R. Hakluyt, *Voyages*, new ed., Glasgow, 1903–05, viii. 319 ff., and W. Strachey, *Hist. of Travaile into Virginia Britannia* (Hakluyt Soc. Publications, vi., London, 1849), for the Nottoway; J. Smith, *Generall Hist. of Virginia*, etc., London, 1624 (new ed., Glasgow, 1907); G. Alsop, 'Character of the Province of Maryland,' in W. Gowans, *Bibl. Americana*, v., New York, 1869, and Strachey, *op. cit.*, for the Susquehanna; J. Lawson, *Hist. of Carolina*, London, 1714, for the Tuscarora and Meherrin. For the totemistic organization of the Iroquois see J. G. Frazer, *Totemism and Exogamy*, London, 1910, iii. 3–29. For literature on the Iroquoian dialects see J. C. Pilling, *Bibliography of the Iroquoian Languages*, Washington, 1888 (= *Bull. 6 BE*).

## IRVING AND THE CATHOLIC APOSTOLIC CHURCH.

—I. Life of Irving.—Edward Irving was born at Annan, Dumfriesshire, 4th Aug. 1792. His father, Gavin, was a tanner of mode-

[1] Huron cosmology presents a general similarity. For an early account of it see J. de Brébeuf, in P. Le Jeune, *Jes. Rel.* x. 127–129.

[1] The Iroquoian man-beings were subject to destiny, and, as was the case in Egypt, the divine stood in need of human aid (J. G. Müller, *Gesch. der amerikan. Urreligionen*², Basel, 1867, p. 148 f.; Hewitt, *HAI* ii. 939 f.).

[2] The White Dog Sacrifice is of the scapegoat type (J. G. Frazer, *The Scapegoat*, London, 1913, pp. 209 f., 233).

rate substance and local influence; his mother, Mary Lowther, came of a family of 'bonnet lairds' in the adjacent parish of Dornock. He was baptized in the Established Church, which in the west of Scotland was much influenced by traditions of the Covenanters. His education was received at the Academy of his native town under Adam Hope, who also became schoolmaster to Thomas Carlyle, and at Edinburgh University, where he matriculated at the age of thirteen. He gave no early promise of his subsequent career; at school his only distinction was that of an athlete. At the University he graduated M.A. in 1809, and, still undistinguished, entered the Divinity Hall. Thereafter he followed the usual course preparatory to the ministry of the Church of Scotland, supporting himself meanwhile by teaching in the Mathematical School recently established in Haddington. With this work he combined the function of private tutor to the daughter of a medical practitioner in the town, Jane Welsh, the future wife of his friend Carlyle. Two years later, while his University studies were still incomplete, he was appointed to the mastership of another new Academy at Kirkcaldy, Fifeshire. In 1815 he became a Probationer of the Church of Scotland, being licensed to preach by the Presbytery of Kirkcaldy, and for the next three years combined this new office with the work of his school. In 1818 he resigned his mastership and returned to Edinburgh, where he remained until, in the following year, he was appointed assistant to Thomas Chalmers (*q.v.*) at St. John's, Glasgow. The fame of the latter was too great, and Irving's genius was too strongly contrasted with that of his chief, to allow much scope to the younger man, and his work during the next two years, though discharged with uninterrupted loyalty and sufficient credit, was not such as to command the enthusiastic appreciation either of the minister or of the congregation of St. John's, or to attract the notice of those who could further his interests. But his position as assistant to Chalmers was prominent enough to bring him under the notice of the Caledonian Church in Hatton Garden, London, a struggling outpost of the Church of Scotland, the pastorate of which had little to commend it to an ambitious man. In 1822, Irving was appointed to this charge, and at last in his thirtieth year he received ordination from his native Presbytery at Annan.

In less than twelve months his popularity was assured. The incident usually associated with the sudden outburst of the new preacher upon the big world of London was the visit of Canning to the National Scots Church at the instance of his colleague, Sir James Mackintosh, and a subsequent speech in the House of Commons, in the course of which the statesman alluded to the eloquence of the sermon then heard. From this moment Irving was provided with the opportunity best suited to his genius, and his permanent congregation, as it was swelled by the numbers drawn from every religious communion, not least from the Church of England, gradually lost its peculiarly Scottish complexion and took on the characteristics of its leader's expanding thought and feeling. In 1823, Irving issued his first publications, both of which were based on his pulpit discourses, and quickly passed through several editions. The *Orations* were at once recognized as affording examples of a new type of religious address (the title itself was ambitious, though justified by the contents), and exhibit the claim and intention of the author to present divine truth to the public mind in a form alike more comprehensive and more vital than the conventional echoes of a narrow and moribund evangelicalism to which the ear of the church-goer had become accustomed. The *Argument for Judgment to come* foreshadows that prophetical teaching which, together with the exercise of spiritual gifts, constitutes the popular conception of Irvingism. This was followed in two years by *Babylon and Infidelity Foredoomed of God*, a survey of contemporary history in the light of that millennial principle of interpreting Daniel and the Revelation which had begun to be revived among Protestant Christians in the early decades of the 19th cent., and of which Irving's mind proved readily receptive. Another influence, which approached him from a different quarter, was that of S. T. Coleridge, to whom he had been personally introduced in 1823.

The year 1826 is important as that of the first of the Conferences held at Albury Park, Surrey, by invitation of Henry Drummond, M.P., under the presidency of Hugh MacNeil, rector of the parish and subsequently dean of Ripon. Drummond had already been brought into contact with Irving, and, knowing his attitude towards the study of the prophets, offered him a seat at the Conference, in which his eminence soon gave him a leading place. As will be apparent, the Albury Conferences were not the product of Irving's ministry, nor was his London congregation directly concerned in them, though Drummond, by whom they were organized, afterwards became a prominent member of the body associated with his name. The movement represented by them is still active in evangelical circles, and in Irvingism it became a formative principle. The *Morning Watch*, a periodical inaugurated by the Conference, virtually became, before its discontinuance in 1833, the organ of the new community.

In 1827 the church in Regent Square was opened to accommodate the crowds for which the small chapel in Hatton Garden was totally inadequate. The building still stands, but no longer as the National Scots Church. The congregation, which continued to use it after Irving's extrusion, became identified in 1843 with the party of the Scottish Disruption, and is now in communion with the English Presbyterians. It was about this time that Irving became acquainted with John McLeod Campbell of Row, who was beginning to re-state the doctrine of the Atonement on lines similar to those which governed his own theory of the Incarnation. This was developed in three volumes of sermons and a book on the *Last Days*, published in 1828. It would be erroneous to say that the alleged heresies for which the two men were severally deposed from the ministry had a single source in the mind of either. They are to be regarded as parallel developments of a common tendency. It is significant that the General Assembly (1831) which condemned Campbell directed that any attempt on the part of Irving to exercise his ministry in Scotland should be met by the Presbytery concerned with an inquiry into his writings on the Incarnation. It was the sermons published in 1828 that contained the statements which first brought him under the suspicion of having asserted the sinfulness of Christ's humanity. Action had actually been taken the previous year (1830) by the Presbytery of London, from the consequences of which Irving escaped only by the doubtful expedient of claiming exemption from their jurisdiction, alleging that the trust-deeds of the National Scots Church required their minister to be ordained by a Presbytery in Scotland. His position, though anarchical, was practically tenable, because he was unanimously upheld by his own Kirk Session, who in a few months were themselves to invoke the authority of the same Presbytery, when on a grave matter of Church discipline

they found themselves irreconcilably opposed to the pastor whose orthodoxy they had stoutly maintained.

Meanwhile events had taken place in Scotland, destined to precipitate the crisis which in a few years severed Irving from the communion of his native Church. An old friendship existed between himself and Robert Story, minister of Roseneath, which on more than one occasion had brought him to preach on the Gareloch. Here he met Alexander Scott, who, coming to London in the first instance as Irving's assistant, received a call to the Scots congregation at Woolwich, and was in consequence involved before the London Presbytery in a charge of heretical teaching concerning our Lord's human nature. Sharing Irving's view of the Incarnation, he insisted that the exceptional gifts of the Spirit, manifested in the Apostolic Church, were a permanent endowment of the Body of Christ, restrained only by the faithlessness of later Christians. This teaching he disseminated, among other places, in his old home in the West of Scotland. At Fernicarry Farm, in Campbell's parish of Row, lived Mary Campbell, a young woman of exceptional piety and unusual personality, who in 1830, while apparently a hopeless invalid, became the subject of spiritual manifestations which her friends claimed as a reappearance of the tongues spoken of in the NT. Shortly afterwards the 'power,' as it came to be called, visited a shipbuilding family at Port Glasgow. James and Margaret Macdonald, brother and sister, spoke in an unknown tongue, and the latter was raised from sickness at the word of the former. James then proceeded to inform Mary Campbell by letter of what had occurred, exhorting her to a similar act of faith, whereupon she too rose from her bed, apparently fully restored to health. From that time she continued, like Margaret Macdonald, to speak with tongues, with which was associated what was claimed as the gift of prophecy. She married, and became a familiar figure among the friends of the new movement as Mrs. Caird. A sympathetic but not unquestioning account of these proceedings has been preserved in the *Memoirs* of Robert Story, published (Cambridge, 1862) by his son Herbert, sometime Principal of Glasgow University. Wide-spread interest in the phenomena arose throughout Scotland. They were investigated by Thomas Erskine of Linlathen, who appears to have acknowledged their genuineness. No money was made out of them, and there is no evidence of imposture. They may, perhaps, be classed and judged with similar manifestations in other parts of Christendom. Irving, predisposed alike by character and antecedents, at once accepted them as a baptism of the Holy Spirit and Fire.

In 1831 the gifts of tongues and prophecy appeared, it was believed, in answer to fervent prayer, among the members of Irving's congregation. The gift of healing was also claimed, and an attitude towards disease, strikingly allied to that which in later times has become characteristic of Christian Science, began to be assumed by 'the spiritual.' But, if disease was spoken of among them as sin, it was because the Spirit must uphold and consecrate, not negate and annihilate, the flesh. It was, however, the two former gifts that exercised a determining influence on the fortunes of Irving and his people, by being 'called into the church.' Irving claimed to have 'tried the spirits' of the prophets, in right of his ministerial commission as angel or pastor, and, finding them to be true spirits, made provision for the exercise of their function in the Scots Church. This involved scenes of excitement, which, as rumour swiftly spread and curious crowds assembled, degenerated into unseemly confusion. Remonstrance proved unavailing, and, acting on legal advice, the trustees, who as members of the Kirk Session had supported Irving in his repudiation of the London Presbytery, now appealed to it under the trust-deed of the Regent Square Church. The facts were undisputed. The case really turned upon the truth or falsity of the plenary inspiration claimed by the 'gifted,' but implicitly rejected alike by the prosecuting trustees and the Presbytery. The view of the latter was unexpectedly strengthened by the repudiation of their former testimony on the part of one or two of the prophets—notably Robert Baxter, who subsequently published his retractation in a *Narrative of Facts* (London, 1833). But Irving, supported by the majority of the prophets, women as well as men, maintained his conviction, and his defence became an arraignment of his judges. The result, however, was never really doubtful. Such evidence as they could offer was, from the point of view of the court, mere opinion; and no tribunal to which the matter could conceivably have been submitted could have decided that an offence had not been committed against the recognized order of the Church. Accordingly, by direction of the Presbytery, the doors were locked against the minister and the greater part of his miscellaneous congregation, which ultimately found shelter in Newman Street. These proceedings revived the charge of heresy which had already been levelled at Irving, and in 1833 he was formally indicted before the Presbytery of Annan, which had ordained him, and which now deposed him. Though Irving consented to defend his teaching before the Presbytery, he never appealed against the judgment, and accordingly in this year he passed out of the Church of Scotland.

**2. The Catholic Apostolic Church.**—Henceforward the personality of Irving ceases to be an important factor in the movement, which had already begun to crystallize into a religious society having little affinity with the Presbyterianism amid which it took its rise. Though a congregation of several hundred members or communicants, together with an indefinite number of adherents, migrated with their pastor from Regent Square, the minority that remained were the real representatives of those who had called him to London ten years before. The more influential members of what must now be called the new body were men and women collected from various quarters who had found in Irving a rallying point for association on the basis of millennial expectation and the exercise of spiritual gifts. From the moment that Irving acknowledged the utterances of the prophets as the authoritative voice of the Spirit, his function towards the society practically ceased. Making no claim to exceptional endowments on his own behalf, he became a follower rather than a leader. The new authority, which had begun to emerge in the person of two apostles, who had been appointed by prophecy, already claimed his submission. An alleged prophecy declared that, the Church of Scotland having withdrawn his commission, his position as pastor or angel of the congregation must remain in abeyance unless duly restored by the Spirit. When at length the prophetic voice proclaimed his reinstatement, he was allowed to resume his office only by ordination at the hands of the new apostolate. Soon afterwards another prophetic utterance sent him on a mission to Scotland, and, reaching Glasgow after a circuitous journey through England and Wales, he died in that city on 7th December 1834, and was buried in the crypt of its ancient cathedral.

The religious society thus brought into being still exists, but it has had little or no public

history. Popularly called Irvingite, a name only partially justified by facts, it is officially styled the Catholic Apostolic Church. The name is said to be due, not to arrogant assumption on the part of its members, but to the mistake of a census clerk, who abstracted it from a return, in which a London householder had described himself as belonging to a 'congregation of the Catholic and Apostolic Church worshipping in Newman Street.' Its organization was practically completed when the college of apostles was increased from two to twelve in obedience to a prophetic message. Prophets and evangelists being already in existence, the fourfold ministry was completed by the ordination of pastors and teachers—a local priesthood—consisting, in the case of each congregation, of the bishop or angel (cf. the 'angels of the churches' in the Apocalypse), or chief pastor, with the elders and deacons. The meeting-place in Newman Street has been replaced by a fine Gothic Church in Gordon Square, and there are churches in Edinburgh and other large cities, as well as at Albury. Outside Britain and Germany its extension has been limited. Its forms of worship have been assimilated to those of ancient Christendom, and its ritual is elaborate. It possesses a liturgy constructed for the most part on Eastern models. These changes, which were speedily introduced, may be traced partly to the study of the Apocalypse, partly to the eclecticism of its members. Its ministry has never been professional, being composed for the most part of persons engaged in ordinary occupations. Many of its members were, and still are, actively engaged in public affairs, and as individuals take a prominent part in works of general utility and philanthropy. But in its corporate capacity the community has lived apart, and, except for the sensation caused by the outbreak of the 'gifts,' has neither courted nor received a place in popular consideration. This is the natural consequence of the theory of its origin, which also accounts for its apathy in respect to missionary work. It is due, not to the cooling of its early zeal, but to its expectation of a returning Lord. The appearance of the gifts was regarded as a sign of the approach of the Son of Man. The apostolate was constituted for the 'ingathering of the nations.' Evangelists were at first sent out into the highways; apostolic journeys were undertaken in Europe and elsewhere; but their object was not to propagate the gospel in the spirit and on the method of the great missionary societies, but to bear final testimony before nations and kings to the coming of the Day of the Lord. The witnesses had no zeal for the extension of the Church, but for its preparation as a bride adorned for her husband. They had no special tenets to proclaim as contrasted with the received teaching of Christendom. Their exclusiveness was due not to what they conceived as the false teaching, but to the apathy, of the churches. If they were in a peculiar sense God's people, it was only because they were aroused, expectant, waiting for the final baptism. The new Apostolic ministry, as they conceived it, belonged to the whole Church. Its establishment was not the construction of a new organ of evangelical activity, but the final ordering of the household before the return of the Master. Their testimony given, they were content to wait in spiritual readiness for the rending of the heavens. They became a church within the Church, instituting a rite of 'sealing,' or laying on of hands, by which those who received the witness of the last times were set apart against the final Day of Redemption. But 'the sealed' were not necessarily required to withdraw from the communion of other Churches, and 'Irvingites' have always been found communicating and, it is said, even ministering in other religious bodies. A special affinity with those Churches which retained the order of bishops, successors of the 'angels' who presided over the apostolic churches, has always been recognized, in spite of the fact that Irving himself had been a Presbyterian minister, and that the connexion of his people with the Church of England was only through individuals who had abandoned its ministries. The last of the apostles is now dead, and the church is in process of readjustment to the new conditions created by the lapse of the college.

Difference of opinion regarding the apostolate has led to a division of the Irvingites and to the formation of the 'New Apostolic Church.' The latter body holds that the number of the apostles may be many more than twelve, and traces its origin to Germany, where Irvingism had been introduced in Bavaria by William Caird in 1841, centres being formed at Augsburg, Berlin, Königsberg, and Hamburg. The New Apostolic Church arose from the endeavour of the prophet of the Berlin congregation, Heinrich Geyer, to have new apostles chosen. Excommunicated in 1863, he joined Schwartz, the bishop at Hamburg, and formed the new organization. As in Holland under the direction of Schwartz, so in Germany the new body has discarded much of its elaborate ritual, and lays less stress on the expectation of the speedy Second Advent. Their main centre is Brunswick, where one of their number, F. Krebs, gradually rose to be the 'father of the apostles.' His successor, H. Niehaus, terms himself the 'Stammapostel,' and it is even believed that in the 'Stammapostel' as well as in the other apostles Christ is incarnate. Since the beginning of the new century the New Apostolic Church has suffered the secession of the 'Sceptre of Judah,' which differs little except that it lays still less emphasis on eschatological hopes.

Except for the United States, no exact statistics are available for the Irvingites. They are supposed to number about 5000 in Great Britain and about 20,000 in Germany and Switzerland; the New Apostolic branch estimated their adherents at 70,000 in Europe at the end of 1909. According to the last religious census of the United States (1906), the Catholic Apostolic Church reported 11 organizations, with a membership of 2907 and 14 ministers; the New Apostolic Church, 13 organizations, with a membership of 2020 and 19 ministers. Since the last previous religious census (1890) the Catholic Apostolic Church had increased by 1 organization and 1513 members; the New Apostolic Church was not reported in America in 1890. The main strength of both bodies is in the N. Atlantic States, especially in New York, which has 7 out of the total number of 24 organizations.

3. Criticism.—Our estimate of Irvingism as a religious phenomenon will vary according as we view it in regard to the particular community in which its principles are embodied or to the spiritual movement of the 19th cent., to which it is vitally related. The lancet window above the great preacher's grave has been filled with a figure of John the Baptist 'crying in the wilderness,' and it is probably as a similar voice that his true character is best judged. He is an arresting rather than a constructive power, prophetic of the needs of his time rather than himself supplying them. He was able to recognize, but not to focus and apply, the influences which were destined to recover a fuller Christianity for a widening age.

The limitations of Irving's personality and the isolation of his position will to a large extent explain the abortive character of the movement which bears his name. It cannot be said that its failure to command popular sympathy and to carry

with it the reason and judgment of his contemporaries is itself evidence of error, for this would be true of Christianity itself in its initial stages. But we are justified in pointing out the presumptions against a stable and progressive work which are to be found in the character of Irving's genius. His spiritual greatness varied almost in inverse proportion to his intellectual equipment. Unlike the Tractarians, he had no solid basis of learning upon which to ground his theology. He had a vision of great religious ideas rather than a comprehensive theology. This is the true criticism of his doctrine of the Incarnation. An adequate inheritance of theological thinking would have kept him from those clumsy statements of our Lord's human nature which exposed him to the assaults of a criticism equally ill-equipped. His philosophy was also at fault. While, therefore, he always maintained Christ's immunity from actual sin, he invariably insisted that the humanity which the Son of God assumed was sinful. By this he meant to assert that God became flesh under the conditions which sin had imposed, in order that He might redeem what He took. It is, therefore, the Spirit indwelling 'the creature' which lifts the Body of Christ and all its members above sin. The second proposition, which was the practical conclusion that Irving wished to reach, is genuine Nicene theology, and this a competent theological tribunal ought to have recognized. The imperfection of the first proposition, which really marked a return to a fuller doctrine of the Person of Christ than the formal evangelicalism of his contemporaries, lies in the false psychology, misled by the phrase 'sinful flesh,' which does not predicate sin solely of the will. But in so far as Irving's teaching was a strong assertion of the identification of Christ with human nature as sin has made it, not excluding its guilt, his doctrine cut deeper than that of his accusers. The further criticism, which attempts to find in Irving's error concerning the peccability of Christ's manhood the secret of his attitude towards the spiritual 'gifts,' and to discredit in consequence his whole system, is not consistent with facts. In so far as the expectation which led him to acknowledge claims disallowed by others sprang out of his theology, rather than out of his reading of the NT, it must be attributed to his strong identification of believers with Him who is their 'federal Head.' But this is no more than is involved in the statement of Athanasius, that 'God became Man in order that we might be made divine' (*de Incarn. Verbi*, liv. 3 [*PG* xxv. 192]). This language is admittedly hyperbolical, but it is intended to cover no more than the 'grace of unction,' a phrase by which Hooker, a writer with whom Irving acknowledged his own sympathy, expressed the supernatural powers which human nature received by union with the Godhead in Christ.

Again, the prophetic element in Irving's personality was allowed to dull his intellectual appreciation. He had the Johannine rather than the Pauline temper, but in the form which appears in the Apocalypse rather than in the Fourth Gospel. He was the mystic in fervent action, not in calm contemplation. The procession of events, and not the eternal silence, fascinated him. God was always coming forth out of His place rather than inhabiting eternity. His own impatience of spirit was manifested in his eager desire for speech, and in his readiness to welcome divine events from day to day. This injured his sense of proportion, and led him to give values to occurrences within his own circle which at once endowed them with significance in the march of history. This was the spirit of the ancient prophets with a difference. They saw in their immediate social experience types of God's judgments; Irving saw in the activities of Regent Square forces intimately connected with the shaking of worlds. This want of proportion in the Irvingite movement is one of the features that most readily offer themselves to the critic. If we may not deny that the Spirit manifests Himself in unexpected quarters, and pursues methods that are 'foolishness with men,' we are yet bound to judge a phenomenon in relation to its environment, and to estimate its value in some proportion to its effectiveness.

Closely connected with the foregoing must be noted Irving's lack of humour, which belongs also to the whole movement. He always takes himself very seriously. Every occasion is great, every speech an utterance. His style is stilted, often turgid, never delicate. The world is identified too readily with Babylon. There is none of that shrewd observation of the facts of society which makes the prophet caustic and the seer sympathetic. He does not really know life as he knows his Bible. It follows that he did not know men, still less women. He took every one at his own valuation, mistook cranks for persons of insight, and became the tool of minds smaller than his own. It is a mistake to charge him with conceit. The movement which revolved round him never made him its centre or took the impress of his personality. It claimed to be an outpouring of the Spirit, but never through the medium of himself. No one *e.g.*, has ever ventured to claim for him the position assigned to Montanus in the primitive schism with which Irvingism has often been compared. Irvingites resent being so named, not merely as unchristian, but as wrong in fact. The secondary position which their leader assumed without complaint after his deposition from the Scottish ministry witnesses alike to the sincerity of his aims and the humility of his character. His theology was his own, but the specific millennial expectation and the constructive work, of which the 'gifts' were the instrument, belonged to others. Drummond, Cardale, and their associates, not Irving, were the builders of the 'Catholic Apostolic Church.' Irving had no constructive genius.

His ecclesiastical isolation is another fact to which due weight must be given. In Scotland he could make no headway. With the standards of the Presbyterian Church he was not out of sympathy. On the contrary, his conception of the pastoral office and of sacramental grace conformed more closely to the ideals of the Confession than the theory and practice of most of his contemporaries. But the intellectualism of Scottish Christianity met with an imperfect response in him, and for all his fervour his undisciplined mysticism failed to impress his fellow-countrymen. London emphasized his lonely position. Such support as he might have secured from the fabric of his own national Church was withdrawn, and he was, of course, outside the life and traditions both of the English Church and of English Nonconformity. Thus he became emphatically a *vox clamantis*. What was, in any case, his true function had to be exercised outside the continuous life of an existing society. There was nothing for him to revivify and inspire. He could but make himself the rallying point for units drawn from other religious societies. In this he differed entirely from the Tractarians. Like them, he began with a complete distrust of the progressive liberalism of the 19th century. Like them, he made no attempt to capture the new forces or permeate the new society with Christian principles. But, while the Oxford men threw back their disciples upon the ancient deposit of Christian doctrine and the inherent powers of the Christian community,

Irving exhorted his hearers to prepare themselves for the imminent judgment which awaited the world, and the coming glory which was to descend upon the Church. For him history virtually disappeared, because past and future had alike lost their importance in view of the approaching end of the age. The eclectic Church order, worked out by the miscellaneous group which constituted his 'congregation' after the rupture with the Church of Scotland, made no pretence of continuity with the past, and did not, in one sense, claim to supersede existing ministries. They were not fashioning an instrument for the conversion of mankind; they were simply setting their house in order to wait for the coming King.

There is, however, one criticism often levelled at Irvingism which has no foundation in fact. It is accused of adding to the Christian faith, by supplementing it with a revelation of its own. This is not the case. It does not claim to add anything to the Catholic interpretation of the Person and Work of Christ. Believing themselves to be a part of the universal Church, its adherents claim that, as the Spirit spoke by prophecy in the churches of Antioch and Corinth, so He spoke in their congregation. As Barnabas and Saul were separated for the work of evangelization by the ministry of the prophets, so (they hold) a ministry was set apart for the sealing of believers in the latter day. Our attitude towards such a claim may involve rejection, but not on the ground that it adds to the deposit of faith.

Perhaps the greatest flaw in the movement was its unsympathetic attitude towards the progressive developments of the early 19th century. Its adherents had not the power of discrimination to distinguish between the true and the false elements in the liberalism of the day. They saw in it nothing but the final apostasy, a destructive effort of Satan. In the welter of change they failed to detect the operation of forces directed by the Spirit and prophetic of the Kingdom. In Glasgow, Irving had shown no sympathy with the social schemes of Chalmers, whose experiment was in full operation when he was assistant at St. John's. So far as he was a politician, it was an unbending, almost a reactionary, Toryism that commended itself to his mind and expressed itself in his personality. His leading followers in London were mainly of the same mould. There was no sense of the existence in society of problems with which Christianity was called upon to deal. The ethical, like the missionary, side of religion was insufficiently grasped. In this there is a close parallel to Tractarianism. Reaction was the characteristic of both movements; but Oxford had behind it a great, historic society, belief in which it set out to rekindle, and in consequence its limitations stood to be corrected by the work of other influences, like that of Maurice and Kingsley, and the reassertion of evangelical enthusiasms within the English Church, the whole mingling in a progressive stream, greater than any of its tributaries. Irving met the same situation not with a revival of church consciousness, but with the voice of prophecy, which, for want of the ethical element conspicuous in the Hebrew prophets, quickly degenerated into a narrow and almost mechanical apocalyptic. This may account for the air of inwardness and mystery which has always associated itself with Irvingism, its adherents living in the midst of affairs and directing their conduct according to the accepted standards of the hour, but retiring within the initiated circle to contemplate and interpret life by the aid of a method not intended for the profane eye.

The true significance of Irvingism, as a phenomenon capable of taking its place in the general history of religion, is best reached by regarding it not as a movement resulting in the formation of a little-known institution called the 'Catholic Apostolic Church,' which appears to exercise small influence upon contemporary life and to give no great promise for the future, but as part of those wider changes in religious thought which belong to the 19th century. Irving may be viewed as a pioneer of those developments in religion which were necessary to meet the requirements of the new age. Evangelicalism had become a sentiment and a survival. Its theology was formal and antiquated, its philosophy non-existent. Following on the French Revolution a fresh era of thought had begun for Europe, and Great Britain shared in the new ideas. Physical science was coming into its kingdom. Discovery and invention were introducing a world of new facts, to which men were occupied in readjusting their minds. Christianity, as then commonly understood, was not big enough to deal with the situation. The effective element in the religion of men like Chalmers, when first they went forward to meet the new conditions, was theistic rather than Christian. The reaction, which threw Irving back upon his religion, as though it were an alternative to the ideas of secular progress, was really forging the instrument by which the new synthesis was to be made. This was a larger and more vital conception of the Person of Christ, leading on to the doctrine of the Holy Spirit and a more vivid apprehension of the corporate side of Christianity. Irving, who always saw great ideas 'looming through the mist,' taught this doctrine in a fragmentary and imperfect way, exposing himself to an indictment for heresy, but anticipating the work of those whose better theological equipment and securer historical position enabled them to guard and systematize their teaching. The Tractarian school, corrected by the more philosophic and liberal thought of Maurice, on the one hand, and the more scientific Biblical method of Lightfoot and Westcott, on the other, accomplished the work of which Irving's preaching was a premonitory signal. But Irving was also a witness to other sides of Christianity which have since been returning to their place in the scheme of religious thought. It need hardly be said that the formal and ecclesiastical side of the Oxford movement, with its antiquarian tendency and its rigidity of form, was absent from Irving's teaching. He was always evangelical, even if his gospel was more vital and less legal than that of his immediate predecessors. And, amid much that was fantastic in the methods of interpretation current among those millennial Christians to whose speculations Irving lent the authority of his name, he emphasized that expectation of the Second Coming which the study of apocalyptic literature among the scientific theologians and Biblical students of the 20th cent. shows to have been an integral element of apostolic and primitive Christianity, and the recognition of which as the ultimate hope of the Church is necessary to a true estimate of the task which confronts it, as the witness among all nations to a crucified, exalted, and returning Lord.

J. G. SIMPSON.

**ISHTAR.**—Ishtar was the Babylonian and Assyrian form of the divinity who was worshipped in Canaan as 'Ashtart ('Ashtoreth, Astarte), in Mesopotamia as 'Attar, in Moab as 'Ashtar, in South Arabia as 'Athtar, and in Abyssinia as 'Astar (see ABYSSINIA, ASHTART, ATARGATIS, SABÆANS).

I. *THE SOURCES OF INFORMATION.*—The cult of Ishtar is now known from a multitude of original Bab. and Assyr. records: (1) historical inscriptions of the kings, (2) mythological texts, (3) hymns and prayers, (4) magical texts, (5) omens, (6) boundary stones, and (7) artistic representations in statues, reliefs, seals, etc. (see literature at end of art.).

II. *THE ORIGIN OF ISHTAR.*—In the art. ASHTART the reasons are given for thinking that this goddess was not a creation of the Sumerians, or of the Semitic Babylonians, but a primitive Semitic divinity. She was a personification of the force in nature that showed itself in the giving and the taking of life. As a glossator of Plautus has aptly expressed it (*Mercator*, IV. vi. 825 f.), she was 'Diva Astarte, hominum deorumque vis, vita, salus: rursus eadem quae est pernicies, mors, interitus.' This conception of her character, which is common to all the Semites, was brought into Babylonia by the first Semitic settlers, and formed the basis of the development of the goddess in that land.

III. *THE IDENTIFICATION OF ISHTAR WITH OTHER DIVINITIES.*—The Semites who entered Babylonia found on the ground a number of local goddesses of the aboriginal Sumerian population whom they proceeded to identify with their mother-goddess. These old goddesses eventually disappeared in Ishtar, leaving only their names as titles, and some of their functions as attributes. Some of these absorbed Sumerian goddesses are as follows.

**1. Innanna, or Ishtar of Erech.**—In Sumerian inscriptions of the Old Bab. period the most conspicuous goddess is the one whose name is written with an ideograph which the Assyrians sometimes reproduced as *RI* (R. Brünnow, *A Classified List of Ideographs*, Leyden, 1889, no. 2561), which, according to the syllabaries, is to be read Innanna, Inninna, Nanâ, or Ninni (P. Jensen, *KIB* iii. [1892] 1, 20). The chief seat of her worship was the temple called E-an-na at Erech (*Vorderasiatische Bibliothek*,[1] i. [1907] 1, 192 n.). For her cult in early times see *VAB* i. 1, 265, *s.v.* 'Ninni.' In bilingual texts, syllabaries, and historical inscriptions, Innanna is repeatedly equated with Ishtar (*e.g.*, *Cun. Texts*, xxiv. [1908] pl. 41, line 75; *PSBA* xxxi. [1909] 20, pl. iii. line 8; *Code of Ḫammurabi*, iv. 60–65). A large number of hymns originally addressed to Innanna are appropriated to Ishtar (*e.g.*, *PSBA* xxxi. 60). For this reason, Ishtar bears the titles 'Queen of Eanna,' 'Queen of the land of Erech' (*loc. cit.*).

**2. Ninâ, or Ishtar of Lagash and Nineveh.**—In the Old Bab. inscriptions the goddess mentioned most frequently after Innanna is the one whose name is written with the ideograph generally read Ninâ (Brünnow, 4800). This sign was used also for a district of Lagash and for the city of Ninâ, or Nineveh. Hence it is inferred that the sign for the goddess and the district of Lagash should also be read Ninâ. It is a plausible conjecture that Nineveh was founded by colonists from Lagash (cf. Gn $10^{11}$), and that the patron-goddess of Nineveh was originally the same as the patron-goddess of the old city of Ninâ in Babylonia. In regard to her worship in the Old Bab. period see *VAB* i. 1, 262, *s.v.* 'Ninâ.' Eannatum (*c.* 3200 B.C.) distinguishes Innanna and Ninâ (*VAB* i. 1, 18. $5^{30-64}$); so also Gudea (*c.* 2500 B.C. [*ib.* 104. $14^{21-27}$]). Ḫammurabi, on the contrary, calls the goddess of Nineveh Innanna (*Code*, iv. 63), and the Assyrians always call her Ishtar. This shows that Ninâ was early identified with both Innanna and Ishtar (cf. Brünnow, 3050). The earliest Assyr. mention of Ishtar of Nineveh is in a prayer of Ashurnaṣirpal II. (*c.* 1100 B.C.; see literature). From that time onward she is frequently named in the royal inscriptions (see Barton, *Hebraica*, ix. [1892–93] 131–155). Her temple in Nineveh bore the name of E-mash-mash. Hence she is described as 'dwelling in E-mash-mash,' and Nineveh is called 'beloved of Ishtar.'

**3. Anunit, or Ishtar of Akkad.**—The chief goddess of the N. Bab. city called Agade, or Akkad, was Anunit. The name of her temple was E-ul-mash. For her worship in early times see *VAB* i. 1, 242, *s.v.* 'Anunitum'; *Code of Ḫammurabi*, iii. 54, iv. 47 f. There is no record that the Assyrian kings paid her any special attention, but she was a great favourite with the Neo-Bab. king Nabonidus, who honoured her above all goddesses, and rebuilt her ruined temple at Akkad (*VAB* iv. [1912] 300, *s.v.* 'Anunit'). For her identification with Ishtar see *KIB* iii. 1, $102^{11}$; Jastrow, *Rel. Bab.* ii. 111; *PSBA* xxxi. 67; H. Zimmern, *Beiträge*, Leipzig, 1896–1901, p. 11; Barton, *Hebraica*, x. 26; *VAB* iv. $170^{5}$, $246^{48}$.

**4. Nin-lil, or Ishtar of Nippur.**—The chief god of the earliest Bab. pantheon was En-lil, 'master of the wind,' the patron-deity of Nippur. His consort was Nin-lil, 'mistress of the wind' (see BAAL, vol. ii. p. 295 ff.). She had a temple in Nippur known as E-shu-ib (*VAB* i. 1, 188). Numerous votive inscriptions in her honour from ancient Bab. rulers have been discovered (*ib.* 265, *s.v.* 'Nin-lil'; H. Winckler, *Untersuchungen*, Leipzig, 1889, p. 141).

One of the titles of Nin-lil was Nin-ḫar-sag, 'mistress of the great mountain' (see *ERE* ii. 296). Under this name she was worshipped in the temple of E-me-te-ur-sag at Kish, and in Girsu, a district of Shirpurla (*VAB* i. 1, 264, *s.v.* 'Ninḫarsag'; *Code of Ḫammurabi*, ii. 59–65).

Still another title of Nin-lil was Nin-maḫ, 'exalted mistress,' or Maḫ, 'exalted' (*VAB* i. 1, 138, $19^{21}$, 237e; Brünnow, 1050, 11008). Under this name she had a temple at Babylon called E-maḫ (*KIB* iii. 1, $150^{45}$; *VAB* iv., Index, *s.v.* 'Maḫ, Nin-maḫ'). For the Semitic settlers in Babylonia Nin-lil was the Nin, or 'Mistress,' *par excellence*; hence they called her Bêlit, 'Mistress,' just as they called her husband Bêl (see *ERE* ii. 296; Brünnow, 11046 ff.).

Eannatum (*c.* 3100 B.C.) carefully distinguishes Ninḫarsag, Innanna, and Ninâ (*VAB* i. 1, 18, $5^{48}$); so also Ur-Bau (*c.* 2700 B.C. [*VAB* i. 1, 60, $3^{8}$]); but Ḫammurabi (*c.* 1950 B.C.) calls the goddess of Kish Innanna (*Code*, ii. 59–65), and Kurigalzu I. (*c.* 1350 B.C.) gave to Nin-lil of Nippur a tablet that had originally been dedicated to Innanna, which shows that he identified the goddesses (H. V. Hilprecht, *Old Bab. Inscr.*, Philadelphia, 1893, i. 1, nos. 15, 43). The Assyr. kings frequently identify Nin-lil = Bêlit with Ishtar (Brünnow, 11046; *KIB* i. [1889] $28^{34}$; Winckler, *Sargon*, Leipzig, 1889, p. 94, xiv. 84; *WAI* ii. [1866] 66, no. $2^{1}$; cf. *KIB* ii. [1890] $230^{26-27}$, $152^{1}$, $220^{28}$); and in one copy of a prayer of Ashurbanipal the goddess is called 'Nin-maḫ,' in another 'Ishtar of Babylon' (Jastrow, *Rel. Bab.* i. 418, n. 6).

**5. Zarpanit, or Ishtar of Babylon.**—The consort of Marduk, the chief god of Babylon, was Zarpanit, whose name in Sumer. seems to mean 'silver-shining,' but was popularly interpreted by the Semites as Zer-banit, 'seed-producing,' with allusion to the reproductive function of the goddess.

[1] Hereafter cited as *VAB*.

One of her titles was Erûa, 'pregnant' (C. F. Lehmann, *Shamashshumukin*, Leipzig, 1892, ii. 36). She had a chapel called Kaduglisug in Esagila, the great temple of Marduk (*VAB* iv. $72^{48-49}$). For references to her cult see L. W. King, *Hammurabi*, London, 1898–1900, no. 101, i. 41, iii. 12; *Code of Ḥammurabi*, xli. 43, 56; *KIB* iii. 138 f.; Winckler, *Sargon*, i. 180; *KIB* iv. [1896] 307, *s.v.* 'Zarpanit.' When, through the rise of the city of Babylon, Marduk became the chief god of Babylonia, he was identified with Enlil = Bêl, the ancient chief god (*ERE* ii. 296 f.). The logical procedure was then to identify Zarpanit, the wife of Marduk, with Ninlil = Bêlit, the wife of Enlil = Bêl (*VAB* iv. $282^{30}$; *KIB* ii. $220^{26}$; J. A. Craig, *Rel. Texts*, Leipzig, 1895, i. pl. 1, obv. 12–25; Jastrow, *Rel. Bab.* i. 536). Accordingly, when in later texts we read of 'Ishtar of Babylon,' we are to understand this of Zarpanit. Herodotus (i. 199) calls Zarpanit Aphrodite.

**6. Ishtar of Ashshur.**—At Ashshur, the capital of the early Assyr. monarchy, an Ishtar was worshipped who was distinguished by the name Ishtar Ashshuritu, or 'Ishtar of Ashshur' (*KIB* i. $4^{12}$, $28^{26}$, $38^{36}$; L. W. King and E. A. W. Budge, *Annals of the Kings of Assyria*, London, 1902, i. 159; *KIB* $158^{36}$; *Beitr. Assyr.* ii. [1894] 587, rev. 33–37). The primitive name of Ishtar of Ashshur and the peculiarities of her cult are unknown.

**7. Ishtar of Arbela.**—At Arbela still another Ishtar was worshipped in a temple called E-gashan-kalamma, 'house of the lady of the world' (*PSBA* xxxi. 68). In the inscriptions of the Assyr. kings, from Sennacherib onwards, Ishtar of Nineveh and Ishtar of Arbela are mentioned as though they were separate goddesses (*KIB* ii. $106^{51}$, $124^{7}$, $154^{16}$). An oracle to Esarhaddon (*WAI* iv. 68, col. iii. 15) begins: 'I am Ishtar of Arbela.' Ashurbanipal distinguished sharply between Ishtar of Nineveh and Ishtar of Arbela, and paid more honour to the latter (*KIB* ii. $178^{4-10}$, $200^{96-108}$, 248–255, 260). Several astrological reports from her temple are known (*WAI* iii. [1870] 51, no. 5 f.). Although she is not mentioned before Sennacherib, it is probable that she was an ancient local divinity of Arbela. The name of the city Arba-ilu suggests either that four divinities were united there or else that the original god was called Arba (cf. Kirjath-Arba' in Palestine). The Sumer. name of her temple E-gashan-kalamma suggests the high antiquity of her cult. The same conclusion is demanded by the words of Ashurbanipal in connexion with the re-building of her temple: 'Whose wall from of old (*ulla* = עוֹלָם) was not built' (*KIB* ii. $260^{3}$).

**8. Other goddesses identified with Ishtar.**—The minor goddesses of the Old Bab. pantheon came also sooner or later to be identified with Ishtar.

Antu, the consort of Anu, is called Ishtar by Sargon (Winckler, *Sargon*, i. $94^{88}$), and is equated with Nin-shar and Ishtar by the lists (*Cun. Texts*, xxiv. pl. 1 and 20, lines 15 ff., 22 ff.; *PSBA* xxxi. 21). Damkina, the consort of Ea, is identified with Bêlit = Ishtar by Sargon (*loc. cit.* line 84). Nin-gal, the consort of Sin, has the attributes of Ishtar in a hymn published by Craig (*Rel. Texts*, ii. pl. 1–2) and translated by Jastrow (*Rel. Bab.* i. 547). Â, the consort of Shamash, seems to have had a similar fate, inasmuch as she early ceased to have any independent importance. Bau was first identified with Gatumdug (*ib.* i. 58–60), then with Gula, and finally with Ishtar (i. 545); and Nin-tu, an ancient goddess of Shirpurla, is equated with Bêlit = Ishtar in *WAI* ii. 55, 16*a*.

Several goddesses are distinguished from Ishtar in the Gilgamesh Epic, but these also are subsequently identified with her. One of these is Nin-sun, the mother of Gilgamesh (*KIB* vi. 145). Sin-gashid of Erech says that she dwells in Eanna, *i.e.* is the same as Nanâ (*VAB* i. 1, 220. xxi). Another such goddess is Ishḫara (*KIB* vi. 154). She is distinguished from Ishtar in the curses on the boundary stones (W. J. Hinke, *A New Boundary Stone of Nebuchadrezzar I.*, Philadelphia, 1907, p. 90 f.), but is equated with her in a number of later texts (*KAT*³, 432). This form of Ishtar appears in Egyptian inscriptions as 'A-sa-kh-ira (Ward, *Seal Cylinders*, 258). Still another goddess of the Gilgamesh Epic is Irnini (*KIB* vi. 160). She also is identified with Ishtar in the hymn published by King (*Seven Tablets of Creation*, London, 1902, ii. pl. 75–84) and translated by Jastrow (*Rel. Bab.* ii. 66, 68, 70). In his quest for Eabani, Gilgamesh meets the goddess Siduri (*KIB* vi. 210). Siduri is defined in a vocabulary (*WAI* ii. 32, 27*c d*) as 'maiden,' a title of Ishtar. In an old Bab. fragment of the Gilgamesh Epic (*MVG* vii. [1902] 8) she appears as Sabitu, which Jensen (*KIB* vi. 578 f.) connects with Mt. Sabu or Lebanon. On this hypothesis, Siduri-Sabitu will be the Phœnician 'Ashtart of Gebal. In the magical text *Shurpu*, ii. 172 (Zimmern, *Beiträge*, p. 10), she is called 'Ishtar of wisdom.'

In the period of the first dynasty, when Babylonia was occupied by the Amorites, the West Semitic 'Ashtart became known in Babylonia. In a tablet published in *PSBA* xi. [1889] 174 ff. she is said to be the 'Ishtar of the West.' Her symbol, the *ashera*, or conventional tree, was treated also as a goddess. In a dedicatory inscription for Ḥammurabi (Winckler, *Forschungen*, Leipzig, 1893, i. 198), Ashratu receives the attributes of Ishtar, and in the Amarna letters the name of the Amorite chieftain Abd-Ashirti is occasionally written with the ideogram for Ishtar (*KAT*³, 432 f.). In the time of the IIIrd dynasty Ishtar was identified with the Kassite goddess Mirizir (Jastrow, *Rel. Bab.* i. 180).

Other goddesses identified with Ishtar are Gushea, a goddess of vegetation (*ib.* i. 535, ii. 67), Mama, or Mami, a mother-goddess (*KAT*³, 430), Aruru, another mother-goddess (*ib.*), Suḫ, Sherûa, and Gamlat (Jastrow, *Rel. Bab.* i. 247 f.), and Shâla (*ib.* ii. 410). A number of lists have come down to us that are devoted to nothing else than the names and titles of Ishtar. Such are *Cun. Texts*, xii. pl. ii.; xxiv. pl. 1, 20, 41; and the tablet K. 2109, published by Pinches (*PSBA* xxxi. 20 ff.). One of these (*Cun. Texts*, xxiv. pl. 41) reads: 'Zanaru is Ishtar of the lands, Karadun is Ishtar of the strong, Ulsiga is Ishtar of heaven and earth, Tiruru is Ishtar of . . ., Shunnusibi is Ishtar of images, Tibanumma is Ishtar of fetters, Menuannim is Ishtar of lamentation, Labatu is Ishtar of wailing, Alakalki is Ishtar of burning, Kashaia is Ishtar of howling.' The other lists are similar, and give us many names of goddesses and temples that are otherwise unknown. The magical texts are fond of invoking Ishtar under a series of names, all of them doubtless once independent goddesses (*e.g.* Zimmern, *Beiträge*, 11). As early as the time of Ḥammurabi *ishtar* had become the equivalent of *iltu*, 'goddess.' So we read 'the gods and the ishtars,' 'his god and his ishtar,' showing how completely the minor goddesses were identified with the great mother.

**9. The male Ishtar.**—In some parts of the Semitic world, as society passed from the matriarchal to the patriarchal organization, 'Ashtar changed her sex (*ERE* ii. 115 f.). The beginnings of a movement in this direction are perhaps to be seen in Babylonia. In Sumer. the word for 'master' is *en* and for 'mistress' *nin*. Gods bear such names as En-lil, En-ki, En-zu, and goddesses such names as Nin-lil, Nin-maḫ, Nin-sun. Some male deities, however, are called *nin*—*e.g.*, Nin-Girsu, Nin-a-gal. This seems to indicate that in these instances primitive goddesses have been transformed into gods (*ERE* ii. 295). This tendency is seen in Nanâ, the goddess of Erech.

In an inscription of Lugaltarsi, king of Kish (*c.* 3150 B.C.), Nanâ is apparently addressed as 'king of the lands' (Barton, *JAOS* xxi. 185 ff.; for a different but less natural interpretation see *VAB* i. 1, 160. 3). One of the ancient *patesis* of Susa addresses Innana-erin, or Ishtar of the cedar forest = Irnini (see above, 8), by the title of 'king' (G. A. Barton, *A Sketch of Semitic Origins*, New York and London, 1902, p. 184: *VAB* i. 1, 182a; see also A. H. Sayce, *Rel. Egypt and Bab.*, Edinburgh, 1903, p. 337). Whatever tendencies of this sort may have existed among the Sumerians, they exerted no influence upon the Semitic conception of Ishtar. For the Babylonians and Assyrians she remained exclusively feminine. The few passages in which she receives male attributes do not imply that she had changed her sex or was bisexual, but show only a sort of henotheism, in which for the moment she was regarded as the supreme divinity. Thus in the hymn published by Haupt (*Akkad. und sum. Keilschrifttexte*, 126–131; Prince, *JAOS* xxiv. [1903] 103 ff.) Ishtar says (obv. 22–24): 'I am En-lil and I am Nin-lil.' The astrological tablet (*WAI* iii. 53, col. ii.) contains the statement that 'Dilbat (the star of Ishtar) is a female at sunset and becomes a male at sunrise.' A hymn to Ishtar of Nineveh (Craig, *Rel. Texts*, i. pl. 7f) reads: 'Like Ashur she is bearded with a beard.' This probably refers merely to the halo, or radiance, that surrounds her star (see Jastrow, *RA* xvii. [1911] 271–298).

IV. *THE CHARACTER OF ISHTAR.*—As a result of the syncretism that has just been described, Ishtar inherited the characteristics of many earlier goddesses; nevertheless, at the end of the process she retained all the traits of the primitive Semitic 'Ashtar.

**1. Water-goddess.**—In *ERE* ii. 116ᵇ it is shown that the primitive 'Ashtar was closely connected with springs as the source of life in the Arabian desert. This character she retained in Babylonia.

The sign for Ninâ, 'fish-house,' shows that she was originally a water-goddess; and her name Nin-â probably means 'mistress of water.' The same is indicated by the dedication of a spring to her (*VAB* i. 1, $104^{19-22}$), and a boat (*ib.* 92. $4^{3}$, 104. $14^{23}$), and by the fact that she was the 'child of Eridu,' *i.e.* the daughter of Ea, the sea-god (*ib.* 110. $20^{16}$). Offerings of fish were made to her, as also to Innanna (*PSBA* xxvii. 71–79). Ishḫara, another form of Ishtar, is often called 'Ishḫara of the sea.' Archaic representations of Ninâ, or some other form of Ishtar, on seals show fish and other sea creatures beneath her throne (Ward, p. 155). Similarly fish were sacred to Atargatis, the Syrian 'Ashtar, and sea-water was brought for libations in her temple (*ERE* ii. 166 f.). In a hymn to Ninlil (*JAOS* xxiv. 114) the goddess says: 'At the mountain spring I fill the vessel, at the mountain spring of Dilmun I wash my head.' Ishtar is brought up from Sheol by sprinkling her with the water of life (*KIB* vi. $88^{34}$).

2. **Giver of vegetation.**—As the goddess of springs Ishtar was naturally connected with the verdure that they caused.

In a hymn (Reisner, *Hymnen*, no. 56, rev. 49 f.) she says: 'In the heavens I take my place and send rain, in the earth I take my place and cause the green to spring forth.' In another hymn (Craig, *Rel. Texts*, i. pl. 15–17) she is called 'Gushea who gives the growth of plants.' In a lament (Haupt, *Akkad. und sum. Keilschrifttexte*, p. 116 f., obv. 6) she is called 'the one who causes verdure to spring forth.' In the Gilgamesh Epic she says to her father Anu: 'I have heaped up grain for mankind, and I have produced fodder for the cattle; if there shall be seven years of famine, I have gathered grain for mankind and have made the fodder great for the cattle.' In this capacity she is the wife, or mother, of Tammuz, the personification of vegetation, who dies in the summer heat and comes to life again with the winter rains (see TAMMUZ). In a lament for Tammuz (*WAI* iv. 30, no. 2, lines 36–38) we read: 'He has gone, he has gone to the bosom of the earth, and the dead are numerous in the land. . . . How long shall the springing of verdure be restrained? How long shall the putting forth of leaves be held back?' To bring him back to life Ishtar descends to Sheol (*KIB* vi. 80–91). Dumu-zi, or Tammuz, appears as the husband of Innanna in the earliest Bab. inscriptions (see *VAB* i. 1, 246, *s.v.*). As the goddess of verdure Ishtar bears the title Urkittu, which is probably derived from *urḳu*, 'green,' rather than from Uruk, 'Erech' (Jastrow, i. 448, n. 6). She is also called 'queen of the dust, mistress of the field.' The *ashera*, or post, that was sacred to Ishtar seems to have been a conventional representation of a living tree. According to Hommel, the sign for Nana-Ishtar (Brünnow, 143) in its archaic form was a picture of an *ashera* (*ExpT* xi. [1900] 190). On ancient seals a seated goddess is represented holding sheaves of grain (Ward, pp. 133–137). This represents one of the forms of Ishtar, perhaps Bau-Gula.

3. **Creatress of animals.**—In an amulet published in *Mitt. der deut. Orient-Gesellsch.*, no. 9 (1901), p. 13, and translated by Jastrow (i. 335 ff.), Ishtar is called 'creatress of the creatures.' In a hymn (Haupt, *Akkad. und sum. Keilschrifttexte*, p. 116 f., obv. 8) she is termed 'creatress of all things.' This is doubtless the reason why in the park of Atargatis at Hierapolis all sorts of wild animals roamed freely (Lucian, *de Dea Syr.* 28 f., 39 ff.).

In particular, Ishtar was the giver of the increase of the flocks and the herds. She promised Gilgamesh that, if he would love her, his sheep and his cattle should bear twins (*KIB* vi. $168^{18}$); cf. the Hebrew usage of calling the young of the flock *'asht<sup>e</sup>rôth*

(Dt $7^{13}$ $28^{4.18.51}$). On account of this connexion with the herds Ishtar herself received the attributes of a cow. In Old Bab. art she is frequently represented with horns. As Ninḫarsag she has the same horned head-dress as the Egyptian cow-goddess Hathor (Ward, p. 404). On the boundary stones her symbol is the cow. When the early kings say that they are 'nourished with holy milk by Ninḫarsag,' this may refer to her character as a cow-goddess not less than as a mother-goddess (Boissier, *OLZ* xi. col. 235, 551). As late as the time of Ashurbanipal, Ishtar of Arbela says to the king: 'Of the four udders that are put to thy mouth two shall suckle thee, and with two thou shalt cover thy face' (Jastrow, i. 444). With this aspect of Ishtar should be compared the Palestinian 'Ashtaroth-Ḳarnaim, or two-horned 'Ashtarts, and the horned 'Ashtarts on the plaques discovered in the mounds of Canaan (*ERE* iii. 182). A figure from the Merrill Collection in the Semitic Museum of Harvard University shows a naked woman with rays round her head and a crescent under her feet, with one foot like a fish's tail, and the other like the hoof of a cow or sheep (*BW* xvii. [1901] 447). Beneath it is the inscription in Greek: 'Divine producer of all.' It is doubtless one of the forms of the Palestinian 'Ashtart. Among birds the dove was specially sacred to her, probably on account of its erotic temperament. It is figured with her on seals (Ward, figs. 924, 926, 927). An image of a dove was also found in the temple of Ninmaḫ at Babylon (*Mitt. der deut. Or.-Gesellsch.*, no. 5 [1900], p. 3). Similarly doves were sacred to Atargatis (*ERE* ii. 166 f.), and the swallow is mentioned as a sacred bird of Ishtar (*KAT*$^{3}$, 431).

4. **Goddess of sexual love.**—Ishtar herself was conceived as unrestrained in her passion for her lovers. In the Gilgamesh Epic, Gilgamesh reproaches her for her fickleness. First she loved Tammuz, then a bird, then a lion, then a horse, then a shepherd, then a gardener, and finally himself (*KIB* vi. 168–171).

In a hymn she is entitled 'the glad-eyed, goddess of desire, goddess of sighing' (*PSBA* xxxi. 22). In another hymn she is called 'amorous mother-goddess at whose side no god draweth near' (S. H. Langdon, *Psalms*, Paris, 1909, p. 257). In one hymn she says of herself: 'Beside the wine when I seat myself, the woman for the devoted man am I' (*AJSL* xxii. [1906] 149). In the same context she even calls herself 'a loving courtesan' and a 'temple-harlot' (*ib.* 149, 150). In this aspect she was depicted in art as a naked woman with emphasised sexual features (Ward, pp. 161 f., 380), or as lifting her robe to disclose her charms (*ib.* pp. 296, 387). She was the awakener of sexual impulse in animals and in men. In a hymn she says: 'I turn the male to the female, I turn the female to the male; I am she who adorneth the male for the female, I am she who adorneth the female for the male' (*PSBA* xxxi. 34). She caused the union of male and female (*JAOS* xxiv. 115). When she descended to Sheol, copulation ceased in men and animals (*KIB* vi. 86 f.). For this reason prostitutes were attached to her temples. Such a woman was called *ishtaritu* after the goddess herself; or *qadishtu*, 'sacred,' the same as *q<sup>e</sup>dhēshā* in the OT, apparently originally a title of the goddess herself; or *ḫarimtu* from the root *ḫaram*, 'devote'; or *shamḫatu*, 'joy-maiden'; or *kizritu*, 'harlot.' One of these from the temple in Erech was sent to ensnare Eabani (*KIB* vi. 122–127). After Gilgamesh had slain the heavenly bull, Ishtar gathered the harlots, the joy-maidens, and the *hierodouloi* to lament (*KIB* vi. 177). In the Ira myth Erech is called 'the dwelling of Anu and Ishtar, the city of harlots, joy-maidens, and hierodules' (*ib.* 62). An omen is interpreted as meaning: 'The divine mistress will cause to bear her maidens who have not become pregnant' (Jastrow, ii. 887). The *Code of Ḫammurabi* contains many provisions in regard to these women (see Lyon, 'The Consecrated Women of the Hammurabi Code,' in *Studies presented to C. H. Toy*, New York, 1912, pp. 341–360). For evidence of prostitution in her cult in later times see ASHTART, vol. ii. p. 116$^{a}$, and HIERODOULOI (Semitic and Egyptian), vol. vi. pp. 672–676.

5. **Goddess of wedlock.**—The ideograph *nin-dingir-ra* (Brünnow, 10999), or *bêlit-ilâni*, 'mistress of the gods,' is also used for *ḫirtu*, 'wife,' which shows that Ishtar was regarded as the 'wife' *par excellence*.

In a hymn she is called 'bride of Esagila and Ezida' (Jastrow, i. 533). In another hymn she is termed 'bride of the lands whose fulness is luxuriance' (*PSBA* xxxi. 68). Ishtar is called the bride, or the wife, of nearly every god of the Bab. pantheon. Still more strangely, the early kings designate themselves her husband—*e.g.*, Eannatum (*VAB* i. 1, 18), Ur-Ninib (*ib.* 204), Pur-Sin (*ib.* 204), Gimil-Sin (*ib.* 200). As a bride Ishtar is described in poetry and represented in art as veiled (cf. Gn $24^{65}$: Jeremias, *AT im Lichte des alt. Orients*$^{2}$, p. 108 f.; *KIB* vi. $210^{4}$). In this capacity she was prayed to bless wedded love. One such prayer has come down to us (*PSBA* xxxi. 66) in which a woman entreats Ishtar that her absent husband, or lover, may return safely, that he may continue to love her, and that she may bear children.

6. **Goddess of maternity.**—As Ninḫarsag, or Ninlil, she was the 'mother of the gods' (*VAB* i. 1, 60. $3^{8}$, 150. $3^{1}$; and frequently in the later literature). She was also the 'mother of men.'

Gudea calls her 'mother of the children of the city' (*ib.* 66). Samsuiluna calls her 'the mother who bare me' (Winckler, *Untersuchungen*, p. 141). A personal name of the Ḫammurabi period is Ishtar-ummiya, 'Ishtar is my mother' (Jastrow, i. 160). As Aruru, Ishtar made Eabani of clay (*KIB* vi. 121), and created all men and animals (*ib.* 40). Sargon speaks of Bêlit-ilâni = Ishtar as the one 'who increases the offspring' (Jastrow, i. 246). In the hymns she is frequently described as 'creatress of mankind, who causeth all created things to flourish.' She is identified with Erûa, the goddess of pregnancy (*ib.* i. 116). In a prayer she is called 'she who loveth reproduction' (*PSBA* xxxi. 63). In a list of titles she is termed 'opener of the loins, framer of the fœtus' (*ib.* 21). Herodotus states (i. 199) that at Babylon she was called Mylitta, *i.e.* Mu'allidtu, 'she who causes to bear.' Under the name Mama, she caused the birth of second children (*JAOS* xxxii. 22). In art, Ishtar was most frequently represented as a mother suckling a child (Jeremias, *AT im Lichte*, p. 107; Ward, pp. 152–154, 375).

As a mother Ishtar was believed to love mankind and to grieve over their sorrows. At the deluge she cried like a woman in travail over the death of the children that she had borne (*KIB* vi. 238). Several laments have been preserved in which she bewails the destruction of her city Erech by the Elamites (see literature). In a hymn she is described as 'she who loveth all men' (*PSBA* xxxi. 63). Another hymn says: 'Thou lookest mercifully upon the sinner, and thou correctest the wrong-doer daily' (Jastrow, ii. 67). Still another hymn calls her 'the mistress of heaven

and earth, who hears prayers, who listens to complaints, who receives petitions, the compassionate goddess, who loves righteousness' (*ib.* ii. 112).

7. **Giver of earthly blessings.**—On account of her mother-love for men she bestowed life, health, prosperity, and all other blessings upon them.

Gudea speaks of her 'life-giving glance' (*VAB* i. 1, 76). Kudurmabuk says that she gave him a prosperous reign (*ib.* 220); Arad-Sin declares that she gave him long life (*ib.* 214). Sargon says that she caused the inhabitants of the land to prosper (Winckler, *Sargon*, i. $94^{89}$); and Nebuchadrezzar affirms that she gives him length of days (*VAB* iv. $170^{5}$). An old hymn to Nanâ that has been adapted to Ishtar says: 'She gives prosperity to the man with whom she is pleased (?), she guards his path. . . . The physician is skilful with whom she is pleased (?). Her hand is with the manservant and the maidservant. Who can do anything without her?' (Jastrow, i. 533). Another hymn calls her 'Ishtar, without whom none possesses peace and joy' (*ib.* i. 347).

She was regarded as the mistress of magical arts with which she counteracted the wiles of the demons (Zimmern, *Beiträge*, p. 33; *AJSL* xxiii. 151). Accordingly, she is constantly invoked as a helper in the magical exorcisms (Jastrow, i. 82, 290, 292, 300, 315, 321). Especially is she a helper against the demon Ti'u (*ib.* 347), and against 'the wicked seven' (*ib.* 361 ff.).

On account of her good-will and her power, prayers were addressed to her more frequently than to any other deity. Ashurbanipal prayed her for long life for himself and his brother (Lehmann, *Shamashshumukin*, pl. xxiii.–xxiv.). Nebuchadrezzar prayed Ishtar, or Ninmaḫ, for long life, posterity, victory, and success. A large number of prayers and penitential psalms to Ishtar were found in the library of Ashurbanipal (see literature; Jastrow, ch. xvii. f.). These breathe a noble ethical and religious spirit, and are among the finest products of the Bab. religion. In one of them the poet expresses the joy of serving his goddess in the words: 'Her song is sweeter than honey and wine, sweeter than sprouts and herbs, superior indeed to pure cream' (cf. Ps $19^{10}$). In many of the prayers Ishtar is asked to intercede with her father Sin, or with some other god, on behalf of the suppliant.

8. **Moral governor of men.**—As the mother of men, who loved them and cared for their well-being, she was naturally concerned with the establishing of law and order.

She was 'queen of all dwelling-places,' 'imparting all laws, wearing the ruler's crown,' 'who executes judgment and decision,' 'leader of mankind' (King, *Seven Tablets*, i. 222 f.), 'mistress of mankind' (Jastrow, ii. 75), 'creatress of wisdom' ($KAT^{3}$, 426), 'opposed to all disorder' (Jastrow, ii. 112), 'mistress of justice' (*ib.* 201). In a hymn she says: 'In the dispute when I take part, the woman who understands *piltum* am I. In the lawsuit when I take part, the woman who understands law am I' (*AJSL* xxiii. 149). Like Shamash, she was the judge of men (Jastrow, i. 535). As the ruler of the world, she appointed kings to execute justice. The Old Bab. kings all acknowledge that she has called them to the throne (*VAB* i. 1, 10. $5^{24}$, 18. $5^{50}$, 20. $2^{5}$, 26g. $1^{7}$, 66b. $2^{11}$, 146. 17a; *Code of Ḫammurabi*, v. 13). Nebuchadrezzar says that 'Anunit called his name to the sovereignty of the land, and placed in his hand the sceptre over all peoples' (*VAB* iv. $248^{26}$).

9. **Giver of revelations.**—In her care for men, it became necessary for Ishtar at times to make special communications of her will. Gudea calls her 'the child of Eridu, who counsels what is best, queenly interpreter of the gods' (*VAB* i. 1, 90. $2^{16}$). He says also that 'she directed her attention to the oracles' (*ib.* 110. $20^{16}$). Rim-Sin calls her 'revealer of all decisions, who causes the oracles of the land to remain' (*ib.* 218e).

Through an association of ideas with verdure, green colour in liquids, green plants, insects, and birds were regarded as omens sent by her (Jastrow, ii. 722, 802). Many omens derived from the livers of victims were connected with her (*ib.* 236, 261, 387, 409 f.). She also inspired prophets to deliver her message. In a prayer of Ashurnaṣirpal (*ib.* 113) the king prays: 'Grant me a trustworthy oracle.' Similarly, Sennacherib asks Ishtar of Nineveh and Ishtar of Arbela for direction (*KIB* ii. 107). A series of responses of Ishtar of Arbela to Esarhaddon is known (Banks, *AJSL* xiv. [1898] 267–277), also a series of responses to Ashurbanipal (Craig, *Rel. Texts*, i. 26–27). She predicted to the latter the death of the king of Mannai (*KIB* ii. $178^{6}$). She sent a dream to encourage the troops who were afraid to cross a river (*ib.* $200^{97-101}$). She appeared in a vision to a seer promising victory over Elam (*ib.* $250^{50-75}$). She commanded Ashurbanipal through an oracle to bring back her image from Elam (*ib.* $210^{112-115}$). For a full discussion of this subject see Jastrow, ch. xix.

10. **Destroyer of life.**—In striking contrast to the life-giving beneficent character of the goddess that has been exhibited thus far stands her other aspect as a destroyer of life. From the earliest times it must have been observed that life and death were only two aspects of the same force, and that love was the frequent cause of jealousy, hatred, and strife.

For Tammuz, the lover of her youth, she appointed yearly death (*KIB* vi. 168). With him died the vegetation that she had called into life. On his account she herself had to descend into Sheol, and be afflicted there with all the diseases (*ib.* 80–91). Ḫammurabi (*Code*, ii. 26 ff.) says that he 'decked with green the sepulchre of Malkat (the queen) of Sippar.' The sufferings that she endured she also inflicted upon men. Eabani she smote with disease and death (*KIB* vi. 198). She sent the heavenly bull to destroy Gilgamesh (*ib.* 172). Men prayed to her as the cause of sickness and suffering. One lament says: 'In thy descent to the house of a man, thou art as the jackal which hath been caused to come to take the sheep, thou art the lion which constantly cometh into the midst' (*PSBA* xxxi. 59). When she was angry, she sent a wicked demon called Diḫu or Ti'u to afflict men (Jastrow, i. 341 ff.). A configuration known as 'the hand of Ishtar' in a liver denoted the death of a son of the family (*ib.* ii. 409). A class of priests endured castration in her service, 'whose manhood, in order to terrify the people, Ishtar turned to womanhood' (*KIB* vi. $62^{10}$). These were evidently similar to the Galli of Atargatis (*ERE* ii. 166 f.) and to the *qedhēshîm* and *kelābhîm* of the OT.

11. **Storm-goddess.**—Either as a destroyer or as a sender of rain, Ishtar was occasionally described as a storm-goddess. She was 'the lofty one who causes the heavens to tremble, the earth to quake, the flaming fire, who causes the bird-like Zu (the storm cloud) to fly from the house, who casts down the mountains like dead bodies' (*AJSL* xxiii. [1907] 150 f., 164 f.). In her character as storm-goddess she waged war with the gods of the mountains (*JAOS* xxiv. 114). In art she was often represented holding a caduceus of two serpents (Ward, pp. 155, 405, 406). This is apparently a symbol of the lightning.

12. **War-goddess.**—The primitive Semitic mother was the leader of her clan in war, and therefore from the earliest times Ishtar was a war-goddess (*ERE* ii. 116b).

She promised Gilgamesh victory over all lands (*KIB* vi. $166^{16}$). She brought the Elamites upon her city of Erech (*ib.* 272). Eannatum speaks of casting the net of Ninḫarsag over the people of Gishḫu (*VAB* i. 1, 14. $17^{19}$). Gudea dedicated weapon-bearers, warriors, to Innanna (*ib.* 104. $14^{24-26}$). Ḫammurabi says that he conquered with the powerful weapon that Nanâ entrusted to him (*Code*, xl. 24). In a votive tablet for Ḫammurabi it is said: 'Ishtar has given thee conflict and battle; what more canst thou hope?' (Jastrow, i. 398). Agumkakrime calls himself 'mighty hero of Ishtar, the warrior-goddess' (*KIB* iii. 135). Nebuchadrezzar I. says that 'at the command of Ishtar and Adad, the gods of war,' he defeated the Elamites (*ib.* $166^{40}$). In the inscriptions of the Assyr. kings, Ishtar appears chiefly as a war-goddess. Tiglath Pileser I. calls her 'the exalted among the gods, mistress of warfare, the arranger of battle' (*ib.* i. $16^{13}$). Ashurnaṣirpal II. says that 'she set her heart upon the making of battle and war' (*ib.* i. $58^{26}$). He first applies to her the title 'Queen of Kitmuru,' *i.e.* 'Queen of Conflict' (Jastrow, i. 215, 243, 249). Shalmaneser II. calls her 'the first born of heaven and earth, who is perfect in bravery, who establishes the fates, who enlarges my kingdom' (*KIB* i. $130^{13}$), 'queen of fight and battle' (*ib.* $152^{3}$). Sennacherib says: 'I prayed unto . . . Ishtar of Nineveh, Ishtar of Arbela, the gods whom I trust, for the capture of my mighty foes.' When menaced by the united forces of the Babylonians and Elamites, he prayed 'to Ishtar of Nineveh, Ishtar of Arbela, the gods whom I trust, for victory over the mighty enemy' (*ib.* ii. $106^{50-53}$). Esarhaddon says: 'in the help of . . . Ishtar of Nineveh, Ishtar of Arbela, the great goddesses, my mistresses, I ruled from the east to the west and found no rival' (*ib.* ii. $124^{7-9}$). For Ishtar's part in Ashurbanipal's campaigns see above under 9. All her oracles were given to assist him in his wars. When she appeared to his seer, she appeared full-armed in flame (*ib.* ii. $250^{52-55}$). Nabonidus calls her 'Anunit, the mistress of battle, who carries bow and quiver . . . who overwhelms the enemy, destroys the wicked' (*VAB* iv. $228^{22-24}$). The warlike character of Ishtar is greatly emphasized in the hymns. One meets such titles as 'warlike daughter of Sin,' 'leader in battle,' 'mistress of battle,' 'perfect in courage,' 'goddess of heroes,' 'sharp dagger,' 'destroyer of the land,' 'mistress of countries.' In one hymn she says: 'Beside my father in battle I take my place; beside Bêl in combat and

battle I stand. During battle thread I weave, with the spindle I spin. Into battle like a swallow I fly' (Reisner, *Hymnen*, no. 56, rev. 39 ff.). This reminds one of Atargatis at Hierapolis who carried a distaff (Lucian, *de Dea Syr.* 327), and also of the Greek Parcæ. At the beginning of another hymn (Craig, *Rel. Texts*, i. pl. 54–55) she is described as marching to battle accompanied by musicians, who through their songs seek to win her favour. Because of her warlike character she is often compared to a lion, a jackal, an angry wild ox, and other animals. Ishtar as a war-goddess is identified in art by the relief of Anubanini, which shows her armed with clubs, leading prisoners by a cord passed through the lips (Ward, fig. 413). In Old Bab. art she is represented seated, armed with clubs and scimitars. In Assyr. art she is depicted standing, armed with bow, arrows, and quiver (Ward, ch. xxv.). Closely akin to the war-goddess was Ishtar's function as a goddess of hunting. The inscriptions *WAI* i. 7 = Delitzsch, *Assyr. Lesestücke*³, p. 121, represent Ashurbanipal pouring libations over dead lions, and are accompanied with an ascription of praise to Ishtar.

13. **The planet Venus.**—Utterly unrelated to the characteristics that have been considered thus far was the identification of Ishtar with the planet Venus. There is no trace of this among the other Semites, except in late times and under evident Bab. influence (see *ERE* ii. 116). Even in Babylonia this astral character cannot be traced back into the Old Bab. period. It is improbable, therefore, that it was primitive Semitic (against D. Nielsen, *ZDMG* lxvi. 469–472). No certain evidence of the identification of Ishtar with the planet Venus is found before the time of Ḫammurabi.

Gudea (c. 2500 B.C.) says that he dedicated a disk to Innanna (*VAB* i. 1, 104. 14[27]), but it is not clear that this was a star-emblem; the usual star-emblems had rays. Kudurmabuk (c. 2000 B.C.) speaks of Nanâ, the mistress, who is like the sky in gleaming splendour (*ib.* 220 f.), but this also is not certainly astral. On boundary stones of the Cassite dynasty, as early as the middle of the 14th cent. B.C., the four- to eight-pointed star is the established emblem of Ishtar (Hinke, *Boundary Stone of Neb. I.*, 245). In seal-cylinders of the same period Ishtar is accompanied with a star (Ward, ch. xxv.). In one of these (Ward, fig. 412) she is represented with wings, rising above the mountains along with the sun. As early as the time of Ḫammurabi, Ishtar seems to have formed a triad with Sin, the moon, and Shamash, the sun—which implies her astral character (Jastrow, i. 158). The fact that Marduk, the chief god of Babylon, is identified with the planet Juppiter, and Nebo, the god of the adjacent Borsippa, with Mercury, indicates that the identification of the great gods with planets did not arise before the unification of Babylonia by Ḫammurabi. It was part of the system of religious syncretism by which this monarch sought to consolidate his empire. The arithmetical sign XV for Ishtar, which is connected with her astral character (the sign for Sin is XXX), makes its first appearance in the period of Ḫammurabi. As to the reason why Ishtar was identified with Venus, one can only conjecture that it may have been the beauty of the planet, or its alternation as morning and evening star, that suggested a connexion with the life-giving and destroying functions of the goddess. Possibly the fact that Ishtar was the daughter of Sin, the moon, as early as Arad-Sin, led to her identification with the planet.

The identity of Venus as morning star with Venus as evening star was known in the Assyr. period, and probably much earlier. There are numerous official reports of the astrologers that speak of Ishtar as morning and evening star (Jastrow, ii. 612). In a hymn she says: 'Ishtar, the goddess of the morning, and Ishtar, the goddess of the evening, am I' (*ib.* i. 531). Nabonidus calls her 'Anunit, who at sunrise and sunset gives me favourable signs' (*VAB* iv. 228[26], 229[38-42]). As the morning star she was called Dilbat, and as the evening star Zib (P. C. A. Jensen, *Kosmologie*, Strassburg, 1890, p. 117 f.). The difference of names shows that in early times the two aspects of the planet were supposed to be different stars, but the list *WAI* ii. 48, line 51*a b*, asserts 'Zib = Dilbat.'

These aspects of the planet gave rise to a variety of titles and identifications. Thus the list *WAI* iii. 58, col. ii. line 36 reads: 'Dilbat at sunrise is Ishtar of Agade, Dilbat at sunset is Ishtar of Erech, Dilbat at sunrise is Ishtar of the stars, Dilbat at sunset is Mistress of the Gods' (*i.e.* Ninlil). See also the list of names of Venus published by Pinches (*PSBA* xxxi. 25). There seems to be evidence also that the synodical period of Venus of 584 days was known in Babylonia and Elam (F. Bork, *Memnon*, iv. [1910] 83–105; E. Weidner, *ib.* v. [1911] 29–39; F. Hrozny, *ib.* v. 81–102).

The claim has often been made that in the clear atmosphere of Babylonia the phases of Venus, which resemble those of the moon, could be seen with the naked eye, and that this is the reason why she is called 'daughter of Sin,' is represented with horns in art, and in certain texts bears the epithet 'horned' (*PSBA* xxxi. 22–24). This is very doubtful.

At the time of greatest brilliancy Venus has a diameter of only 40″. Two points must be about 60″ apart to be recognized as distinct by the naked eye; and at least four such points are needed to perceive a crescent. It seems, therefore, physiologically impossible for the naked eye to detect the crescent form of Venus, and we have no evidence that the Babylonians possessed lenses. The horns of Ishtar are, accordingly, to be connected with her aspect as a cow-goddess rather than as a planet, and she is called the daughter of Sin because she appears in the sky with him, and not because she has similar phases.

In astrology, Ishtar plays an important part along with Shamash and Sin. The omens that have come down to us all date from a late period. A number of these are published by C. Virolleaud, *L'Astrologie chaldéenne*, Paris, 1903–12, 'Istar,' no. 13; R. C. Thompson, *Reports of the Magicians and Astrologers*, London, 1900, ii. p. lxix f.; Jastrow, ii. 612–638. They are of the following type: 'When Venus disappears at sunrise in Nisan from the first to the thirtieth day, there will be desolation.' 'When, in the month of Nisan, Venus has a beard, the inhabitants of the land will bear boys. In that year the market-price will be low.' In the magical texts also Ishtar is invoked under the name 'Ishtar of the stars.'

The astral character of the goddess finds frequent expression in the hymns. She is called 'the light of heaven and earth,' 'flaming torch of heaven and earth,' 'glory of the whole world,' 'queen of the stars,' 'queen of heaven,' 'the perfect, mighty light,' 'brilliant Ishtar who illumines the evening.' In a hymn published by Prince (*JAOS* xxx. [1909] 96) the poet says: 'With her gracious aspect Ninâ speaketh. In her gracious rising verily she shineth forth; where she waxeth full, her procreative power is mighty of aspect.' In another hymn published by Reisner (*Hymnen*, no. 53, pp. 96–99) and translated by M. I. Hussey (*AJSL* xxiii. [1907] 172 f.), Ishtar says: 'To give portents in fulness I stand, consummate I stand. Beside my father Sin, to give portents in fulness I stand, consummate I stand. Beside my brother Shamash, to give portents in fulness I stand, consummate I stand. As for me my father Nannaru (the moon) has established me . . . in the bright heavens. . . . Amid shouts of joy I, Ishtar, the goddess, take my exalted way. Ishtar, goddess of the evening, am I; Ishtar, goddess of the morning, am I; Ishtar who opens the lock of the bright heavens, that is my glory.'

14. **The star Sirius.**—Less frequently Ishtar is identified with the Bow-star, or Sirius (Jensen, *Kosmologie*, pp. 52 f., 149, 151). This is probably due to the fact that the Assyrians usually depicted Ishtar armed with a bow.

15. **The constellation Virgo.**—It is probable that Ishtar is occasionally identified with the zodiacal constellation Virgo (Zimmern, *KAT*³, 427 f.). These different identifications show that her astral character is secondary, and rests upon late priestly speculation.

From the foregoing survey it appears that Ishtar was the most important divinity of the Assyr.-Bab. pantheon. She absorbed so many other goddesses, and exercised such a variety of functions, that she came near to being the supreme divinity. Many hymns addressed to her disclose a henotheism that approximates to monotheism.

V. *THE CULT OF ISHTAR.*—In regard to the rites that were practised in the worship of Ishtar our information is less complete than in regard to the conception of her character. We know that temples were built to her in all the important cities of Babylonia and Assyria. These contained images (King, *Ḫammurabi*, no. 101, col. i. 41; *KIB* iii. 138[9-22]; *ib.* ii. 209[107-126]). The costume worn by the goddess may be inferred from the artistic representations and from the articles of dress that she left behind when she went down to Sheol (*KIB* vi. 82–84): tiara, earrings, necklace, pectoral, girdle, bracelets, anklets, and tunic. Agumkakrime expended four talents of gold on

the robes of Marduk and Zarpanit (*KIB* iii. 140[33-34]). She had a throne (*VAB* i. 1, 227), a bed (*ib.* 230[13]), and a boat (*ib.* 92, 104, 229[4]). Her priests are often mentioned, and the hierodouloi have been referred to above (IV. 4).

Slaves were dedicated to her temples (*OLZ* xii. 110). The ancient kings record with special frequency that they made her offerings of lapis lazuli. Sargon states that he gave her cedar, and cypress wood, and aromatic herbs (Winckler, *Sargon*, i. 126[143]). Nebuchadrezzar gives a long list of the offerings of animals, birds, fish, vegetables, wine, and oil that he presented to Marduk and Zarpanit (*VAB* iv. 154[24-57]). For the offerings made by Esarhaddon see Jastrow, ii. 170, and for those of Ashurbanipal, *ib.* ii. 107 ff. In one psalm the offerer says: 'I have given to thee thy great gift, a *salla* (=*pudendum muliebre*) of lapis lazuli, and a *multi* (similar to the *salla*) of gold, the adornment of thy divinity' (*PSBA* xxxi. 63 f.). The hymn published by Craig (*Rel. Texts*, i. pl. 15, obv. 19 ff.) says: 'I prepared for thee a pure offering of milk, cakes, salted bread. I presented to thee a vessel for libations, hear me and be gracious. I slew for thee a pure lamb without blemish from the flock of the field. I presented a conserve for the shepherdess of the god Tammuz.' Sacrifice of infants, which was so common in the cult of 'Ashtart (*ERE* ii. 117[b]), is not yet proved in the cult of Ishtar. For supposed evidences of it see *KAT*[3], 599. E. J. Banks (*Bismya*, London, 1912, p. 390 f.) reports the discovery of brick stamps mentioning a temple of Ishtar, numerous small houses containing obscene figures, and beneath one of these eight clay coffins containing infant bones. These seem similar to the jar-burials of infants in the mounds of Palestine (*ERE* iii. 187[a]).

The fourth month, Tammuz (June–July), was celebrated by the annual wailing for Ishtar's lover, whose death coincided with the withering of vegetation in the summer heat. The fifth month, Ab (July–August), was sacred to Ishtar, and in it was celebrated her descent to Sheol to bring her lover back to life. Perhaps the heliacal rising of Sirius in this month may explain the connexion of this star with Ishtar (*KAT*[3], 426; Langdon, *Psalms*, xvi.). Ashurbanipal records: 'In the month of Ab, the month of the appearance of Sirius, the festival of the revered queen, the daughter of Bêl, I tarried in Arbela, her beloved city, to worship her great divinity' (*KIB* ii. 248[16-19]). Ashurbanipal speaks also of the 25th of Siwan as the day of the procession of the Bêlit of Babylon, the honoured among the great gods (*KIB* ii. 220[36]; cf. *VAB* iv. 282[30]).

VI. *WORSHIP OUTSIDE OF BABYLONIA.*—Adherents of the Pan-Babylonian school of Winckler, Zimmern, Jensen, and Jeremias hold that the Bab. Ishtar was the original mother-goddess of western Asia, and that all the other local forms were derived from her. As remarked above, this theory is improbable; 'Ashtar must rather be regarded as a primitive Semitic divinity. Nevertheless, it is not improbable that at the time of the extension of Bab. civilization Ishtar exerted a modifying influence upon the other Semitic goddesses.

**1. In Elam and Persia.**—The worship of Innanna of Erech in ancient Elam is attested by the inscriptions of a number of ancient rulers of Susa (*VAB* i. 1, 178c, 180. 3, 182. 4). The Assyrian records show that it persisted down to the fall of the Assyr. Empire. After the conquest of Elam by the Indo-European Medes and Persians the old goddess was identified with Anāhita, and under this name enjoyed extensive homage (see ANĀHITA). Her ancient name, however, was not forgotten. In 2 Mac 1[13-16] we are told that Antiochus Epiphanes was killed in the temple of Nanaia in Persia.

**2. In Mesopotamia.**—Bab. and Assyr. influence was exerted in Mesopotamia from the earliest times, and the cult of Ishtar was established in all the important cities. The old Aramaic name 'Attar was little used except in the compound Atargatis (*ERE* ii. 165), and instead titles derived from the astral form of Ishtar were employed, such as Kokabta, 'star' (=Bab. *kakabu*), Kokabnugha, 'star of splendour,' or Nugha, 'splendour.' Even the Old Bab. name Nanai was used in Syriac for the planet Venus (*ZDMG* x. [1860] 459) along with the Sumer. name Dilbat (Jensen, *Kosmologie*, p. 118). Astara and Bêlti were names for Venus among the Mandæans (*ib.* p. 135). For survivals of Bab. myths concerning Ishtar in Mesopotamia see Baudissin, 'Tammuz bei den Harrânern,' *ZDMG* lxvi. 172 ff.

**3. In Arabia.**—In the South Arabian inscriptions 'Athtar, who is masculine, is represented by a star with eight points, and forms a triad with the sun and moon. It can hardly be doubted that this is due to direct Bab. influence. In North Arabia the original name of the goddess was displaced by titles such as al-Lât, 'the goddess,' or al-'Uzza, 'the strong' (J. Wellhausen, *Reste arab. Heidentums*[2], Berlin, 1897, pp. 29–39). She was identified with the planet Venus and called al-Najm, 'the star,' *par excellence* (cf. the oath, *Qur'ān*, liii. 1: 'By the star when it setteth'; lxxxvi. 1 ff.). Isaac of Antioch (5th cent. A.D.), i. 210 (ed. G. Bickell, Giessen, 1873–77), identifies al-'Uzza with Bêltis and applies to her the Syriac name Kokabta, 'the star' (Wellhausen, pp. 40–45). This astral character of al-'Uzza is found only in late times in the regions that border on Syria and Mesopotamia; and the same names are used that are applied to Ishtar in Mesopotamia, namely, 'star,' 'star of splendour,' and 'splendour' (Nielsen, *ZDMG* lxvi. 472); it seems clear, therefore, that these traits are due to borrowing of Bab. ideas from Mesopotamia.

**4. In Syria and Palestine.**—In the Amarna letters the Canaanite 'Ashtart is equated with Ishtar, and Canaanite artistic representations often conform to the Bab. type (see *ERE* iii. 182[a], 183[b]). There is no clear evidence of Ishtar in the early writings of the OT. The efforts of P. C. A. Jensen (*Gilgamesch-Epos*, Strassburg, 1906) and of Jeremias (*AT im Lichte des alt. Orients*) to show that Sarah, Rebekah, Tamar, Pharaoh's daughter, Jephthah's daughter, and most of the other female characters of the OT are transformed Ishtar-myths cannot be pronounced successful. The first certain trace of Ishtar in the OT is in the neo-Bab. period in Jer 7[18] 44[17-19, 25], where she is called 'queen of heaven.' This is a specifically Bab. name for Ishtar in her astral aspect, and the *kawwān*, or 'cake,' that the Hebrew women baked for her is the same as the *kawânu* that was presented to Ishtar (*KAT*[3], 441 f.). The wailing for Tammuz mentioned in Ezk 8[14] is closely connected with Ishtar and is specifically Babylonian. At the time of the Bab. supremacy the cult of Ishtar must have been established in Jerusalem, or even earlier under Assyr. rule (2 K 21[3]). The name Esther is an Aramaic form of Ishtar, and the Book of Esther shows clear knowledge of Bab. Ishtar myths (see Paton, 'Esther' in *ICC*, Edinburgh, 1908, pp. 87–94). In Palmyra the Bab. Ishtar was worshipped under the name Bêlti (*ERE* ii. 294), and the rites of the Phœnician 'Ashtart at Gebal, as described by Lucian (*de Dea Syr.* 6, 8), were evidently coloured by the Bab. mourning for Tammuz. On the whole subject of the Tammuz cult in the West see Baudissin, *Adonis und Esmun*, Leipzig, 1911.

5. **Among the Greeks and Romans.** — During the period of Seleucid Greek rule the religions of the East and of the West were fused with extraordinary rapidity in Syria and in Egypt, and under the early Roman emperors Bab. astrology became the dominant religion of the day. The gods of Greece and of Rome were identified with the nearest Bab. counterparts, and thus came to take on astral characteristics. The equations that resulted were: Zeus = Juppiter = Bel-Marduk = the planet Jupiter; Hermes = Mercury = Nabu = the planet Mercury; Ares = Mars = Nergal = the planet Mars; Chronos = Saturn = Ninib = the planet Saturn; Aphrodite = Venus = Ishtar = the planet Venus. To these identifications are due the names of the planets in all modern European languages. Ishtar thus took the place of Aphrodite, and the mythology of the Bab. mother-goddess was grafted on to the myths of the ancient local Aphrodites and Astartes. Even the Sumer. name Dilbat for the planet Venus became known to the Greeks; Hesychius says: Δελέφατ ὁ τῆς Ἀφροδίτης ἀστὴρ ὑπὸ Χαλδαίων (see F. Cumont, *Les Religions orientales dans le paganisme romain*, Paris, 1909 [Eng. tr., Chicago, 1911], ch. v., *Astrology and Religion among the Greeks and the Romans*, New York, 1912).

LEWIS BAYLES PATON.

**ISIS.**—A nature-goddess whose cult first sprang into prominence in Egypt under the New Empire (*c.* 1700–1100 B.C.), became universal in its native land, spread throughout Oriental, Greek, and Roman territory, and became one of the chief antagonists of Christianity. According to Egyptian mythology, she was the daughter of Seb, god of the earth, and Nut, goddess of the sky, the pair which, with sex reversed, corresponded to the Greek Kronos and Rhea. Other children of the union were a daughter, Nephthys, and three sons, Horus the Elder, Osiris, and Set. Isis was the wife, as well as the sister, of Osiris, to whom she had been wedded even before their birth, and by whom she afterwards became the mother of Horus, the sun-god in whom the Greeks saw a parallel to Apollo (Eduard Meyer, in Roscher, *s.v.* 'Isis'). Horus the Elder and Horus the Child (Harpocrates) are different conceptions of the same god (*ib. s.v.* 'Horus').

The Isis-Osiris myth in its main lines is as follows: Osiris (Serapis), known and loved for his benefactions to all mankind, is treacherously slain by his brother Set, who encloses him in a chest and throws him into the Nile, which bears him towards the sea. Isis, after much wandering, persecution, and sorrow, discovers the chest, and mourns over the body of her husband, accompanied by Nephthys, her sister, who is also the wife of Set; but Set again gets possession of the body, and disperses it about Egypt in fourteen parts. Meanwhile Isis gives birth to Horus, whom she secretly rears in the marshes of the Delta. After long searching, she succeeds in recovering and interring the members of Osiris, who, restored through the magic formulæ of Thoth, becomes a judge and god of the dead, and even visits the earth to appear to his son Horus. The latter takes vengeance upon Set for the slaying of his father, sparing his life, however, at the entreaty of Isis herself, with whom he is for this reason so angered that he strikes off her head-dress (or her head), which Thoth restores as a cow's-head helmet (or cow's head). Horus and Set then appear before the court of the great gods of Egypt, where Horus, through the support of Thoth, is victorious, receives the crown and throne of his father, and unites both parts of the land under him (Plutarch, *de Is. et Osir.*; Budge, *Egyptian Religion*, ch. ii.).

Whether the Isis-Osiris myth is founded on a primitive attempt to explain the daily vicissitudes of the sun, or is the outgrowth of a local historical or religious legend which was grafted on to solar speculation, there is no doubt as to its having possessed a solar significance in the minds of those who reflected upon religion. Osiris was the Sun, born of Seb and Nut, Earth and Heaven; Set was Night; Isis, whose name signifies 'seat' or 'throne,' was a deity of the heavens, and especially of the dawn, who restored Osiris, the Sun, after his death at the hands of Night, and also gave birth to Horus, the Sun, who took vengeance on Set, the Night, and won back his father's throne; Nephthys, the Western Horizon, or Evening, sister of Isis, the Eastern Horizon, or Dawn, mourns with the latter at the bier of Osiris, and is also the mother, by him, of Anubis, god of the realm of darkness and the dead. Transferred to the realm of morals, the myth symbolized the warfare between good and evil. It also symbolized human destiny, the rebirth of man in his children; but its greatest significance in the minds of the ancients was spiritual—the immortality of the soul, the resurrection, the universal motherhood of Isis, and her other-world influence. The resurrection of Osiris through the efforts of Isis symbolized the rebirth of the soul, and it was this that made the Isis cult the greatest of Egyptian religions, though there is no evidence that it had attained to any importance, or was even in existence, before the New Empire. Through her mysteries the worshipper received the gift of immortality, which her magical powers enabled her to bestow. Her connexion with magic no doubt made her cult still more popular. In a papyrus of as early as 1553 B.C., a physician invokes her aid, beseeching her to employ in his interests the same arts by which she had healed the wounds of Set and Horus. She was called 'The Mighty in Magic.' By the time of the Saite and Greek periods (from 663 on) she had gradually developed into a universal nature-goddess, a beneficent, maternal deity whose hand was full of all manner of blessings, temporal and spiritual. She was 'The Great,' 'The Great Mother,' 'The Mother of the Gods'; local goddesses were invested with her characteristics, and she in turn took on theirs, until the distinction between them and her was little more than one of mere name. She became the great prototype of all goddesses. Her importance in the cult far overshadowed that of Osiris; she even had independent shrines, as, for example, the temple of the XXIst dynasty at Gizeh, called 'the temple of the Mistress of the Pyramids.' Her most important seats of worship in Egypt were at Memphis, and on the island of Philæ, at the southern extremity of the country, where her temple, first completed in the reign of Nectanebos (360–342), remained open until A.D. 560, when it was closed by order of Justinian (Meyer, *loc. cit.*).

Outside of Egypt, the Isis-Osiris cult rose to importance nowhere until the Hellenistic period (from 333 B.C. on), though it was known in Phœnicia in the 7th and 6th centuries before Christ, and was communicated thence to other parts of the world. Evidences of it are abundant, however, in every part of the Hellenistic and Roman world. The Greeks saw in Isis and her mysteries an analogue to Demeter and the Eleusinian mysteries, identified Osiris with Dionysus, Horus with Apollo, Seb and Nut with Kronos and Rhea. As early as 333 B.C., in spite of Greek prejudice against foreign cults, the erection of a temple at Peiræus was permitted, and under the Ptolemys the cult was received at Athens itself, and a temple erected at the foot of the Acropolis. The use of the word 'Isis' in the composition of citizens' names—Isidotos, Isidoros, etc.—and the numerous reliefs representing Greek ladies in the character of Isis afford evidence of the popularity of the cult. There were two temples in Corinth (Daremberg-Saglio, *Dictionnaire des antiquités grecques et romaines*, *s.v.* 'Isis, Histoire'; Drexler, in Roscher, *s.v.* 'Isis,' 373–391).

The success of the cult in the West was even more pronounced. Sardinia had received it before the Hellenistic period, probably through the Phœnicians; Malta, Sicily, and Southern Italy admitted it later. Puteoli was an important centre in Campania, while the cult was also strong at Pompeii, Herculaneum, and Stabiæ. The Pompeian temple of Isis, of which the remains are still to be seen, was founded between 200 and 80 B.C., was ruined by the earthquake of A.D. 63, and was the only temple in the city which had been restored when the final catastrophe occurred in 79 (H. Nissen, *Pompejan. Stud.*, Leipzig, 1877, pp. 671, 170 ff.). First introduced into the city of Rome in the time of Sulla, though probably it found a place in Ostia and the suburbs before this, it was the object of so much distrust on the part of the conservative citizenship of Rome that in 58 B.C. its altars on the Capitoline, and its chapels (to the number of fifty-three), were destroyed by order of the Senate. In 54, 50, and 48 similar events occurred; in 43 the triumvirs decreed a temple to Isis and Serapis, and the cult seemed about to gain the permanent support of the State; but in 28 Augustus excluded the worship from inside the Pomerium, or augural limit of the city, his policy of opposition to foreign cults having been stimulated by the war with Antony and Cleopatra; in 21 Agrippa forbade the erection of chapels within a radius of seven and a half stades from the limit; and Tiberius, in A.D. 19, as a result of certain scandals in connexion with the cult, destroyed its places of worship and banished its priests. Under Caligula, however, the cult seems to have been recognized by the State, though it was not yet in possession of the right to erect temples within the Pomerium, nor supported by the public funds. It grew, nevertheless, and abundant evidence of its strength is to be seen in the art and literature of the Empire. Under Caracalla the law was made null which had kept its temples outside the Pomerium, and henceforth it enjoyed perfect equality of rights with other cults. Its altars and shrines of minor size and importance had no doubt existed in the city from the first, and it had been strong in the support of the lower classes. Besides its lesser shrines and chapels, its greatest temples were that in the sixth region erected by Caracalla, that on the Cælian, east of the Coliseum, from which the third region took its name (*Isis et Serapis*), and the great temple in the Campus Martius, east of the Pantheon, which was voted in 43 B.C., but probably not erected until about A.D. 39, burned in 80, and restored by

Domitian, Alexander Severus, and Diocletian (S. B. Platner, *Topography and Monuments of Ancient Rome*, revised ed., Boston, 1911, pp. 62, 358). From the 2nd cent. onwards, it was one of the most bitter and effective antagonists of Christianity, and, when the final struggle occurred, numbered among its adherents many of the first families of Rome. Symmachus, Vettius Agorius Prætextatus and his wife, and Virius Nicomachus Flavianus were its ardent defenders. In the three months' revival of pagan religion at Rome in A.D. 394, when Nicomachus Flavianus espoused the cause of Eugenius against Theodosius, Isis, Mithra, and the Great Mother of the gods were in the foreground, as they were throughout the struggle with the new religion. The festival of Isis was celebrated with great pomp on this occasion (*Codex Parisinus*, 8084, lines 98–101). With the fall of Eugenius the cult passed out of history at Rome, though the worship persisted here and there in the Roman world until the middle of the 5th century (Wissowa, 'Religion und Kultus der Römer,'[2] Müller's *Handbuch*, v. 4, p. 95 ff.; Drexler, *loc. cit.* 394–409). The fall of the famous Serapeum of Alexandria occurred in 397, but the temple at Philæ was not closed until 560, when Justinian's general, Narses, took its priests captive and forbade the worship. The vigour and long life of the religion of Isis, as well as its rise and spread to all parts of the world, are to be explained on the ground of the universality of the character of the goddess, who included in herself the virtues of all other goddesses, by the attractiveness of her ceremonies, by the fascination of her mysteries, and, above all, by the rewards which she could offer the faithful initiate—purification, forgiveness, communion, regeneration, and immortality of soul; in short, the qualities to which it owed its success were the very same which existed in a fuller and less artificial form in Christianity itself. While the antagonism between the two religions may have been bitter, and reached a violent stage in many places, it is nevertheless true that the transition to Christianity was quite as much a process of blending as a violent displacement. Isis herself was identified with the Virgin Mary, Horus with Christ, and some of the legends of the Saints are traceable to legends of the Isis cult (Drexler, 426–548; Lafaye, 'Histoire du culte des divinités d'Alexandrie hors de l'Égypte,' pp. 167–170).

In art, Isis is represented as a matron, standing, draped in a long robe reaching to the ankles, mantle thrown over the shoulders and crossing the breast, where it is made into a large and very apparent knot, and often a veil, symbolic of secrecy. In her right hand is the sistrum, in her left a small ewer. Her hair is abundant, and on her forehead rises the lotus, emblem of the resurrection. Stars or crescent sometimes figured in the representation, in token of her astronomical significance; Sirius was her especial star, and she is sometimes figured sitting on the back of a dog representing it. As a deity of agriculture, like Demeter, she is figured with torches, heads of wheat and poppies, serpents, the mystic chest, or the horn of plenty. As queen of the lower world, she is represented in black marble or basalt. In her character as deity of the sea, she often appears on coins in a boat with sail raised, with symbols of the sea. As goddess of love and maternity, she is accompanied by the infant Horus, or Harpocrates, who is often clasped to her breast or being nursed. Sometimes Osiris completes the group, which forms a kind of holy family (Apuleius, *Metam.* xi. 3, 4; Daremberg-Saglio, *s.v.* 'Isis, Attributions et images').

The practices of the Isis-Osiris cult in Roman times may be assumed to represent with more or less accuracy those of all lands in which the religion found favour. Its main festival occurred on the last day of October and the first three days of November (for the date see Wissowa, 'Religion und Kultus der Römer,'[2] p. 354), as follows: October 31, *Heuresis*; Isis, in company with Nephthys and Anubis, and with manifestations of deepest grief, in which priests and mystics participate, searches for the body of Osiris; November 1–3, the celebration of the finding, or resurrection, of Osiris, with unrestrained expressions of joy, November 2 being called *Ter Novena*, perhaps from a chorus consisting of three times nine participants, and November 3, *Hilaria*, from its character, which was like that of the corresponding festival of the Great Mother. Another annual festival was that called *Isidis Navigium*, which occurred on March 5, at the opening of navigation. A ship, richly equipped, and laden with spices, was sent to sea as an offering to the goddess. Apuleius (*Metam.* xi. 7–17) describes this festival as it took place at Cenchreai near Corinth. It may have had a parallel at Rome in a ceremony at the mouth of the Tiber. Two other festivals, *Sacrum Phariæ* and *Sarapia*, mentioned in the *Menologia Rustica*, the first on April 25 and the other somewhat earlier, were of less importance. The *Pelusia*, on March 20, was a festival whose motive was in the flooding of the Nile, and was introduced at Rome at a late date. *Fasti Philocali*, and Lydus, *de Mensibus*, iv. 40, are the first evidences of it (Wissowa, 'Religion und Kultus,'[2] p. 354 f.).

The conduct of the cult was in the hands of priests and priestesses, chosen by the cult associations for various terms. There seems to have been a high priest, *summus sacerdos*, *sacerdos maximus*, *primarius*, *præcipuus* (Apul. xi. 20, 17, 21, 22), who was perhaps the same as the *propheta primarius* (ii. 28). The *grammateus* was another priest. Each association was officered by a pater, a quæstor, or treasurer, and decurions, if the membership was large. Numerous names mentioned in inscriptions indicate that different associations performed special duties in the processions. There were the *pastophoroi*, who carried little shrines upon litters; *pausarii*, so named from their pauses at certain places along the route; *Anubiaci* and *Bubastiacæ*, who may have impersonated Anubis and Bubastis; etc. Those who fulfilled a priestly office were obliged to keep head and face clean shaven, to wear linen garments, and to abstain from certain things (Wissowa, 357 f.; Daremberg-Saglio, *s.v.* 'Isis, Les associations, Le sacredoce').

According to Apuleius, there were three degrees—one of Isis, another of Isis and Osiris, and a third of actual priestly functions. Accurate knowledge of the observances through which the mystic passed in his rise from one degree to another is impossible because of the comparative strictness with which ancient writers keep the rule of secrecy.

The account of Apuleius, however (*Metam.* xi.), throws general light upon both the public and the private character of the cult, in spite of the author's reserve regarding the secret part of his experience. Lucius, the hero of the tale, in whose character Apuleius is narrating his own experience, determines to devote himself to Isis. The goddess herself has so directed him in a vision (xi. 5). The procession of the following day was that of *Isidis Navigium*. First came a line of masqueraders, strikingly costumed—a soldier, a hunter, a gladiator, etc. At the head of the procession proper marched women clad in white, with flowers in their hair and hands. Others followed bearing mirrors behind them, held up to the face of the advancing goddess, so that she might see the members of the procession coming, as it were, to meet her, and were followed by still others who carried ivory combs which they employed in the pantomime of dressing the deity's hair, and others who sprinkled the streets with balsam and unguent. Next came a great number of men and women with waxen tapers and other lights, and then musicians with pipes and flutes, in

whose train advanced a chorus of chosen youths clad in snowy white, chanting a hymn. More pipers followed, and heralds, after whom marched the train of mystics, men and women of all ages and conditions, luminous in pure white, the women with anointed hair covered with transparent veils, and the men with smooth-shaven shiny heads; and all were keeping up a shrill jingling with bronze, silver, and even golden sistra. Then came the chief ministers in shining linen, bearing insignia of the mightiest gods. The first carried a golden lamp; the second, models of altars; the third, a palm tree with golden leaves and a golden caduceus; the fourth, a left hand, the symbol of equity, and a golden vessel in the form of the female breast, from which he poured libations of milk on the ground; the fifth, a golden winnowing-fan with thick golden branches; and another, an amphora. The next feature of the procession was a number of men who represented various deities: Anubis, the messenger-deity, bearing in his left hand the caduceus and with his right shaking a green palm; a cow, erect, the symbol of the universal parent-goddess; etc. These were followed by one who bore a chest containing secret paraphernalia; another who bore the effigy of a great divinity which resembled neither beast nor bird, nor even man; and, finally, by a priest with sistrum and crown of roses. After the sending out of the sacred ship the mystics returned to the temple, deposited the holy symbols, were formally dismissed, and, after kissing the feet of the silver statue of the goddess on the temple steps, went home, carrying branches of olive, flowers, and herbs, and filled with joy (*ib.* 8–17). Lucius then took up his abode within the temple enclosure, and attended all the services of the priests, studying and meditating until the goddess announced in a dream that the time for his initiation was at hand. He was first bathed, or baptized, in public, then brought to the feet of the goddess to receive secret instruction, and ordered, before the world, to abstain for ten days from wine, the flesh of animals, and all abundance of food. At the end of this period the evening of his consecration arrived. Having been favoured, at sunset, with many presents from the multitude of assembled worshippers, he was left by the throng, and in the night conducted by the priest to the inner recess of the temple, where he was the recipient of revelations and the witness of sights such as he was not permitted to divulge to a greater extent than in the following suggestive description: 'I approached the confines of death, trod the threshold of Proserpina, and returned borne through all the elements; at midnight I saw the sun gleaming with bright light; the gods below and the gods above I approached face to face, and adored near by' (*ib.* 23). The next morning he appeared before the people dressed in twelve stoles, a beautifully coloured garment of linen, and a precious scarf which covered his back from neck to ankles, all of these articles being decorated with paintings of animals in various colours. With a burning taper in his hand and a chaplet of palm leaves on his head, he was suddenly revealed to the multitude by the drawing of the sanctuary curtains (*ib.* 24). He then, at the admonition of the goddess, spent a year in Rome, and at the end of that time was initiated into the mysteries of Osiris. A short time afterwards, he was for the third time directed in a vision to be further initiated. This he did, becoming also a member of the college of *Pastophoroi*, in which he held the office of Quinquennial Decurion (*ib.* 26, 30).

The regular services in a temple of Isis comprised two ceremonies each day. The first occurred at sunrise, when the priest opened the doors, 'waked the deity,' and after several moments of prayer, made the round of the altars, performing the sacred ceremonial and pouring libations at each, after which rites the worshippers loudly announced the first hour of the day (Apul. *op. cit.* 20). At the second ceremony, which took place in the afternoon, the priest held up before the worshippers a vase of consecrated water, which they venerated as the first principle of all things (Martial, x. 48. 1).

GRANT SHOWERMAN.

**ISLĀM.**—Islām is the name peculiar to the religion founded by Muhammad, and embraces all the different sects which are now found among his followers. Thus, a Shī'ite and a Sunnite are both Muslims. *Islām* is the infinitive form of *aslama*, and means 'to resign oneself,' to profess Islām. It is sometimes looked upon by European writers as expressing complete resignation to the will of God in all matters of faith and duty; but this seems to be too wide an extension of the term, for Syed Amīr 'Alī says:

'The word does not imply, as is commonly supposed, absolute submission to God's will, but means, on the contrary, striving after righteousness' (*Spirit of Islam*, ed. 1891, p. 236).

But what is the idea of righteousness which the term 'Islām' expresses? It is given in the verse, 'Whoso is a Muslim, he seeketh after the right way' (*Qur.* lxxii. 14). Here, again, we need a definition of the words 'Muslim' and 'right way.' Muhammadan commentators explain them thus: the former means 'one who places his neck under the order of God,' 'one who comes under the order,' 'one who sincerely accepts the dogma of the Unity of God'; the other, the *rashād*, or 'right way,' is the 'finding of the reward of good works,' the 'desire of goodness.'

The term 'Islām' occurs twice in late Meccan *sūras*, but not in the earlier ones.

'That man's breast will be open to Islām' (vi. 125). 'Whose breast God has opened to Islām' (xxxix. 23).

In Medīnite *sūras* it occurs in the following places:

'The true religion (*dīn*) with God is Islām' (iii. 17). 'Whoso desireth any other religion (*dīn*) than Islām, that religion shall not be accepted from him' (iii. 79). 'It is my pleasure that Islām be your religion' (v. 5). 'Who is more impious than he who, when called to Islām, deviseth a falsehood concerning God?' (lxi. 7). 'We profess Islām' (xlix. 14). 'They taunt thee with having embraced Islām' (xlix. 17).

Some parts of the verb express the sense of embracing Islām, but they are chiefly found in late *sūras*: xlix. 17, ix. 75, iii. 60, xii. 101, xxxiii. 35. It is very important to bear this fact in mind. In a few places a more general idea of resignation seems to be referred to, as:

'They who set their faces with resignation Godward (*man aslama wajhahu lillāhi*), and do that which is right, their reward is with their Lord' (ii. 106), and 'I resign myself to the Lord of the worlds' (*aslamtu lirabbi-l-'ālamīna*) (ii. 125).

But these have to be interpreted in accordance with the meaning attached by Muslim commentators to the more definite ones.

Muhammadan theologians draw a sharp distinction between *īmān* ('faith') and Islām, and base it on the following verse:

'The Arabs say, "We believe." Say thou, "Ye believe not"; say rather, "We profess Islām (*aslamnā*)," for the faith (*īmān*) hath not yet found its way into your hearts' (xlix. 14).

Belief with the heart is one thing; the profession of Islām is another. It is outward obedience to certain rules, and it is only when sincerity (*taṣdīq*) is joined to it, as shown in the belief in God, angels, divine books, prophets, predestination, and the last day, that a man becomes a true believer. Shahrastānī, in the *Milal wa'n-Niḥal* (ed. London, 1846, p. 27), draws a distinction between Islām, *īmān* ('faith'), and *iḥsān* ('devotion,' 'benevolence') in the following tradition:

Gabriel one day came in the form of an Arab and sat near the Prophet and said: 'O Messenger of God, what is Islām?' The Prophet replied: 'Islām is to believe in God and His Prophet, to say the prescribed prayers, to give alms, to observe the fast of Ramaḍān, and to make the pilgrimage to Mecca.' Gabriel replied that he had spoken truth, and then asked the Prophet what *īmān* was. He replied that it was to believe in God, angels, books, prophets, the last day, and predestination. Again, Gabriel admitted the correctness of the definition, and inquired what *iḥsān* meant. The Prophet replied: 'To worship God as if thou seest Him, for if thou seest Him not He sees thee.'

This is borne out by the meaning assigned in Persian commentaries to the term 'Muslim,' which is said to designate a man who is a *munqād* and a *ḥukmbardār*, words which mean 'submissive' or 'obedient to orders.' A Muslim, then, is one who carefully keeps the outward works of the law, but, when he adds to it *iḥsān*, or devotion, he is a *muḥsin*, a man who does good works as well as pays attention to ceremonial observances; when to these he adds sincerity of heart and exercises faith (*īmān*), he becomes a *mu'min*, or 'believer.'

'The true believers (*al-Mu'minūn*) are only those who believe in Allāh and His Apostle, and afterwards doubt not' (xlix. 15).

The term 'Islām' emphasizes the Rabbinical precept that it is not the 'study of the law which is most important, but the practice thereof,' and connotes the formal performance of certain outward duties. It is doubtful whether it ever had an

ethical meaning attached to it. The commentators seem to be unanimous in using it in a mechanical sense. That agrees with the omission of the term in the earlier *sūras*; for it was not till Muhammad formulated his religion at Medina that the *Arkān-ad-dīn* ('pillars of religion'), the five obligatory duties of religion, came to be a formal part therein. Earlier, the word Islām does not appear to have been in common use. Thus, Islām, when looked at from the Muhammadan standpoint, loses much of the beauty which has gathered round the ethical idea of complete submission to the will of God, and really emphasizes the external and legal side of religion.

For the religions of Islām see MUHAMMADANISM.

EDWARD SELL.

**ISOCRATES.**—The place of Isocrates in the history of Greek oratory and the evolution of prose style is definitely described in Jebb's *Attic Orators* and his art. in *EBr*[11] xiv. 877. In ethics, Isocrates interests the student of to-day chiefly as a measure of the altitude by which Plato towers above the flats of the average moral sentiment of refined and educated Greeks of the 4th cent. B.C. But to Ascham, Milton, and the educators of the Renaissance generally, he was a still edifying expositor of the great commonplaces of morality and the conduct of life. Thomas Elyot says of him:

'Isocrates, concerning the lesson of oratours, is euerywhere wonderfull profitable, hauynge almost as many wyse sentences as he hath wordes: and with that is so swete and delectable to rede, that, after him, almost all other seme unsauery and tedious: and in persuadynge, as well a prince, as a priuate persone, to vertue, in two very litle and compendious warkes, wherof he made the one to kynge Nicocles, the other to his frende Demonicus, wolde be perfectly kanned, and had in continual memorie' (*The Boke named The Gouernour*, London, 1883, i. 74).

The (probably genuine) 'protreptic' or parænetic discourse to Demonicus here mentioned is the earliest extant specimen of a long literary succession which in modern English literature extends from Sir Henry Sidney's Letter to his 'little Philip at school at Shrewsbury,' Polonius's advice to Laertes, and Sir Thomas Browne's *Christian Morals*, through Lord Chesterfield's *Letters to his Son*, down to Hazlitt's *Advice to a School-boy*, Thackeray's *Mr. Brown's Letters to his Nephew*, and their numerous recent imitators. The Demonicus anticipates many famous sayings, from C. Tourneur's 'Your predecessors were your precedents' (*Atheist's Tragedy*, I. ii.) to 'How doth the little busy bee.' In its pages the appeal to the secret tribunal of conscience (i. 16) and the Golden Rule (i. 14), on which Isocrates twice stumbles elsewhere (iii. 62 and iv. 81) as a happy turn of Gorgian rhetoric, stand in naive juxtaposition with the Chesterfieldian recommendation to win the favour of men by speaking 'advantageously of them behind their backs in companies who, you have reason to believe, will tell them again' (i. 33).

The two discourses in this kind that bear the name of Nicocles contain further parænetic matter together with many special considerations concerning the duties of good kings and loyal subjects—the theme of the βασιλικὸς λόγος of post-Classical and Renaissance oratory. They also discuss the style of this kind of writing, which, Isocrates tells us, is appropriately disjointed and aphoristic, and its matter, which, he thinks, demands not so much originality as industry in the collection of the best things already said by Hesiod, Phocylides, Theognis, and other moral poets. Isocrates here (ii. 44) and elsewhere deplores the perversity of mankind, who prefer the pleasant to the useful and the fables of mythology to the profitable admonitions of the gnomic poets.

The *Areopagiticus*, which has only its title in common with Milton's famous tract, was also a favourite with Renaissance moralists because of its impressive development of the topics of the degeneracy of the age, the licence of democracy, and the need for a restoration of the salutary discipline of the good old times.

The main ethical interest of the other orations lies in their resemblance to, yet their contrast with, Plato. Isocrates' ethics is utilitarian, not in any speculative sense, but in its prevailing tone and temper. His preaching is exactly that of the excellent fathers of families whose prudential philosophy fails to satisfy Glaucon and Adimantus in the second book of Plato's *Republic*. He celebrates not the beauty, not the absolute worth and intrinsic sanctions, but the profitableness of virtue. Honesty is and ought to be spoken of as the best policy (xv. 283). Isocrates repeatedly enforces this lesson with illustrations drawn from Greek history, and more particularly from the ruinous effects of a selfish policy of imperialism on the true welfare and prosperity of Athens and Sparta (vi. 34, viii. 14, 25 ff., xiv. 40). But even this empirical coincidence of happiness and righteousness he will not affirm absolutely or undertake to demonstrate (xii. 185 f.; but cf. xiv. 25). It is true, 'for the most part,' he says in a phrase made technical by Aristotle, and the wise man will govern his conduct by probabilities and the general rule (viii. 35). To this he adds the interesting remark that the law is most certain of verification in the longer life of cities and States (viii. 120, vi. 34–38), and he maintains that we may attribute the few cases of its apparent violation to the neglect of the gods (xii. 187), an expression against which Plato would have protested. As Dryden more piously puts it:

'I have heard, indeed, of some virtuous persons who have ended unfortunately, but never of any virtuous nation: Providence is engaged too deeply, when the cause becomes so general' (Preface to *Annus Mirabilis*).

But, though Isocrates deprecates (xii. 118) or sneers at (x. 1, xv. 84) the subtleties and the paradoxes of absolute Platonic ethics, he seems to have been increasingly moved to emulation by the success and the moral fervour of the *Gorgias* and the *Republic* (iii. 47, 59, ii. 29, vi. 59, viii. 28). Traces of this feeling appear in the passages already mentioned on the verification of moral law in history. It is still more apparent in certain edifying digressions on the true meaning of those ambiguous words, 'advantage' and 'gain' (πλεονεξία, iii. 2, viii. 7, 17, xv. 275, xii. 240; κέρδος, iii. 50). All men desire their own advantage, he repeatedly tells us, but they mistakenly seek it in taking wrongful advantage of others. All men desire gain, but they know not in what true gain consists.

In addition to this, Isocrates has many ethical or psychological observations that recall Plato or anticipate Aristotle. Though teaching alone will not make a good man of a bad one (xiii. 21), he is confident that 'virtue' can be taught (ii. 12 f.), as even the training of animals proves (xv. 213 f.). His list of virtues includes the Platonic four (ix. 22 f.) and incidentally others, as self-control and magnificence (ii. 19). 'Great-souled' is one of his terms of praise. He emphasizes the idea of moderation and the mean, and anticipates Aristotle in the remark that the virtuous mean is more akin to deficiency than to excess (ii. 33 f.), as also in the affirmation that virtue when won is the most stable of possessions (i. 5 f.; cf. iii. 47). The three motives of human action, he says, are gain, honour, and pleasure.

His conjectured influence upon Greek politics,

and the elements of political theory and terminology scattered through his writings, lie outside of our topic.

His religion is conventional and perfunctory, though he sometimes develops the Euripidean or anticipates the Platonic censure of the anthropomorphic mythology, which attributes human failings to the gods (xi. 41). References to the subject are sometimes introduced by the phrase: 'if I may properly speak of such ancient (or old-fashioned) things' (iii. 26, iv. 30). The gods, he tells us, govern mankind and apportion good and evil, not by direct intervention, but by the thoughts which they inspire in men (v. 150). In one passage he comes very near to the Ovidian 'expedit esse deos et ut expedit esse putemus' (xi. 24 f.). He alludes to the better hope of the righteous and of the initiated (ii. 20, iv. 28; cf. viii. 35), and he makes use of the conventional formula: 'if any perception remains to the dead' (xiv. 61). But the only immortality which he really expects is the subjective immortality of fame (xii. 260).

In ethics and religion, as in philosophy and eloquence, he cannot bear confrontation with his two supreme contemporaries; but, removed from the shadow of that comparison, he appears as a worthy citizen, an excellent teacher, and an estimable writer, whose works, if no longer valued for themselves, are indispensable to the understanding of the life and thought of the age of Plato and Demosthenes.

LITERATURE.—There is very little literature on the ethics of Isocrates. L. Schmidt, *Die Ethik der alten Griechen*, Berlin, 1882, may be mentioned. The philological literature is given in *EBr*[11] xiv. 881; R. C. Jebb, *Attic Orators*, London, 1893; F. Blass, *Die attische Beredsamkeit*[2], Leipzig, 1887–98; and W. Christ, *Gesch. der griech. Lit.*[6], ed. O. Stählin and W. Schmid, Munich, 1912 ff.

PAUL SHOREY.

**ISRAEL.** — **1. Introduction.** — An adequate treatment of the questions suggested by the name 'Israel' would require an encyclopædia to itself. All that is attempted is to trace the religious development which has given pre-eminence to Israel among the spiritual teachers of mankind. The religion of Israel cannot be satisfactorily studied apart from the external history of the race, but account will here be taken of the latter only in so far as it serves to elucidate the former. An inquiry into the historical value of the narrative of the Pentateuch is beyond the scope of the present article. Suffice it to say that by the name 'Israel' we understand that people which, though not originally homogeneous, had been formed into a single nation in Palestine about a millennium before the Christian era.

Of this nation the strictly Israelite element was of comparatively recent introduction, the Israelites before their conquest of the Canaanites and subsequent mingling with them having occupied the oases in the wilderness to the south of Palestine, where they had entered into close relation with the Kenites and other tribes of kindred stock as well as with the Midianites further east, from whom, perhaps, they learned to reverence Horeb, the holy mountain. They regarded themselves as closely akin to the Edomites, who seem to have gained a permanent settlement in the district south of the Dead Sea at a somewhat earlier date; and somewhat less closely to the Moabites and Ammonites on the east. The belief that their ancestors had been Aramæans and had once lived in N.W. Mesopotamia may not, perhaps, be of very ancient origin, and may be due to the fusion with Aramæan settlers which took place during the 8th and 7th centuries B.C. It was commonly believed among the Israelites that before the conquest of Palestine their ancestors had for some time sojourned in Egypt, where they had been compelled to do taskwork, from which they had been freed by Moses. It may be questioned whether all the tribes of Israel were ever in Egypt. The early legends which have come down to us had taken final shape at a time when stress was being laid on the national unity of Israel, and doubtless this unity has in many cases been wrongly ascribed to the past.[1]

**2. Tribal division and conquest of Palestine.**—The twelve tribes of which, in later times, Israel was considered to be composed fall into four groups, severally connected by descent from four women to whom they traced their ancestry. The Leah group included Reuben, Simeon, Levi, Judah, Issachar, and Zebulun; the Rachel group, Joseph (subdivided into Ephraim and Manasseh) and Benjamin. To Zilpah, said to be Leah's handmaid (whereby some dependence upon the Leah tribes seems to be indicated), were assigned Gad and Asher; to Bilhah, Rachel's handmaid, Dan and Naphtali.[2] We need not suppose that all the tribes finally incorporated in Israel had become confederated before the Exodus or even before the conquest of Palestine. For the Egyptian sojourn of the Rachel tribes at least we have the witness of Amos ($2^{10}$ $3^{1}$); for that of the Leah tribes we have no early evidence apart from the Pentateuch; but it would be difficult to explain the prominence of Moses, a Levite, in the traditions of the Exodus, if only the Rachel tribes had come out of Egypt. The tribes which are represented as descended from the concubines were probably of mixed origin, mainly Canaanite, and were incorporated in Israel only after the conquest of Palestine. In addition to these, in Judah at least, were other tribes, such as the Calebites, which, however, remained more or less distinct for a long time after their inclusion in Judah. It is probable that these clans entered upon their inheritance from the south; but, since Reuben, not Judah, is reckoned as the first-born son of Leah, by which priority of settlement is probably to be understood, and since Moses the Levite was buried in Reubenite territory east of the Jordan,[3] the Pentateuchal tradition, according to which the land between the Arnon and the Jabbok was first won by Israel, and W. Palestine was invaded from this region, may be accepted as correct for both the Leah and the Rachel tribes, though it is unlikely that these acted together. In the section Jg $1^{1-7}$ Simeon is associated with Judah, but the writer to whom we owe this section in its present form has probably modified an early tradition of Simeon's first invasion of Palestine to suit the fact that in later times Simeon was incorporated with Judah. Bezek, which is reasonably identified with the modern Ibzîk, 14 miles N.E. of Shechem, seems to be beyond the sphere of Judah's operations; but a Simeonite war in this neighbourhood is perfectly consistent with the fact that in Gn 34 (cf. 49) Simeon is found with Levi in central Palestine. We do not know

[1] We must guard against the supposition that every statement in the Pentateuch and the historical books of the OT embodies a 'tradition.' Hebrew writers were as capable of drawing inferences as modern commentators, and in some cases they cannot have intended their statements to be taken literally. In the section Gn $25^{1-4}$ we have what appears to be a mere literary device to show in genealogical fashion the connexion of Israel with Midian and other tribes. It is conceivable that the section is now misplaced, and that it once followed the account of the birth of Ishmael; but it does not harmonize well with the tone of that story, and in any case the editor who gave it its present position can scarcely have failed to notice its incongruity, if taken literally, with its context. In the OT we are dealing with writings emanating from a people whose ideas of arrangement were based on oral rather than on literary methods.

[2] Although the grouping of the Leah and Rachel tribes is probably pre-Palestinian, the names Leah and Rachel may be somewhat later. On such points certainty is impossible.

[3] It is a significant fact that Gn $50^{10f.}$ evidently implies that the tomb of Israel was east of the Jordan. The burial at Machpelah belongs to the later and exclusively Judæan modification of tradition.

the extent of the area occupied by these tribes, but it is probable that, allowance being made for the many strongholds which remained in the hands of the Canaanites, the five Leah tribes west of the Jordan were originally contiguous, Judah being settled in the south, where the tribe came into contact with the friendly Calebites, and Issachar and Zebulun in the plain of Megiddo and the district to the north.

The permanent effect of this invasion of W. Palestine was not very great. Issachar and Zebulun were entirely dominated by the Canaanites; Simeon, which, next to Reuben, must have been originally the most important of the Leah tribes, was before long expelled from its first settlements, the survivors finding a refuge in the south;[1] at the same time Levi as a territorial tribe ceased to exist. Since, however, in view of Gn 34, 49, it can hardly be maintained that Levi was always merely a priestly caste, we may reasonably conclude that the tribe of Levi once had a settlement just where we should expect to find it, viz. between Simeon and Judah; and, if so, we may hazard the guess that Shiloh was the chief sanctuary of Levi, while the tribe still occupied territory in central Palestine.[2]

The Leah tribes' invasion was followed by a second, undertaken by the Rachel tribes under the leadership of Joshua. These crossed the Jordan near Jericho, which they took, advancing thence to Ai and Bethel, from which point they gradually extended their power over central Palestine.[3] For a long time many Canaanite fortresses remained unsubdued, but the tribes of Israel (Leah and Rachel) were able by degrees to consolidate their position and to exercise some sort of hegemony over tribes of mixed origin—the sons of the handmaids. The assignment of Gad to Leah's handmaid may be explained by the position of the tribe immediately to the north of Reuben—Asher, similarly assigned, being contiguous to Zebulun. Dan, assigned to Rachel's handmaid, lay immediately to the west of the Rachel tribes, and the similar assignment of Naphtali may perhaps be accounted for by its proximity to the northern Dan. Benjamin, which would appear to have been originally a subdivision of the Joseph tribes,[4] gained in importance sufficiently to be reckoned as a separate tribe, and colonists from Manasseh re-crossed the Jordan and settled in Bashan.

3. **Union of the tribes.**—It is impossible here to do more than indicate briefly the process by which the tribes of Israel were welded together. The cause of unity was the common danger which for several generations threatened the tribes, either from the original inhabitants of Canaan, whom they had sought to dispossess, or from other invaders, such as the Philistines, who, like Israel, were seeking to gain possession of the country. Thus the struggle against the king of Hazor (Jos 11, Jg 4) probably involved not only Naphtali, but also the neighbouring tribes; the power of Sisera and the fortified towns of the plains of Megiddo and Jezreel threatened both the Leah tribes, Issachar and Zebulun, and the Rachel tribes to the south of them. From time to time a military leader who had been successful in struggles of this kind would exercise authority as a king in the region which he had delivered. Thus Gideon was elected king[1] over some portion of Manasseh and Ephraim. Somewhat later, apparently towards the end of the 11th cent. B.C., the opposition of Philistine Ammonites and Amalekites demonstrated the need of concerted action, and for a time united the Rachel tribes with the Leah tribes farther south. The union was short-lived, and was broken in the reign of Rehoboam; but it gave to later ages an ideal of what Israel should be.

An exact history of the reigns of Saul and David is impossible. The longer accounts of these reigns—though they doubtless embody some true traditions—are inconsistent with the short summaries given in 1 S $14^{47f.}$ and in 2 S 8. These sections, which are certainly quite independent, show that in the circles in which they originated all that was definitely known of the reigns of Saul and David was that certain wars had been waged during this period, the exploits of the two kings not being clearly distinguished.[2]

4. **Early religion of Israel.**—Of the religion of the tribes of Israel proper at the time of the conquest of Palestine we have no direct information; all the stories relating to this period are written for the edification of later ages and are coloured by their circumstances. The most noteworthy passages which throw any light on the subject are Am $5^{25}$ and Jer $7^{22}$. If in both the 8th and 7th centuries B.C. it could be asserted that Israel had not offered sacrifices and burnt-offerings during the sojourn in the wilderness, we cannot doubt that throughout the Monarchy there still existed in some circles traditions of a religion which must have been very different from what is presented to us, not only in the books of Judges, Samuel, and Kings, but even in the earlier documents of the Pentateuch. We need not go so far as to suppose that in the early days sacrifice was altogether unknown, but we shall scarcely do justice to the plain words of the prophets if we do not conclude that it was a comparatively infrequent rite, perhaps confined to the feast of the Passover. The statements of Amos and Jeremiah are also in harmony with the fact that the great feasts of Israel were mainly agricultural, and could not, therefore, have been celebrated by such people as the Rechabites (*q.v.*), who were loyal worshippers of the national God of Israel. It is not improbable that the Rechabites may be regarded as representative of the true Israelite, as distinct from the Canaanite, elements in Israel. Presumably before the conquest of Canaan the Israelites lived mainly on milk, as do the Bahima and the Todas in modern

[1] Whether the expulsion of Simeon was due to the Canaanites only, or, in some measure, to the Rachel tribes, cannot be determined. It is noteworthy that in Gn $34^{30}$ (cf. $49^{5-6}$) Israel repudiates the action of Simeon and Levi, and in Gn $42^{24}$ Joseph imprisons Simeon. The later settlement of Simeonites in Judah proves nothing as to their earlier home. The migration of the Danites from their original settlement furnishes an exact analogy. It is, indeed, not impossible that those Simeonites who survived the Canaanite onslaught retained their original settlement as an *enclave* in the territory of the house of Joseph as long as the N. Israelite kingdom lasted, perhaps as late as the destruction of Shiloh, mentioned in Jer $7^{12-15}$. The earliest evidence for Simeon's connexion with Judah is in Jg $1^{1-7}$, which in its present form is not earlier than the Exile.

[2] The history of Shiloh presents a most difficult problem. The place appears to have possessed a sanctuary of great importance, which contained the Ark. It is generally supposed that Shiloh was destroyed by the Philistines, and that the surviving priests fled to Nob; but the only ground for connecting the priesthood of Shiloh with that of Nob is the awkward statement in 1 S $14^{3}$. Moreover, Jeremiah ($7^{12}$) implies that the sanctuary of Shiloh had continued until fairly recent times (cf. Jg $21^{19}$). Its destruction perhaps took place in the catastrophe referred to in Is $7^{8}$, *i.e.* about 670 B.C. If the cult at Shiloh differed in important particulars from that of other sanctuaries of the Rachel tribes, we can understand why N. Israelite writers should ignore it. It is certainly hard to believe that the Ark (*q.v.*) was connected with the early religion of the Rachel tribes, for, had this been the case, a duplicate would probably have been made.

[3] Jos $8^{30-35}$ is based directly on Dt 27, and cannot be regarded as a 'tradition.'

[4] Cf. 2 S $19^{20}$, Am $5^{6}$ $6^{6}$.

[1] That Gideon, or Jerubbaal (if the two are really identical), was king is evident from Jg $9^{2}$. The account of Gideon's refusal of the kingship (Jg $8^{23}$) evidently proceeds from the same clerical school as 1 S 8 $10^{17-19}$ 12.

[2] Definiteness is no proof of historicity. Many of the incidents recorded may be historical, though they are not necessarily ascribed to the right persons. There is no reason to doubt that Goliath was slain by somebody, but the otherwise unknown Elhanan (2 S $21^{19}$; cf. $23^{24}$) was probably the hero on that occasion, his exploit being ascribed, centuries afterwards, to the better known Bethlehemite David.

times, though the eating of game may also have been allowed. We may accordingly picture the primitive Israelites as a race of men cruel, fierce, and barbarous indeed, but preserved by their abstinence from agriculture from that crude nature-worship with which agriculture was connected. It may well be that the great prophetic reformers of the 8th and 7th centuries B.C. were not so much innovators as champions of an ancient Israelite tradition which the most genuine Israelite families had never wholly abandoned.

The provenance of the name of the national Israelite God, Jahweh (Jehovah),[1] is as yet uncertain. Ex $3^{14}$ (E) represents it as revealed to Moses at Horeb, whereas according to J the name was known to the antediluvian ancestors of Israel (Gn $4^{26}$). Ex 3, as is shown below, reflects the circumstances of a later age, but it is noteworthy that Joshua bears a name compounded with the Tetragrammaton, and it is possible that the tribes of Israel were united in the worship of Jahweh before the conquest of Palestine.

Yet, if they gave to the God whom they worshipped the same name, they at all events represented Him by different symbols. The tribe of Levi, and probably all the Leah tribes, venerated a seraph, or winged serpent; the Rachel tribes, a bull. They seem to have practised circumcision—though the story in Ex $4^{24-26}$ might suggest that the rite had not been adopted by the primitive ancestors of Israel—but it was performed, at all events normally, not in infancy but in adolescence or manhood.[2] This fact and the use of flint knives (Jos $5^{2ff.}$, Ex $4^{25}$) show that the rite was of a barbarous character, as among the modern Zulus and other peoples. In the earliest times Jahweh would seem to have been regarded as a God of war, and we may conclude that the tabus to which we find warriors subject (cf. 1 S $21^{4ff.}$ etc.) date from primitive times.

We cannot say whether other features of Israelite religion were brought by Israel into Palestine or were there acquired. We do not even know whether the observance of the new moon and the Sabbath goes back to the earliest period. Similarly, we have no exact information regarding the ethical ideas current in Israel in pre-Palestinian days. It is probable that then, as in later times, polygamy[3] prevailed, and that, though adultery was condemned, concubinage was freely allowed. Ideas of blood vengeance may also be ascribed to the earliest period.

**5. Blending of Israelite and Canaanite religious ideas and traditions.**—It was not long before the Israelite conquerors, with the exception, perhaps, of some families, such as the Rechabites, became thoroughly merged with the conquered Canaanites, adopting the customs and consequently, to a great extent, the religion of the latter. Canaanite sanctuaries continued to exist as sanctuaries of the mixed race resulting from the fusion of conquerors and conquered. At these sanctuaries Israel would acquire the traditions of the patriarchal heroes associated with them. Thus we may suppose that at Bethel Israel learned the traditions of Jacob, at Ramah of Rachel, at Shechem of Joseph, and so forth; and these, being now regarded as ancestors of the united people, would have deeds assigned to them which in pre-Israelite times had not been told of them. The transparently artificial character of some features in the genealogies has already been noticed, and we have only to suppose that this free treatment of the genealogical style was possible in early times to account for much in the patriarchal stories which is otherwise inexplicable. Probably Joseph was at first revered as the ancestor of the population in the district of Shechem, where was his reputed tomb; Jacob and Rachel would be similarly honoured in the districts of Ramah and Bethel, Abraham at Hebron, and so forth. With the growing sense of the unity of the nation, traditions originally local would obtain a wider currency, and thus, in course of time, the reputed ancestors of clans would be regarded as ancestors of great tribes, or even of the whole nation.[1]

Perhaps the only sanctuary during the period of the Judges which might be regarded as genuinely Israelite was Shiloh. It is noteworthy that no theophany is related in connexion with it; no patriarch is buried there; its foundation is associated with no great name; while, on the other hand, a tradition which, though perhaps considerably modified, cannot be very late ascribes to it the possession of the Ark, and Jeremiah states that Jahweh put His name there at the first. If Shiloh was Israelite rather than Canaanite, we can understand why, as the absence of prophetic references shows, it was not popular among the mixed population. Jeremiah ($7^{12ff.}$) certainly implies that Shiloh existed as a sanctuary long after the period of the Judges, and Jg $18^{31}$, which is not at all early in its present form, is in harmony with the supposition. Jeremiah may have regarded Shiloh as the sanctuary which most nearly resembled Jerusalem.[2]

That the religion of Israel should be very greatly affected by that of Canaan was inevitable. Since in primitive times agriculture was bound up with religion, so that agricultural operations might almost be reckoned as ritual observances, a pastoral people in adopting agriculture would, almost of necessity, adopt the religion of the agriculturists. Hence Canaanite feasts became Israelite (see, further, art. FESTIVALS AND FASTS [Hebrew], vol. v. pp. 863–867), and the name *Baal* (*q.v.*), by which the Canaanites denoted their god, was applied to Jahweh.

Household gods appear to have been common (1 S $19^{13ff.}$, Gn $31^{19ff.}$); here and there a chieftain or wealthy man, such as Gideon or Micah, would build a sanctuary for an idol which would be reverenced by the family or tribe.

Of the appearance of these idols we have no information. The implication that David's *teraphim* was in human form only proves that this form was common when the story took shape. It would seem that the idol at Shiloh was a bronze seraph,[3] and

[1] There is no doubt that the pronunciation 'Jehovah' rests altogether on a misconception. At the same time the name, in this form, has so long been bound up with the religious ideas of English-speaking people that the author of this article thinks it might stand. But the form Jahweh, having been used throughout this Encyclopædia, is adopted in this article also.

[2] The proof of this assertion is to be found in the note in Jos $5^{4-7}$. The writer seeks to excuse the non-circumcision of the people on their arrival at Gilgal on the ground that during the journey circumcision had been impossible. No one could have accepted such an excuse, if the circumcision of infants had been contemplated, but it might be accepted as valid in the case of adults. We may perhaps infer from the story of the vicarious circumcision of Moses that the rite was occasionally practised on infants, but we should probably infer from Jos 5 that down to the Exile the normal time was manhood (see, further, art. CIRCUMCISION [Semitic], vol. iii. p. 679 f.).

[3] On such points it is impossible to speak definitely. It cannot be maintained that polyandry is found in the OT, though some Hebrew customs may be supposed to have originated in such a state of things.

[1] We need not suppose that all the stories of the patriarchs can be explained from incidents of which we have precise knowledge. The traditions of the nation generally have been finally shaped in the south, and incidents true with regard to Judah, or to part of it, may have been referred to N. Israel, or *vice versa*. There may have been, at least for some of the tribes, other periods of bondage besides that in Egypt. Thus Hosea ($12^{12}$) seems to refer to a bondage among the Aramæans, resulting in an Aramæan marriage alliance.

[2] We need not suppose that the account of the abuses at Shiloh represents a genuine tradition. The motive of the story is to exalt the priesthood of Zadok, and the abuses described are probably those against which the Zadokites protested.

[3] For the evidence of this statement see art. ARK, vol. i. pp. 791–793.

that the image made by Micah and stolen by the Danites was in the form of a bull (see, further, art. IMAGES AND IDOLS [Hebrew and Canaanite], above, p. 138 ff.).

Doubtless some cults were always merely local. In the Moloch worship which called forth the denunciation of the 7th cent. prophets we may recognize an early Canaanite cult of which, perhaps, a faint trace remains in the story of Melchizedek, in which the first-born children were sacrificed to the king as the embodiment of the god.[1] High places with altars (see artt. HIGH PLACE, vol. vi. pp. 678–681, ALTAR [Semitic], vol. i. pp. 350–354) appear to have been numerous, and there were not a few larger sanctuaries with temples and idols. Whether a priest was always necessary for a sacrifice it is difficult to say (see art. SACRIFICE [Hebrew]). The victim could, apparently, be slain by the offerer; but it is difficult to decide whether it was competent for the layman to burn the fat and to pour out the blood on the altar. All the more important sanctuaries had organized priesthoods in which the priestly office, though not necessarily hereditary, would tend to become so. The priest was the repository of religious tradition, and where there was an idol to be kept he, or a subordinate, was the custodian (see, further, art. PRIEST [Hebrew]). Most important of all, he was acquainted with the proper way of obtaining an oracle by means of the sacred lot, and possessed the necessary paraphernalia. A decision thus reached would, in matters of dispute, become a precedent for the future, and the priests would gradually become the exponents of much of the common law. How far their functions ever coincided with those of the 'sacred men' (*ḳᵉdhēshîm*) cannot be determined. Underlying the story in 1 S 2[22] we may perhaps discern a state of things in which the priests acted as *ḳᵉdhēshîm*, but in many cases, at any rate, the office was distinct. These 'sacred men,' one of the greatest blots on the ancient religion of Israel, the existence of whom was the chief cause of the prophetic antagonism to the high places, appear to have been Canaanite in origin. They acted as the surrogates of the god in stimulating the reproductive powers of nature. It is doubtless to the ideas associated with them that we may ascribe that other great blot, the sacrifice of the first-born. Since the 'opening of the womb,' the fruitfulness of marriage, was ascribed to the union with the god acting in the person of the *ḳᵉdhēshîm*, the first-born would naturally be regarded as the property of the god (cf. also art. FIRST-BORN [Hebrew], vol. vi. p. 35 f.). The office of 'sacred women' (*ḳᵉdhēshôth*) may have been simply an extension of the principle implied in the *ḳᵉdhēshîm*, or may have been directly derived from Ashtoreth worship.[2]

In addition to the priests, who were definitely attached to certain sanctuaries, and who ascertained the divine will by casting lots in the presence of the idol with sacrifice and due formalities, there were also diviners (*ḳôsᵉmîm*), who would appear, like the priests, to have made use of some method of casting lots. They were not, however, attached to any sanctuary, and their divination required neither sanctuary nor sacrifice. The references in Is 3[2] and Mic 3[7] show that the diviner during the Monarchy was a prominent figure in Israelite society.[3]

Besides the priests and diviners who ascertained the divine will by mechanical means, there were some who professed to possess the same knowledge through intuition or inspiration. These fall into two main classes, represented respectively by the seer and the prophet (see, further, art. PROPHECY AND PROPHETS [Hebrew]). These were in their origin quite distinct, although they were finally regarded as identical. The function of the seer is best illustrated by the story of Saul's application to Samuel concerning his father's lost asses. The prophets, on the other hand, were originally enthusiasts banded together, whose activities appear to have been directed in early times chiefly towards the stirring up of the martial spirit in Israel. Certainly such men as Isaiah or Jeremiah would not in earlier days have been included among the prophets. But—perhaps with the coming of peace—the prophets, whose efforts had been directed originally to the setting forth of Jahweh's will in war, tended to become exponents of His will in other matters, and thus, to some extent, approximated to the seers. It would seem that the prophets proper lived in communities,[1] and were supported largely by the gifts of those to whom they prophesied. The Nazirites (*q.v.*), of whom we have a full account only in the later legislation, were merely persons who for a greater or less period were bound by certain tabus. The term seems originally to have included the consecrated warrior (cf. Am 2[11f.]).

Of the religious history of Israel under the Monarchy down to the middle of the 9th cent. B.C. we have little information. We hear of Saul's construction of altars (1 S 14[35]), of David's bringing of the Ark to Jerusalem and institution of a sanctuary on Mt. Sion, of Solomon's building of the Temple, and of the adoption of Bethel and Dan as the national sanctuaries of N. Israel and as a set-off against Jerusalem. But the motive of all these stories belongs to a much later period; even the extraordinarily graphic narratives of 2 Samuel can be shown by both literary and historical criticism to have no claim to be considered contemporary history. It is only here and there, in some cases perhaps through the inadvertence of later editors, that we have glimpses of the primitive type of early Israelite religion. The hacking to pieces of Agag 'before Jahweh' (1 S 15[33f.]), the conception of the Ark (evidently regarded as Jahweh's actual dwelling-place), the method of its removal in a new cart drawn by horned cattle (2 S 6[3ff.]),[2] David's dance before it (2 S 6[14ff.]), and the mention of *ḳᵉdhēshîm* in the reigns of Rehoboam, Asa, and Jehoshaphat are sufficient evidence that, for a parallel to the religion of the average Israelite during this period, we must look to modern Uganda or India rather than to modern Judaism. Doubtless there were exceptions to the rule; and some families, such as the Rechabites, though they remained barbarous and uncivilized, were uncontaminated by the grosser pollutions of Canaanite religion—the true salt of Israel, which never wholly lost its savour.

**6. Introduction of Baal-worship.**—Israelite religious history may be said to begin about the middle of the 9th cent. B.C., when a new danger for the religion of Jahweh had been brought about by Omri's alliance with the kingdom of Tyre and the marriage of his son Ahab with Jezebel. Hitherto Jahweh, at least in name, had been ac-

[1] Cf. J. G. Frazer, *Adonis, Attis, Osiris*[2], London, 1907, ch. ii.

[2] For the whole subject see Frazer, *op. cit.* iv. § 5, and cf. art. HIERODOULOI (Semitic and Egyptian), vol. vi. pp. 672–676.

[3] It is impossible here to take account of classes of soothsayers such as those who interpreted natural phenomena, or dreams, or of those who professed to be inspired by a familiar spirit or some influence other than that of the god (see, further, art. DIVINATION [Jewish], vol. iv. pp. 806–814).

[1] Although there is no reason for believing that any of the canonical prophets were members of such communities or, to use the OT phrase, 'the sons of the prophets,' they certainly in many cases surrounded themselves with bands of disciples, to whom we are indebted for the preservation of their teaching. The collections of prophetic sayings have had, in many cases, an origin similar to the collections of the sayings of our Lord which we have in the Gospels.

[2] That this method of carrying the Ark was not due to clerical slovenliness is abundantly clear from the fact that the Philistines, who were particularly anxious not to outrage Jahweh's holiness, are said to have adopted a similar method (1 S 6[7ff.]).

cepted as the sole God of the nation.[1] But now an attempt was made to introduce the worship of the Tyrian Baal—an attempt which was the more dangerous since many elements of the Canaanite religion had already passed over into that of Israel. The new movement, which set forth with Tyrian gorgeousness the ideas which the people had inherited from their Canaanite forbears, was naturally not unpopular. In some circles, however, it was fiercely resisted. The protagonist in the struggle was a Gileadite prophet, Elijah, who left to his successor, Elisha, the task of maintaining the cause of Jahweh against Baal. It seemed for some time a forlorn hope, for Omri and Ahab were great kings; but the party of Elisha, taking advantage of the indignation against the royal family caused by the judicial murder of Naboth, at last succeeded, with the aid of the unscrupulous adventurer Jehu, in overthrowing the dynasty of Omri, and in forcing on the nation the acceptance of the principle: 'No God but Jahweh in Jahweh's land.'

It was in N. Israel that the cult of the Tyrian Baal had been most prominent; but Judah was not unaffected. We know little of the S. kingdom during this period; but it is almost certain that under Omri, and probably from the time of Baasha, Judah had been tributary to N. Israel. The absence of any direct statement to this effect is, doubtless, due to the pride of the Judæan editors to whom we owe the OT in its present form, for the facts can scarcely be interpreted in any other way. That Judah remained a separate kingdom may be explained from the common practice of ancient Asiatic conquerors, whose sole object was to obtain tribute, and who were content to leave the collection of it to native rulers.

Whether the school of Elijah attempted any reforms in the worship ostensibly paid to Jahweh we cannot say. Certainly the times were not very propitious, for Israel was engaged in a death-grapple with the Aramæans of Damascus, which lasted for more than half a century; but it is probable that the requirements of the religion of Jahweh were now formally set forth in the ancient Decalogue, which can be distinguished in both of the earliest documents of the Pentateuch, and which was probably drawn up in N. Israel, and subsequently adopted in Judah during the reign of Joash. The original draft of this Decalogue was probably engraved on two stone tablets which were preserved at Bethel, and the Judæan copy on two similar tablets which, since they vindicated Jahweh's rights against any other god, might well be deposited in the Ark, which had probably been originally the portable shrine of Jahweh's image[2] (the bronze seraph), and which perhaps still contained it. In this way we may explain how it was that the Ark came to be called 'the Ark of the Covenant.'

This early Decalogue was apparently as follows:

'(I.) I am Jahweh thy God, thou shalt worship no other god. (II.) The feast of unleavened cakes thou shalt keep: seven days thou shalt eat unleavened cakes. (III.) All that openeth the womb is mine; and all thy cattle that is male, the firstlings of ox and sheep. (IV.) My sabbaths shalt thou keep; six days shalt thou work, but on the seventh day thou shalt rest. (V.) The feast of weeks thou shalt celebrate, even the first-fruits of wheat harvest. (VI.) The feast of in-gathering thou shalt celebrate at the end of the year. (VII.) Thou shalt not sacrifice my sacrificial blood upon leavened bread. (VIII.) The fat of my feast shall not remain all night until the morning. (IX.) The first of the first-fruits of thy ground thou shalt bring into the house of Jahweh thy God. (X.) Thou shalt not seethe a kid in its mother's milk.'[3]

It speaks volumes for the thoroughness with which the reformation was carried out in the time of Jehu that, notwithstanding the influx of Aramæans into Israel during the 9th cent., the labours of the 8th cent. prophets, Amos and Hosea, appear to be directed not so much against Aramæan cults as against superstitions which went back to pre-Aramæan days. There is no evidence that in the middle of the 8th cent. B.C. there was any danger from Aramæan cults.[1]

**7. Reforming movement among 8th cent. prophets of N. Israel.**—The great forward movement in the religion of Israel dates from about the middle of the 8th cent. B.C. Outwardly things looked prosperous. The horror of the long Aramæan war was now over, and Jeroboam II. had been able to rectify the frontiers greatly to the advantage of Israel. There was now no doubt that Jahweh—whatever ideas were associated with the name—was the God of Israel, and to Him were ascribed Israel's victories. The people had experienced a 'day of Jahweh' in His activity manifested against the Aramæans, and thronged His temples in the hope of inducing Him by sacrifice and offerings to give yet further proof of His love for His own people and hatred of their enemies. In this religious fervour, ethical considerations were entirely ignored. The commerce which the dynasty of Omri had laboured to develop, and which had been checked by the Aramæan wars, had begun to flourish again, and, though it had produced an increase of wealth and culture, it had brought in its train all those disadvantages which must arise when there is a sudden growth in national wealth. The perverted sense of religion was shown in the fact that the very materials of the sacrificial feasts were frequently the outcome of extortion and robbery. There were some, however, who remained loyal to the old Israelite traditions. In their eyes, that which passed as culture and progress was altogether anathema. They argued that it would have been better to continue the old life of simplicity, better never to have 'eaten of the tree of knowledge,' than to be compelled to witness the shame and horror which so-called progress had brought with it.[2]

It has been stated above that it is unlikely that sacrifice was a prominent feature in the life of Israel before the conquest of Palestine, and it may perhaps have been limited to an annual offering of firstlings (Passover). In the 8th cent., however, it was an integral part of the religion of Jahweh as it was set forth at all the high places. In the pastoral days of Israel, when the people had subsisted chiefly on milk, only a very solemn occasion would have warranted the slaughter of one of the flock, and sacrifices must accordingly have been infrequent. But in the agricultural and commercial phase of Israelite life, there was no difficulty in procuring sacrificial victims, and the wealthy could gratify their gluttony at sacrificial feasts, while at the same time they flattered themselves that they were propitiating Jahweh.

It was to a people whose religious ideas were of

[1] The statements about Solomon's introduction of foreign worship (1 K $11^{1-8.33}$, 2 K $23^{13}$) are not corroborated by any early document.

[2] See art. ARK.

[3] Space forbids a fuller discussion here of this most important code of laws. For a fuller account see the present writer's essay, 'History of the Jewish Church from Nebuchadnezzar to Alexander,' in *Cambridge Biblical Essays*, London, 1909, pp. 95–99. The original order of the laws cannot be determined.

[1] Am $5^{26}$ might appear to disprove this statement, since, if it is genuine, it must be understood as referring to cults which had come in through Aramæan influence. The verse is, however, an isolated fragment having no connexion with the context; and, since the cults mentioned appear to be Assyrian rather than Aramæan, it is more likely that we have a fragment of a 7th cent. prophecy.

[2] The teaching which the writer of Gn 3 seeks to set forth by the present, doubtless greatly modified, form of the very primitive story therein contained probably expresses to a great extent the feeling of the Rechabites and the prophets of the 8th cent.; but there is no reason for supposing that the story was already current in N. Israel at this time. A very good discussion of the subject will be found in 'The Tree of the Knowledge of Good and Evil,' by F. C. Eiselen. in *BW* xxxvi. [1910] 101 ff.

this type that Amos, the first of those prophets whose teaching is collected in separate books,[1] addressed himself. There is no need to question the statement that he was not brought up as a prophet, and was not attached to any school or gild of prophets. It was a common belief in ancient Israel, and gave tremendous force to much of the prophetic teaching, that calamity of any sort implied divine displeasure. The impending calamity which called forth the eloquence of Amos, and which was, strange to say, apparently unperceived by the majority of the nation, was the threatened subjugation of the Palestinian States by the growing power of Assyria. Assyria was not unknown, at least to the governing classes, for Jehu, the founder of the reigning dynasty, had sought to strengthen his position by judicious presents[2] to Shalmaneser II. Few people, however, perceived that the independence of Israel was seriously menaced, and that the crippling of the Aramæan States, while it removed one danger, must bring about another infinitely greater. By what means Amos arrived at so true a perception of the political situation it is hard to say. There is much likelihood in the suggestion that for the disposal of the wool which his flocks produced he must have attended great markets, where he would learn the news of the world. The greatness of the man is shown by the fact that, when he realized his people's danger, he gave up all,[3] that he might bring them to a sense of their position. We know that he preached in the sanctuary at Bethel, probably on more than one occasion, but we have no means of determining the length of his ministry.

At such a place as Bethel it was clear that, if sacrifice was what Jahweh chiefly required, there was little cause for His threatened displeasure. Amos, accordingly, regards sacrifice as a misdirection of energy. He maintains that Jahweh requires mercy and righteousness, and will have none of sacrifice. Israel's fathers worshipped without sacrifice; why, then, should it now be imagined that sacrifice is the one essential?

It is not surprising that the man who shifted the centre of gravity in religion should have developed a new religious language. In his insistence on the ethical rather than on the physical holiness of Jahweh, Amos naturally gave a fresh *nuance* to existing terms. 'The day of Jahweh,' *i.e.* the day of Jahweh's activity, which was commonly understood as referring to the divine activity against Israel's foes, was used by Amos to denote the period of Jahweh's activity manifested against all unrighteousness, and, therefore, the period of punishment.[4]

A short time after the appearance of Amos another prophet began his ministry in the N. kingdom, probably at Bethel, but possibly at Shechem or in some other district. The book of Hosea, the text of which is very corrupt, is fragmentary and disjointed, and the meaning of many passages is very uncertain; but it is evident that we have here a varying background, and it would seem that the prophet's ministry, which, like that of Amos, began before the great catastrophe, was prolonged into the time of horror which preceded the final ruin of Israel.[1] The book of Hosea, even in passages which may well be dated before the anarchy of the closing years of the Israelite Monarchy, presents to us a much darker picture of Israelite religion than is found in the book of Amos. In the latter, with the possible exception of one very doubtful clause ($2^7$),[2] there is, strange to say, no attack on the religious prostitution practised at many, if not all, of the sanctuaries, which, being ostensibly carried on in Jahweh's name, degraded Him to the level of Baal. Hosea, however, taught, it would seem, by the sad experiences of his own domestic life, denounced this religious prostitution as subversive of all morality. Like Amos, he is convinced of the futility of sacrifice, but he shows more clearly than Amos that the sanctuaries are in themselves a cause of degradation to Israel. Covetousness and sensuality, lust and cruelty, are rife among the people, while at the same time they profess to base their hope on Jahweh who 'will have mercy, and not sacrifice.' In spite of the difficulty caused by the mutilation and corruption of the text, the prophet Hosea stands out as perhaps the most lovable of all the goodly fellowship. He had experienced the sorrow of finding that one whom he most tenderly loved was incapable of rising above degrading superstition;[3] and, feeling that Israel had behaved towards Jahweh as Gomer had behaved towards himself, he credited Jahweh with a tenderness towards Israel such as he himself felt towards his superstitious wife. He thus became the preacher not only of Jahweh's justice, but also of His love.

Hosea's opposition to the superstitions which had originated in nature-worship may have led him also to attack the reverence for the golden bull at Bethel, since the bull is a fertility-god. The present book of Amos contains no denunciation of the worship of idols, and it is probable that Hosea was the originator of the movement which, somewhat later, brought about the introduction into the law of Israel of a prohibition of image-worship.

Hosea's influence must have been great, for Jeremiah more than a century afterwards shows how deeply he has drunk of his teaching. But the times were unpropitious for religious reform, and the leaven of Hosea's spirituality was slow in leavening the lump of Israelite superstition. It was not long, however, before the prophet's predictions were vindicated by the course of events. In Tiglath-Pileser's campaign in 734 B.C. Israel felt the heavy hand of Assyria, and in 722 the kingdom of N. Israel came to an end.

**8. Continuance of the worship of Jahweh in Samaria after 722 B.C.**—It has been a too common mistake to treat the land of Israel north of the kingdom of Judah as virtually a vacuum after 722; but it is to the exigencies of this district that we must look for an explanation of the subsequent development of Israelite religion. Thousands of captives were deported by Tiglath-Pileser and Sargon, and probably by Esar-haddon;[4] and Esar-

[1] There is no more reason for supposing that Amos himself wrote down his prophecies than there is for believing that our Lord wrote down the Sermon on the Mount. It may well be doubted whether even Jeremiah actually dictated his prophecies. The author of Jer 36 has probably made Jeremiah's command to Baruch to collect his prophecies somewhat more definite than is warranted by an analytical study of the book.

[2] It is scarcely possible that this can have been tribute in the strict sense of the term. Statements of Assyrian kings must not always be accepted at their face value.

[3] The words, 'the Lord took me from following the flock' (Am $7^{15}$), imply the permanent giving up of the lucrative occupation of a sheep-farmer for the precarious livelihood of a prophet (cf. Ps $78^{70}$).

[4] The book of Amos has not come down to us in the form in which it was originally written. There is more than one *hiatus* in the book as it stands, which may be due to mutilation, and considerable additions and modifications have been made, in order to bring the teaching up to date. The strange absence of any direct mention of Assyria is, perhaps, not a primitive feature.

[1] We are unable to determine how long Hosea's ministry lasted. The minimum time is fixed by the account of the birth of the prophet's three children. Since Israelite women, like the Baganda, suckled their children for three years (cf. 2 Mac $7^{27}$), at least a period of some eight years must have elapsed between the birth of Jezreel (presumably at the beginning of the prophet's ministry) and that of Lo-ammi.

[2] There is no reason for understanding Am $2^{8a}$ as a reference to religious prostitution; $4^4$, according to the more correct translation, shows that worshippers came to the sanctuary the day before the sacrifice.

[3] It is probable that the fault of Gomer was not adultery in the ordinary sense, but that, like other Israelite women of her time, she considered union with the *ḳedhêshîm* a religious act. The guess may be hazarded that the slavery from which the prophet finally redeemed her was at some sanctuary; in other words, that she had become a *ḳedhêshâ*.

[4] The gloss in Is $7^8$, apparently written by some one possessing an accurate knowledge of the history, implies that about 65

haddon and his successor (Ezr $4^{2.10}$) introduced in their stead a number of colonists from N.W. Mesopotamia and other parts of the Assyrian Empire. But the worship of Jahweh was not extinguished. Indeed, it is not improbable that, on the one hand, the vindication of Hosea's teaching against idolatry by the destruction of the N. Israelite sanctuaries in 722 and the carrying off of their idols strengthened the hands of the reformers, and resulted in the enlargement of the existing Decalogue by a law forbidding the worship of images (cf. Ex $20^{23f.}$); and, on the other, the efforts on the part of the worshippers of Jahweh to win over the heathen settlers brought about a new and important development in religion.

**9. Reforming movement in Judah during the latter half of the 8th cent. B.C.**—Of the religious history of Judah we know practically nothing from the reformation under Joash till the reign of Ahaz. It must not be forgotten that the compiler of the book of Kings makes two assumptions which are of first importance for the criticism of the history which he relates. Writing from the standpoint of Deuteronomy, he concludes that those who have been worshippers at sanctuaries other than Jerusalem are thereby to be classified among those who 'have done evil in the sight of Jahweh'; and, believing that disaster is the chief proof of wickedness, he is apt to infer that those who have suffered disaster must have been sinners above other men. Having regard, then, to the fact that, so far as we are able to form an opinion from the scanty materials available, Judah down to the middle of the 8th cent. B.C. was in no respect in advance of N. Israel, and may perhaps have been inferior, it is precarious to argue that, because a particular superstition is not mentioned before a certain date, it must have originated later. We are certainly not justified in affirming that Ahaz introduced into Judah the sacrifice of the first-born simply because he is the first king of whom such a sacrifice is recorded. It may well be that an action which in the days of the earlier kings would have attracted no attention, because it was the universal practice, is specially mentioned in the case of Ahaz, because in his time it was done in defiance of the prophetic teaching. If more of Isaiah's discourses had come down to us, we should probably be in a position to understand the verdict passed on Ahaz by the writer of the book of Kings.

Isaiah's most important contributions to the religious thought of his people are to be found in his insistence on the incompatibility of Jahweh's majesty and holiness with the images by which He was represented, and in his declaration that the Assyrian has been the scourge in the hand of Jahweh to chastise Israel, and that, this being effected, Assyrian ambition and cruelty must be punished. Isaiah's attack on idolatry, which may perhaps have been inspired to some extent by the teaching of his older contemporary Hosea, dates from the very beginning of his ministry. In the allegory of extraordinary force and majesty in which he narrates his call (Is 6) Isaiah gave expression alike to a higher conception of Jahweh and to his conviction of the coming ruin of the national life of his people. He pictured Jahweh enthroned in His temple, not as a seraph,[1] but in human form, clad in a gorgeous robe of which the train covered the whole of the temple floor, so as to leave room for no other god. As though to show Jahweh's superiority to the popular conception of Him which found expression in the bronze seraph, Isaiah represented Him as ministered to by seraphim, whose form he modified, the more clearly to bring out their inferiority, thereby implying that Jahweh was as far above the popular views of Him as the great king is above the ministers who dare not lift their eyes to his face.

The course of events which led to Isaiah's prediction of Jahweh's judgment on the Assyrian oppressors is somewhat obscure. The prediction itself and the prophet's unwavering faith in Jahweh's protection of His people in the face of Sennacherib's menace[1] gave him a temporary influence in Judah which enabled him to induce the king, Hezekiah, to carry out a drastic reform. We have, indeed, no information as to the year of Hezekiah's reign when this was done, but there are indications that Isaiah met with not a little opposition during the greater part of his ministry, and it is, therefore, probable that a reform which must have been intensely distasteful to many people was not carried out till the prophet's influence had reached its climax. At the beginning of his activity as a prophet, Isaiah had attacked the crudity of thought which could accept the bronze seraph as the representation of Jahweh. His teaching was now carried into effect, and the venerable idol was destroyed (2 K $18^4$). Probably at the same time the primitive Decalogue, which had been accepted in Judah since the time of Joash, was enlarged by the insertion of a prohibition of 'molten gods' (Ex $34^{17}$).

The precise extent of Hezekiah's reform is uncertain. We are told that the *ăshērāh* (on which see art. POLES [Hebrew]), in the Temple court—perhaps associated specially with the *ḳᵉdhēshîm* and *ḳᵉdhēshôth*—was cut down, and some attempt may have been made to reform the high places.[2] We may wonder that a king who so dared to wound the religious feelings of many of his subjects should have kept his throne. Yet in the last years of Hezekiah's reign the political situation was such that there was little likelihood of revolt; for, since Sennacherib had taken from Judah and had annexed to the neighbouring States no fewer than forty-six fortified cities, the population of the remaining districts, cowed by the horrors of the Assyrian wars, may have felt compelled to accept the king's action.

**10. Reaction against the reformers.**—There can be no doubt that the reformers had gone beyond that which commended itself to the popular conscience. There were many to whom Hezekiah's iconoclasm would appear to be a sin crying aloud for vengeance, and it is not surprising that, when his death occurred a few years later, there was a violent reaction. Not only was there a recrudescence of the ancient superstitions, but new cults were introduced by Assyrian officials and settlers; so that the cause of a pure monotheism appeared, for the time, to be lost in Judah.

It must not, however, be supposed that Israelite religion gained nothing from foreign influences during this period. Worship even at Jerusalem had been very barbarous, and contact with more highly civilized and cultured people could not fail to introduce some much needed improvements in

years after 785 something happened to N. Israel which deprived it of any claim to be still considered a nation. It is quite likely that Egypt, for selfish ends, had induced Samaria to rebel, with the result that Esar-haddon crushed resistance once for all.

[1] It must not be forgotten that the image of Jahweh at Jerusalem at this time was a bronze seraph, *i.e.* a flying serpent (Nu $21^8$, 2 K $18^4$; cf. Dt $8^{15}$, Is $14^{29}$ $30^6$, and Herod. ii. 75 f.). The serpent form may already have been modified by the introduction of some human features.

[1] In the absence of any proof that the disaster to the Assyrian army happened during a later campaign, and having regard to the obscurity of certain details in Sennacherib's own account, the year 701 B.C. may still stand as the date of the great deliverance.

[2] In 2 K $18^4$ there is, as J. Wellhausen has pointed out (art. 'Israel,' *EBr*[9] xiii. 413), a combination of the general and the particular which is not very convincing. It is, needless to say, impossible to argue from 2 K $18^{22}$ that the reforms had preceded the Assyrian invasion. All that we can justly deduce from the speech put into the mouth of Rabshakeh is that it was written at a time when there was considerable indignation in Judah over the destruction of the high places.

this direction. It is noteworthy that the first meeting between the king of Judah and a king of Assyria resulted in an important innovation in the ritual at Jerusalem; for Ahaz, when he had been summoned to Damascus in 732, saw there a great stone altar more suitable for sacrifice on a large scale than the brazen altar which had hitherto been in use in the Temple, and had a copy of it erected (2 K $16^{10ff.}$), thereby inaugurating that increase of decency in sacrifice which made it possible for a rite so savage to continue for centuries longer the rallying-point of Israel.

11. **Religion of Jahweh in Samaria during the 7th cent. B.C.**—Though in Judah, with the accession of Manasseh, reform was crushed and the religion of Jahweh itself appeared to be in jeopardy, in the north the religious outlook was soon to become somewhat brighter. Since the fall of the city of Samaria, the old kingdom of N. Israel had been governed by Assyrian officials, and the name Samaria was now applied to that portion of it which lay south of the plain of Megiddo. In consequence of the deportation of Israelites and importation of colonists from other portions of the Assyrian Empire, there existed in the province of Samaria at the end of Esar-haddon's reign—perhaps earlier [1]—so large an admixture of Aramæan and other settlers that the religion of Jahweh which still survived was but one of many cults. The great sanctuary of Bethel [2] had been deprived of its priests, and for a time there seemed a possibility that not only the work of Amos and Hosea, but even that of Elijah and Elisha, might be undone. But there were still prophets in the land, and a plague of lions, doubtless occasioned by the long war and the partial depopulation of the country, gave them their opportunity. They declared the cause of the trouble to be the neglect of the cult of the God of the land, and so far convinced the new settlers that an appeal was made to the king of Assyria to allow the return of one of the Israelite priests, in order that he might teach the cult of Jahweh. The appeal was successful, and Bethel was reopened, by the express permission of a king of Assyria, as a sanctuary of Jahweh (2 K $17^{25ff.}$). It is probable that, if other sanctuaries had been closed, they were reopened at the same time; but Bethel was of particular importance, not only for its traditions, but also by reason of its proximity to the boundary between Samaria and Judah. We may well believe that some at least of the Judæan reformers who were persecuted by Manasseh would find an asylum at Bethel, and would add strength to the reforming ideas there existing. For the present, indeed, there was no thought of giving effect to the teaching of Amos and Hosea concerning sacrifice. The influx of heathen Aramæans and others had put the clock back. It would have been impossible to persuade them at the same time not only to forsake their gods, but also to worship their new God Jahweh in a way entirely strange to them, without sacrifice. The first thing to be done was to win them over to the religion of Jahweh, and, in order to do this, it was necessary, not to take away His high places and altars, but rather to encourage the building of them.[3] In one respect, indeed, Hosea's teaching had been vindicated. The golden bull of Bethel no longer existed, and worship without idols was accepted by the Bethelite priesthood,[1] who would presumably teach on the basis of the primitive Decalogue, now amplified by the insertion of a law forbidding the worship of images.

[1] Is $9^{11.12}$ may refer to the rush of Philistines and Aramæans to take possession of the land of those who had been deported from N. Israel. For 'the adversaries of Rezin' we should probably read 'his adversaries.'

[2] It may be that the priests of other N. Israelite sanctuaries were deported at the same time. There was, however, a special reason for removing the Bethelite priests, since Bethel was 'the king's sanctuary' (Am $7^{13}$), and its priests would consequently be more closely connected with the royal family.

[3] The religious exigencies of Samaria at this period will explain the presence of a law enjoining the making of altars 'in every place' specially consecrated to the worship of Jahweh (Ex $20^{24f.}$). A similar motive underlies the statements in 1 S $14^{35}$, 1 K $18^{30}$ $19^{10.14}$.

12. **Codification of law for Samaria.**—The newcomers in Samaria would require instruction not only in the Israelite law of worship, but in what may be described as the common law of Israel, which may perhaps in some details have been already modified by Assyrian influence. The old Decalogue was, therefore, now combined with a collection of laws relating to slavery, property, and the like, in order that the population of Samaria might be united by identity of customs.[2] This law, which, with some later modifications, is now found in Ex $20^{22}$–23, was probably issued originally as a separate document.

No mere code of laws could make those whose traditions were entirely heathenish whole-hearted worshippers of the God of Israel. They required to be taught the traditions of Israel, and to learn what great things Jahweh had wrought for the ancestors of the nation in which they were now incorporated. Hence the traditions which had been current at the great sanctuaries were collected, and worked into a continuous narrative, which embraced legends of the patriarchs, the story of the deliverance from Egypt, the sojourn in the wilderness, and the giving of the Law by Moses, which was identified with the code described above. That this document, which we know as the work of the Elohist (E), was originally designed for people who had quite recently been heathen is evident not only from such a statement as that in Gn $35^{2-4}$, but also from the fact that the proper name of the God of Israel is represented as not originally known to the nation as a whole, and as specially revealed to Moses. It may also be inferred that the story in Ex $3^{13-15}$ was intended for people of Aramæan stock, since the Tetragrammaton is explained as being identical with the Aramaic word meaning 'He will be.'[3] How long

[1] The account of Moses' destruction of the 'golden calf' (Ex $32^{20}$) might be thought to be suggested by what had actually taken place in the desecration of Bethel. Idols of various sorts, however, must have remained at some sanctuaries for a considerable time, and the method of destruction ascribed to Moses may be based on what was actually done in some places.

[2] The phrase 'to come near unto God' (Ex $22^{8f.}$ $21^{6}$) will naturally mean 'to come to the nearest sanctuary.' It doubtless arose when there were images, but does not necessarily presuppose them. There is no necessity to understand the term in $21^{6}$ to mean 'household gods.' The explanation of the rite is that, according to primitive thought, there can be no exemption from the common law (which in Israel forbade perpetual servitude) except for the gods. By being attached to the temple doorpost the slave was brought into perpetual servitude, theoretically, to Jahweh, but, since Jahweh did not claim his service, in reality to the master from whom he did not desire to be separated. An apparently contrary procedure, but based on precisely the same conception of the gods as exempted from common law, is found at Delphi and elsewhere, where a slave, in order to receive his freedom—the manumission of slaves being prohibited by the common law—was made over to the god, to whom theoretically he belonged, though he was not attached to the temple service (see Daremberg-Saglio, i. 302 ff.; C. Lécrivain in Daremberg-Saglio, iii. 1219; J. E. B. Mayor on Juv. i. 104 f.). This parallel is sufficient to disprove the argument based on Ex $21^{6}$ that we must ascribe the origin of these laws to a period when household gods were still recognised.

[3] The phrase 'I will be what I will be' (the translation 'I am,' in the sense of *εἰμί*, is impossible) is given in the first person, because Jahweh is represented as speaking. It is probable that in the latter part of v.[14] 'I will be' (EV 'I am') is a mistaken correction for an original Jahweh (יהוה). The original writer evidently supposed יהוה (Jahweh, Jehovah) to be related to אֶהְיֶה (*ehyeh*), 'I will be,' as the third person to the first. It must be remembered that, owing to the weakening which took place in the pronunciation of the vowels, the third person imperfect of the verb הוה, which, according to the Massoretic pronunciation, would, if it occurred, be pronounced יֶהֱוֶה (*yehĕweh*), must in earlier times have been pronounced יַהְוֶה, and must, therefore, have been nearly, if not quite, identical with the proper name of the God of Israel.

the process of the collection and redaction of traditions lasted we do not know, but it was probably completed by the end of the 7th cent. B.C. It may have gone on at more than one centre, but we shall not be wrong in assuming that Bethel, the chief sanctuary of Samaria, was responsible for its final shape.

It would in itself be unlikely that the school of men who produced E would have ceased from their activity at its publication. We may suppose that, shortly afterwards, a beginning was made with the work of collecting the various traditions as to the conquest of Palestine by the tribes, and the exploits of the judges, kings, and prophets. This does not mean that E itself was continued down into the Monarchy, for it is very doubtful whether any parts of the existing books of Joshua, Judges, Samuel, or Kings ever formed one document with it, but merely that the writing of E provided the stimulus for the collection of other N. Israelite traditions. It must be remembered that the collectors had a practical purpose, and were not actuated by antiquarian interests. Thus, in the story of Elijah, Jahweh's protagonist against foreign cults, we have precisely the teaching which was necessary in Samaria in the 7th cent. B.C. As Ex $20^{24}$ encourages the building of altars in places consecrated to Jahweh, so Elijah is represented as repairing the altar of Jahweh that is broken down, while at the same time he has friendly relations with heathen outside Jahweh's land (1 K $19^{14}$ $17^{9ff.}$). Similarly in E itself it is noteworthy that Balaam comes from 'Aram . . . from the mountains of the East' (Nu $23^{7}$). The story of an Aramæan prophet who was constrained to declare the superiority of Jahweh and Israel would have special force in Samaria in the 7th cent. B.C.

13. **Prophetic activity under Josiah.**—Meanwhile in Judah the violent reaction against reform which the accession of Manasseh had brought about was spending its force. Manasseh died about 641 B.C., and was succeeded by his son Amon, who died after a short reign of two years and was succeeded by his son Josiah, then only eight years old. We have no information about the early years of Josiah's reign, but it is evident from the subsequent course of events that the antagonism to the teaching of the school of Isaiah must have greatly moderated. For some time nothing occurred to give the necessary impetus to a popular reformation; but about the year 626 news of the havoc which the Scythians were working in the districts north of Palestine, and which menaced Judah itself, caused the prophets to preach repentance, in order that the threatened blow might be averted. Among these the most prominent, as he was undoubtedly the greatest, was Jeremiah, who for the next forty years or more exercised a profound influence on the religious development of his fellow-countrymen, though comparatively few were prepared to accept his teaching in its entirety. It is remarkable that Jeremiah shows few signs of direct dependence upon his great predecessor Isaiah, while he is evidently deeply imbued with the teaching of Hosea—a fact which may perhaps be explained on the hypothesis suggested above, viz. that during the persecution under Manasseh, Judæan reformers found an asylum in Samaria, especially at Bethel. The evils which Jeremiah believed to be calling forth the wrath of Jahweh are to a great extent those which the earlier prophets had denounced, but in addition to these there were some foreign cults of Aramæan and Assyrian origin, of which there had been an influx during the reign of Manasseh.

About five years after the beginning of Jeremiah's mission, during some building operations at the Temple[1] a book was found which, when read before the king, convinced him of the need of reform. There can be little doubt that the historian of 2 K 22 f., whose account, however, can scarcely be held to be contemporaneous with the events recorded,[2] identified this book with Deuteronomy. But this identification is beset with difficulties, even if the book read to Josiah be supposed to have included only chs. 12–26. If Deuteronomy be anterior to 621, it is hard to understand how, at a time when the province of Samaria was governed by an Assyrian official and Judah by a native king,[3] any man or school of men could have drawn up an entirely new code of law for all Israel. Men of average common sense do not legislate in the air for a situation which may conceivably arise nobody knows when, but for one which is actually present or imminent. Moreover, the ritual law of Deuteronomy with respect to the fat and the blood appears to be in substance later than that which is found in the Law of Holiness (Lv $17^{3-6}$), and which may reasonably be supposed to represent the custom in Jerusalem at the time of the Exile (cf. Ezk $44^{7.15}$). Further, Jeremiah's emphatic repudiation of the sacrificial law which, whenever he first uttered it, he reiterated as late as the fourth year of Jehoiakim is incompatible with the supposition that Deuteronomy became virtually canonical Scripture in 621.[4] There is, indeed, no need to call in question the main incidents of the finding of the book. It is true that, although in the Deuteronomic period the phrase, 'the book of *the* law' (*sēfer hat-tōrāh*), would naturally suggest Deuteronomy, the mere omission of the definite article would make a wider application possible. '*A* book of *tōrāh*' might be used of any collection of prophetic teaching (cf. Is $8^{16}$), and the book read before Josiah may have been a roll containing sayings of Micah (cf. Jer $26^{18}$), or of Isaiah, or, more probably, it may have been a collection of Hosea's prophecies which had been brought to Jerusalem from Bethel when the persecution under Manasseh had come to an end.

14. **Reformation under Josiah.**—It is evident that the king and his advisers felt the necessity of putting a stop to the superstitious rites practised at Judæan sanctuaries; but the accomplishment of this was by no means an easy matter, for the national welfare was popularly supposed to depend upon them. Mere legislation on the subject would have been futile, for there was no machinery to enforce such legislation. A solution of the difficulty was provided by what had hitherto appeared to be an unmitigated calamity, viz. Sennacherib's curtailment of Judæan territory eighty years before. No king, however absolute he may be in theory, can with safety shock the sensibilities of the overwhelming majority of his subjects, but,

[1] The description of the work (2 K $22^{5f.}$) apparently implies something more than mere 'church restoration.' The Temple may have been injured in some attack on Jerusalem during the reign of Manasseh—for the account in 2 Ch $33^{11ff.}$ may have some basis in fact—or even in the early years of Josiah. We might in this way account for the disappearance of the Ark, which could not have taken place very long before the fourth year of Jehoiakim, if, indeed, Jer $3^{16}$ be as early as this. But possibly the Ark was taken away at the time of Jehoiachin's captivity (cf. 2 K $24^{13}$).

[2] In an age when newspapers did not exist, events would not as a rule be recorded in writing immediately after their occurrence.

[3] It is true that the section 2 K $23^{15-20}$ (cf. $^{4b}$) implies that Josiah had jurisdiction in Samaria, from which it might be inferred not only that the cities which Sennacherib had taken away had been restored, but also that the province of Samaria had been annexed to Judah. This section, however, is clearly a later insertion, for v.$^{8}$ describes the area of the reformation as extending from 'Geba to Beersheba' (cf. 2 K $23^{1.2.5.24}$). Moreover, both Isaiah and Jeremiah address Judah and Jerusalem; Gedaliah is governor over the cities of Judæa (Jer $40^{5}$), and Zerubbabel is 'governor of Judah.'

[4] For a fuller discussion of the subject see R. H. Kennett, 'The Date of Deuteronomy,' in *JThSt* vii. [1906] 481–500.

thanks to Sennacherib, the kingdom of Judah had lost most of its important towns, and Josiah reigned over a little kingdom comprising country districts with small towns and villages, Jerusalem being the only city of first-rate importance.[1] We cannot be surprised that the king and his advisers shrank from causing mortal offence to Jerusalem; they probably considered, however, that, if a measure of reform could be introduced which could be accepted by Jerusalem, the opposition of the remaining portion of the kingdom would be a negligible quantity. Moreover, the Temple at Jerusalem was an annexe of the royal palace, and Josiah doubtless supposed that he would be able to exercise over it a supervision which would be impossible in the case of the country sanctuaries. With these principles in view, the king and his advisers carried out a sweeping reform. The country sanctuaries were destroyed utterly;[2] the *ḳᵉdhēshîm*, who had quarters even in the Temple, were put to death; the foreign cults recently introduced were abolished. No change was made in regard to sacrifice, except that it could now be celebrated only at Jerusalem. Needless to say, a change so tremendous as the abolition of sanctuaries numerous enough to be described in the terms 'upon every high mountain and under every spreading tree' (Jer $2^{20}$ $3^{6.13}$ $17^{2}$; cf. Dt $12^{2}$) for a time caused many difficulties. In the first place, it was necessary to make provision for the country priests, the Levites as they were called, who were now thrown out of employment, for the reformers would scarcely have dared, had they wished to do so, to treat them as they had treated the *ḳᵉdhēshîm*. Josiah doubtless supposed that, since the number of worshippers at Jerusalem would now be increased, the Temple revenues would be able to support a more numerous priesthood, and he seems to have intended that the priests who had ministered at the country sanctuaries should now be allowed to become members of the gild of Zadok at Jerusalem. But he had not taken into account the opposition of the Zadokites to such a scheme, and in effect those country priests who managed to gain a footing in the Temple at all were placed by the Zadokites in an inferior position, so that henceforward the Jerusalem priests were of two ranks (cf. 2 K $23^{8.9}$, Ezk $44^{10-14}$).

It is manifest that the discontent caused by the king's reforms in the country districts must have been intense. Even in Jerusalem the forbidden practices went on, if not in the Temple, at all events more or less openly. The country people had good cause for discontent, for, since no change had been made in the sacrificial law, and the domestic animals could be slain only at an altar, it had become illegal to hold a feast except at Jerusalem.[3] It would seem that some inhabitants of the more distant districts, having no altar near, dispensed with one altogether, so that it now became necessary to urge upon them the requirements of the sacrificial law. Under these circumstances it is not surprising that, although the original impetus to reform had been given by prophets who repudiated sacrifice altogether, a school of prophets arose who laid stress on the necessity of performing sacrificial ordinances. Against those who, because of their distance from Jerusalem, were inclined to drop sacrificial worship altogether, or to slaughter domestic animals without due ritual, the obligation of keeping the great feasts, which were, indeed, specially mentioned in the ancient Decalogue, was insisted on (Ex $34^{22f.}$), and old stories of the building of altars and of solemn sacrifice by the patriarchs were again told.[1] The result may be seen in the Jahvistic document of the Pentateuch (J), the idea of which may have been suggested by the similar document E, which was, perhaps, still taking shape in the province of Samaria. The population of Judah was homogeneous to a much greater extent than that of Samaria, and it was, accordingly, unnecessary to introduce any social legislation into this document; but the ancient Decalogue, which had probably been somewhat amplified in the closing years of Hezekiah's reign, and was perhaps already popularly ascribed to Moses, was enlarged by hortatory additions to suit the exigencies of the present situation.

The school to which we owe this document, and which may be considered as representative among the prophets of the State religion of the period, found no favour in the eyes of Jeremiah. It is highly significant that he is not mentioned in the account of Josiah's reforms given in 2 K 22 f. He remained unshaken in his conviction that sacrifice was unnecessary and displeasing to Jahweh. He gave an unqualified denial to the assertion that Moses had commanded it (Jer $7^{22}$), and declared, perhaps of the Jahvistic document itself, that 'the lying pen of scribes had wrought falsely' ($8^{8}$).

It is stated (2 K $23^{3}$) that Josiah's reformation was inaugurated by a solemn covenant to keep the law on the part of the king and the people. That there was some solemn publication of what was henceforth to be the law at some stage of the reformation is likely enough, but it is more probable that this did not take place at the beginning of the movement, but when it had made sufficient progress to ensure the absence of any very violent opposition. The present narrative has a strongly Deuteronomic colouring, and seems to have been modified since it was first written.[2] The code now contained in Ex 34 may well represent the basis of the 'covenant' determined upon by Josiah (note particularly v.$^{27}$), though the hortatory introduction is probably of somewhat later date.

Notwithstanding the deep cleavage between Jeremiah and those prophets who approved of Josiah's compromise, the influence of Jeremiah must have been great. He attacked unsparingly the superstitions which all Josiah's zeal had been unable to stamp out, as well as the moral evils from which even the reformed Temple was by no means free. It was doubtless in no small measure owing to him that, at the disillusionment caused by the troubles which followed the death of Josiah, there was not a far greater recrudescence of the superstitions which that king had put down.

The false hopes raised in Judah by the defeat of Pharaoh at the battle of Carchemish again

[1] The supposition that it was Isaiah's teaching that gave to Jerusalem the unique position afterwards assigned to it rests on the most flimsy basis. Scanty as are the fragments of Isaiah's teaching which have been preserved to us in their original form, it is clear that Isaiah took the same view of sacrifice as Amos, Hosea, and Jeremiah. Isaiah's contemporary, Micah, had even declared that Zion should be 'plowed as a field' (Mic $3^{12}$, Jer $26^{18}$).

[2] We have no knowledge of the exact limits of Josiah's kingdom. It is not improbable that some sanctuaries, which were originally Judæan, especially in the southern districts, were not at this time subject to the king of Judah, and thus temporarily escaped destruction.

[3] The words put into the mouth of Rabshakeh (2 K $18^{22}$) probably reflect the discontent caused by Josiah's reforms.

[1] It is obvious that, after the limitation of sacrifice to the one altar at Jerusalem, a considerable time must have elapsed before it came to be recognized that the high places as such had always been displeasing to Jahweh.

[2] Thus, whereas according to 2 K 22 the book that is found is 'the book of the law' (*tôrâh*), in $23^{2}$ it suddenly becomes 'the book of the covenant' (*bᵉrîth*), though nothing has as yet been said about any covenant. In v.$^{3}$ the English versions tacitly follow the LXX in rendering 'made a covenant,' and this probably represents the correct text, for the reading of the Massoretic text, 'made the covenant,' is scarcely possible. The words, 'to confirm the words of this covenant that were written in this book,' are probably an addition by a Deuteronomic editor, and this addition has caused the modification in the description of the newly found book in v.$^{2}$, and the consequent alteration of '*a* covenant' into '*the* covenant' in v.$^{3}$.

called forth Jeremiah's activity. His earlier anticipations of Judah's ruin at the hands of a foe from the north had not been realized; for, though the Scythians had come very near, there is no evidence that they ever invaded Judah. But now there was a prospect of the domination of a far more powerful nation, viz. the Chaldæans, who in Judah would not unnaturally be regarded as coming from the north. Accordingly, in the fourth year of Jehoiakim (*c.* 604–603 B.C.), Jeremiah directed his disciple Baruch to write down a number of prophecies which he had composed since the beginning of his ministry in 626, with the object of showing that the judgment then threatened had been merely postponed and not averted.

**15. End of the kingdom of Judah.**—The ill-advised revolt of Jehoiakim, three years after he had taken an oath of allegiance to Nebuchadnezzar, brought against Jerusalem an army of Chaldæans which, after some time, was joined by Nebuchadnezzar in person. Jehoiakim appears to have died during the siege. He was succeeded by his son Jehoiachin, who, three months later, surrendered to Nebuchadnezzar. Jehoiachin and many of the royal family with the aristocracy of Judah, including many, if not most, of the Zadokite priests, were carried captive to Babylon,[1] Nebuchadnezzar appointing as king of Judah Mattaniah, the brother of Jehoiakim and uncle of Jehoiachin, who now assumed the name of Zedekiah.

But the new government proved no better than the old. The Palestinian States had not yet realized the full power of the Chaldæans, while Egypt continued the policy, which she had followed for more than a century, of fomenting revolts in Palestine, in order to avert the danger which threatened herself from the great W. Asiatic empire. In spite of Jeremiah's earnest warning, Zedekiah was induced to revolt, with the inevitable result. After a long siege, Jerusalem was taken in the year 586 B.C. King Zedekiah was made prisoner, blinded, and carried to Babylon; the Temple was first rifled and then, together with the king's palace and the better houses in Jerusalem, burnt; the city walls were broken down. For the second time a great number of the inhabitants, including those priests who had been left on the former occasion, were transported to Babylon.

The OT, as is but natural from the place and period of its composition, is for the most part written from an aristocratic point of view; and, accordingly, since the upper classes were taken into exile, it is not surprising that some passages give the impression that the whole population of Judah except the very poorest were transported. But, although the whole land had suffered greatly, it was Jerusalem only that had borne the brunt of Nebuchadnezzar's wrath, and a not inconsiderable population remained in the land, whose numbers were augmented, as soon as the Chaldæan army had gone, by the return of numerous refugees, many of whom were doubtless of good family, who had sought an asylum in the neighbouring countries. Nebuchadnezzar, although even his patience was exhausted as far as the house of David was concerned, adhered to his former policy of leaving the government of the country in the hands of a native, and appointed Gedaliah the son of Ahikam governor of Judah.

How long Gedaliah's governorship lasted cannot be determined with certainty. The year is not given in Jer $41^{1}$ ‖ 2 K $25^{25}$, and an interval of less than three months seems scarcely sufficient for the events recorded in 2 K 25. Since Jer $52^{30}$ mentions a third transportation of Jews to Babylon five years after the second, which, although it is dated in the eighteenth year of Nebuchadnezzar, must be the same as that which is described in 2 K $25^{11}$, we may perhaps suppose that Gedaliah was governor for about five years, the last transportation being the result of his murder (2 K $25^{25}$, Jer $41^{2}$), which the Chaldæans regarded as an act of rebellion. Thenceforward Judah, like Samaria, appears to have been governed by a Babylonian official.

In the certainty that the Chaldæans, after the murder of Gedaliah, would send a punitive expedition to Judah, a number of the inhabitants fled to Egypt, which had probably been for a considerable period a place of refuge for the distressed inhabitants not only of Judah, but also of Samaria. There thus arose a number of Israelite communities in Egypt, which were destined in after times to have an important influence on Israel. The refugees would naturally be representative of the medley of cults which existed in Palestine in the 7th cent. B.C.; but the religion of Jahweh flourished among them, and in the time of Cambyses—apparently there had previously been opposition on the part of the Egyptian priests, perhaps on the ground of the choice of sacrificial animals—a temple for sacrifice was built to Jahweh at Elephantine.

Of the last years and death of Jeremiah, who, after the murder of Gedaliah, was compelled by the refugees to accompany them to Egypt, we have no information. There is no evidence that his presence exercised any permanent influence upon the community in Egypt. He may have returned to Jerusalem and died there.

It had been Jeremiah's sad office 'to pluck up and to break down, and to overthrow and to destroy,' and apparently it was not till the close of his ministry that it was perceived that he had also a mission 'to build and to plant' (Jer $31^{28}$). Although he never wavered in his conviction of the futility of opposition to the Chaldæans, there can be little doubt that to those who believed his preaching he turned comforter. Perhaps the individualism which was beginning to make itself heard (cf. Jer $31^{29f.}$) may partly account for this phase, but it was probably due in the main to the conviction that Jahweh, who all through Israel's sin had remembered the love of her espousal ($2^{2}$), could not wholly cast her off. The prophecy in $23^{5-8}$, which appears worked up again in $33^{14ff.}$, though we do not possess it in its original setting, and perhaps not quite in its original form, may be dated with considerable likelihood in the period of the ruin of the kingdom after the capture of Zedekiah. The tree of David's dynasty had been cut down, but from the root[1] there would yet spring up a shoot (wrongly rendered 'branch' in EV) which would grow again into as goodly a tree. This restored monarchy, unlike Zedekiah, who had belied his name of 'Jahweh is righteousness,' would seek its 'righteousness,' *i.e.* wellbeing, only in Jahweh, and the restored community would enjoy a 'covenant' with Jahweh which would be permanent, inasmuch as His teaching (*tôrāh*) would be written on His people's hearts ($31^{31ff.}$).[2] The prophecy of the 'Shoot' is the ear-

[1] The actual numbers carried off by Nebuchadnezzar are doubtful; but Jer $52^{28-30}$ is more trustworthy than 2 K 24, as is shown by its use of the more correct form of the name 'Nebuchadrezzar.'

[1] The term 'David' in $23^{5}$ need not necessarily be understood to mean originally the actual family of David, but merely that Judæan royalty which had so long belonged to the dynasty of David. In $22^{30}$, although, strictly interpreted, only Jehoiachin's actual descendants are excluded from reigning, Jeremiah seems to mean the royal family generally.

[2] Since the word rendered 'covenant' has a much wider range of meaning in Hebrew than the English rendering would imply, it is not quite certain what is here regarded as the former 'covenant.' The word may denote merely a state of peace such as that which exists between two parties who have entered into an agreement for mutual protection, and is so used, *e.g.*, in Hos $2^{18}$, Job $5^{23}$. If this sense be adopted here, the earlier covenant will be the loving relation between Jahweh and Israel described in Jer $2^{2f.}$.

liest prediction of future happiness to which we find subsequently definite reference in the OT (cf. Zec $3^{8}$ $6^{12}$), and may be regarded as the starting-point of 'Messianic' prophecy.

**16. Religion in Judah after the destruction of the Temple.**—The deportation of the priests from Jerusalem and the burning of the Temple had not made sacrifice impossible, for the great stone altar originally erected by Ahaz probably remained, and in any case some sort of altar could have been continued on its site. But the absence of a priesthood must have occasioned many difficulties, for sacred and secular life were hardly distinguishable. In this respect Samaria was now better off than Judah, for Bethel[1] had been reopened by special permission of the king of Assyria, and probably Shechem and other sanctuaries were to some extent flourishing. The removal of the dynasty of David had taken away the old cause of jealousy between Samaria and Judah; and, since the similarity in their political situation would doubtless draw the two provinces together, there was now no reason why they should not combine for their mutual advantage. The priesthood at Bethel, which may reasonably be regarded as Aaronite,[2] represented in the main the ideas, not indeed of Jeremiah, but of the prophetic school which had drawn up the Jahvistic document (J); and it is probable that the proximity of Bethel to Jerusalem suggested the possibility of an arrangement by which the latter sanctuary should serve the needs of those who had hitherto worshipped at the former, Bethel for its part supplying the priesthood. That by some means, at some time, the province of Samaria was for religious purposes united with Judah is evident. The writer of Ezr $4^{1f.}$ believed that such a union had been effected before the time of Zerubbabel, and the story of the Samaritan schism and subsequent worship at Gerizim is inexplicable unless the Samaritans had previously accepted the principle of one sanctuary only. The combination of the N. Israelite and Judæan documents E and J also presupposes some such union, which may most easily be explained on the supposition of a voluntary agreement. We need not dismiss the account given in 2 K $23^{15-20}$ as altogether fictitious, for it is extremely unlikely that those who had worshipped at Bethel would be unanimously in favour of closing that sanctuary, and the majority may have perpetrated on the minority the horrors here described; but the writer can scarcely be correct in ascribing them to Josiah. Probably this beginning of reunion affected at first only Judah[3] and the district hitherto served by Bethel. There were, indeed, many problems to be solved before it could have a wider scope. In particular, there was the question of the law-books, or, in Hebrew phraseology, the 'covenant'-books, recognized respectively at Jerusalem and Samaria. The Elohistic document E was probably accepted not only at Bethel, but also at other sanctuaries in Samaria; while in Judah the Jahvistic document J, in spite of the opposition of Jeremiah, had probably acquired, except perhaps in Zadokite circles, a quasi-canonical acceptance. It was not to be expected that either community should abandon its Scriptures, and the difficulty was solved by the combination of J and E into JE, the code of J (Ex 34) being represented as given to replace the code of E, which had been broken up by Moses.

It must have been evident to those who cherished any nationalist aspirations that anything which tended towards centralization and union was of the greatest value, and it is not surprising that, when the compact between Bethel and Jerusalem had had time to prove its advantages, a further extension of the law of the One Sanctuary began to be mooted. But there were many difficulties in the way. The impossibility of slaughtering domestic animals except at Jerusalem had already been found a great burden in the more distant districts of Judah; it was futile to imagine that still more distant districts in N. Samaria or Galilee would tolerate such an inconvenience. Besides, even on the supposition that the rest of the country would be willing to accept Jerusalem as a place of sacrifice in lieu of other sanctuaries, there was the problem of the maintenance of the priests who had ministered at these, while a state of society in which the vendetta was recognized would naturally shrink from abolishing sanctuaries where an innocent homicide might find asylum. A further difficulty would be found in the fact that reforming ideas had in some respects made greater way in Judah. Thus, *e.g.*, whereas those who, after the introduction of heathen settlers, had laboured to maintain the religion of Jahweh as the national religion of Samaria had perhaps been compelled to content themselves with affirming Jahweh's exclusive right to worship, and, while insisting that to Him alone belonged the first-born, had apparently left the actual sacrifice of these still permissible (Ex $22^{29}$),[1] Judah, perhaps in response to Jeremiah's vehement teaching on the subject, had made the sacrifice of the first-born illegal and their redemption compulsory (Ex $34^{20}$).

Taught, perhaps, by the mistakes of the past, the 6th cent. reformers adopted a liberal policy. The sacrifice of the first-born was absolutely prohibited, but in connexion with the slaughter of domestic animals a bold and far-reaching innovation was accepted. The internal fat and the blood had hitherto been most holy, and it had been obligatory to burn the one and to pour out the other upon the altar. No concession was made with regard to the eating of either, but all that was now required in connexion with the blood was that it should be poured out upon the ground. This modification in ritual requirements removed the greatest obstacle to the adoption of the law of the One Sanctuary. In other respects also the reformers were equally liberal. Josiah's policy of throwing open the priesthood at the central sanctuary to the priests of the country sanctuaries, which the sons of Zadok had once successfully thwarted, was now adopted; and certain sanctuaries, although they ceased to be places of sacrifice, were allowed to keep their rights of asylum (Dt $19^{1-13}$ $4^{41-43}$; cf. Jos 20).

The outcome of these and other reforms and concessions was the book of Deuteronomy, of which the legal code (chs. 12–26) is evidently the

We hear, however, of a solemn ratification of a covenant in the reign of Zedekiah (Jer $34^{8.\ 15.\ 18-20}$), though we are not told the circumstances which led up to it, and in v.[13] this covenant is assumed to be on the basis of an ordinance dating from the Exodus. But ch. 34, though it may embody some of Jeremiah's phrases, is not from the prophet's own hand, and cannot be held to prove that there existed in Judah at this time a law relating to the freeing of slaves which was ascribed to the period of the Exodus.

[1] It is inconceivable that the writer to whom we owe the account of Josiah's reforms in 2 K $23^{1-14}$, if he had heard of the destruction of Bethel by Josiah, should have given the limits of the reform as 'from Geba to Beersheba' (v.[8]). Bethel lay outside Josiah's kingdom. 2 K $23^{15-20}$ is from the same hand as 1 K 13. It is significant that 2 K $17^{24-41}$, which is post-Deuteronomic, and was written at least as late as the third generation from the time of Esar-haddon (cf. v.[41] and Ezr $4^{2}$), ignores this alleged destruction of Bethel and of the high places of Samaria.

[2] For a fuller discussion of this point see Kennett, 'The Origin of the Aaronite Priesthood,' in *JThSt* vi. [1905] 161–186.

[3] The exact limits of Judah at this period are not known. It is possible that, when Judah ceased to be a kingdom and was made a province governed by a Babylonian official, its old limits were restored; but some districts which, as far as their population was concerned, were Judæan may even yet have remained distinct with their old sanctuaries.

[1] The utmost that can be maintained of the teaching of Gn 22 is that the sacrifice of the first-born is not insisted on. Cf. Jer $7^{31}$ $19^{5}$. Ezekiel ($20^{26}$) recognises that the sacrifice of the first-born has been legal in the past.

nucleus. In the forefront of this code is placed the law relating to sacrifice at the one altar,[1] specially framed in view of the extension of the law to all Israel. The code also contains rules relating to the celebration of the great feasts, the maintenance of the priests, and the like, as well as a number of enactments designed to put a stop to superstitious and heathenish practices, and ordinances dealing with matters of common life. These last, which are to some extent based upon the code of the Samaritan book E, appear to be intended more especially, though not exclusively, for the instruction of the non-Judæan districts of the land. This code of law, although it is directly at variance with Jeremiah ($7^{22}$) in definitely requiring sacrifice—which it represents as commanded by Moses himself—indirectly did much to further Jeremiah's conception of religion. In time past the motive of sacrifice had frequently been 'to eat flesh'—a fact which had called forth the scathing sarcasm of Jeremiah ($7^{21}$); but now those who desired to feast could do so at home, and thus sacrifice was at least lifted above such sordid considerations.

There was, indeed, the danger that the infrequency of ritual worship might bring about a forgetfulness of religion, but this was to a great extent guarded against by the Deuteronomic reformers, who based obedience to the common law of Israel on Israel's relation to Jahweh, and subsequently prefixed to the code of laws several prefaces cast into the form of hortatory addresses by Moses. Yet the difficulty must have been felt that the old Decalogue, which was regarded as the basis of Jahweh's 'covenant' with Israel, being chiefly concerned with ritual ordinances, had been repudiated by the school of Jeremiah, and that this school, which, indeed, had greatly leavened religious thought, would never accept as the basis of a divine 'covenant' a code which required sacrifice but did not insist on justice, mercy, and truth. Accordingly, since the tradition of the laws divinely given and graven upon two tables of stone had gained firm hold of the popular mind, the bold step was taken of providing a new Decalogue (Dt 5), keeping the first commandment and that relating to the observance of the Sabbath, as well as the more recently introduced prohibition of images, but otherwise based on the ethical teaching of the great prophets, especially Jeremiah (see, *e.g.*, Jer $7^{9}$ $9^{1-6}$ etc.).

One of the last of the great Samaritan sanctuaries to fall into line in the matter of the Deuteronomic law was that of Shechem, which claimed to be the burial-place of Joseph (Jos $24^{32}$), and which possessed near its altar some standing-stones supposed to have been placed there by Joshua (Dt $27^{1-4}$, Jos $8^{30}$). It would have been strange if the inhabitants of Shechem had been willing to destroy that which had made their city so famous, while without Shechem the unity of Israel could not have been attained. A solemn compact, legalized by an appendix to the earlier law of Deuteronomy (cf. 27), was therefore made with the Shechemites, whereby the latter agreed to accept the law of the One Sanctuary. This compact was ratified with sacrifice upon the old altar of Shechem, which was allowed to remain on condition that it should not again be used for its original purpose, while the standing-stones were purged of any heathenish or schismatic associations by being plastered over and inscribed with the provisions of the new law.[2]

[1] This fact alone is sufficient to disprove the assertion that Jeremiah was acquainted with the book of Deuteronomy, and, indeed, deeply influenced by it. Sacrificial laws are at least as prominent in Deuteronomy as sacramental prayers and rubrics in the Book of Common Prayer; but who will maintain that the latter is not concerned with sacraments?

[2] Probably the story contained in Jos 22 had its origin in a similar concession with regard to some altar in the vicinity of the Jordan.

Advantage was taken of the gathering at Shechem to stimulate the national sentiment. Representatives of the twelve tribes were stationed, six on Ebal, on which stood the ancient sanctuary, and six on Gerizim, who responded respectively when the Levites pronounced curses on those who should transgress, and blessings on those who should obey, the new law.

The law of the One Sanctuary had thus become a rallying point for the national life of Israel,[1] Jerusalem being accepted as the only legitimate place of sacrifice by the whole land which had once formed the kingdom of David. No doubt there still remained some heathen communities in Samaria, and still more in Galilee and Gilead; but there was little cohesion between them, and such national sentiment as existed was Israelite. So greatly had the sense of Israelite unity been developed by the centralization of worship that the reformers had considered it desirable to incorporate in their new law-book legislation for a future king (Dt $17^{14-20}$). The provision that such a king must be of Israelite blood may possibly be aimed at the ambitious schemes of some governor appointed by the Chaldæans to get himself recognized as king of Palestine, or may be intended merely to ensure that a king of Israel should not be a man who had only recently accepted the religion of Jahweh, but one who was thoroughly imbued with Israelite tradition, while in the warning against Egypt and against horses we may see the fruits of the teaching of the great prophets. It is impossible to give a *terminus ad quem* for the adoption of the Deuteronomic law, but it may probably be dated before the appointment of Zerubbabel.

17. **Development of religion among the Babylonian exiles.**—Meanwhile a religious development of the utmost importance was going on among the Jewish community settled in Babylonia. It might have been supposed that these exiles, like their brethren who had taken refuge in Egypt, would have erected one or more temples to Jahweh, and would have continued the exercise of their own religion. But, whereas the refugees in Egypt had left their native land of their own free will, the exiles in Babylonia were for the most part violently nationalist, and less inclined to settle down in a foreign country; indeed, for some time it was difficult to persuade them that their exile would be of long duration (cf. Jer 28 f.).

The most important factor in shaping the religion of the exiles in Babylonia was the presence among them of the Zadokite priests, of whom the majority had been carried off with Jehoiachin in 597 B.C. An unforeseen result of Josiah's reforms was that these priests had been placed in a unique position; for, since they had refused to accept on an equality the priests who had ministered at the country sanctuaries (Ezk $44^{10ff.}$), they were compelled to maintain not only that there must be but one sanctuary, but also that that one sanctuary must be at Jerusalem. These men, therefore, could not have acceded to a demand for a temple in Babylonia—had such a demand been made—without stultifying their previous action.

Prominent among these priests was a certain Ezekiel, son of Buzi, a man thoroughly imbued with the traditions of the reformed Zadokite priesthood as they had taken shape after 621. Ezekiel felt himself called to be a prophet in the fifth year of Jehoiachin's captivity, and thenceforward for twenty-two years he exercised a powerful influence on his fellow-captives. It is vain to speculate why for four years Ezekiel was silent; but it is possible that for some time he, like his fellow-captives, did

[1] Notice especially Dt $27^{9}$.

not realize that the exile was likely to be of long duration.

Like the other great prophets, Ezekiel was convinced that the disasters which had come upon his people were due to sins, but his priestly training largely modified his conception of what those sins had been. He was alive to the social evils, but, in his opinion, Israel's chief sin in the past had consisted in idolatry and idolatrous practices in the religion of Jahweh. Unlike Jeremiah, he considered sacrifice a divine institution, and his standpoint is throughout sacerdotal rather than prophetic. Himself a man of intensely strong convictions, he makes no allowance for the fact that his code of right is of very recent origin. Thus he condemns as some of the sins which have caused Israel's ruin the taking of a father's wives by his son (Ezk $22^{10}$), as well as the marriage of a half-sister on the father's side (v.$^{11}$), though such practices had been, and perhaps in Palestine still were, the common custom in Israel (2 S $16^{20-23}$ $13^{13}$; cf. Gn $20^{12}$).

That Ezekiel, under the circumstances in which he found himself, should have developed an individualism was but natural. It was inevitable that some of the exiles should be merged in the heathenism of Babylonia; and the desire to keep the rest faithful to Jahweh must have called forth a care for individuals which had not been required of earlier prophets, so that Ezekiel became the prototype of the Christian minister. It is true that individualism of a sort was already 'in the air'; even before the disaster of 597, men had asked why, if the fathers had eaten sour grapes, the children's teeth should be set on edge (Jer $31^{29}$). To a prophet who felt himself bound to care for individual souls such a question must of necessity present a problem which could not be ignored, and Ezekiel (ch. 18) attempted to grapple with it. The thought of the age was not sufficiently advanced to render a full discussion of the problem possible, and Ezekiel was hampered by the supposed necessity of coupling together sin and suffering as cause and effect; but in his efforts to vindicate Jahweh's justice he insisted on Jahweh's relation with the individual soul, and thus prepared the way for later and fuller teaching.

Ezekiel's great achievement was the forging of the weapon by which the religion of Israel was finally enabled to withstand the attacks of heathenism. Being fully convinced of the sole right of the Zadokites to the priesthood, as well as of a return to Jerusalem, Ezekiel set himself to commit to writing the priestly traditions of the Temple ritual, freely introducing, however, in characteristic fashion, modifications and innovations which he considered would be an improvement on the old state of things, and insisting on the permanent degradation to inferior offices in the Temple of those Levites who up to Josiah's reforms had ministered at the country sanctuaries. He claimed no ancient authority for this new 'ecclesiastical polity'; but the school which he founded not unnaturally concluded, in accordance with his teaching, that what he laid down ought to have been practised all along, and this in itself would tend to produce the impression that what the priestly scholars in Babylonia agreed to be right must have been enjoined at the Exodus. It is possible that the Zadokite priests, before they left Jerusalem, knew the Jahvistic document J in its original form, though it is unlikely that they would have accepted it as what we should call canonical; or perhaps, after the combination of J and E into JE, the latter document, or an account of it, may have reached them in Babylonia, and may thus have provided them with an example of a framework in which to place their legal traditions. The codification of priestly traditions was evidently spread over a considerable time. The nucleus of the collection, which bears a strong resemblance to Ezekiel's writings, is contained in the so-called Law of Holiness (Lv 17–26), and presents the remarkable feature that, in connexion with the slaughter of domestic animals, it requires the offering of the blood and fat at the central altar, so that it must be in substance anterior to Deuteronomy.

The victories of Cyrus and the threatened conquest of Babylonia caused grave disquiet not only to the exiles themselves, but also, on their behalf, to their brethren in Palestine. The situation in Babylonia called forth the eloquence of one of the most attractive of the canonical prophets, whose compositions, however, have come down to us only in a very fragmentary form, and modified and interwoven with prophecies of a later date. In the coming overthrow of Chaldæan rule he foresaw the release of his people from captivity, and hailed Cyrus as a deliverer. Whether his anticipations were justified by the event is very doubtful. The belief that Cyrus gave free permission to the Jews to return rests only on the statement of the Chronicler, whose trustworthiness in this connexion may be gauged by the fact that he represents (Ezr $1^{7-11}$) Cyrus as restoring the vessels of the Temple, which, according to the more probable statement in 2 K $24^{13}$ (cf. Jer $52^{19}$), Nebuchadnezzar had 'cut in pieces' forty-eight years before. The Cylinder Inscription of Cyrus does not prove that all the captive population of the Babylonian Empire were allowed to return to their homes, and there is no other confirmation of the Chronicler's statement. Neither Haggai nor Zechariah refers to any such return from captivity, and neither shows the least gratitude towards Persia. Probably during the reign of Cyrus the province of Judah continued to be governed by the Babylonian official whose name appears in Ezr $1^{8}$ as Sheshbazzar.

18. **Zerubbabel appointed governor of Judah; rebuilding of the Temple.**—Though there is good reason for doubting the Chronicler's statement as regards Cyrus, there is no doubt that in the second year of Darius (520–519 B.C.) a member of the old royal family of Judah, Zerubbabel the son of Shealtiel, had been appointed governor of Judah. We know nothing of the fortunes of the house of David in Babylonia beyond the fact that Jehoiachin had been treated with consideration by Evil-merodach. Zerubbabel may have commended himself to Darius in some such way as is described in 1 Es 3 f., or he may have been selected for the governorship of Judah because Darius, in the troubles which beset him at the beginning of his reign, wished to conciliate the inhabitants of that province. That there was any return of exiles on a large scale at the time of Zerubbabel's appointment is unlikely; but there is little doubt that he would be accompanied by a retinue of his own people, among whom there would be, in all probability, some Zadokite priests.

Hitherto little had been done at Jerusalem in the way of restoration. Sacrifices were offered at the altar (Hag $2^{14}$); but the Temple had not been rebuilt, and, apparently, its ruins had not even been cleared away; the wall of Jerusalem was still broken down, and the community generally was poverty-stricken. The poverty, however, was not universal, and a certain number of people had built themselves houses which, in the opinion of the prophet Haggai, were unnecessarily luxurious. This prophet, of whose antecedents we know nothing,[1] took advantage of the enthusiasm evoked

[1] We are not in a position to decide whether Haggai and Zechariah had returned with Zerubbabel, or whether they had always lived in Judah. Zechariah's interest centres in Judah, from which it might be inferred that he belonged to the more exclusive Jews of Babylonia. On the other hand, the province

by Zerubbabel's appointment to urge the rebuilding of the Temple. On the new-moon festival (*c.* 1st Sept. 520 B.C.) he addressed the people on this subject with such success that, three weeks later (*c.* 24th Sept.), work, probably in the clearing of the site, was actually begun. A month later (*c.* 21st Oct.), the work was so far advanced that it was possible to lay the foundation-stone with solemn ceremony.[1] Haggai now encouraged those who were despondent because of the inferior character of the building just begun, by declaring that the outcome of the shaking of the world—referring probably to the numerous revolts which had broken out against Darius in various parts of the Persian Empire—would be that the wealth of all nations would flow into the Temple. Two months later (*c.* 24th Dec.), Haggai gave expression to what was, doubtless, a general hope—that in Zerubbabel would be seen the reversal of Jeremiah's judgment on Jehoiachin (Hag $2^{23}$, Jer $22^{24}$).

Haggai's hopes of the dissolution of the Persian Empire proved illusory, however, and it soon became evident that Darius would hold his own. The disappointment thus caused in Judah was combated by Zechariah, who endeavoured to keep alive the enthusiasm which had been called forth by the project of rebuilding the Temple. Zechariah's prophecies, of which those that have come down to us are, for the most part, in allegorical form, are of unique interest, but only two features of his work can here be mentioned. As the work at the Temple proceeded successfully, the idea was mooted, perhaps by Zerubbabel himself, of rebuilding the wall of Jerusalem. Zechariah, although he hoped and believed that Zerubbabel would one day actually be king of Judah, was fully alive to the danger of such an enterprise, and earnestly deprecated it ($2^{1-5}$). The prophet seems in this instance to have been unsuccessful, and the proposed fortification of Jerusalem naturally aroused the suspicion of the Samaritans, who imagined that Zerubbabel was aiming at making himself a second Solomon, and of exacting from them forced labour (Ezr $4^{4.5}$).[2]

It was inevitable that there should be collision between those who had always been settled in Jerusalem and their brethren who had returned from the east. The chief priest at Jerusalem at this time was a certain Joshua, son of Jehozadak, whose genealogy is connected by the Chronicler (1 Ch $6^{12-14}$) with the Zadokites probably by the mere combination of Jer $52^{24}$ with Hag $1^{1\ etc.}$, but who may have been descended from the Aaronite priests who had formerly ministered at Bethel. The Zadokite priests who accompanied Zerubbabel would naturally regard this man as unqualified and at best not superior to the country Levites who had been permanently degraded to an inferior position.[3] Joshua, however, found a staunch champion in Zechariah, who declared that so long as he should be loyal to Jahweh's law he should have the government of the Temple. Zerubbabel, Zechariah maintained, should be king upon his throne, and Joshua priest at his right hand,[4] and counsel of peace should be between the two of them. By his championship of Joshua, Zechariah decided that the right of the priesthood at Jerusalem belonged to the sons of Aaron. No doubt he was perfectly willing that, in accordance with the provision of the Deuteronomic law, the sons of Zadok should also be allowed to minister as priests, but the consequence of giving the chief position at the Temple to an Aaronite would be that any Zadokites who desired to minister as priests would be compelled to enrol themselves in the gild of Aaron. Accordingly, when the news reached Babylonia that Zerubbabel, whom the Jewish exiles regarded as their legitimate ruler, had recognized the gild of Aaron as legitimate priests at Jerusalem, the students of the priestly traditions in Babylonia would be compelled to accept this recognition as final, and to merge the Zadokites in the Aaronites. In this way we can explain the otherwise inexplicable fact that, whereas in Ezekiel the clergy are divided into Zadokites and Levites, in the Priestly Code we find Aaronites and Levites.

**19. Samaritan jealousy of Judah.**—Zechariah's championship of Joshua involved far greater consequences than the mere decision between Aaron and Zadok. The religious reunion of Samaria and Judah was still a very recent event, and, had there been a predominance of a Babylonian (and, therefore, exclusively Judæan) party at this time, the links which united the two provinces must have snapped, and the religion and national life of Samaria would have been developed on quite distinct lines, in which case we should probably have lost all history of the northern kingdom. As it was, the cleavage between those whom we may call the Zerubbabel party (*i.e.* those who had returned with Zerubbabel from Babylonia), who would naturally be strongest in Jerusalem itself, and the rest of the population was never entirely healed. The growing jealousy between Samaria and Judah, as well as the fact that Nehemiah, whose feelings were altogether anti-Samaritan, found a following in Jerusalem, is sufficient proof of this; but the jealousy appears to have been political rather than religious, and there may have been mingled with it the rival claims of the families of Saul and David, should the Monarchy be restored.[1]

Happily, these jealousies did not interfere with the idea of the essential unity of Israel. The work of collecting the ancient traditions, which had already produced the documents J and E, was still continued. Early stories of the conquest of Palestine by the various tribes and of the subsequent history of the country were collected, arranged, and modified, in order to insist on the unity of Israel. Moreover, since the influx of heathen into the land still continued, and the religion of Jahweh was but lightly held by many who professed it, a school of prophets, who had already produced the book of Deuteronomy, laboured unceasingly to eradicate idolatry, using as the basis of their teaching the stories now current of the past.[2] The methods of the ancient prophets who had taught by hymns which could be learnt by heart were still employed to convey warnings against idolatry (*e.g.*, Dt 32), and to set forth the blessings which might be expected as the result of obedience (*e.g.*, Dt 33). A collection of Jeremiah's prophecies had been in existence for some time, and probably also collec-

of Samaria was probably in a more flourishing condition, as it had had longer time to recover from the effects of the Assyrian invasions.

[1] The date in Hag $2^{18}$ is a mistaken insertion from v.$^{10}$. The discourse in $2^{2-9}$ is evidently that which was delivered at the laying of the foundation-stone.

[2] The exact nature of the appeal to Darius is not stated, but it may be inferred from the subsequent appeal said to have been addressed to Artaxerxes (Ezr $4^{9-16}$).

[3] That Joshua's misfortune—which Zechariah allegorically describes as an accusation by Satan (Zec $3^{1ff.}$)—was attempted deposition from the priesthood is clear from the fact that he is represented as clad in filthy garments, *i.e.* garments in which it would be impossible for a priest to minister.

[4] In Zec $6^{13}$ for 'on his throne' (the second time of the occurrence of the phrase) the LXX has 'at his right hand'; and, since there is a reference to two people in the following clause, it is evident that the name of Joshua has been omitted in this verse, while it has been wrongly written for that of Zerubbabel in v.$^{11}$.

[1] The prominence given in the existing books of Samuel to the rejection of Saul in favour of David would suggest that it was claimed by some in Samaria that a king who should reign over all Israel should not be of the house of David. There is no difficulty in the supposition that some members of Saul's family still remained at Gibeah.

[2] A good illustration of this is found in the words put into the mouth of Joshua (Jos 24). In mentioning the people who dwelt beyond the Euphrates and served other gods, the writer really has in view the immediate ancestors of many of those whom he is addressing.

tions of the sayings of Amos, Hosea, Isaiah, Micah, Zephaniah, Nahum, and Habakkuk.[1]

The ideals of those whom Zechariah had endeavoured to dissuade from attempting to fortify Jerusalem continued to be cherished by many in that city. The work of rebuilding the wall was probably begun in 515 B.C., and Tattenai and Shethar-bozenai appealed against it successfully to the Persian government. According to Ezr $4^{6}$, an appeal was made to Xerxes (Ahasuerus) against the Jews about the year 485 B.C., from which it may be inferred that there was then another attempt to fortify Jerusalem. The work was yet again taken in hand in the reign of Artaxerxes Longimanus, probably between 460 and 455.[2] On this occasion the wall appears to have been almost completed when Artaxerxes, in response to an earnest appeal from Rehum and Shimshai, who appear to have been respectively governors of Samaria and some other Palestinian province, allowed these men to raise troops in the country and to stop the work. A force composed of Samaritans, Ammonites, Moabites, and others thereupon attacked Jerusalem, demolished a considerable portion of the newly built wall, burned the gates, and carried off many captives.[3] The Edomites, of whom large numbers had for more than a century been pressing northwards and had become incorporated in Judah, may have been induced by the Samaritans to take part in this attack—an act of treachery which the Jerusalem party never forgave.

**20. Appointment of Nehemiah; rebuilding of the wall of Jerusalem.**—It was not long before the tables were turned on those who had attacked Jerusalem. In 448 B.C. the Syrian satrap Megabyzos revolted, and Samaria seems to have been involved in the rebellion. If this were so, the Jews would naturally hold aloof, and this fact might be adduced to convince Artaxerxes of their loyalty. But, whatever may be the explanation of the Persian king's change of policy, there can be no doubt that in April 445 B.C. a Jew named Nehemiah, an official at the court of Susa, who had some months previously received a report of the forlorn condition of Jerusalem, obtained leave from Artaxerxes to visit that city and to fortify it.

Upon his arrival at Jerusalem, Nehemiah, after making a secret survey of the wall, called a meeting of the citizens and communicated to them what he proposed to do. Perhaps the recent attack on Jerusalem had alienated from the Samaritans the sympathies of some who would not otherwise have been hostile to them. Nehemiah's proposal was enthusiastically adopted, and in fifty-two days the repair of the wall was completed. During this first visit to Jerusalem, however, Nehemiah appears to have accomplished little else. At every turn he must have realized how widely his own ideals, which were shared by the Jewish community in the east, differed from those of the people who in Palestine professed to be Israelite. The radical difference between the religion of the Jews in Babylonia and that of the heathen among whom they lived had made intermarriage almost an impossibility, and the Jews had remained a community apart. In Palestine, to Nehemiah's horror, there was no such sharp line of demarcation. Those who in Jerusalem were like-minded with Nehemiah were in a minority, and there seemed little likelihood of their being able, under the existing conditions, to indoctrinate their fellow-countrymen. Nehemiah came to the conclusion that the reforms which he desired could not be carried into practice unless the small minority who sympathized with him were reinforced by a mission from Babylonia. Upon his return to the east he obtained permission from Artaxerxes for the return to Jerusalem under the leadership of Ezra[1] of a number of Jews (probably carefully selected)[2] then living in the east.

[1] This must not be taken to mean that any of these collections have reached us in their original form. They have all been more or less modified to suit the exigencies of later ages.

[2] See *Cambridge Biblical Essays*, p. 117.

[3] The rendering of the English version in Neh $1^{3}$, 'the remnant that are left of the captivity,' naturally suggests to English readers the Babylonian captivity, but the Hebrew is more naturally understood of the carrying off of those who had been recently captured in war.

**21. Mission of Ezra; publication of the Law.**—Upon their arrival an attempt was made to separate Jews from non-Jews, and to put a stop to mixed marriages. The attempt aroused intense opposition and little was effected. Ezra must indeed have felt himself powerless, inasmuch as among a people who possessed and reverenced Scriptures he had none to which he could appeal as authority for the work which he proposed to do. He determined, therefore, to publish in Jerusalem the law of the Zadokite lawyers in Babylonia; and, since it was impossible to expect that Palestine would give up its Scriptures, he decided to follow the precedent set when the Scriptures of Samaria and Judah had been combined into JE. Probably in order to carry out this work, Ezra returned to the east, but on this point we have no information. In 433, Nehemiah got Artaxerxes to appoint him governor of Jerusalem, and returned thither, perhaps accompanied by Ezra. As yet little had been accomplished in the matter of reform. So lax were the ideas about the sanctity of the Temple, on which Ezekiel had laid great stress, that the high priest had allowed Tobiah, the Ammonite governor, to have a room there (Neh $13^{4ff.}$). The singers and Levites—perhaps those who had but recently returned with Ezra—had not found a livelihood at the Temple, and had left to seek a living elsewhere (Neh $13^{10}$).

'Realising that no reform could be permanent which did not rest on a legal basis, Nehemiah took steps to secure the recognition of the law in the shape to which the labours of Ezra and his fellow-workers had brought it. He accordingly induced the leaders of the people to enter into a solemn compact to observe the law. A legal document was drawn up, and the leaders both of clergy and laity affixed to it their seals. The law, having been formally accepted by the leaders, was then promulgated at a general assembly of the people: whether by Nehemiah only, or by Nehemiah and Ezra together, can scarcely be determined with certainty, for Nehemiah viii. shews too many signs of the hand of a later editor to allow us to attach much importance to the names there given.'[3]

The Law published by Nehemiah and Ezra was probably the whole Pentateuch, that is to say, it consisted of the documents JE, Deuteronomy (D), and the Priestly Code (P), including the Law of Holiness (H); it must not, however, be supposed that it had as yet attained to its present form. Those who worked at the codification of the Priestly Code in Babylonia could not provide for all the contingencies which would arise when the Law had been put into force in Palestine, and many an amendment and addition must have been found necessary after 433.

**22. Final breach with the Samaritans.**—From the first Nehemiah had shown himself uncompromising in his Judæan and Zadokite prejudices. Having grown up as a member of a race which had perforce been separate from other races for several generations, he could not bring himself to look upon people of mixed nationality as truly Israelite. Although those who accompanied Ezra seem to have been chosen as representative of the twelve tribes, Nehemiah soon showed that, in his opinion,

[1] For this view of the relation of Nehemiah and Ezra see *Cambridge Biblical Essays*, p. 128 ff.

[2] At first there were no Levites among the returning exiles, and Ezra made a special point of procuring some (Ezr $8^{15-20}$). It is probable that from the deportation of the Zadokites till the return of Ezra the clergy who ministered at Jerusalem had been all of one rank.

[3] *Cambridge Biblical Essays*, p. 125 f.; cf. also W. H. Kosters, art. 'Ezra-Nehemiah' in *EBi* ii. 1487, § 17 (*c*).

Judah alone was genuinely Israelite. The Samaritans he scorned and hated. Under these circumstances a breach sooner or later was inevitable, and we can scarcely wonder that, when Nehemiah dismissed the grandson of the high priest from office at the Temple on the ground that he had married the daughter of Sanballat, the governor of Samaria (Neh $13^{28}$), the last straw had been laid on the burden of Samaritan patience. Shechem still retained memories of its once famous sanctuary, and the dismissed priest, whose name, according to Josephus (*Ant.* XI. vii. 2, viii. 2, 4), was Manasseh, was soon installed there as priest in a new temple.[1] The cleavage seems to have followed political lines,[2] the boundary between the two provinces being also the boundary between the areas of the rival sanctuaries. By this schism, which was, indeed, the culmination of Nehemiah's whole policy, the Jews of Jerusalem and its vicinity became as completely separated from their neighbours in Palestine as their brethren in the east had been from the heathen population of Babylonia. The Jew became a man apart, and a century of isolation gave to the new Judaism sufficient strength to enable it to stand against the flood of new ideas which came in with Alexander the Great.

We do not know what effect the Samaritan schism had upon Galilee. The mention of Kedesh as a city of refuge (Jos $20^{7}$) implies that Galilee had, at least to some extent, accepted the law of the One Sanctuary, and in Maccabæan times there were not a few loyal Jews in the district (1 Mac $5^{14-23}$). It is impossible to say whether these had settled in the north since 332, or whether the Israelites of Galilee remained loyal throughout the Samaritan schism. The latter supposition is by no means impossible, for Galilee and Samaria formed different provinces, and the jealousy between Samaria and Judah was almost wholly political.

Since the deportation of Jews by Nebuchadnezzar, there had been a real danger that religion might develop on such different lines in the east and in the west as to cause a permanent cleavage in the religion of Israel. By the combination of the law of the east with that of the west, Nehemiah had averted this danger. In Egypt, however, the Israelite settlers appear to have known nothing of the development of the Law at home. It is very doubtful whether they possessed any portion of the Pentateuch. It is practically certain that they were unacquainted with Deuteronomy and the Priestly Code.

The drastic measures adopted by Nehemiah to get rid of those who would not accept the new Law, based as this was entirely on religious principles, inevitably transformed the population which did accept it into a church rather than a nation, and in such a state of things the priests were naturally all-important, and the high priest was regarded as the head of the State. It would seem, however, that the national spirit was not wholly dead, and that there were even proposals to elect a king—proposals which were vigorously opposed by the clerical aristocracy.[3]

[1] Josephus puts this schism a century later, but that Sanballat was governor in the 5th cent. B.C. is proved by the Elephantine papyri.

[2] The idea that the kingdom of N. Israel was composed of ten tribes probably arose very late. Since Simeon was absorbed in Judah, and Levi was not a territorial tribe, the number ten can be obtained only by counting Benjamin. In some passages Judah seems to denote the kingdom of Judah, *e.g.* Jg $1^{10}$, 1 K $12^{20}$, and is described as 'one tribe,' *e.g.* in 1 K $11^{32.36}$. Later on, probably in consequence of the presence of powerful Benjamite families in the province of Judah, Judah was reckoned as two tribes, Judah and Benjamin, Simeon being ignored, and the number ten was obtained simply by subtracting two from twelve.

[3] No one can fail to be struck by the extraordinary statements put into the mouth of Samuel when the people demand a king, and by the arrogant way in which the prophet is represented as giving his orders to the king.

**23. Institution of synagogues and rise of the scribes.**—Nehemiah's efforts to enforce the Law produced one result of inestimable advantage for the development of spiritual religion—the institution of synagogues with the consequent rise of the scribes. Since a Law so complex as that contained in the Pentateuch could not have been learnt at one hearing, it must have been necessary to provide for regular instruction in it; and the informal meetings which in the past had taken place in the prophets' houses (cf. 2 K $4^{23}$) probably suggested a way in which this could be effected. Henceforth those who wished to know the will of Jahweh betook themselves, not to the prophets who had taught according to their own intuition, but to those who were duly instructed in the written Law. Professional prophets, indeed, long continued to exist, but they were men with whom prophecy was merely a livelihood. The nobler exponents of Jahweh's will found their inspiration for the most part in the Scriptures, though prophecy was by no means dead, if the word be understood not of the form, but of the substance of the message delivered.[1]

It was impossible that the Jews should live among so highly civilized a people as the Babylonians without acquiring a considerable amount of culture, and the connexion between Palestine and the east during the 6th and 5th centuries had probably brought much of this culture to Jerusalem. Doubtless a number of practices of which Ezra and Nehemiah would have disapproved lingered on or even found their way into Jewish religious life, and in some cases, such as the celebration of the Day of Atonement, were found to have taken so firm a hold upon the people that it became necessary to embody them in the Law. There can be little doubt, however, that, as a whole, the development in religion from the time of Nehemiah was in the direction of a higher spirituality. It is true that the priests whom Malachi had rebuked about the middle of the 5th cent., and who were then far from being spiritual leaders, do not appear to have been any better after Nehemiah's reforms, but happily the spirituality of Israel did not depend on the Temple.

From the Samaritan schism till the coming of Alexander the history of Judah is almost a blank. Josephus tells us (*Ant.* XI. vii. 1) of a quarrel between the high priest Johanan and his brother Jeshua, and of the murder of the latter, which was punished by Bagoas, who may reasonably be identified with the Bagohi who, according to the Elephantine papyri, was governor of Judah in 408. Perhaps the prophecy of Joel in its original form dates from the period between Nehemiah and Alexander, and doubtless the redaction of the historical books still continued.

**24. Condition of Judaism, 332–198 B.C.**—With the coming of Alexander the Great a new era dawned for Palestine and for Judaism. The Persians had been most unpopular rulers, and Alexander promised a large measure of freedom. But long isolation had produced, at least in the rank and file of Judaism, a shrinking from contact with heathenism, and it was perhaps for some time doubtful whether the little community of Jews in Jerusalem and the neighbouring districts of Judah would gain any advantage from the opening up of the world which had resulted from Alexander's conquests. It is probable that in the book of Jonah we have a rebuke of that contemptuous attitude towards the Gentiles which was endangering the

[1] This is doubtless the explanation of the development of the apocalyptic as distinct from the earlier prophetic style, which is especially characteristic of the 2nd cent. B.C. Prophetic methods were then discredited (Zec $13^{2ff.}$). Exhortations had long before been put into the mouth of historical characters, but now descriptions of past events and of their still future outcome were together put into the mouth of some one in the past, thus teaching a philosophy of history.

very existence of the nation. The writer, who, like St. Paul, evidently contrasts 'Jews by nature' with 'sinners of the Gentiles,' maintains that Israel has a message for the world, and it was doubtless due to him, and to those who were like-minded, that Jews loyal to their religion now left the narrow district to which they had been restricted and settled not only further afield in Palestine, but also in more remote parts of Alexander's dominions.

It is not unlikely that the Jews had at first anticipated from the coming of Alexander greater freedom than was actually given them. They must have felt keenly their subjection to the Ptolemaic rule, although that rule was mild compared with Persian methods of government. A new trouble was, however, arising. With the advent of Hellenism the religion of Jahweh had to grapple with a more dangerous foe than it had as yet encountered. At first the danger was scarcely realized, but, as milder government made it increasingly possible for Jews to become wealthy, the attractions of Hellenism became more serious. In the book of Proverbs we have a picture of a fairly well-to-do community, and the warnings against foreign vices here given show the temptations to which the younger Jews especially were exposed.

**25. Struggle between Judaism and Hellenism.**—When Antiochus the Great became master of Palestine (198 B.C.), the condition of Judaism was outwardly more flourishing than had been the case for centuries. The work which Simon the son of Onias had been able to carry out at the Temple (Sir 50) about the end of the 3rd cent. is sufficient proof that there was a considerable amount of wealth among loyal Jews. Moreover, there had been a great expansion of Judaism, and Jewish communities were to be found not only in Jerusalem and the almost exclusively Jewish districts of Judæa, but also in Galilee and Gilead, as well as among the Ammonites, Moabites, Edomites, and Philistines. The poorer Jews, especially in the country districts, were loyal to the Law; but among the wealthier classes, particularly in Jerusalem, the social disadvantages of customs radically opposed to Hellenism were being keenly felt, and there were not a few people who were disposed to live in a way which, if it did not actually imply the abandonment of the Law, at least showed a dangerous inclination to coquette with Hellenism.

It is unnecessary to trace here in detail the widening of the breach between those who were loyal to the Law, the *Ḥăsîdîm*, as they came to be called, and those who were in favour of adopting Hellenism; or to describe the events which led to the attempt of Antiochus Epiphanes to make an end of Judaism. That attempt marks the greatest and most glorious development in the religion of Israel. Never before had the religion of Jahweh been subjected to so severe a trial; yet it not only stood the test, but emerged from it spiritualized and glorified. At first the resistance of the *Ḥăsîdîm* was passive; martyrdom followed martyrdom and massacre massacre. Hitherto it had been the received teaching that compensation for suffering would be given to the righteous before death, but now old theories of retribution, which had, perhaps, been quite recently attacked in the poem of Job, broke down utterly. The *Ḥăsîdîm* asked, 'Why standest thou so far off, O Jahweh?,' and from many a synagogue there went up the cry, 'My God, my God, why hast thou forsaken me?' Though for some time they found no answer, they were yet loyal. Hunted as they were from place to place, and treated as sheep for the slaughter, they nevertheless continued to meet, and to comfort one another. Lessons for the present distress were found in the words of the prophets whose utterances were now sometimes modified or amplified to suit the situation, sometimes imitated. Several passages in the prophetical books, especially Isaiah, as these have come down to us, show signs of having been composed or adapted during this period of storm and stress.

It is impossible here to tell the story of the Maccabæan struggle and of the successes achieved by the Jews, beginning with the re-dedication of the Temple on 25th Dec. 165 B.C. and culminating in the granting of autonomy to the Jews under Simon, who was accepted as high priest in 141. The tremendous importance of the religious development during this period has been overlooked, partly owing to preconceived ideas about the history of the Canon and the date of the Septuagint version, but largely owing to the quite correct feeling that the religion of the Psalms and the books of the Prophets is on a far higher plane than that which is found in the books of Maccabees. Yet, if it be remembered that the *Ḥăsîdîm* and the Maccabees were not identical, and that, whereas some of the latter—*e.g.* Jonathan and Simon—were, despite their personal bravery, stained with vice, of the former the Apostle writes, 'of whom the world was not worthy' (He 11[38]), objections to a Maccabæan date on this score will have little force.

Happily, the Maccabees were dependent for a time on the help of the *Ḥăsîdîm*, and to this cause we may attribute the fact that, in the work of restoration under Simon, the *Ḥăsîdîm* appear to have had considerable influence. In Jerusalem and in many synagogues the Scriptures had been burnt, defaced, or defiled, and after the struggle it would probably be necessary to edit the prophetic writings from tattered and mutilated fragments, the original Scriptures and later compositions based upon them being in many cases indistinguishable. At the same time the synagogue collections of Psalms, which had now become an integral part of the religious life of the people, would be combined for the use of the Temple, and a beginning would thus be made of the last section of the Hebrew Canon.

In the Psalms and in the books of the Prophets, as they finally appear after the Maccabæan struggle, we see how great an evolution has taken place in Israel. The crude religion of Israel, as it had existed seven hundred years before, has been enriched and purified 'by divers portions and in divers manners.' The crudities often remain, but to a great extent they fail to obtrude themselves, because they too have been made to serve the purpose of a spiritual religion, and only the student of comparative religion recognizes their original nature.

The climax of OT revelation was achieved through the sufferings of the *Ḥăsîdîm*. Those sufferings, which had once tried the faith of the best men in Israel almost to breaking, were seen in the final issue not only to have preserved the national life of Israel, but to have established a Church which attracted the best elements of other nations. At last the meaning of martyrdom was made clear, and those who in their suffering for the right had proved themselves to be the true Israel were vindicated. To this Israel, His steadfast servant who had faith to discern His utterance, Jahweh had spoken in no uncertain voice:

> 'It is too light a thing that thou shouldest be my servant to raise up the tribes of Jacob, and to restore the preserved of Israel: I will also give thee for a light to the Gentiles, that thou mayest be my salvation unto the end of the earth' (Is 49[6]).

**ITALY (ANCIENT).—1. Introductory.**—The design of this article is limited to recording briefly such features in the religious belief and usage of Ancient Italy during the last six centuries B.C. as are independent, so far as can be ascertained, both of Etruscan and of Roman religion. The materials for such an account are, of course, scanty. They consist mainly of ancient inscriptions or archæological remains from the areas inhabited by tribes not speaking either Latin or Etruscan, combined with what meagre records survive, in Roman and Greek authors, of the customs of those tribes. This record is often still difficult to interpret; and there is always the danger that a particular cult in a particular district (say in the 3rd or later centuries B.C.), though wearing all the appearance of native usage, may really have been planted there by either Etruscan or Greek influence. Under these circumstances, the only useful method is to avoid general statements relating to the whole of the peninsula, and to present instead a brief outline of the salient features of each separate tribal area; so that, however limited our progress may be, there will be at least firm ground beneath our feet. By comparison of the details given here with the artt. ROMAN RELIGION and ETRUSCAN RELIGION, the reader will easily reach such general conclusions as may at present safely be drawn.

**2. Chronology.**—The period which is mostly represented by the statements that follow, when no more precise dates are given, is from 400–90 B.C. (or, more narrowly, from 350–150). After the latter year there were not many parts of Italy in which Latin was not commonly understood and spoken; and after 89 B.C., at the conclusion of the Social War, what remained of the local dialects rapidly died out. So soon as the conquering idiom has established itself in a locality, it becomes difficult to distinguish with certainty the surviving elements of local usage from the predominant influence of Roman custom. The beginning of the record is for most districts safely reckoned at 400 B.C., since (with the possible exception of a few Venetic inscriptions from Padua, and some interesting, but as yet mainly undeciphered and almost wholly untranslated, inscriptions from the Eastern coast, such as the inscriptions of Castrignano and Grecchio) there are no dialectal inscriptions which can be referred to any earlier date than 400 B.C., when the knowledge of the Græco-Etruscan alphabet first penetrated the mountain tribes of the centre, through their contact with the Greek colonies of the Western coast and with the Etruscans. Nevertheless, it will be found that some of the records come themselves provided with a considerable history, from the analysis of which we can glean not uninteresting particulars of the beliefs of the tribes at a period antecedent to the first Gallic invasion, though in no case earlier than the arrival of the Etruscans.

**3. Tribal areas.**—For a description of the geographical distribution of the different tribes of Ancient Italy, the reader must be referred to other sources—*e.g.*, the art. 'Italy' in *EBr*[11], sect. on 'Ancient Languages and Peoples.' It will suffice to enumerate here the following different tribes of whose religious beliefs we have some limited knowledge: (1) the Messapians in the South Eastern peninsula; (2) the Samnite tribes occupying roughly the southern half of the centre of the peninsula; (3) their kinsmen who settled in the Campanian plain between 440 and 400 B.C., over-running a partly Italic and partly Etruscan population, especially in the great city of Capua, which they held until it was destroyed in 211 B.C.; (4) their kinsmen to the North—a group of hardy mountaineers, of whom the Marsians and Pælignians were the most conspicuous; (5) the Sabines, the brothers of the Roman Patricians and the ancestors of the Samnites; (6) the ancient inhabitants of Latium, probably identical with the Plebeians at Rome; (7) the Volscians, a primitive tribe who occupied the marshes on the coast and some of the hills behind them, between the Latins and the Campanians; (8) the Umbrian inhabitants of Iguvium, the authors of the famous Iguvine Tables; (9) the Veneti in the plains of the North East. This leaves out of account the Bruttii in the extreme South Western peninsula, the Ligurians in the North West (see art. LIGURIAN RELIGION), and the Picentines in the East; no very substantial record of the religion of any of these at this period has been as yet discovered. For the usages of the Celtic invaders of Trans-Alpine Gaul, see art. CELTS.

(1) *Messapians.*—In the scanty and difficult inscriptions that survive from this people (the tribe from which the Latin poet Ennius sprang) no deities have been recognized except such as are familiar on Greek soil; and the only divine name that occurs frequently enough to be identified without hesitation is that of the goddess Aphrodite in a genuine Messapian form (Aprodita), which is fairly good evidence that her worship was established in the locality, though it is probable that the goddess Damater (Attic Demeter) was also not unknown. According to Festus (p. 181 [ed. C. O. Müller, Leipzig, 1839]), the Jupiter to whom the Messapian Salentini sacrificed a horse had the epithet Menzana—a name for which there is more than one possible but no certain etymology. Even Mommsen's careful collection (*Unterital. Dialekte*, pp. 85–98) of the evidence from ancient writers contains hardly anything that is of service to students of religion.

(2) *The Samnite tribes.*—The Samnite tribes were in origin identical with the Sabines,[1] and there is little doubt that, like them, they shared many of the beliefs and usages of the Roman official religion. There is no doubt, *e.g.*, that they practised the curious institution of the *ver sacrum*, by which, under pressure of some public calamity, all the creatures, human and others, born in a particular spring were devoted to the gods, and compelled at a certain age to leave the territory of the rest of the tribe and seek a home elsewhere. Such, according to a well-attested tradition, was the origin of the distinction between the Samnites proper and the Sabines (see, *e.g.*, Festus, p. 326 f., 106 [Müller]). In the intercourse between Romans and Samnites in the Samnite Wars they appear to have well understood the fetial ceremonies practised by the Romans (see Livy, ix. 1–12), and they certainly shared the body of early Italic custom which the Romans originally denoted by the term *ius gentium.* More definite information about their beliefs is afforded by a well-preserved monument, which has hardly attracted as much notice as it deserves. It is a bronze tablet, now in the British Museum, inscribed on both sides, known as the *Tabula Agnonensis*, from the name of the modern village (Agnone) near which it was found, and which is near the site of the ancient Bovianum. This table enumerates the deities worshipped in a sacred grove or garden, and presents some details of their cult. The text of it is typical of the religion of the most powerful tribe of Italy, and worth quotation in full. A query in the translation indicates the points at which the meaning of the Oscan is still subject to doubt. It should be explained that the whole grove was sacred to a (presumably feminine) deity called Kerres, who certainly stands in some near relation to the Latin Ceres; and most of the various deities

[1] See (5) below.

have an epithet showing their subordination to or connexion with her.

'The following deities are placed in the Garden of Kerres. A statue to the goddess of Gestation (?); to the Good-Humoured god [Mercury]; to Kerres; to the Kerrean mother; to the goddess Midwife; to the Kerrean Wet-Nurse; to the Kerrean Streams; to the inmost-forest[1]-revealing (?) goddess; to the Kerrean Rains; to the Kerrean Dawns; to Jove the Door-keeper (?); to Jove the Ruler; to the Kerrean Herculus; to the faithful goddess of Delivery; to the Divine Creatress.

On the altar for fire-sacrifice a sacred offering is decreed at every alternate festival.

At the garden the statues are dedicated to the following attendants of Flora. To the Kerrean Presentress [*i.e.* a goddess of Birth ?]; to the Kerrean Wet-Nurse; to the Kerrean Flora; to Father Good-Humour [Mercury].

The following altars belong to the garden:'

[Then follows an enumeration of the deities whose statues have been already mentioned in which Jupiter the Ruler is also called Pius, 'dutiful' (as son or father ?); then a repetition of the rule for the fire-sacrifice, and, finally, the statement that the garden 'is dedicated to the Decumanii' (deities of the sacred tithes ?).]

It would be out of place to discuss the details of this interesting list; but it will be seen at once that there could hardly be a better illustration of the half-animistic stage which Warde Fowler has traced in his *Religious Experience of the Roman People* (London, 1911), p. 117. Side by side with fairly complete persons, such as Jupiter, Hercules, and Ceres, we have a number of shadowy figures representing different natural operations of importance to the worshipper in an agricultural community, and their connexion with the supreme creative force represented by Kerres is expressed with curious faithfulness by the continual repetition of the epithet 'Kerrean.'

This town, Bovianum, was the chief centre of the Samnites; but no Samnite inscriptions have survived connected with any buildings. An interesting characteristic, however, of a large temple which has been laid bare upon the site (modern Calcatello, near Pietrabbondante) is that the hill on which it stood slopes towards the E.; and, in order that the worshipper might not have to turn his back upon the E. in addressing the statue of the god, this was placed on the N. side wall of the Cella, similar arrangements being made with the altars outside. The temple presumably belonged to Apollo. One other deity who should be mentioned was called in Samnite form Anagtia, better known under her Marso-Latin title of Angitia (see below, § 4).

(3) *The Campanians.*—The inscriptions of the prosperous towns of Pompeii and Herculaneum, which were overwhelmed in A.D. 79, include many which go back to the Oscan period, and vouch for the worship of Apollo, Flora, Venus, and Hercules, under their Oscan titles of Apellu, Fluusa, Herentas, and Hercolus. To Hercolus, for instance, was dedicated a spacious temple on the confines of Nola and Abella, whose administration formed the subject of a solemn treaty between the two communities (R. S. Conway, *Italic Dialects*, no. 95).

On the leaden curses, of which several have been preserved, having been originally put into tombs in order to be conducted by the dead man (who had no connexion with the curse) to another world, we find the deity Kerres with an epithet *arentika* (supposed to mean 'avenging'); and also a euphemistic description of some punitive deities as 'the best of maidens' (*valaimas puklum*), who with Kerres are besought to punish the victim of the curse by depriving him of all capacity to undertake any operation of life, as well as by various species of torture (see the curse of Vibia [Conway, no. 130]). Kerres apparently has a 'legion' of other spirits under her command; and the object of the curse is to secure some concession, which, if made, will free the victim from it.

The most interesting phenomenon, however, in the religious documents of ancient Campania is the unique group of inscriptions which scholars have agreed to call Jovilæ (Osc. *iovilas*). These are coats of arms (generally, though not always, containing a pair of emblems) which appear to have been dedicated either at graves or in some temple or sacred grove, though the only deity clearly mentioned is 'Jupiter *Flagius'—to write his name in Latin form (the meaning and significance of the epithet are uncertain). The object of the erection of the Jovila was to secure the performance of some regular sacrifice, presumably in honour of the ancestors or tutelar deities of the families concerned, at regular dates in the year, such as the Ides of March. They are commonly cut from stone; but the later specimens were more cheaply made of terra-cotta, and a pair of these may be seen in the British Museum. They have been discovered hitherto only at Capua and Cumæ. The inscriptions regularly mention the name of a *gens*, and very often of two, such as the Tirentii Magii. Fuller details, with the scanty record of the nearest parallels to this usage known elsewhere in ancient Italy, such as the *Stultorum Feriæ* at Rome, and the crests of families at Heraclea, may be found in Conway, p. 101 ff. The fact that they appear nowhere but in or near a city so long under Etruscan influence raises the question how far we have here a genuine Italic usage; but the evidence, on the whole, points to its having been natural to Italian soil.

(4) *North Oscan tribes of the Abruzzi.*—The Pælignian town of Corfinium, though far from completely excavated, has yielded some interesting records of the local institutions. It is clear that the local dialect remained in full use in these mountain valleys until the time of Cicero. We have several epitaphs in honour of persons bearing the epithet Kerria, *i.e.* '(priestess) of Kerres'; and one longer and interesting inscription describes a lady connected with two noble *gentes* as 'shepherdess of the sacred flock' and 'priestess of two (masculine) gods of agriculture,' the *Cerfi semones*—to Latinize their names; she is said to have been buried 'by command of Urania' (commonly interpreted as Venus; but quite possibly denoting either Demeter or Juno), and the contents of the inscription show that she had been married. The goddesses Minerva and Angitia and the 'children of Jove,' presumably Castor and Pollux, were also worshipped in this district.

One other characteristic of these tribes is the comparative frequency of dedications to geographical deities, such as the River Avernus, Lake Fucinus, and Pater Albensis, probably a deity connected with the same lake near whose shores stood the town of Alba Fucens.

A goddess Vesūna Erinia is coupled with Erinus or Ero Pater on one inscription of the Marsi; and, as Vesūna is commonly identified with Vesta, her appearing here as one of a divine couple is noteworthy. The goddesses of good health and victory (Valetudo, Victoria) show the same abstract character that is familiar in many Roman deities; but their inscriptions are hardly earlier than 150 B.C.

A famous temple and grove belonging to the goddess Angitia stood on the shore of Lake Fucinus, and she was widely worshipped in this mountain region as the goddess of healing, with skill to cure by charms and herbs the bites of the serpents which abound in its limestone rocks. The name is commonly connected with the Latin *anguis*, 'snake'; the derivation is doubtful, though in the present state of our knowledge not altogether impossible. In one inscription the name appears in the plural, so that there were apparently sister deities. The Marsian district was famous for

[1] The epithet *liganakdikei* would be in Latin form '*lignadodex*, and may conceivably mean 'that indicates the proper trees to be hewn.'

witches in classical times, and is still counted the home of witchcraft in Modern Italy (A. de Nino, *Usi e costumi abruzzesi*, Florence, 1891, *passim*, esp. vol. vi.).

(5) *The Sabines.*—To discuss the religion of the Sabines would be to examine the most lofty and austere elements of the religion of the primitive Patricians at Rome, a system whose foundation tradition ascribed to the Sabine king Numa. The Roman writers (like Horace, *Odes*, III. vi. 38) habitually associate with the Sabine element in the Roman stock the ideals of a simple if somewhat stern rustic life—piety, valour, industry in both sexes, in agriculture among the men, in housewifery and spinning among the women, and domestic purity; and there can be no doubt that the difference in feeling between the two orders at Rome was largely due to this more northern strain of ethics in the Sabine stock. The *patria potestas*, with the marked sacredness of the marriage tie, and the religious form of marriage known as *confarreatio*, were associated with the Patrician religion, whereas among the people of the plain of Latium akin to the Volscians there are many traces of kinship being counted only through the mother (*e.g.* Vergil, *Æn.* xi. 340 f.); and the other less sacred types of marriage, which have been plausibly ascribed to a non-Patrician origin, were based either on the primitive custom of purchase or on *usus*, *i.e.* on the mere fact of joint life. It must suffice here to indicate this important distinction, and the sources in which further account of the evidence can be found.

The artt. 'Rome' (sect. on 'Ancient History'), 'Sabini,' and 'Volsci' in *EBr*11 give the considerable linguistic evidence. W. Ridgeway's 'Who were the Romans?' (*Proc. of the Brit. Acad.*, vol. iii. [1907]), collects the archæological data, which should be supplemented by the important criticism of Warde Fowler in his *Religious Experience* (ch. v.; and esp. pp. 112, 140), though his general standpoint (see p. 248) is not very far removed from Ridgeway's. The traces of descent through the female line in the Roman legends of the kings are collected by J. G. Frazer (*Lectures on the Early History of the Kingship*, London, 1905, lect. viii.). Julius Binder (*Die Plebs*, Leipzig, 1909) also maintains Schwegler's view of a racial distinction between the orders.

Beyond this there is little to say of Sabine religious cults, for the reason that they were practically amalgamated with the Romans at so early a period; the legends ascribe the fusion to the 8th cent. B.C. There have been preserved to us, however, a certain number of divine names and religious terms from the Sabine district, mainly by the Augustan scholar, Varro, who was himself a Sabine. These will be found enumerated in Conway, pp. 353–358.

To the Sabines are specifically assigned by Latin authorities the deities Juno, Quirinus, Mamers (Mars), Minerva, Vacuna, and other more shadowy figures, among which may be mentioned the picturesque name of Fērōnia, the goddess of wild creatures, who had also a great temple in Faliscan territory,[1] despoiled by Hannibal in 215 B.C.

The Faliscans, who were a half-Etruscanized Sabine community, especially worshipped the goddesses Juno and Minerva,[2] and to the Faliscans is attributed also the curious institution of fire-leaping priests (Hirpi).[3]

Mention should be made here of the sacredness of the oak-tree and its connexion in many places with the worship of Jupiter. The evidence for this is collected by A. B. Cook (*ClR* xviii. [1904] 360 ff.); and of this wide use has been made by J. G. Frazer in his *Lectures on the Early History of the Kingship* (especially in lect. vii.). But the criticism of Warde Fowler (*Religious Experience*, p. 143) is important.

There is no doubt that the oak had many religious associations in central Ancient Italy; but the first point to determine is whether this belief belonged to the Sabine (Patrician) or the Volscian (Latian or Plebeian) stock, or to both. This question is ignored by Frazer, who attributes it equally to the Latian centre of Aricia and to the Sabine Patricians. In one interesting passage which Cook cites (Livy, iii. 25), on Mount Algidus, on the confines of Volscian, Aequian, and Latian territory, there was a sacred oak by which oaths of great importance had to be taken, but which, it is clear from the story, was regarded with more reverence by the Roman than by the Aequian commander. The Aequians, it should be noted, belonged to the Volscian side of the tribal division. But there is no evidence in the passage that the oak was connected with any one particular god, and it is to be observed in the light of linguistic evidence which has accumulated since Cook's paper (see Ridgeway, 'Who were the Romans?' p. 43) that, if Cures and Quirinus are connected with the word meaning 'oak' (Lat. *quercus*), the names are more probably Latin rather than Sabine in origin. On Quirinus see, further, Wissowa, in Roscher.

(6) *Ancient Latium.*—To attempt to separate the religion of the Plebeian or Latian part or parts of the Roman stock is impossible within the limits of this article. The evidence for their distinction from the Sabines has been already cited; but mention should be made here of the famous cult of the Lake of Nemi near Aricia, which was an ancient centre of worship in Latium, and which in historical times was connected with Diana. Besides the Vestal Virgins by whom the worship was properly conducted, there was a curious and very ancient person called Rex Nemorensis, who is described by Strabo (V. iii. 12; see also Ovid, *Fasti*, iii. 271).

'He was a runaway slave, who succeeded to office by slaying his predecessor, and he held it only so long as he could make good his title in single combat against all assailants. Any fugitive slave who contrived to break a branch from a certain tree in the grove had the right to fight the priest, and if he killed him he reigned in his stead' (J. G. Frazer, *op. cit.* p. 16).

There seems no reason to doubt that this is a survival of a very primitive belief belonging to, or at least at home in, the Latian stock, and Frazer's collection of the evidence of the Roman and Greek elements which came in the end to be attached to the cult is of fascinating interest, although the political deductions which he would attach to his collection still need confirmation.

(7) *The Volscian district.*—In an inscription (Conway, no. 252) from the Volscian town of Velitræ (the birthplace of Augustus), dating from about 300 B.C., whose language shows remarkable affinities to the Umbrian of Iguvium, we have directions as to what is to be done in the case of any profanation of the temple of a deity called Declunus or Decluna; among them it is notable that, in order to repair any injury, the use of iron is specifically permitted, showing that in the ordinary course that metal would be tabu, as to the Flamen of Jupiter at Rome.

(8) *The Umbrians.*—The most famous monument of ancient Italian religion outside Rome is the Iguvine Tables (sometimes erroneously called Eugubine), which were found in the town of Gubbio in the 15th cent., and are still preserved in its Town Hall. They are seven tables of bronze of varying sizes; all but two are engraved on both sides. They are all written in what is generally called the Umbrian dialect, though in different periods of the language. In the earlier Tables, i–v, the Umbrian alphabet, which is a variety of the Etruscan, is used. The two later Tables, vi and vii, with the last paragraph of Table v, are written in the Latin alphabet of about 100 B.C. All but Tables iii and iv can now be interpreted with approximate completeness, and even of iii and iv the general sense is tolerably clear. The Tables contain the liturgy of a sacred brotherhood, the *frateer atiiediur*, who in Latin shape would be called the Fratres Atiedii, together with some administrative resolutions of the same body. Tables vi and vii contain a later and greatly expanded version of the liturgical directions contained in Table i, both alike regulating the solemn lustration of the town

[1] See Conway, pp. 353–358; and, *e.g.*, Varro, *de Ling. Lat.* v. 74 f.; Macrobius, I. ix. 16; Livy, xxvi. xi. 8 f.

[2] See Conway, p. 370 ff., and the authorities there cited.

[3] See Varro, quoted by Servius on *Æn.* xi. 787 and 785; also Pliny, VII. ii. 19.

of Iguvium and an assembly of the people closely connected with the *lustrum*. The curse which they pronounce on the enemies of Iguvium denounces the Etruscans but not the Gauls, and must, therefore, have been first composed well before 400 B.C., when the Gauls appear in North Italy south of the Apennines in great numbers.

The chief item in the expansion is that the prayers which are to be recited by the priests, although it is directed that they are to be recited in a whisper [*taçez*, i.e. *tacitus*], are now written out in full (see below).

Table ii, which, on the whole, seems to have been engraved at the earliest date, contains regulations for a sacrifice, including the *lustrum*, which is absent from the later liturgy; for an optional sacrifice to some infernal deity known as Hontus Jovius (or Honta Jovia); and also for the sacrificial proceedings at a six-monthly assembly of deputies (*decuriæ*) from ten towns or clans, the deity worshipped in this case being none but Jupiter the Holy. Tables iii and iv, which (though the existing copy seems later than ii) contain, on the whole, the oldest matter of all of the seven, give directions for sacrifices to be offered in a particular month to a number of deities: (1) Jupiter; (2) Pomonus, with a doubtful epithet (Pupdike [dative]=*Pubidicus ['the decider, or creator, of sex']?), and (3) Vesuna, who is associated with Pomonus probably as consort, since offerings of a peculiarly feminine character are made to her. Three other deities also receive honour: Tursa, who seems to be a goddess of terror; and Purtupita and Hula (or Purtupitus and Hulus), who are dismissed somewhat briefly. Tursa occurs in one of the other Tables as an associate, or originally perhaps merely as a potency, of the masculine deity known as Cerfius Martius. Part of the ritual prescribed in Table iii seems to have been the carrying round of the victim in some sort of a cage, though the meaning of the lines (10–20) is by no means certain. If this view of the meaning is correct, it gives a welcome ground for assuming some historical connexion between the ritual of the Tables and the remarkable ceremony still practised in Gubbio every year on 15th May, the date of the Roman Ambarvalia. A full description of this modern and ancient rite with admirable photographs and a discussion of its connexion with the Tables will be found in H. M. Bower, *The Elevation and Procession of the Ceri at Gubbio* (=Publication xxxix. of Folk-Lore Society), London, 1897.

The following paragraph (*Tab. Iguv.* vi. b, 19–36), taken from the ceremonial to be observed at the Vehian Gates, will illustrate the style of the liturgy. The two deities invoked are (1) Grabovis, who is probably the same as the Roman Gradivus, with an epithet Vofio, which probably means 'Hearer of Vows'; and (2) Tefer Jovius, the first title being presumably connected with Gr. *τέφρα*, 'ashes,' and Oscan *tefúrúm*, 'burnt-sacrifice.' [For the sake of conciseness, the rendering that follows is given in the 2nd person; but the original is in the 3rd.]

'Before the Vehian Gate sacrifice three bulls with white foreheads to Grabovis, the Hearer of Vows, on behalf of the Fisian hill and the city of Iguvium. Offer the inward parts (?) with the sacrificial knife [*or* upon the sacrificial dish]; make offering either with wine or vinegar; offer the corn, pray silently. Sprinkle the flat cake with salt, offer it with the round cake; then make announcement of the auguries as before the Trebulan Gate.

After passing the Vehian Gate, offer three lambs (?) to Tefer, Son (?) of Jove, on behalf of the Fisian hill and the city of Iguvium. Make the offering seated, offer the meat [? *or* bury the remains]; offer the corn; offer the vinegar; pray silently. Over the severed portions present the sacred cakes of two shapes, then announce the auguries as at the Trebulan Gate. When you have made oblation of the lambs (?), then do you, the same priest, offer, at the right foot, libation and the image of a pig. Make a hollow for the sacred basin; hold it in the left hand until you have completed the libation. Set the sacred basin in its place and at the left foot offer the blood [*or* (?) the final oblation]. Then pray thus over the libation: "Thus I invoke thee, Tefer, Son of Jove, on behalf of the Fisian hill and the city of Iguvium for the folk [? *or* name] of each; foster and be kind to the hill and to the city, to the folk [?] of each. I beseech thee, holy one, trusting in thy holiness; I beseech thee, Tefer, Son of Jove, by this thine own sacred purifying image of a pig, on behalf of the Fisian hill, the city of Iguvium, and the folk of each. O Tefer, Son of Jove, by the might of this offering, whatever fire has broken out [?] in the Fisian hill, whatever solemn rites have been neglected in the city of Iguvium, count it as not having happened. O Tefer, Son of Jove, whatever part of thy sacrifice has been forgotten, let slip, spoilt, stolen, or lost, whatsoever defect there be in thy sacrifice, seen or unseen, O Tefer, Son of Jove, in so far as it be lawful, let it be made pure by this sacred purifying image of a pig. O Tefer, Son of Jove, make pure the Fisian hill and the city of Iguvium. O Tefer, Son of Jove, make pure the folk, the nobles, the sacred rites, the persons of men and cattle, and the fruits of the Fisian hill and the city of Iguvium; make them pure, foster and be kind with thy peace towards the Fisian hill and the city of Iguvium, and to the folk of each. O Tefer, Son of Jove, keep safe the Fisian hill and the city of Iguvium. O Tefer, Son of Jove, keep safe the folk, the nobles, the sacred rites, the persons of men and cattle and the fruit of the Fisian hill and the city of Iguvium. Keep them safe, foster and be kind with thy peace toward them. O Tefer, Son of Jove, thee with this thine own sacred purifying image of a pig on behalf of the Fisian hill and the city of Iguvium, for the folk of each, O Son of Jove, I beseech thee." In the middle of the prayer, dance.'

It should perhaps be mentioned here that Fraser (*op. cit.* p. 275) accepts without criticism a tradition recorded in a fragment of Nicolaus Damascenus (Stobæus, *Florileg.* x. 70 = *FHG* iii. 457) to the effect that among the Umbrians, whoever may be meant by that description, the ordeal by personal combat was regular. In view of (1) the looseness with which the name Umbrians is used by many Greek writers (see Conway, *op. cit.* p. 395), (2) the nearness of the Umbrians in North Italy to other nationalities, such as the Celts, and (3) the complete absence of any other evidence of such a practice among the Umbrians of Italy proper, the statement cannot be accepted without reserve.

(9) *The Veneti.*—Of the religion of the Veneti, a people speaking an Indo-European tongue which may be described as midway between Greek and Latin, and inhabiting the lower plain of the Po before and after the invasion of the Gauls, we learn most from the inscriptions, both Venetic and Latin, of the district. From the Latin inscriptions contained in *CIL*, vol. v., we find a god named Belenus, occasionally identified with Apollo (*e.g.*, 741). Under the Empire he is often called Augustus (*e.g.*, 2143 and 2144). He was extensively worshipped in the district, and, according to Tertullian (*Apol.* 24), he was of Norican origin (cf. G. Wissowa, *Rel. und Kultus der Römer*[2], p. 297). Another deity who should be mentioned is Bergimus, whose name must be connected with the modern town of Bergamo (*e.g.*, *CIL* 4200).

We find here also the same instinct as farther south, of worshipping geographical entities: an altar to Lacus Benacus [Lago di Garda] (3998); and to the *Nymphæ Augusti et Genius pagi* (3915). These remarks, of course, apply mainly to the Latin period, *i.e.* after the foundation of the Roman Colony in Aquileia in 184 B.C.

The most picturesque figure among the Venetic deities of whom we have knowledge is the goddess known as Rehtia, to whom belonged what must have been a popular temple in the ancient city of Ateste, the modern Este, where an admirable Museum contains the recently excavated traces of her cult (some account of these was given by the present writer to the British Academy, and reported in the *Times* of 25th July 1908). The name means 'goddess of straightness or rectitude'; but there can be little doubt that she enjoyed the attributes of a goddess of fortune, like the Tuscan Nortia. Among the most numerous votive objects in her temple are a number of long bronze nails of square shape, with inscriptions minutely incised along the sides. Attached to the head of some of the nails are small objects which are best explained as representing the wedges of necessity (*clavi trabales*), which Horace described as borne by the goddess of Fortune (*Odes*, I. xxxv. 17). The inscriptions are all of the common votive type, and all in the Venetic language, save that the specimens in which the workmanship of the nail is degraded show also

a mere make-believe inscription—a string of zig-zag lines and crosses, with an occasional letter taking the place of the old formula. Two other types of votive offering are common: (1) bronze images of race-horses, of which little is left except the heels of their hind feet embedded in the pedestal that bears the inscription, and (2) bronze alphabetic tablets, which, no doubt, served the same magical purposes as similar inscriptions found elsewhere in Greece and Italy (see ETRUSCAN RELIGION, § 28).

There is at present no complete edition of the remains of these people, though Carl Pauli in *Die Veneter* (Leipzig, 1894) gave the best account then possible of the inscriptions so far discovered. The present writer hopes to publish ere long a more complete collection.

LITERATURE.—W. Warde Fowler, *Religious Experience of the Roman People*, London, 1911; T. Mommsen, *Die unteritalischen Dialekte*, Leipzig, 1850; C. Pauli, *Die Veneter*, do. 1894; G. Wissowa, *Religion und Kultus der Römer*², Munich, 1912; R. S. Conway, *The Italic Dialects*, Cambridge, 1897; F. Bücheler, *Oskische Bleitafel*, Frankfort, 1878, and *Umbrica*, Bonn, 1883; H. M. Bower, *Elevation and Procession of the Ceri*, London, 1897; J. G. Frazer, *The Early History of the Kingship*, do. 1905, and the sections relating to Italy in *GB*³, where the evidence of ancient Italic usage needs to be carefully distinguished from the assumptions and interpretations with which the author combines them.

R. S. CONWAY.

**ITIHĀSA.**—The word *itihāsa*, formed from *iti ha āsa*, 'so in truth it was,' signifies etymologically a *purāvṛtta* (cf. *Amara-kośa*, I. vi. 4), an event of the past. In the later Skr. literature it simply means 'myth,' 'legend,' 'story,' and is frequently used in conjunction with, and as a synonym of, such common equivalents for 'story' as *ākhyāna*, *ākhyāyikā*, *kathā*, etc.[1] But, if we may accept a fuller definition, viz. 'an event of olden time, conjoined with a tale and provided with a demonstration of duty, profit, love, and final emancipation [the four objects of human existence] is termed *itihāsa*,'[2] the *itihāsa* bore under its narrative guise a didactic sense, and Skr. literature affords sufficient grounds for believing that this was really the case. According to *Āśv. Gṛ. S.* (IV. vi. 6), when a person dies, the friends should sit together, reciting the histories of famous men, while the salutary *itihāsas* and *purāṇas* are recited to them.[3] Kauṭilya regards the hearing of *itihāsas* as part of the daily task by means of which the prince should perfect his education (*Arthaś.* i. 5 [10. 14 f.]), while *itivṛtta* and *purāṇa* (which, as we shall see, are elements of the *itihāsa*) are recommended to the minister as the means whereby he may bring back the misguided king into the right way (*Arthaś.* v. 6 [255. 1]).[4]

The *Mahābhārata* is described as an *itihāsa mahāpuṇyaḥ* ('an *itihāsa* of great merit'; *e.g.*, in *Mahābh.* I. lxii. 16 [2298]), and reference is frequently made to its *puṇyāḥ kathāḥ* ('meritorious tales'). In the numerous *itihāsas* which the *Mahābhārata* usually quotes with the formula *atrāpy udāharantīmam itihāsaṁ purātanam* ('right here they begin this ancient *itihāsa*'; see below), the didactic element assumes such prominence that the historical drapery all but disappears. Such passages as *Mahābh.* XII. cccxli. 14 (13020): 'This doubt, O sage, is, like a dagger, implanted in my heart; tear it out by the recital of *itihāsas*—that is my supreme desire,' may also be recalled.[5]

Kauṭilya, in the first of the two passages already cited (*Arthaś.* i. 5. [10. 15]), regards *itihāsa* as a collective term comprehending the six groups, *purāṇa*, *itivṛtta*, *ākhyāyikā*, *udāharaṇa*, *dharmaśāstra*, and *arthaśāstra*—groups regarding which, it is true, fresh difficulties arise, in so far as we do not know precisely what he means by the several categories.

The present writer is inclined to believe, however, that Sauti's question to the Ṛṣis (*Mahābh.* I. i. 16): 'What, ye twice-born, shall I tell? The meritorious tales collected in the Purāṇas, filled with precepts of duty and profit, (or) the acts (*itivṛtta*) of princes of men and great-souled seers?' indicates an analogous conception of the *itihāsa*, as it refers to the *itihāsa*, the best among the *itihāsas*, *i.e.* the *Mahābhārata* (cf., *e.g.*, I. i. 19, 49, 259, ii. 36 [306], iii. 85 [648], lx. 23 [2229], lxii. 16 [2298], xcv. 88 [3840]), which, in point of fact, contains all the component elements of the *itihāsa* specified by Kauṭilya, *dharma-* and *arthaśāstra* included.[1] To the category of the *purāṇa* may be assigned in this connexion—here the present writer agrees with Jacobi—the legendary (cf. the definition in *Mahābh.* I. v. 2 [864]); to that of the *itivṛtta*, the historical (cf. the passage cited above, *Mahābh.* I. i. 16); to that of the *ākhyāyikā*, prose narratives corresponding to the later *ākhyāyikā* and *kathā*;[2] and to that of the *udāharaṇa*, the moral instructions (cf. the *puṇyāḥ kathāḥ* [*Mahābh.* I. i. 16]), often introduced in the *Mahābhārata* with the verse already quoted, 'right here they begin,' etc. This collective sense of *itihāsa* probably also explains the variety of designations by which the same work is known, as *ākhyāna*, *upākhyāna*, etc.[3]

From what has been said it is clear that the *itihāsa* was at first but one of the various possible and actually occurring forms of literary composition. The *Mahābhārata* itself is described as the most excellent of the *itihāsas* (I. i. 266 [259], etc.). Moreover, there are positive grounds for believing that in ancient India there existed a collection of *itihāsas* under the title of *Itihāsa*, or *Itihāsaveda*.

In the *pāriplavam ākhyānam*, a ten-days' cycle of ritual belonging to the *aśvamedha* (*q.v.*), and repeated throughout the entire year in which the sacrificial horse was permitted to roam at large,[4] every day a particular class of beings, together with their king, was scenically presented, and instructed by a recital performed by the *hotṛ*.[5] On the 1st day were represented Manu Vaivasvata as the king and human beings as his subjects, and a hymn from the *Rigveda* was recited; on the 2nd day there were given, in the respective parts, Yama Vaivasvata, the *pitaras*, and a chapter of the *Yajurveda*; on the 3rd day, Varuṇa Āditya, the Gandharvas, and a *parvan* of the *Atharvāṇaḥ*; on the 4th day, Soma Vaiṣṇava, the Apsaras, and a *parvan* of the *Aṅgirasaḥ*; on the 5th day, Arbuda Kādraveya, the serpents (*sarpa*), and a *parvan* of the *Sarpavidyā* (or *Viṣavidyā*); on the 6th day, Kubera Vaiśravaṇa, the Rakṣas, and a *parvan* of the *Devajanavidyā* (or *Rakṣovidyā*, or *Piśāchavidyā*); on the 7th day, Asita Dhānva(na), the *asuras*, and a *māyā* (or *asuravidyā*); on the 8th day, Matsya Sāṁmada, aquatic beings, and an *itihāsa* of the *Itihāsaveda* (cf. Śāṅkh., the *itihāsa* only in *Śatap.* and *Śāṅkh.*; but the *Āśv.*—with the same characters—gives a *purāṇa* of the *Purāṇavidyā*, assigning the *itihāsa* to the following day); on the 9th day, Tārkṣya Vaipaśyata, the birds, and a *purāṇa* of the *Purāṇaveda* (cf. Śāṅkh., the *purāṇa* only in *Śatap.* and *Śāṅkh.*; in the *Āśv.*, as noted, an *itihāsa*); on the 10th day, Dharma Indra, the gods, and a decade of the *Sāmaveda*.

Here, accordingly, we have the following series: *Ṛcaḥ*, *Yajūṁṣi*, *Atharvāṇaḥ*, *Aṅgirasaḥ*, *Sarpavidyā* (or *Viṣavidyā*), *Devajanavidyā* (or *Rakṣovidyā*, or *Piśāchavidyā*), *Māyā* (or *Asuravidyā*), *Itihāsa*, *Purāṇa* (or these two in reverse order), and *Sāmāni*. Similar lists are found elsewhere in Vedic texts[6]—*e.g.*, *Śatap.* XIV. v. 4. 10 (i.e. *Bṛhadāraṇyaka Upaniṣad*, II. iv. 10 = IV. i. 2), XI. v. 6; *Taitt. Ār.* ii. 9; *Āśv. Gṛ. S.* III. iii. 1; *Atharvaveda*, XV. vi. 8 f.

In these ancient lists *itihāsa* is always found side by side with *purāṇa*; sometimes, indeed, the two are joined together to form a *dvandva* (dual compound), and it is impossible, in view of the above remarks, to doubt their close relation and affinity. The present writer has, in fact, noted in Vedic texts only a single occurrence of each

[1] Cf. Jacobi, *op. cit.*, p. 969.
[2] Stories about women, perhaps; cf. Sieg, i. 32.
[3] Cf. Sieg, i. 16 f., 22. Many of these terms may, of course, mean no more than 'story,' and this may be the case, in particular, with *ākhyāna*; but with reference to the *Mahābhārata* it should be indicated that that work speaks of itself (*e.g.*, I. ii. 383 [645]) also as *arthaśāstra*, *dharmaśāstra*, and *kāmaśāstra*; in I. lxii. 16 (2298) it is called *uttamaṁ purāṇam* ('last *or* highest *purāṇa*').
[4] A. Weber, 'Episches im vedischen Ritual' in *SBAW*, 1891, p. 775.
[5] So at least the present writer interprets the description given in *Śatap. Br.* XIII. iv. 3. 2 ff., *Śāṅkh. Śr. S.* XVI. ii. 1 ff., and *Āśv. Śr. S.* X. vii. 1 ff.
[6] Cf. Sieg, i. 21.

unaccompanied by the other, viz. *itihāsa* in *Śatap.* XI. i. 6. 9, and *purāṇa* in *Atharvaveda*, XI. vii. 24. It is also of importance to note the position which the two terms occupy in the lists. It will be seen that in many cases they come immediately after the four Vedas, and it is, therefore, by no means surprising that in *Chhānd. Up.* (VII. i. 2 and 4, ii. 1, vii. 1) the *Itihāsapurāṇa* is actually spoken of as the fifth Veda (*itihāsapurāṇaḥ pañchamo vedānāṁ vedaḥ*).

To these indisputable evidences from Vedic texts, conclusively attesting the existence of a collection of *itihāsas*, or *purāṇas*, entitled *Itihāsa* or *Purāṇa* and reckoned among the Vedas, there has recently been added a most significant datum in the discovery of Kauṭilya's *Arthaśāstra*, which shows that this *Itihāsaveda* was still extant about the beginning of the 3rd cent. B.C.[1]

The relevant passage is i. 3 (7. 9 ff.):[2] 'The triad Sāma, Ṛg, and Yajur Vedas, the Atharvaveda, and the Itihāsaveda (are) Vedas.' In this connexion we may call attention also to a passage in the introduction of the *Mahābhāṣya*, viz. i. 9. 21 ff. [ed. F. Kielhorn, Bombay, 1892]: 'The four vedas with their ancillary literature and esoterism [*i.e.* the *Upaniṣads*], divided in many ways . . . "the dialogue," "the itihāsa," "the purāṇa," "the healing art,"—of such extent is the scope of application of word (sound)'; as also to the terms *aitihāsika* and *paurāṇika* applied respectively to those who knew or studied the *Itihāsa* or the *Purāṇa*.[3]

Curiously enough, we find that in the *Itihāsapurāṇa par excellence*, *i.e.* the *Mahābhārata*, the title of the 'fifth Veda' is given to *Ākhyāna*, while the *Mahābhārata* itself becomes the representative of this fifth Veda;[4] cf., *e.g.*, III. lviii. 9 (2247): 'all four vedas, (and) *Ākhyāna* as the fifth,' and XII. cccxl. 21 (13027): 'the Vedas . . . the *Mahābhārata* as the fifth.' Nevertheless, we also find in the *Mahābhārata* numerous references to *Itihāsa* and *Purāṇa* as ancient works that were studied together with the Vedas.[5]

The number of such passages, which, of course, are far from having all the same historical value—the *Mahābhārata* in its present shape having been a growth of centuries—might easily be increased;[6] but they are quite sufficient to show that the ancient *Itihāsaveda* or *Itihāsapurāṇaveda* has left distinct traces of its existence in the great epic. The *Mahābhārata*, in fact, must very gradually have come to take the place of that 'fifth Veda,' and the process may quite readily be explained on the assumption that the *Itihāsapurāṇa* literature was to a large extent incorporated by degrees in the epic. The source of these stories is often shown by the terms *itihāsa*, *purāṇa*, *itihāsapurātana*, and the like.[7]

We must now ask what connexion exists between the extensive *Purāṇa* literature still extant and the ancient *Purāṇaveda*. We must obviously assume that the ancient *Purāṇa* was the precursor of the later literary group bearing the same name, and that much of its subject-matter has been preserved in the *Purāṇas* known to us. The latter assumption will be especially valid in the case of those passages in which the *Purāṇas* agree more or less verbally with one another, or with the *Mahābhārata*, and probably also of those in which the *lakṣaṇas* (characteristics) belonging, according to ancient tradition, to the *Purāṇa* find expression in the extant *Purāṇas*. This occurs very seldom, however, for the chief characteristic of these *Purāṇas* is their sectarian spirit, which was certainly absent from the ancient *Purāṇa*.[1]

5 Cf. *Mahābh.* I. lx. 3 (2210), XII. ccx. 19 (7660), cccxxv. 24 f. (12210 f.), cccxlii. 6 (13134), XIII. xxii. 12 (1542), XII. cccxlii. 8 f. (13136 f.), I. cix. 20 (4355), II. v. 2 (136). Note also such groups as *Mahābh.* VIII. xxxiv. 44 ff. (1496 ff.): *atharvāṅgirasau, ṛgvedaḥ sāmavedaś cha, purāṇaṁ cha, itihāsayajurvedau.*
6 Sieg, i. 22.
7 Sieg, i. 24; M. Winternitz, *Gesch. der ind. Litt.*, Leipzig, 1908 ff., i. 442.

The present writer is of opinion that remains of the ancient *Itihāsapurāṇa* can be traced elsewhere in Skr. literature. Materials derived from that collection must be recognized above all in the myths and legends of the *Brāhmaṇas*, especially in such as occur in the *Arthavāda* (explanatory) parts and are distinguished by form and matter alike from the general context; but they must be recognized also in the shorter mythologico-historical additions of the *Brāhmaṇas* designed to explain them.[2]

From Yāska's *Nirukta* we learn that there was a Vedic school known as the Aitihāsikas—so named because its members made use of 'the *Itihāsa*' in expounding the *mantras*,[3] and to certain *mantras* (or *sūktas*) Yāska attaches short narrative supplements which he designates *itihāsa* or *ākhyāna*. Alike in their subject-matter and in the formulæ with which they are introduced, these remind us of the additions to the *Brāhmaṇas* just mentioned. Such *itihāsas* are found, further, in the *Bṛhaddevatā*, in the *Anukramaṇī* to the Rigveda, and in the mediæval commentaries—*e.g.*, those of Devarāja, Durga, Ṣadguruśiṣya, and especially Sāyaṇa.[4] Even these relatively modern texts may preserve, and, as the present writer believes, do really preserve, ancient traditions, for it was an established principle in the exegesis of the *mantras* that the *nidāna* (primal cause, basis)—if there was one—must be taught first in order to bring out the meaning, and that the usual verbal explanation could be entered upon only after that had been done.[5]

It is, however, quite another question whether the writers of the *Brāhmaṇas* and the exegetes of the Veda made a right use of the *itihāsas*, and whether, above all, they applied them at the proper places, in the exposition of *mantras*. The present writer is of opinion that the question can be answered only with reference to each individual case. He now holds the view that the ancient *Itihāsapurāṇa* was an independent collection of legends and stories not specially connected with any particular Veda. Even on the hypothesis that there was a general correspondence between *Itihāsa* and Veda with respect to mythological views and to mythical and legendary ideas, the sagas of the *Itihāsapurāṇa* might still differ very essentially in form from the same sagas in Vedic *mantras*, and in particular, therefore, from those in the Rigveda. In such cases the employment of an *itihāsa* in the exposition of the *mantras* could easily prove a dangerous procedure.

We may here refer, by way of illustration, to the two specially prominent cases. The story of Śunaḥśepa,[6] which the *hotṛ* had to relate to the king at the Rājasūya, is quite appropriately introduced into the *Brāhmaṇa* of the Rigveda, since it formed the *arthavāda* for the *añjaḥsava* (rapid preparation of Soma) commonly used in the Rājasūya.[7] But the *Brāhmaṇa* writer certainly erred in interweaving this saga with all the songs of the Rigveda which are ascribed to Śunaḥśepa,

1 Winternitz, p. 443 f.; Sieg, i. 34. 2 Sieg, i. 18 ff.
3 Cf. the well-known verse in *Vāsiṣ. Dharm.* xxvii. 6, *Mahābh.* I. i. 267 (260), *Vāyu Pur.* i. 181: 'by *itihāsa* and *purāṇa* one should supplement the Veda; the Veda feareth a man with scanty [sacred] learning, lest "this may injure me"'; cf. Sieg, i. 18 ff.
4 Sieg, i. 17 ff.
5 Cf. Durga on *Nirukta*, i. 5 (II. 58. 21 ff.); Sieg, i. 36.
6 *Saunaḥśepam ākhyānam*; nevertheless a genuine *itihāsa* according to Kauṭilya's definition; cf. *Ait. Br.* vii. 13–18, *Śāṅkh. Śr. S.* xv. 17–27.
7 At the royal inaugural sacrifice the original victim had been a man, who, however, was released from the stake by the gods themselves; and the consecration was thereafter performed without a victim or any other sacrifice, *i.e.* the *añjaḥsava* was resorted to. Cf. Sieg, i. 19, note 2. What is further said in the saga regarding the adoption of Śunaḥśepa by Viśvāmitra (a splendid example of one or more *Itihāsasūktas* with connecting prose) was in all likelihood designed merely to show what became of the liberated victim.

since the story of Śunaḥśepa's being bound to and delivered from the sacrificial stake is only very briefly alluded to in the Rigveda (I. xxiv. 12–13, v. ii. 7).

The story of Purūravas and Urvaśī[1] is quite appropriately given in the *Brāhmaṇa* (cf. *Śatap.* XI. v. 1, *Kāṭh.* I. viii. 10, *Maitr.* I. vi. 12) as the *arthavāda* for the use of special fire-sticks in the Agnimanthana,[2] but the legend fits here only if the dialogue between the lovers has a conciliatory ending. According to the version of the story in the Rigveda (x. xcv.), the dialogue ended tragically, and here the *Brāhmaṇa* writer took the proper course of utilizing the Rigveda strophes only so far as they fitted in with his *itihāsa*, and discarding the rest.[3]

It may be observed, finally, that the connexion between the Vedic *sūkta* and the *itihāsa* is still a subject of dispute in Vedic philology. E. Windisch (*Verhandl. der dreiunddreissigsten Philologenversammlung in Gera*, 1879, p. 23) has advanced the conjecture that the song of Purūravas and Urvaśī (Rigv. x. xcv.) is a poem detached from its original narrative context. This idea was further developed by H. Oldenberg,[4] who advocated the theory that a number of Rigveda hymns actually postulated a prose narrative as the connecting medium of the metrical parts, and that such must be recognized as a popular type of story in ancient India—the type in which verses were set in a prose framework in favourite passages of a work, and especially in passages containing speeches and the rejoinders to them. For the systematic transmission of such a narrative—Oldenberg calls it *ākhyāna*, on the example of the *Saunaḥśepam ākhyānam*—it sufficed, he holds, to teach and learn the verse parts only, while the prose matrix, the language of which had never been fixed, suffered numberless changes at the hands of successive generations of narrators, or else was lost altogether.[5] In particular, the prose context which later tradition supplies for the *ākhyāna* hymns of the Rigveda is, according to Oldenberg, mere drivel—not genuine tradition at all, but at most worthless *quasi*-tradition. Oldenberg's theory of the *ākhyāna* has long enjoyed an all but universal acceptance. Pischel, Geldner, and the present writer have all expressed their agreement with it, except that, in contrast to Oldenberg, they have strongly insisted upon the value of the Indian *itihāsa* tradition for the Rigveda.

On the other hand, S. Lévi[6] asserts that the majority of the dialogue hymns in the Rigveda are so lucid in their verse that they cannot have required a story to link the single strophes together; the mere reading of them calls up some sort of dramatic scene. As a matter of fact, Max Müller had thought of a dramatic action in connexion with Rigv. i. 165.[7]

Independently of both, J. Hertel[8] has rejected the *ākhyāna* theory; he regards all the *saṁvāda* hymns of the Rigveda as dramatic responsive songs,[1] which were performed occasionally at sacrificial festivals, and he conjectures that we have in these the germs of the Indian drama. L. von Schroeder[2] takes the further step of explaining all these hymns as ritual dramas.

Winternitz[3] adopts a middle course between the two views, advocating the theory that the dialogue songs of the Rigveda are not all to be explained in the same way. Some of them, he holds, are ballads, in which everything is told in versified speeches, and for which a prose introduction was necessary only in certain cases; some are poetical fragments of narrative composed partly of verse and partly of a prose element that has not survived; while others are to be regarded as strophes belonging to ritual dramas.[4]

A. B. Keith argues that it is impossible to obtain really cogent evidence for either of the theories.[5] He says that in the ancient Vedic literature there is no trace whatever of the knowledge of such a prose-poetic *ākhyāna* as Oldenberg's theory requires,[6] but there is likewise no trace of a knowledge of dramatic responsive songs at sacrificial feasts, or of ritual dramas, though, were the hypotheses of Hertel and von Schroeder sound, both types would certainly occur in the ritual texts of the Vedas. Keith's conclusion, accordingly, is that no explanation yielding a solution in all respects satisfactory has as yet been discovered.

The last word on the subject, so far, has been spoken by K. F. Geldner,[7] who, thus coming near to Hertel's views, has tried to solve the problem by regarding the hymns in question as ballads in the wider sense in which Goethe has defined the ballad. These ballads require no connecting prose, but explain themselves, as the subject used by the poet is not a free invention, but is taken from some well-known myth. Geldner's hypothesis is most attractive, as it allows the explanation of the hymns without calling for connecting prose that, in fact, does not exist. Little, however, is changed by it as regards the chief interesting point in this connexion. For these ballads, like a great number of the Rigvedic *mantras*, are to be understood only by one who knows the old myths, *i.e.* the old *itihāsas*, from which their theme is taken.

LITERATURE.—This has been sufficiently indicated in the course of the article.

[Buddha], T. W. Rhys Davids, *Origin and Growth of Rel. as illustrated by Ind. Buddhism* [*HL*, 1881], London, 1881, p. 33).—The most famous of the Indian temples and sacred places, situated in the town of Purī, in the modern provinces of Behār and Orissa, on the shores of the Bay of Bengal, lat. 19° 48′ N., long. 85° 49′ E.

The present temple was built about A.D. 1100 by Ananta Chodagaṅgā (1076–1147), the most notable king of the E. Gaṅgā dynasty of Kalinga (V. A. Smith, *Early Hist.*², Oxford, 1908, p. 428). It stands in a square enclosure, 652 ft. long by 630 ft. broad, the interior being carefully guarded from profane intrusion by a massive stone wall, 20 ft. high. Within the enclosure stand about 120 temples, including, besides those dedicated to Viṣṇu in his various forms, some 13 dedicated to Śiva, and several to his consort, thus illustrating the eclecticism of modern Hinduism. The conical tower of Jagannāth's temple rises to a height of 192 ft., and is surmounted by the mystic wheel (*chakra*) and flag (*dhvaja*) of Viṣṇu. It contains four chambers: a hall of offerings, where the bulkier oblations are made, only a small quantity of the choicest food being admitted into the inner shrine; a pillared hall for musicians and dancing-girls; a hall of audience, where pilgrims assemble to gaze upon the god; and, lastly, the sanctuary itself, which is surmounted by the tower. The image is in triple form, representing Jagannāth, beside whom sit his brother Balabhadra, or Balarāma, and his sister Subhadrā. The theory that this triple image is a perversion or adaptation of the Buddhist Triratna—Buddha, the Law (*Dharma*), and the Congregation (*Saṅgha*)—is due to A. Cunningham (*The Stūpa of Bharhut*, London, 1879, p. 112; cf. F. C. Maisey, *Sánchi and its Remains*, do. 1892, p. 26 n.). It has been connected by other authorities with the *triśūla*, or trident symbol (G. d'Alviella, *The Migration of Symbols*, Westminster, 1894, p. 254 f.). Waddell, however, remarks:

'"*The Three Holy Ones*" are seldom, if ever, concretely represented in Tibet by Buddha, Dharma, and Saṅgha; nor have I found such a triad figured in Indian Buddhism, though many writers have alleged the existence of them, without, however, bringing forward any proof' (*Buddhism of Tibet*, London, 1895, p. 346; but see H. A. Oldfield, *Sketches from Nipal*, do. 1880, ii. 158 ff., with a drawing of the Triratna).

The legends indicate that, under Buddhist and Hindu influences, a rude local 'fetish' has been adapted to represent Viṣṇu. One Bāsu, a fowler, a servant of Jagannāth, is said to have found the god, in the form of a blue-stone image, at the foot of a banyan tree (W. W. Hunter, *Orissa*, i. 89 f.). According to another account, the god appeared in a vision to King Indradyumna, and showed him his image in a block of timber thrown up on the seashore (cf. Farnell, *CGS* v. 189; E. Thurston, *Castes and Tribes*, 1909, vi. 129). The workmen failed to fashion the block into an image, till Viṣṇu appeared as an aged carpenter, whom the king shut up in the temple, intending to keep him there for one and twenty days. But his queen persuaded the king to open the temple doors before the appointed time, and the three images were found fashioned only from the waist upwards, and without hands or feet (W. Ward, *The Hindoos*, ii. 163). The king was much disconcerted, but prayed to Brahmā, and he promised to make the image famous in its present state—obviously an ætiological myth to explain the rudeness or incompleteness of the existing images. Another remarkable legend tells that

'when two new moons occur in Assur [Āsāṛh] (part of June and July), which is said to happen about once in seventeen years, a new idol is always made. A Nim tree [*Melia azadirachta*] is sought for in the forest, on which no crow or carrion bird has ever perched. It is known to the initiated by certain signs. This is prepared into a proper form by common carpenters, and is then intrusted to certain priests who are protected from all intrusion; the process is a great mystery. One man is selected to take out of the idol a small box containing the spirit, which is conveyed inside the new; and the man who does this is always removed from the world before the end of the year' (Col. Phipps, *Mission Register*, Dec. 1824, quoted by A. Sterling, *Orissa*, 122).

According to another account, a boy is selected to take out of the breast of the idol a small box containing quicksilver, said to be the spirit, which he transfers to the new image; the boy always dies within a year (Brij Kishore Ghose, *The Hist. of Pooree*, Cuttack, 1848, p. 18). In another form of the legend the relics enclosed in the image are said to be the bones of Kṛṣṇa. They were found in the forest by some pious person, who was directed by Viṣṇu to form an image of Jagannāth, and to place the bones within it.

'Every third year they make a new image, when a Brahman removes the original bones of Krishna from the inside of the old image to that of the new one; on this occasion he covers his eyes, lest he should be struck dead for looking on such sacred relics. The Rajah of Burdwan expended twelve lākh of rupees in a journey to Jugunat'hu, including two lākh paid as a bribe to the Brahmans to permit him to see these bones; but he died six months after for his temerity' (F. Parkes, *Wanderings of a Pilgrim in Search of the Picturesque*, London, 1850, ii. 383 f.; cf. W. Ward, *op. cit.* ii. 163).

Needless to say, the introduction of human bones into a Vaiṣṇava image is opposed to the rules of that sect and to the usages of Brahmanical Hinduism. The stories are, in fact, a tradition from Buddhist times, when relics of the Teacher were collected in *stūpas* and other monuments.

'The pilgrimage, the image procession, the suspension of caste prejudices, everything in fact at Puri, is redolent of Buddhism, but of a Buddhism so degraded as hardly to be recognizable by those who know that faith only in its older and purer form' (J. Fergusson, *Ind. and East. Arch.*, London, 1899, p. 429).

'The name of Jagannáth still draws the faithful from a hundred provinces of India to the Purí sands,' says Hunter (i. 137). This is particularly the case since the abolition of the Pilgrim tax, the collection of which under the orders of a Christian Government aroused active controversy, until it was finally discontinued in A.D. 1840. Hunter gives a vivid picture of the touts who wander through the land collecting pilgrims, of the miseries of the journey before, under British rule, railways were built, sanitation was enforced, and medical treatment was provided. The same writer fully describes the twenty-four local festivals, of which the most important is the Rath Jātrā, which takes place in June or July, when the images are placed in cars and dragged to the country house of the deities. The religious suicides who flung themselves beneath the wheels of the idol chariots have made the name of Jagannāth famous in the Western world. The older narratives were distorted and exaggerated.

'In a closely-packed eager throng of a hundred thousand men and women, many of them unaccustomed to exposure or hard labour, and all of them tugging and straining to the utmost under the blazing tropical sun, deaths must occasionally occur. There have, doubtless, been instances of pilgrims throwing themselves under the wheels in a frenzy of religious excitement. But such instances have always been rare, and are now unknown. At one time several unhappy people were killed or injured every year, but they were almost invariably cases of accidental trampling. The few suicides that did occur were for the most part cases of diseased and miserable objects who took this means to put themselves out of pain. The official returns now place this beyond doubt. Indeed, nothing could be more opposed to the spirit of Vishnu-worship than self-immolation. Accidental death within the temple renders the whole place unclean. The ritual suddenly stops, and the polluted offerings are hurried away from the sight of the offended god' (Hunter, i. 133 f.).

Only the lowest and most impure castes are now excluded from the temple (*ib.* i. 135 f.). The customs regarding the consecrated food (*mahāprasād*) are remarkable. This is properly the food cooked for deity or dedicated to the images. The local belief as recorded in the temple annals (*Khetra mahātmya*) is that it is prepared by the goddess, Mahā Lakṣmī, who gives prosperity.

'He who eats it is absolved from the four cardinal sins of the Hindu faith: killing a cow, killing a brahmin, drinking spirits, and committing adultery with a female of a Guru or spiritual

pastor. So great is its virtue that it cannot be polluted by the touch of the very lowest caste, and the leavings even of a dog are to be carefully taken up and used. The most tremendous and inexpiable of all crimes is to handle and eat the mahaprasad, without a proper feeling of reverence' (A. Sterling, *Orissa*, p. 121).

Hence there is at Purī a temporary suspension of the rigid tabu which controls the use of food which is not cooked in the regular way, and all castes can eat the sacred food with impunity. Nowadays the priests impress upon the pilgrims the impropriety of dressing food within the holy limits, and provide them from the temple kitchen. This is so sacred that none can be thrown away, and it is often consumed in a state of putrefaction, with the natural result that it causes danger to the public health. It has been suggested that the licence in the use of food at Purī, Pandharpur, and other holy places is due to the spirit-scaring power of the god and his holy place; but the fact of its dedication sufficiently explains the feeling regarding it (*BG* xx. [1884] 474). Even among a tribe like the Kāndhs (*q.v.*), friendship is sworn on the holy rice from Purī (Thurston, iii. 409).

In 1880 a remarkable attempt was made by a party of fanatics from Sambalpur, known as Kumblīpatiā, so called because they wear only ropes made of the leaves (*pāt*) of the *kumblī* tree (*Cocklospermum gossypium*), to destroy the images. In the affray one of the fanatics was killed (L. L. S. O'Malley, *Sambalpur Gaz.*, Nagpur, 1909, i. 59 ff.).

LITERATURE.—The most recent and best account of the god, his temple, and worship is by W. W. Hunter, *Orissa*, London, 1872, i. 81 ff.; see also A. Sterling, *Orissa; its Geography, Statistics, History, Religion, and Antiquities*, do. 1846, p. 116 ff.; *Calcutta Review*, x. [1848] 204 ff.; L. Rousselet, *India and its Native Princes*, London, 1882, p. 606 ff., with drawings of the images and their car; W. Ward, *A View of the History, Literature, and Mythology of the Hindoos*, Serampore, 1815, ii. 163 f.; Abu'l-Faḍl, *Āin-i-Akbarī*, tr. H. Blochmann and H. S. Jarrett, Calcutta, 1873-94, ii. 127 ff.; for the cult of Jagannāth in Benares, M. A. Sherring, *The Sacred City of the Hindus*, London, 1868, p. 120 f.; many quotations from older writers in H. Yule and A. C. Burnell, *Hobson-Jobson*², London, 1903, p. 466 ff.

**JAINISM.**—**I. Introductory.**—Jainism is a monastic religion which, like Buddhism, denies the authority of the Veda, and is therefore regarded by the Brāhmans as heretical. The Jain church consists of the monastic order and the lay community. It is divided into two rival sections, the Śvetāmbaras, or 'White-robes,' and the Digambaras, or 'Sky-clad'; they are so called because the monks of the Śvetāmbaras wear white clothes, and those of the Digambaras originally went about stark naked, until the Muhammadans forced them to cover their privities. The dogmatic differences between the two sections are rather trivial (see art. DIGAMBARA); they differ more in conduct, as will be noticed in the course of the article.

The interest of Jainism to the student of religion consists in the fact that it goes back to a very early period, and to primitive currents of religious and metaphysical speculation, which gave rise also to the oldest Indian philosophies—Sāṅkhya and Yoga (*qq.v.*)—and to Buddhism. It shares in the theoretical pessimism of these systems, as also in their practical ideal—liberation. Life in the world, perpetuated by the transmigration of the soul, is essentially bad and painful; therefore it must be our aim to put an end to the Cycle of Births, and this end will be accomplished when we come into possession of right knowledge.[1] In this general principle Jainism agrees with Sāṅkhya, Yoga, and Buddhism; but they differ in their methods of realizing it. In metaphysics there is some general likeness between Sāṅkhya and Yoga on the one hand, and Jainism on the other. For in all these systems a dualism of matter and soul is acknowledged; the souls are principally all alike substances (monads) characterized by intelligence, their actual difference being caused by their connexion with matter; matter is, according to Jains and Sāṅkhyas, of indefinite nature, a something that may become anything. These general metaphysical principles, however, are worked out on different lines by the Sāṅkhyas and Jains,[1] the difference being still more accentuated by the different origins of these systems. For the Sāṅkhyas, owing allegiance to the Brāhmans, have adopted Brāhmanical ideas and modes of thought,[2] while the Jains, being distinctly non-Brāhmanical, have worked upon popular notions of a more primitive and cruder character, *e.g.* animistic ideas. But the metaphysical principles of Buddhism are of an entirely different character, being moulded by the fundamental principle of Buddhism, viz. that there is no absolute and permanent Being, or, in other words, that all things are transitory.[3] Notwithstanding the radical difference in their philosophical notions, Jainism and Buddhism, being originally both orders of monks outside the pale of Brāhmanism, present some resemblance in outward appearance, so that even Indian writers occasionally have confounded them. It is, therefore, not to be wondered at that some European scholars who became acquainted with Jainism through inadequate samples of Jain literature easily persuaded themselves that it was an offshoot of Buddhism.[4] But it has since been proved beyond doubt that their theory is wrong, and that Jainism is at least as old as Buddhism. For the canonical books of the Buddhists frequently mention the Jains as a rival sect, under their old name Nigaṇṭha (Skr. *Nirgrantha*, common Prākrit *Nigganṭha*) and their leader in Buddha's time, Nātaputta (Nāta- or Nātiputta being an epithet of the last prophet of the Jains, Vardhamāna Mahāvīra), and they name the place of the latter's death Pāvā, in agreement with Jain tradition. On the other hand, the canonical books of the Jains mention as contemporaries of Mahāvīra the same kings as reigned during Buddha's career, and one of the latter's rivals. Thus it is established that Mahāvīra was a contemporary of Buddha, and probably somewhat older than the latter, who outlived his rival's decease at Pāvā.

Mahāvīra, however, unlike Buddha, was most probably not the founder of the sect which reveres him as their prophet, nor the author of their religion. According to the unanimous Buddhist tradition, Buddha had, under the Bodhi-tree, discovered by intuition the fundamental truths of his religion as it appears throughout his personal work; his first sermons are things ever to be remembered by his followers, as are the doctrines which he then preached. No such traditions are

[1] It may be added that, with the exception of Yoga, all these ancient systems are strictly atheistic, *i.e.* they do not admit an absolute Supreme God; even in Yoga, the Iśvara is not the first and only cause of everything existent.

[1] The Sāṅkhyas endeavour to explain, from their dualistic principles, *puruṣa* and *prakṛti*, the development of the material world as well as that of living beings; the Jains, however, are almost exclusively concerned with the latter, and declare that the cause of the material world and of the structure of the universe is *lokasthiti*, 'primeval disposition' (*Tattvārthādhigama sūtra*, iii. 6 com.). Sāṅkhya, probably based on cosmogonic theories contained in the Upaniṣads, was intended as a philosophic system which in the course of time became the theoretical foundation of popular religion. But Jainism was, in the first place, a religion, and developed a philosophy of its own in order to make this religion a self-consistent system.

[2] *e.g.*, the Sāṅkhya principle *mahān* means *mahān ātmā*; the three *guṇas* are suggested by the *trivṛtkaraṇa* of *Chhāndogya Up.* vi. 3 f.; and *prakṛti* by the cosmical *brahmā* of the earlier Upaniṣad doctrine, wherefore in the *Gauḍapāda Bhāṣya* on *Kārikā* 22 *brahmā* is given as a synonym of *prakṛti*, etc.

[3] The fundamental theories of Jainism, *e.g.* the *syādvāda*, their division of living beings, especially the elementary lives, are not found in Buddhism.

[4] See *SBE* xlv. [1895] Introd., p. xviii ff.

preserved in the canonical books of the Jains about Mahāvīra. His becoming a monk, and, some 12 years later, his attainment of omniscience (*kevala*), are, of course, celebrated events. But tradition is silent about his motives for renouncing the world, and about the particular truths whose discovery led to his exalted position. At any rate, Mahāvīra is not described by tradition as having first become a disciple of teachers whose doctrines afterwards failed to satisfy him, as we are told of Buddha; he seems to have had no misgivings, and to have known where truth was to be had,[1] and thus he became a Jain monk. And again, when, after many years of austerities such as are practised by other ascetics of the Jains, he reached omniscience, we are not given to understand that he found any new truth, or a new revelation, as Buddha is said to have received; nor is any particular doctrine or philosophical principle mentioned the knowledge and insight of which then occurred to him for the first time. But he is represented as gaining, at his *kevala*, perfect knowledge of what he knew before only in part and imperfectly. Thus Mahāvīra appears in the tradition of his own sect as one who, from the beginning, had followed a religion established long ago; had he been more, had he been the founder of Jainism, tradition, ever eager to extol a prophet, would not have totally repressed his claims to reverence as such. Nor do Buddhistic traditions indicate that the Nigaṇṭhas owed their origin to Nātaputta; they simply speak of them as of a sect existing at the time of Buddha. We cannot, therefore, without doing violence to tradition, declare Mahāvīra to have been the founder of Jainism. But he is without doubt the last prophet of the Jains, the last Tīrthakara. His predecessor, Pārśva, the last Tīrthakara but one, seems to have better claims to the title of founder of Jainism. His death is placed at the reasonable interval of 250 years before that of Mahāvīra, while Pārśva's predecessor Ariṣṭanemi is stated to have died 84,000 years before Mahāvīra's Nirvāṇa. Followers of Pārśva are mentioned in the canonical books; and a legend in the *Uttarādhyayana sūtra* xxiii. relates a meeting between a disciple of Pārśva and a disciple of Mahāvīra which brought about the union of the old branch of the Jain church and the new one.[2] This seems to indicate that Pārśva was a historical person; but in the absence of historical documents we cannot venture to go beyond a conjecture.

**2. Jain view of their origin, etc.**—According to the belief of the Jains themselves, Jain religion is eternal, and it has been revealed again and again, in every one of the endless succeeding periods of the world, by innumerable Tīrthakaras. In the present *avasarpiṇī* period (see art. AGES OF THE WORLD [Indian], vol. i. p. 200 f.) the first Tīrthakara was Ṛṣabha, and the last, the 24th, was Vardhamāna. The names, signs, and colours of the 24 Tīrthakaras were as follows:

(1) Ṛṣabha (or Vṛṣabha), bull, golden; (2) Ajita, elephant, golden; (3) Śambhava, horse, golden; (4) Abhinandana, ape, golden; (5) Sumati, heron, golden; (6) Padmaprabha, lotus-flower, red; (7) Supārśva, the *svastika*, golden; (8) Chandraprabha, moon, white; (9) Suvidhi (or Puṣpadanta), dolphin, white; (10) Śītala, the *śrīvatsa*, golden; (11) Śreyāṁsa (or Śreyān), rhinoceros, golden; (12) Vāsupūjya, buffalo, red; (13) Vimala, hog, golden; (14) Ananta (or Anantajit), falcon, golden; (15) Dharma, thunderbolt, golden; (16) Śānti, antelope, golden; (17) Kunthu, goat, golden; (18) Ara, the *nandyāvarta*, golden; (19) Malli, jar, blue; (20) Suvrata (or Munisuvrata), tortoise, black; (21) Nami, blue lotus, golden; (22) Nemi (or Ariṣṭanemi), conch shell, black; (23) Pārśva, snake, blue; (24) Vardhamāna, lion, golden. All Tīrthakaras were Kṣatriyas; Munisuvrata and Nemi belonged to the Harivaṁśa, the remaining 22 to the Ikṣvāku race. Malli was a woman, according to the Śvetāmbaras; but this the Digambaras deny, as, according to them, no female can reach liberation. The interval in years between Mahāvīra and the two last Tīrthakaras has been given above. Nami died 500,000 years before Nemi, Munisuvrata 1,100,000 years before Nami; the next intervals are 6,500,000, 10,000,000, or a krore; the following intervals cannot be expressed in definite numbers of years, but are given in *palyopamas* and *sāgaropamas*, the last interval being one krore of krores of *sāgaropamās*. The length of the life and the height of the Tīrthakaras are in proportion to the length of the interval (see art. AGES OF THE WORLD [Indian]). These particulars are here given according to the Śvetāmbaras.

In connexion with these items of the mythological history of the Jains, it may be added that they relate the legends of 12 universal monarchs (Chakravartins), of 9 Vāsudevas, 9 Baladevas, and 9 Prativāsudevas who lived within the period from the first to the 22nd Tīrthakara. Together with the 24 Tīrthakaras they are the 63 great personages of Jain history; the legends of their lives form the subject of a great epic work by Hemachandra—the *Triṣaṣṭiśalākāpuruṣacharita*, which is based on older sources, probably the Vāsudevahindī (edited in Bhāvnagar, 1906-09, by the Jainadharmaprasārakasabhā).

[1] A. F. R. Hoernle, *Uvāsagadasāo*, tr., p. 5 f., note (Calcutta, 1890), says that Mahāvīra, having been born in Kollāga, 'naturally, when he assumed the monk's vocation, retired (as related in *Kalpasutra* 115 f.) to the *cheīya* of his own clan, called Dūipalāsa and situated in the neighbourhood of Kollāga. Mahāvīra's parents (and with them probably their whole clan of Nāya Kṣattriyas) are said to have been followers of the tenets of Pārśvanātha (see *Āyārañga*, ii. 15, § 16). As such they would, no doubt, keep up a religious establishment (*cheīya*) for the accommodation of Pārśva, on his periodical visits, with his disciples, to Kuṇḍapura or Vesālī. Mahāvīra, on renouncing the world, would probably first join Pārśva's sect, in which, however, he soon became a reformer and chief himself.'

[2] *SBE* xlv. Introd. p. xxi f.

All Tīrthakaras have reached Nirvāṇa at their death. Though, being released from the world, they neither care for nor have any influence on worldly affairs, they have nevertheless become the object of worship and are regarded as the 'gods' (*deva*) by the Jains (see art. ATHEISM [Jain], vol. ii. p. 186 f.); temples are erected to them where their idols are worshipped.[1] The favourite Tīrthakaras are the first and the three last ones, but temples of the remaining ones are also met with. The worship of the idols of the Tīrthakaras is already mentioned in some canonical books, but no rules for their worship are given;[2] it was, however, already in full sway in the first centuries of our era, as evidenced by the Paüma-chariya, the oldest Prakrit *kāvya* of the Jains, and by the statues of Tīrthakaras found in ancient sites—*e.g.*, in the Kaṅkālī mound at Mathurā which belongs to this period.[3] Some sects, especially a rather recent section of the Śvetāmbaras, the Dhuṇḍhiā or Sthānakavāsins, reject this kind of worship altogether.[4]

It goes without saying that the Tīrthakaras, except the two last, belong to mythology rather than to history; the 22nd, Ariṣṭanemi, is connected with the legend of Kṛṣṇa as his relative. But the details of Mahāvīra's life as related in the canonical books may be regarded on the whole as historical facts.

He was a Kṣatriya of the Jñāta clan and a native of Kuṇḍagrāma, a suburb of the town Vaiśālī (the modern Basārh, some 27 miles north of Patna).[5] He was the second son of the Kṣatriya Siddhārtha and Triśalā, a highly connected lady. The Śvetāmbaras maintain, and thus it is stated in the *Āchārāṅga sūtra*, the *Kalpasūtra*, etc., that the soul of the Tīrthakara first descended into the womb of the Brāhmaṇī Devānandā, and was, by the order of Indra, removed thence to the womb of Triśalā.[6] But the Digambaras reject this story. His parents,

[1] For images and idols of the Jains see J. Burgess, 'Digambara Jain Iconography,' *IA* xxxii. [1903] 459 ff.; G. Bühler, 'Specimens of Jaina Sculptures from Mathura' in *Epigraphia Indica*, ii. [1894] 311 ff.; J. Fergusson and J. Burgess, *Cave Temples*, London, 1880, p. 487 ff.

[2] Some kind of worship, however, seems to be implied for the oldest times by the mention of the various *cheīya* (*chaitya*), or shrines, in the sacred books. These shrines were situated in gardens in which Mahāvīra resided during his visits to the towns to which they belonged. Cf. Hoernle, *Uvāsagadasāo*, tr., p. 2, note 4.

[4] See 'Notes on the non-Idolatrous Shwetambar Jains,' by 'Seeker,' 1911; and Margaret Stevenson, *Notes on Modern Jainism*, p. 13 f.

[5] Kuṇḍaggāma and Vāṇiyaggāma, both suburbs of Vesālī, have been identified by Hoernle (*loc. cit.* p. 4, note 8) with the modern villages Bāniyā and Basukuṇḍ.

[6] Cf. the transfer of the embryo of Baladeva from the womb of Rohiṇī to that of Devakī, whence he got the name Saṁkarṣaṇa, still retaining the metronymic Rauhiṇeya.

who were pious Jains and worshippers of Pārśva, gave him the name Vardhamāna (Vīra or Mahāvīra is an epithet used as a name; Arhat, Bhagavat, Jina, etc., are titles common to all Tīrthakaras). He married Yaśodā and by her had a daughter Aṇojjā. His parents died when he was 30 years old, and his elder brother Nandivardhana succeeded his father in whatever position he had held. With the permission of his brother and the other authorities, he carried out a long-cherished resolve and became a monk with the usual Jain rites. Then followed 12 years of self-mortification; Mahāvīra wandered about as a mendicant friar, bearing all kinds of hardships; after the first 13 months he even discarded clothes. At the end of this period dedicated to meditation, he reached the state of omniscience (*kevala*), corresponding to the Bodhi of the Buddhists. He lived for 42 years more, preaching the law and instructing his 11 disciples (*gaṇadhara*): Indrabhūti, Agnibhūti, Vāyubhūti, Ārya Vyakta, Ārya Sudharman, Maṇḍitaputra, Mauryaputra, Akampita, Achalabhrātṛ, Metārya, and Prabhāsa. In the 72nd year of his life he died at Pāvā and reached Nirvāṇa. This event took place, as stated above, some years before Buddha's death, and may, therefore, be placed about 480 B.C. The Śvetāmbaras, however, place the Nirvāṇa of Mahāvīra, which is the initial point of their era, 470 years before the beginning of the Vikrama era, or in 527 B.C.[1] The Digambaras place the same event 18 years later.

**3. Canonical literature of the Śvetāmbaras.**—The canonical books of the Śvetāmbaras (the Digambaras do not admit them to be genuine) are not works by Mahāvīra himself, but some of them claim to be discourses delivered by him to Indrabhūti, the Gautama, which his disciple, the *gaṇadhara* Sudhārman, related to his own disciple Jambūsvāmin.

Before entering on details about the existing canon, it must be stated that, according to the Jains, there were originally, since the time of the first Tīrthakara, two kinds of sacred books, the 14 *pūrvas* and the 11 *aṅgas*; the 14 *pūrvas* were, however, reckoned to make up a 12th *aṅga* under the name of Dṛṣṭivāda. The knowledge of the 14 *pūrvas* continued only down to Sthūlabhadra, the 8th patriarch after Mahāvīra; the next 7 patriarchs down to Vajra knew only 10 *pūrvas*, and after that time the remaining *pūrvas* were gradually lost, until, at the time when the canon was written down in books (980 A.V.), all the *pūrvas* had disappeared, and consequently the 12th *aṅga* too. Such is the Śvetāmbara tradition regarding the *pūrvas*; that of the Digambaras is similar as regards the final loss of the *pūrvas*, differing, however, in most details; but they contend that the *aṅgas* also were lost after 9 more generations.[2]

The 11 *aṅgas* are the oldest part of the canon (*siddhānta*), which at present embraces 45 texts. Besides the 11 *aṅgas*, there are 12 *upāṅgas*, 10 *paiṇṇas* (*prakīrṇas*), 6 *chhedasūtras*, *Nāndī* and *Anuyogadvāra*, and 4 *mūlasūtras*. A list of these texts according to the usual enumeration follows.[3]

(1) 11 *aṅgas*: Āchāra, Sūtrakṛta, Sthāna, Samavāya, Bhagavatī, Jñātadharmakathās, Upāsakadaśās, Antakṛddaśās, Anuttaraupapātikadaśās, Praśnavyākaraṇa, Vipāka (Dṛṣṭivāda, no longer extant); (2) 12 *upāṅgas*: Aupapātika, Rājapraśnīya, Jīvābhigama, Prajñāpanā, Jambudvīpaprajñapti, Chandraprajñapti, Sūryaprajñapti, Nirayāvalī [or Kalpikā], Kalpāvataṁsikā, Puṣpikā, Puṣpachūlikā, Vṛṣṇidaśās; (3) 10 *paiṇṇas* (*prakīrṇas*): Chatuḥśaraṇa, Saṁstāra, Āturapratyākhyānam, Bhaktāparijñā, Taṇḍulavaiyālī, Chandāvija, Devendrastava, Gaṇivija, Mahāpratyākhyāna, Vīrastava; (4) 6 *chhedasūtras*: Niśītha, Mahāniśītha, Vyavahāra, Daśāśrutaskandha, Bṛhatkalpa, Pañchakalpa; (5) 2 *sūtras* without a common name: Nāndī and Anuyogadvāra; (6) 4 *mūlasūtras*: Uttarādhyayana, Āvaśyaka, Daśavaikālika, and Piṇḍaniryukti. Most of the canonical books have been edited in India, some with commentaries. English translations have been published of the Āchārāṅga, Sūtrakṛtāṅga, Upāsakadaśās, Antakṛddaśās, Anuttaraupapātikadaśās, Uttarādhyayana, and two Kalpasūtras.

The redaction of the canon took place under Devarddhigaṇi in 980 after the Nirvāṇa (A.D. 454, according to the common reckoning, actually perhaps 60 years later); before that time the sacred texts were handed down without embodying them in written books. In the interval between the composition and the final redaction of the texts, and

[1] In the Preface to his ed. of the *Pariśiṣṭa Parvan* (*Bibl. Ind.*, Calcutta, 1891), p. 4 ff., the present writer criticizes the Śvetāmbara tradition, and, by combining the Jain date of Chandragupta's accession to the throne in 155 after the Nirvāṇa with the historical date of the same event in 321 or 322 B.C., arrives at 476 or 477 B.C. as the probable date of Mahāvīra's Nirvāṇa.

[2] For details see A. A. Guérinot, *Répertoire d'épigraphie jaina*, Paris, 1908, p. 36.

[3] For details see Weber, 'Sacred Literature of the Jainas, which first appeared (in German) in *Indische Studien*, xvi. [1883], and xvii. [1885], and was translated in *IA* xvii. [1888]–xxi. [1892].

even afterwards, they have undergone many alterations—transposition of parts, additions, etc.—traces of which can still be pointed out.[1] Along with these alterations there seems to have gone on a gradual change of the language in which the texts were composed. The original language, according to the Jains, was Ardhamāgadhī, and they give that name, or Māgadhī, to the language of the present texts. But it has, most probably, been modernized during the process of oral transmission. The older parts of the canon contain many archaic forms for which in later texts distinct Māhārāṣṭrī idioms are substituted. It will be best to call the language of the sacred texts simply Jain Prākrit, and that of later works Jain Māhārāṣṭrī.

As the works belonging to the canon are of different origin and age, they differ greatly in character. Some are chiefly in prose, some in verse, some in mixed prose and verse. Frequently a work comprises distinctly disparate parts put together when the redaction of the canon took place. The older prose works are generally very diffuse and contain endless repetitions; some, however, contain succinct rules, some, besides lengthy descriptions, systematic expositions of various dogmatic questions; in others, again, the systematic tendency prevails throughout. A large literature of glosses and commentaries has grown up round the more important texts.[2] Besides the sacred literature and the commentaries belonging to it, the Jains possess separate works, in close material agreement with the former, which contain systematic expositions of their faith, or parts of it, in Prākrit and Sanskrit. These works, which generally possess the advantage of accuracy and clearness, have in their turn become the object of learned labours of commentators. One of the oldest is Umāsvāti's *Tattvārthādhigamasūtra*, a Śvetāmbara work, which, however, is also claimed by the Digambaras.[3] A sort of encyclopædia of Jainism is the *Lokaprakāśa*[4] by Tejapāla's son, Vinaya vijaya (1652). On these and similar works our sketch of the Jain faith is chiefly based.

It may here be mentioned that the Jains also possess a secular literature of their own, in poetry and prose, both Sanskrit and Prākrit. Of peculiar interest are the numerous tales in Prākrit and Sanskrit with which authors used to illustrate dogmatical or moral problems. They have also attempted more extensive narratives, some in a more popular style, as Haribhadra's *Samarāichchakahā*, and Siddharṣi's great allegorical work *Upamitibhavaprapañchā kathā* (both edited in *Bibl. Ind.*, Calcutta, 1901–14), some in highly artificial Sanskrit, as Somadeva's *Yaśastilaka* and Dhanapāla's *Tilakamañjarī* (both published in the *Kāvyamālā*, Bombay, 1901–03, 1903). Their oldest Prākrit poem (perhaps of the 3rd cent. A.D.), the *Paümachariya*, is a Jain version of the *Rāmāyaṇa*. Sanskrit poems, both in *purāṇa* and in *kāvya* style, and hymns in Prākrit and Sanskrit, are very numerous with the Śvetāmbaras as well as the Digambaras; there are likewise some Jain dramas. Jain authors have also contributed many works, original treatises as well as commentaries, to the scientific literature of India in its various branches—grammar, lexicography, metrics, poetics, philosophy, etc. (cf. art. HEMACHANDRA), vol. vi. p. 591.

**4. The doctrines of Jainism.**—Jain doctrines may be broadly divided into (i.) philosophical and (ii.) practical. Jain philosophy contains ontology, metaphysics, and psychology. The practical doctrines are concerned with ethics and asceticism, monasticism, and the life of the laity.

i. (*a*) *Philosophy*.—The Āraṇyakas and Upaniṣads had maintained, or were believed to maintain, that Being is one, permanent, without beginning, change, or end. In opposition to this view, the Jains declare that Being is not of a persistent and unalterable nature: Being, they say, 'is joined to

[1] See Weber, *loc. cit.* 8.

[2] The development of this commenting literature has been studied by E. Leumann, *ZDMG* xlvi. [1892] 585 ff.

[3] The Skr. text with a German tr. and explanation has been published by the present writer in *ZDMG* lx. [1906] 287 ff., 512 ff.; text and *bhāṣya* are contained in the *Bibl. Ind.* edition (Calcutta, 1905).

[4] Edited by Hīrālāla Haṁsarāja, 3 vols., Jāmnagar, 1910.

production, continuation, and destruction.'[1] This theory they call the theory of the 'Indefiniteness of Being' (*anekāntavāda*); it comes to this: existing things are permanent only as regards their substance, but their accidents or qualities originate and perish. To explain: any material thing continues for ever to exist as matter; this matter, however, may assume any shape and quality. Thus, clay as substance may be regarded as permanent, but the form of a jar of clay, or its colour, may come into existence and perish. It is clear that the Brāhmanical speculations are concerned with transcendental Being, while the Jain view deals with Being as given in common experience.

The doctrine of the Indefiniteness of Being is upheld by a very strange dialectical method called *Syādvāda*, to which the Jains attach so much importance that this name frequently is used as a synonym for the Jain system itself. According to this doctrine of *Syādvāda*, there are 7 forms of metaphysical propositions, and all contain the word *syāt*, e.g. *syād asti sarvaṁ, syād nāsti sarvaṁ*. *Syāt* means 'may be,' and is explained by *kathaṁchit*, which in this connexion may be translated 'somehow.' The word *syāt* here qualifies the word *asti*, and indicates the Indefiniteness of Being (or *astitvam*). For example, we say a jar is somehow, *i.e.* it exists, if we mean thereby that it exists as a jar; but it does not exist somehow if we mean that it exists as a cloth or the like. The purpose of these seeming truisms is to guard against the assumption of the Vedāntins that Being is one without a second, the same in all things. Thus we have the correlative predicates 'is' (*asti*) and 'is not' (*nāsti*). A third predicate is 'inexpressible' (*avaktavya*); for existent and non-existent (*sat* and *asat*) belong to the same thing at the same time, and such a co-existence of mutually contradictory attributes cannot be expressed by any word in the language. The three predicates variously combined make up the 7 propositions, or *sapta bhaṅgas*, of the *Syādvāda*.

Supplementary to the doctrine of the *Syādvāda*, and, in a way, the logical complement to it, is the doctrine of the *nayas*.[2] The *nayas* are ways of expressing the nature of things: all these ways of judgment, according to the Jains, are one-sided, and they contain but a part of the truth. There are 7 *nayas*, 4 referring to concepts, and 3 to words. The reason for this variety of statement is that Being is not simple, as the Vedāntins contend, but is of a complicated nature; therefore every statement and every denotation of a thing is necessarily incomplete and one-sided; and, if we follow one way only of expression or of viewing things, we are bound to go astray. Hence it is usual in explaining notions to state what the thing under discussion is with reference to substance, place, time, and state of being.

(*b*) *Metaphysics.*—All things, *i.e.* substances (*dravya*), are divided into lifeless things (*ajīvakāya*) and lives or souls (*jīva*). The former are again divided into (1) space (*ākāśa*); (2) and (3) two subtle substances called *dharma* and *adharma*, and (4) matter (*pudgala*). Space, *dharma*, and *adharma* are the necessary conditions for the subsistence of all other things, viz. souls and matter; space affords them room to subsist; *dharma* makes it possible for them to move or to be moved; and *adharma*, to rest. It will be seen that the function of space, as we conceive it, is by the Jains distributed among three different substances; this seems highly speculative, and rather hyperlogical. But the conception of the two cosmical substances *dharma* and *adharma*, which occur already, in the technical meaning just given, in canonical books, seems to be developed from a more primitive notion. For, as their names *dharma* and *adharma* indicate, they seem to have denoted, in primitive speculation, those invisible 'fluids' which by contact cause sin and merit. The Jains, using for the latter notions the terms *pāpa* and *puṇya*, were free to use the current names of those 'fluids' in a new sense not known to other Indian thinkers.

Space (*ākāśa*) is divided into that part of space which is occupied by the world of things (*lokākāśa*), and the space beyond it (*alokākāśa*), which is absolutely void and empty, an abyss of nothing. *Dharma* and *adharma* are co-extensive with the world; accordingly no soul nor any particle of matter can get beyond this world for want of the substrates of motion and rest. Time is recognized by some as a quasi-substance besides those enumerated.

Matter (*pudgala*) is eternal and consists of atoms; otherwise it is not determined in its nature, but, as is already implied by the doctrine of the Indefiniteness of Being, it is something that may become anything, as earth, water, fire, wind, etc. Two states of matter are distinguished: gross matter, of which the things which we perceive consist, and subtle matter, which is beyond the reach of our senses. Subtle matter, for instance, is that matter which is transformed into the different kinds of *karma* (see below). All material things are ultimately produced by the combination of atoms. Two atoms form a compound when the one is viscous and the other dry, or both are of different degrees either of viscousness or dryness. Such compounds combine with others, and so on. They are, however, not constant in their nature, but are subject to change or development (*pariṇāma*), which consists in the assumption of qualities (*guṇas*). In this way originate also the bodies and senses of living beings. The elements—earth, water, fire, and wind—are bodies of souls in the lowest stage of development, and are, therefore, spoken of as 'earth-bodies,' 'water-bodies,' etc. Here we meet with animistic ideas which, in this form, are peculiar to Jainism. They probably go back to a remote period, and must have prevailed in classes of Indian society which were not influenced by the more advanced ideas of the Brāhmans.

Different from matter and material things are the souls (*jīva*, lit. 'lives'). There is an infinite number of souls; the whole world is literally filled with them. The souls are substances, and as such eternal; but they are not of a definite size, since they contract or expand according to the dimensions of the body in which they are incorporated for the time being. Their characteristic mark is intelligence, which may be obscured by extrinsic causes, but never destroyed.

Souls are of two kinds: mundane (*saṁsārin*), and liberated (*mukta*). Mundane souls are the embodied souls of living beings in the world and still subject to the Cycle of Birth; liberated souls will be embodied no more; they have accomplished absolute purity; they dwell in the state of perfection at the top of the universe, and have no more to do with worldly affairs; they have reached *nirvāṇa* (*nirvṛti*, or *mukti*). Metaphysically the difference between the mundane and the liberated soul consists in this, that the former is entirely filled by subtle matter, as a bag is filled with sand, while the latter is absolutely pure and free from any material alloy.

The defilement of the soul takes place in the following way. Subtle matter ready to be transformed into *karma* pours into the soul; this is called 'influx' (*āsrava*). In the usual state of things a soul harbours passions (*kaṣāya*) which act like a viscous substance and retain the subtle

[1] See H. Jacobi, 'The Metaphysics and Ethics of the Jainas,' in *Trans. of the Congress for the Hist. of Religion*, Oxford, 1908, ii. 60.
[2] *Ib.* 61.

matter coming into contact with the soul; the subtle matter thus caught by the soul enters, as it were, into a chemical combination with it; this is called the binding (*bandha*) (of *karma*-matter). The subtle matter 'bound' or amalgamated by the soul is transformed into the 8 kinds of *karma*, and forms a kind of subtle body (*kārmaṇaśarīra*)[1] which clings to the soul in all its migrations and future births, and determines the individual state and lot of that particular soul. For, as each particular *karma* has been caused by some action, good, bad, or indifferent, of the individual being in question, so this *karma*, in its turn, produces certain painful, or pleasant, or indifferent conditions and events which the individual in question must undergo. Now, when a particular *karma* has produced its effect in the way described, it (*i.e.* the particular *karma*-matter) is discharged or purged from the soul. This process of 'purging off' is called *nirjarā*. When this process goes on without interruption, all *karma*-matter will, in the end, be discharged from the soul; and the latter, now freed from the weight which had kept it down before the time of its liberation (for matter is heavy, and *karma* is material), goes up in a straight line to the top of the universe where the liberated souls dwell. But in the usual course of things the purging and binding processes go on simultaneously, and thereby the soul is forced to continue its mundane existence. After the death of an individual, his soul, together with its *kārmaṇaśarīra*, goes, in a few moments, to the place of its new birth and there assumes a new body, expanding or contracting in accordance with the dimensions of the latter.

Embodied souls are living beings, the classification of which is a subject not only of theoretical but also of great practical interest to the Jains. As their highest duty (*parama dharma*) is not to kill any living beings (*ahiṁsā*), it becomes incumbent on them to know the various forms which life may assume. The Jains divide living beings according to the number of sense-organs which they possess: the highest (*pañchendriya*) possess all five organs, viz. those of touch, taste, smell, sight, and hearing, while the lowest (*ekendriya*) have only the organ of touch, and the remaining classes each one organ more than the preceding one in the order of organs given above; *e.g.* worms, etc., possess the organs of touch and taste; ants, etc., possess, in addition, smell; bees, etc., seeing. The vertebrates possess all five organs of sense; the higher animals, men, denizens of hell, and gods possess an internal organ or mind (*manas*), and are therefore called rational (*saṁjñin*), while the lower animals have no mind (*asaṁjñin*). The notions of the Jains about beings with only one organ are, in part, peculiar to themselves and call for a more detailed notice.

It has already been stated that the four elements are animated by souls; *i.e.*, particles of earth, etc., are the body of souls, called earth-lives, etc. These we may call elementary lives; they live and die and are born again, in the same or another elementary body. These elementary lives are either gross or subtle; in the latter case they are invisible. The last class of one-organed lives are plants; of some plants each is the body of one soul only, but of other plants each is an aggregation of embodied souls which have all functions of life, as respiration and nutrition, in common. That plants possess souls is an opinion shared by other Indian philosophers. But the Jains have developed this theory in a remarkable way. Plants in which only one soul is embodied are always gross; they exist in the habitable part of the world only. But those plants of which each is a colony of plant-lives may also be subtle, *i.e.* invisible, and in that case they are distributed all over the world. These subtle plants are called *nigoda*; they are composed of an infinite number of souls forming a very small cluster, have respiration and nutrition in common, and experience the most exquisite pains. Innumerable *nigodas* form a globule, and with them the whole space of the world is closely packed, like a box filled with powder. The *nigodas* furnish the supply of souls in place of those who have reached *nirvāṇa*. But an infinitesimally small fraction of one single *nigoda* has sufficed to replace the vacancy caused in the world by the *nirvāṇa* of all the souls that have been liberated from the beginningless past down to the present. Thus it is evident that the *saṁsāra* will never be empty of living beings (see *Lokaprakāśa*, vi. 31 ff.).

From another point of view mundane beings are divided into four grades: denizens of hell, animals, men, and gods; these are the four walks of life (*gati*), in which beings are born according to their merits or demerits. For details, see artt. DEMONS AND SPIRITS (Jain), vol. iv. p. 608 ff., COSMOGONY AND COSMOLOGY (Indian), § 4, vol. iv. p. 160 f., and AGES OF THE WORLD (Indian), vol. i. p. 200.

We have seen that the cause of the soul's embodiment is the presence in it of *karma*-matter. The theory of *karma* is the key-stone of the Jain system; it is necessary, therefore, to explain this theory in more detail. The natural qualities of soul are perfect knowledge (*jñāna*), intuition or faith (*darśana*), highest bliss, and all sorts of perfections; but these inborn qualities of the soul are weakened or obscured, in mundane souls, by the presence of *karma*. From this point of view the division of *karma* will be understood. When *karma*-matter has penetrated the soul, it is transformed into 8 kinds (*prakṛti*) of *karma* singly or severally, which form the *kārmaṇaśarīra*, just as food is, by digestion, transformed into the various fluids necessary for the support and growth of the body. The 8 kinds of *karma* are as follows.

(1) *Jñānāvaraṇīya*, that which obscures the inborn right knowledge (*i.e.* omniscience) of the soul and thereby produces different degrees of knowledge and of ignorance;[1] (2) *darśanāvaraṇīya*, that which obscures right intuition, *e.g.* sleep; (3) *vedanīya*, that which obscures the bliss-nature of the soul and thereby produces pleasure and pain; (4) *mohanīya*, that which disturbs the right attitude of the soul with regard to faith, conduct, passions, and other emotions, and produces doubt, error, right or wrong conduct, passions, and various mental states. The following 4 kinds of *karma* concern more the individual status of a being: (5) *āyuṣka*, that which determines the length of life of an individual in one birth as hell-being, animal, man, or god; (6) *nāma*, that which produces the various circumstances or elements which collectively make up an individual existence, *e.g.* the peculiar body with its general and special qualities, faculties, etc.; (7) *gotra*, that which determines the nationality, caste, family, social standing, etc., of an individual; (8) *antarāya*, that which obstructs the inborn energy of the soul and thereby prevents the doing of a good action when there is a desire to do it.

Each kind of *karma* has its predestined limits in time within which it must take effect and thereby be purged off. Before we deal with the operation of *karma*, however, we must mention another doctrine which is connected with the *karma*-theory, viz. that of the six *leśyās*. The totality of *karma* amalgamated by a soul induces on it a transcendental colour, a kind of complexion, which cannot be perceived by our eyes; and this is called *leśyā*. There are six *leśyās*: black, blue, grey; yellow, red, and white. They have also, and prominently, a moral bearing; for the *leśyā* indicates the character of the individual who owns it. The first three belong to bad characters, the last three to good characters.[2]

[1] The Jains recognize 5 bodies which an individual may possess (though not all simultaneously), one gross and 4 subtle ones. Besides the *kārmaṇaśarīra*, which is the receptacle of *karma* and has no bodily functions, there are (1) the transmutation body (*vaikriyaśarīra*), producing the wonderful appearances which gods, magicians, etc., may assume; (2) the translocation body (*āhārakaśarīra*), which certain sages may assume for a short time in order to consult a Tīrthakara at some distance; (3) the igneous body (*taijasaśarīra*), which in common beings causes the digestion of food, but in persons of merit gives effect to their curses (that they burn their objects) and to their benedictions (that they gladden as the rays of the moon), etc. This doctrine of the subtle bodies, in which, however, many details are subject to controversy, seems to be the outcome of very primitive ideas about magic, etc., which the Jains attempted to reduce to a rational theory. With the terms *vaikriya-* and *taijasaśarīra* may be compared the *vaikārika* and *taijasa ahaṁkāra* of the Sāṅkhyas.

[1] The Jains acknowledge five kinds of knowledge: (1) ordinary cognition (*mati*), (2) testimony (*śruta*), (3) supernatural cognition (*avadhi*), (4) direct knowledge of the thoughts of others (*manaḥparyaya*), (5) omniscience (*kevala*).

[2] The belief in colours of the soul seems to be very old and to go back to the time when expressions like 'a black soul,' 'a

The individual state of the soul is produced by its inborn nature and the *karma* with which it is vitiated; this is the developmental or *pāriṇāmika* state. But there are 4 other states which have reference only to the behaviour of the *karma*. In the common course of things *karma* takes effect and produces its proper results; then the soul is in the *audayika* state. By proper efforts *karma* may be prevented, for some time, from taking effect; it is neutralized (*upaśamita*), but it is still present, just like fire covered by ashes; then the soul is in the *aupaśamika* state. When *karma* is not only prevented from operating, but is annihilated altogether (*kṣapita*), then the soul is in the *kṣāyika* state, which is necessary for reaching *nirvāṇa*. There is a fourth state of the soul, *kṣāyopaśamika*, which partakes of the nature of the preceding ones; in this state some *karma* is annihilated, some is neutralized, and some is active. This is the state of ordinary good men, but the *kṣāyika* and *aupaśamika* states belong to holy men, especially the former. It will be easily understood that these distinctions have an important moral bearing; they are constantly referred to in the practical ethics of the Jains.

We shall now consider the application of the *karma*-theory to ethics. The highest goal is to get rid of all *karma* (*nirjarā*) and meanwhile to acquire no new *karma*—technically speaking, to stop the influx (*āsrava*) of *karma*, which is called *saṁvara*, or the covering of the channels through which *karma* finds entrance into the soul. All actions produce *karma*, and in the majority of cases entail on the doer continuance of worldly existence (*sāmparāyika*); but, when a man is free from passions and acts in strict compliance with the rules of right conduct, his actions produce *karma* which lasts but for a moment and is then annihilated (*īryapatha*). Therefore the whole apparatus of monastic conduct is required to prevent the formation of new *karma*; the same purpose is served by austerities (*tapas*), which, moreover, annihilate the old *karma* more speedily than would happen in the common course of things.

It is evident from the preceding remarks that the ethics and ascetics of the Jains are to be regarded as the logical consequence of the theory of *karma*. But from a historical point of view many of their ethical principles, monastic institutions, and ascetic practices have been inherited from older religious classes of Indian society, since Brāhmanical ascetics and Buddhists resemble them in many of their precepts and institutions (see *SBE* xxii. [1884] Introd., p. xxii ff.).

ii. Jain ethics has for its end the realization of *nirvāṇa*, or *mokṣa*. The necessary condition for reaching this end is the possession of right faith, right knowledge, and right conduct. These three excellences are metaphorically named the 'three jewels' (*triratna*), an expression used also by the Buddhist but in a different sense; they are not produced, but they are manifested on the removal of obstructing or obscuring species of *karma*. To effect this, the rules of conduct must be observed and corresponding virtues must be acquired. Of first importance are the five vows, the first four of which are also acknowledged by Brāhmans and Buddhists. The five vows (*vratas*) of the Jains are: (1) not to kill; (2) not to lie; (3) not to steal; (4) to abstain from sexual intercourse; (5) to renounce all interest in worldly things, especially to keep no property. These vows are to be strictly observed by monks, who take them on entering the Order, or, as it is commonly expressed, on taking *dīkṣā*. In their case the vows are called the five great vows (*mahāvrata*). Lay people, however, should observe these vows so far as their conditions admit; the five vows of the lay people are called the small vows (*aṇuvrata*). To explain: not to kill any living beings requires the greatest caution in all actions, considering that nearly everything is believed to be endowed with life. Endless rules have been laid down for monks which aim at preventing the destruction of the life of any living beings whatever. But if a layman were to observe these rules he could not go about his business; he is, therefore, obliged to refrain only from intentionally killing living beings, be it for food, pleasure, gain, or any such purpose. And so it is also with the remaining vows; their rigour is somewhat abated in the case of laymen. A layman, however, may, for a limited time, follow a more rigorous practice by taking one of the following particular vows or regulations of conduct (*śīlavrata*): (1) *digvirati*; he may limit the distance up to which he will go in this or that direction; (2) *anarthadaṇḍavirati*; he may abstain from engaging in anything that does not strictly concern him; (3) *upabhogaparibhogaparimāṇa*; he may set a measure to his food, drink, and the things he enjoys, avoiding besides gross enjoyments. (It may be mentioned in passing that certain articles of food, etc., are strictly forbidden to all, monks and laymen alike, *e.g.* roots, honey, and spirits; and likewise no food may be eaten at night.) The preceding three vows are called *guṇavrata*; the next four are the disciplinary vows (*śikṣāvrata*): (4) *deśavirata*, reducing the area in which one will move; (5) *sāmāyika*; by this vow the layman undertakes to give up, at stated times, all sinful actions by sitting down motionless and meditating on holy things; (6) *pauṣadhopavāsa*, to live as a monk on the 8th, 14th, or 15th day of the lunar fortnight, at least once a month: (7) *atithisaṁvibhāga*, lit. to give a share to guests, but it is understood in a less literal sense, viz. to provide the monks with what they want.

Most of these regulations of conduct for laymen are intended apparently to make them participate, in a measure and for some time, in the merits and benefits of monastic life without obliging them to renounce the world altogether. The rules for a voluntary death have a similar end in view (see art. DEATH AND DISPOSAL OF THE DEAD [Jain], vol. iv. p. 484 f.). It is evident that the lay part of the community were not regarded as outsiders, or only as friends and patrons of the Order, as seems to have been the case in early Buddhism; their position was, from the beginning, well defined by religious duties and privileges; the bond which united them to the Order of monks was an effective one. The state of a layman was one preliminary and, in many cases, preparatory to the state of a monk; in the latter respect, however, a change seems to have come about, in so far as now and for some time past the Order of monks is recruited chiefly from novices entering it at an early age, not from laymen in general. It cannot be doubted that this close union between laymen and monks brought about by the similarity of their religious duties, differing not in kind, but in degree, has enabled Jainism to avoid fundamental changes within, and to resist dangers from without for more than two thousand years, while Buddhism, being less exacting as regards the laymen, underwent the most extraordinary evolutions and finally disappeared altogether in the country of its origin.

A monk on entering the Order takes the five great vows stated above; if they are strictly kept, in the spirit of the five times five clauses, or *bhāvanās* (*SBE* xxii. 202 ff.), no new *karma* can form. But, to practise them effectually, more explicit regulations are required, and these constitute the discipline

bright soul,' were understood in a literal sense. Traces of a similar belief have also been found elsewhere (see *Mahābhārata*, xii. 290. 33 f., 291. 4 ff.; cf. *Yogasūtra*, iv. 7).

of the monks. This discipline is described under seven heads.

(1) Since through the activity of body, speech, and mind, which is technically called *yoga* by the Jains, *karma*-matter pours into the soul (*āsrava*) and forms new *karma*, as explained above, it is necessary, in order to prevent the *āsrava* (or to effect *saṁvara*), to regulate those activities by keeping body, speech, and mind in strict control: these are the three *guptis* (*e.g.*, the *gupti* or guarding of the mind consists in not thinking or desiring anything bad; having only good thoughts, etc.). (2) Even in those actions which are inseparable from the duties of a monk, he may become guilty of sin by inadvertently transgressing the great vows (*e.g.*, killing living beings). To avoid such sins he must observe the five *samitis*, *i.e.* he must be cautious in walking, speaking, collecting alms, taking up or putting down things, and voiding the body; *e.g.*, a monk should in walking look before him for about six feet of ground to avoid killing or hurting any living being; he should, for the same reason, inspect and sweep the ground before he puts anything on it; he should be careful not to eat anything considered to possess life,[1] etc. (3) Passion being the cause of the amalgamation of *karma*-matter with the soul, the monk should acquire virtues. The 4 cardinal vices (*kaṣāya*) are anger, pride, illusion, and greed; their opposite virtues are forbearance, indulgence, straightforwardness, and purity. Adding to them the following 6 virtues, veracity, restraint, austerities, freedom from attachment to anything, poverty, and chastity, we have what is called the tenfold highest law of the monks (*uttamadharma*).[2] (4) Helpful for the realization of the sanctity of which an earnest searcher of the highest good stands in need are the 12 reflexions (*anuprekṣā* or *bhāvanā*) on the transitoriness of all things, on the helplessness of men, on the misery of the world, and similar topics, which form the subject of endless homilies inserted in their works by Jain authors. (5) Furthermore, it is necessary for a monk, in order to keep in the right path to perfection and to annihilate his *karma*, to bear cheerfully with all that may cause him trouble or annoyance. There are 22 such 'troubles' (*pariṣaha*) which a monk must endure without flinching, as hunger and thirst, cold and heat, all sorts of trying occurrences, illness, ill treatment, emotions, etc. If we consider that the conduct of the monk is regulated with the purpose of denying him every form of comfort and merely keeping him alive, without, however, the risk of hurting any living beings, it may be imagined to what practical consequences the endurance of the *pariṣahas* must lead. (6) Conduct (*chāritra*) consists in control and is of 5 degrees or phases. In the lowest phase all sinful activities are avoided, and the highest leads to the annihilation of all *karma*, preliminary to final liberation. (7) The last item is asceticism or austerities (*tapas*), which not only prevents the forming of new *karma* (*saṁvara*) but also purges off the old (*nirjarā*), provided that it be undertaken in the right way and with the right intention; for there are also the 'austerities of fools' (*bālatapas*) practised by other religious sects, through which temporary merits, such as supernatural powers, birth as a god, etc., can be accomplished but the highest good will never be attained. *Tapas* is, therefore, one of the most important institutions of Jainism. It is divided into (*a*) external and (*b*) internal *tapas*; the former comprises the austerities practised by the Jains, the latter their spiritual exercises. (*a*) Among austerities fasting is the most conspicuous; the Jains have developed it to a kind of art, and reach a remarkable proficiency in it. The usual way of fasting is to eat only one meal every second, third, fourth day, and so on down to half a year. Another form of fasting is starving oneself to death (*māraṇāntikī saṁlekhanā*; see 'Voluntary death or euthanasia' in the art. DEATH AND DISPOSAL OF THE DEAD [Jain]). Other kinds of abstinence are distinguished from fasting properly so called: reduction of the quantity of the daily food; restrictions as regards the kind of food selected from what one has obtained by begging (for monks and nuns must, of course, beg their daily meal and must not eat what has been specially prepared for them); rejection of all attractive food. To the category of external austerities belong also sitting in secluded spots to meditate there and the postures taken up during meditation. The latter item Jain ascetics have in common with Brāhmanical Yoga. (*b*) Internal austerities embrace all that belongs to spiritual discipline, including contemplation—*e.g.*, confessing and repenting of sins. Transgressions of the rules of conduct are daily expiated by the ceremony of *pratikramaṇa*; greater sins must be confessed to a superior (*ālochanā*) and repented of. The usual penance in less serious cases is to stand erect in a certain position for a given time (*kāyotsarga*); but for graver transgressions the superior prescribes other penances—in the worst cases a new ordination of the guilty monk. Other kinds of internal austerities consist in modest behaviour, in doing services to other members of the Order or laymen, in the duty of studying, in overcoming all temptations. But the most important of all spiritual exercises is contemplation (*dhyāna*). Contemplation consists in the concentration of the mind on one object; it cannot be persevered in for longer than one *muhūrta* (48 minutes), and is permitted only to persons of a sound constitution. According to the object on which the thoughts are concentrated and the purpose for which this is done, contemplation may be bad or good, and will lead to corresponding results. We are here concerned only with good contemplation, which is either religious (*dharma*), or pure or bright (*śukla*). The former leads to the intuitive cognition of things hidden to common mortals, especially of religious truths. Indeed, it cannot be doubted that the pretended accuracy of information on all sorts of subjects, such as cosmography, astronomy, geography, spiritual processes, etc., which the sacred books and later treatises contain is in great part due to the intuition which the 'religious contemplation' is imagined to produce. Higher than the latter is the 'pure' contemplation, which leads through four stages to final emancipation: first, single objects are meditated upon, then only one object; then there is the stage when the activities of the body, speech, and mind continue, but only in a subtle form without relapse. At this stage, when the worldly existence rapidly draws towards its end, the remaining *karma* may be suddenly consumed by a kind of explosion called *samudghāta*. Then, in the last stage of contemplation, all *karma* being annihilated and all activities having ceased, the soul leaves the body and goes up to the top of the universe, where the liberated souls stay for ever. It must, however, be remarked that 'pure contemplation' is not by itself a means of reaching liberation, but that it is the last link of a long chain of preparatory exertions. Even its first two stages can be realized only by those in whom the passions (*kaṣāya*) are either neutralized or annihilated; and only *kevalins*, *i.e.* those who have already reached omniscience, can enter into the last two stages, which lead directly to liberation. On the other hand, the *nirvāṇa* is necessarily preceded by 12 years of

[1] The second part of the *Āchārāṅga sūtra* will give an idea of the cautions to be taken in this regard.
[2] Cf. Manu, vi. 92.

self-mortification of the flesh,[1] which should be the closing act of a monk's career, though it no longer leads to liberation, for Jambūsvāmin, the disciple of Mahāvīra's disciple Sudharman, was the last man who reached *kevala*, or omniscience, and was liberated on his death[2] (64 after Mahāvīra's Nirvāṇa); accordingly during the rest of the present Avasarpiṇī period nobody will be born who reaches *nirvāṇa* in the same existence. Nevertheless these speculations possess a great theoretical interest, because they afford us a deeper insight into the Jain system.

In this connexion we must notice a doctrine to which the Jains attach much importance, viz. the doctrine of the 14 *guṇasthānas*, *i.e.* the 14 steps which, by a gradual increase of good qualities and decrease of *karma*, lead from total ignorance and wrong belief to absolute purity of the soul and final liberation.

In the first stage (*mithyādṛṣṭi*) are all beings from the *nigodas* upwards to those men who do not know or do not believe in the truths revealed by the Tīrthakaras; they are swayed by the two cardinal passions, love and hate (*rāga* and *dveṣa*), and are completely tied down by *karma*. In the following stages, as one advances by degrees in true knowledge, in firmness of belief, and in the control and repression of passions, different kinds of *karma* are got rid of and their effects cease, so that the being in question becomes purer and purer in each following stage. In all stages up to the 11th (that of a *upaśāntakaṣāya-vītarāgachchhadmastha*) a relapse may take place and a man may fall even down to the first stage. But as soon as he has reached the 12th stage, in which the first four kinds of *karma* are annihilated (that of a *kṣīṇakaṣāyavītarāgachchhadmastha*), he cannot but pass through the last two stages, in which omniscience is reached; in the 13th stage (that of a *sayogikevalin*) the man still belongs to the world, and may continue in it for a long period; he retains some activities of body, speech, and mind; but, when all his activities cease, he enters on the last stage (that of an *ayogikevalin*), which leads immediately to liberation, when the last remnant of *karma* has been annihilated.

A question must now be answered which will present itself to every critical reader, viz. Is the *karma*-theory as explained above an original and integral part of the Jain system? It seems so abstruse and highly artificial that one would readily believe it a later developed metaphysical doctrine which was grafted on an originally religious system based on animistic notions and intent on sparing all living beings. But such a hypothesis would be in conflict with the fact that this *karma*-theory, if not in all details, certainly in the main outlines, is acknowledged in the oldest parts of the canon and presupposed by many expressions and technical terms occurring in them. Nor can we assume that in this regard the canonical books represent a later dogmatic development for the following reason: the terms *āsrava*, *saṁvara*, *nirjarā*, etc., can be understood only on the supposition that *karma* is a kind of subtle matter flowing or pouring into the soul (*āsrava*), that this influx can be stopped or its inlets covered (*saṁvara*), and that the *karma*-matter received into the soul is consumed or digested, as it were, by it (*nirjarā*). The Jains understand these terms in their literal meaning, and use them in explaining the way of salvation (the *saṁvara* of the *āsravas* and the *nirjarā* lead to *mokṣa*). Now these terms are as old as Jainism. For the Buddhists have borrowed from it the most significant term *āsrava*; they use it in very much the same sense as the Jains, but not in its literal meaning, since they do not regard the *karma* as subtle matter, and deny the existence of a soul into which the *karma* could have an 'influx.' Instead of *saṁvara* they say *āsavakkhaya* (*āsravakṣaya*), 'destruction of the *āsravas*,' and identify it with *magga* (*mārga*, 'path'). It is obvious that with them *āsrava* has lost its literal meaning, and that, therefore, they must have borrowed this term from a sect where it had retained its original significance, or, in other words, from the Jains. The Buddhists also use the term *saṁvara*, e.g. *sīlasaṁvara*, 'restraint under the moral law,' and the participle *saṁvuta*, 'controlled,' words which are not used in this sense by Brāhmanical writers, and therefore are most probably adopted from Jainism, where in their literal sense they adequately express the idea that they denote. Thus the same argument serves to prove at the same time that the *karma*-theory of the Jains is an original and integral part of their system, and that Jainism is considerably older than the origin of Buddhism.

**5. Present state of Jainism.**—The Jains, both Śvetāmbaras and Digambaras, number, according to the census of 1901, 1,334,140 members, *i.e.* even less than ½ per cent of the whole population of India.[1] On account of their wealth and education the Jains are of greater importance, however, than might be expected from their number. There are communities of Jains in most towns all over India. The Digambaras are found chiefly in Southern India, in Maisūr and Kannaḍa, but also in the North, in the North-Western provinces, Eastern Rājputāna, and the Panjāb. The headquarters of the Śvetāmbaras are in Gujarāt (whence Gujarātī has become the common language of the Śvetāmbaras, rather than Hindī) and Western Rājputāna, but they are to be found also all over Northern and Central India. Very much the same distribution of the Jains as at present seems, from the evidence of the inscriptions, to have prevailed ever since the 4th century.[2] Splendid temples bear testimony to the wealth and zeal of the sect, some of which rank among the architectural wonders of India, as those on the hills of Girnār and Satruñjaya, on Mount Ābū, in Ellora, and elsewhere.

The outfit of a monk is restricted to bare necessities, and these he must beg: clothes, a blanket, an almsbowl, a stick, a broom to sweep the ground, a piece of cloth to cover his mouth when speaking lest insects should enter it. The nuns' outfit is the same except that they have additional clothes. The Digambaras have a similar outfit, but keep no clothes and use peacocks' feathers instead of the broom. The monks shave the head, or remove the hair by plucking it out (*locha*). The latter method of getting rid of the hair is to be preferred and is necessary at particular times; it is peculiar to the Jains and is regarded by them as an essential rite.

Originally the monks had to lead a wandering life except during the monsoon, when they stayed in one place; compare the *vassa* of the Buddhist monks. Thus Mahāvīra in his wandering stayed for one day only in a village and five days in a town. But this habit has been somewhat changed by the introduction of convents (*upāśraya*), corresponding to the *vihāras* of the Buddhists.

The *upāśrayas* 'are separate buildings erected by each sect for their monks or nuns. An Upāśraya is a large bare hall without bath-rooms and cooking places, furnished only with wooden beds' (M. Stevenson, *Mod. Jainism*, p. 88).

The Śvetāmbaras, as a rule, go only to those places where there are such *upāśrayas*; and now they stay as long as a week in a village, in a town as long as a month. It is in the *upāśraya* that the monks preach or explain sacred texts to laymen who come to visit them. The daily duties of a monk are rather arduous if conscientiously performed; *e.g.*, he should sleep only three hours of the night. His duties consist in repenting of and expiating sins, meditating, studying, begging alms (in the afternoon), careful inspection of his clothes and other things for the removal of insects, for

[1] The small number of Jains is explained by the fact that Jainism is not a religion of the uncultivated masses, but rather of the upper classes.
[2] See Guérinot, *Répertoire d'épigraphie jaina*, p. 24.

cleaning them, etc. (for details see lect. xxvi. of the *Uttarādhyayana sūtra* [*SBE* xlv. 142 ff.]). There are various monastic degrees. First there is the novice (*śaikṣa*), who is not yet ordained. When he or any other man takes the vows (*vratādāna*), he renounces the world (*pravrajyā*) and is initiated or takes *dīkṣā*. The most important ceremony at that time is the shaving or pulling out of the hair under a tree. From a common monk he may rise to the rank of a teacher and superior called *upādhyāya*, *āchārya*, *vāchaka*, *gaṇin*, etc., according to degrees and occupations.

The religious duties of the laity have, to some extent, been treated above. The ideal of conduct is that of the monk, which a layman, of course, cannot realize, but which he tries to approach by taking upon himself particular vows.[1] But in practical life also, apart from asceticism, the Jains possess a body of rules composed by monks which lay out a rational course of life for laymen and tend to improve their welfare and moral standard.[2] The monks have also to provide for the religious wants of the laity by explaining sacred texts or religious treatises and delivering sermons; this is done in the *upāśrayas* where the laymen visit them; similarly the nuns are visited by, or visit, the lay women. But the most conspicuous habit of the laity is attendance in temples, and worship of the Tīrthakaras and the deities associated with them.[3]

We must now advert to a peculiarity of the Jains which has struck all observers more than any other, viz. their extreme carefulness not to destroy any living being, a principle which is carried out to its very last consequences in monastic life, and has shaped the conduct of the laity in a great measure. No layman will intentionally kill any living being, not even any insect, however troublesome; he will remove it carefully without hurting it. It goes without saying that the Jains are strict vegetarians. This principle of not hurting any living being bars them from some professions, *e.g.* agriculture, and 'has thrust them into commerce, and especially into its least elevating branch of money-lending. Most of the money-lending in Western India is in the hands of the Jains, and this accounts in a great measure both for their unpopularity and for their wealth.'[4] A remarkable institution of the Jains, due to their tender regard for animal life, is their asylums for old and diseased animals, the *panjarapolas*, where they are kept and fed till they die a natural death.

**6. History of Jainism.**—The history of the Jain church, in both the Śvetāmbara and the Digambara sections, is chiefly contained in their lists of patriarchs and teachers and in legends concerning them. The oldest list of patriarchs of the Śvetāmbaras is the *Sthavirāvalī* in the *Kalpasūtra*, which begins with Mahāvīra's disciple Sudharman and ends with the 33rd patriarch Śāṇḍilya or Skandila. Of most patriarchs only the names and the *gotra* are given; but there is also an expanded list from the 6th, Bhadrabāhu, down to the 14th, Vajrasena, which adds more details, viz. the names of the disciples of each patriarch and of the schools and branches (*gaṇa*, *kula*, and *śākhā*) founded by, or originating with, them. As some of these details are also mentioned in old Jain inscriptions of the 2nd cent. A.D. found at Mathurā,[1] this part at least of the Jain tradition is proved to be based on historical facts. Further, the more detailed list of patriarchs shows that after the 6th patriarch a great expansion of Jainism took place in the N. and N.W. of India.[2] Beyond the details mentioned, we have no historical records about the patriarchs; but such legends as were known about them down to Vajrasena have been combined in Hemachandra's *Pariśiṣṭa parvan* into a kind of continuous narrative.[3] For later times there are lists of teachers (*gurvāvali*, *paṭṭāvali*)[4] of separate schools, called *gachchha*, which give a summary account from Mahāvīra down to the founder of the *gachchha* in question, and then a more detailed one of the line of descent from the latter downward, with some particulars of subsequent heads of the *gachchha* called Śrīpūjya. The number of *gachchhas*, which usually differ only in minute details of conduct, is said to amount to 84, of which only 8 are represented in Gujarāt, the most important of them being the Kharatara Gachchha, which has split into many minor *gachchhas*, the Tapā, Añchala, and others. Separate mention is due to the Upakeśa Gachchha, whose members are known as the Oswāl Jains; they are remarkable for beginning their descent, not from Mahāvīra, but from his predecessor Pārśva. These lists of teachers seem, as a rule, to be reliable only in that part which comes after the founder of the school to which they belong; the preceding period down to about the 9th cent. A.D. is one of great uncertainty; there seems to be a chronological blank of three centuries somewhere.[5]

Records which allude to contemporaneous secular history are scant; such as we have in inscriptions and legends refer to kings who had favoured the Jains or were believed to have embraced Jainism. The first patron king of the Jains is said to have been Samprati, grandson of the great emperor Aśoka; but this is very doubtful history. A historical fact of the greatest importance for the history of Jainism was the conversion of Kumārapāla, king of Gujarāt, by Hemachandra (see art. HEMACHANDRA).

Finally, we must mention the schisms (*nihnava*) that have occurred in the Jain church. According to the Śvetāmbaras, there were eight schisms, of which the first was originated by Mahāvīra's son-in-law, Jamāli; and the eighth, occurring in 609 A.V. or A.D. 83, gave rise to the Digambara sect.[6] But the Digambaras seem to be ignorant of the earlier schisms; they say that under Bhadrabāhu rose the sect of Ardhaphālakas, which in A.D. 80 developed into the Śvetāmbara sect.[7] It is probable that the separation of the sections of the Jain church took place gradually, an individual development going on in both groups living at a great distance from one another, and that they became aware of their mutual difference about the end of the 1st cent. A.D. But the difference is small in articles of faith (see art. DIGAMBARA).

The sources for the history of the Digambaras are

[1] Mention should be made of the 11 *paḍimās* (Skr. *pratimā*), or standards of ascetic life, which a layman may take upon himself, especially when he intends to end his life by starving (cf. Hoernle, *Uvāsagadasāo*, tr., p. 45, n. 12 f., *IA* xxxiii. [1904] 330).

[2] E. Windisch, *Yogaśāstra*, Germ. tr., *ZDMG* xxviii. [1874]; L. Suali, *Yogabindu*, Ital. tr., *Giornale della Società Asiatica Italiana*, xxi. [1908]; Warren, *Jainism*, p. 64 ff.

[3] For a description of the worship of the different sections of the Jains see Stevenson, *Mod. Jainism*, p. 85 ff., where there is also a short notice of the Jain festivals and fasts (p. 107 ff.; cf. also art. FESTIVALS AND FASTS [Jain], vol. v. p. 875 ff.).

[4] Stevenson, 41.

[1] See Bühler, *Epigr. Ind.* i. [1892] 371 ff., 393 ff.

[2] It is, however, curious that another tradition states: 'In India after the time of the Nanda kings the Law of the Jinas will become scarce' (*Paümachariya*, lxxxix. 42). Perhaps this refers more specially to Magadha and the adjoining countries, where, under the reign of the Mauryas, Buddhism soon attained the position of a popular religion, and must have become a formidable rival of Jainism.

[3] See the contents of the work given in the introduction to the text in the Bibl. Ind. edition.

[4] The oldest *gurvāvali* known is that by Munisundara, A.D. 1410, ed. Benares, 1905.

[5] A full bibliography of this subject is contained in Guérinot, *Essai de bibliographie jaina*, p. 370 ff., and *Répertoire d'épigraphie jaina*, p. 59 ff.

[6] See E. Leumann, in *Ind. Studien*, xvii. [1885] 91 ff.

[7] See *ZDMG* xxxviii. [1884] 1 ff.

of a similar kind to those of the Śvetāmbaras, but later in date. The Digambara line of patriarchs is quite distinct from that of their rivals, except that they agree in the names of the first patriarch, Jambū, and the 6th, Bhadrabāhu, who, according to the Digambaras, emigrated at the head of the true monks towards the South. From Bhadrabāhu dates the gradual loss of their sacred literature, as stated above. The inscriptions furnish ample materials for a necessarily incomplete history of their ancient schools (*gaṇas*); but they do not quite agree in all details with the more modern tradition of the *paṭṭāvalis*. According to the latter, the main church (*mūla-saṅgha*) divided into four *gaṇas*, Nandi, Sena, Siṁha, and Deva, about the end of the 1st cent. A.D.

LITERATURE.—Some of the more important works and treatises have been cited in the art.; a full bibliography has been given by A. Guérinot, *Essai de bibliographie jaina*, Paris, 1907, to which the reader is referred for all questions of detail. Of new monographs on the subject (besides the old one by G. Bühler, *Über die indische Secte der Jainas*, Vienna, 1887, tr. J. Burgess, London, 1903) the following will be found useful: Margaret Stevenson, *Notes on Modern Jainism*, Oxford, 1910; Herbert Warren, *Jainism, in Western Garb, as a Solution to Life's great Problems*, Madras, 1912; H. L. Jhaveri, *The First Principles of the Jain Philosophy*, London, 1910. For translations of some of the principal texts see H. Jacobi, 'Jaina Sūtras,' *SBE* xxii., xlv. [1884, 1895].

HERMANN JACOBI.

**JALĀL AL-DĪN RŪMĪ.**—Muḥammad Jalāl al-dīn, commonly known as Maulānā ('our Master') Jalāl al-dīn Rūmī, was born at Balkh in eastern Persia in A.D. 1207 and died in 1273 at Qōniya (Iconium) in Rūm (Asia Minor); whence the epithet 'Rūmī,' which he sometimes employs as a *takhallus*, or pen-name, in his lyrical poems. When Jalāl was only a few years old, his father, Muḥammad ibn Ḥusain al-Khaṭībī al-Bakrī, generally called Bahā al-dīn Walad, was obliged to leave Balkh in consequence of a court intrigue which aroused against him the anger of the reigning sovereign, 'Alā al-dīn Muḥammad Khwārizmshāh. The exiled family, after long wanderings, in the course of which they visited Nīshāpūr, Baghdād, and Mecca, arrived at Malaṭya (Melitene) on the upper Euphrates, and, having stayed there four years, moved farther westward to Lāranda (now Qarāmān) in Asia Minor. Finally, seven years later, Bahā al-dīn was invited by the Seljūk prince, 'Alā al-dīn Kaiqubād, to Qōniya. He died here in A.D. 1231. Jalāl had already married a lady named Gauhar Khātūn, daughter of Lālā Sharaf al-dīn of Samarkand, who bore him two sons. One of these, Sulṭān Walad, is the author of a mystical poem, the *Rabābnāma*, which, though written in Persian, contains 156 couplets in the Seljūk dialect of Turkish—the earliest important specimen of West Turkish poetry that we possess (see E. J. W. Gibb, *History of Ottoman Poetry*, i. 152).

After several years of study at Aleppo and Damascus, Jalāl returned to Qōniya, where he was appointed professor and gained a great reputation for learning. About this time he seems to have devoted himself to theosophy under the guidance of Burhān al-dīn of Tirmidh, one of his father's pupils; but the crisis of his spiritual life was his meeting with Shams al-dīn of Tabrīz, a wandering dervish who came to Qōniya in A.D. 1244 and vanished mysteriously—according to one legend, he was killed in a riot—in 1246. This illiterate God-intoxicated man exerted upon Jalāl an extraordinary personal influence almost amounting to possession, which was bitterly resented by his numerous disciples at Qōniya. To escape from their persecution Shams al-dīn left the city and returned only a short time before his death. During his absence Jalāl composed part of the enormous collection of mystical odes entitled *Dīvān-i Shams-i Tabrīz*; the rest belongs to a later period, but nearly the whole work is written in the name of his beloved teacher and friend. Jalāl founded—in memory, it is said, of Shams al-dīn—the Maulavī order of dervishes with their peculiar dress and whirling dance; and some of these hymns, first uttered in moments of ecstatic rapture, are still chanted by the Maulavīs, whose headquarters remain at Qōniya to the present day. In the *Dīvān* Jalāl's poetical genius is not hampered by didactic motives, and he sings out of the fullness of his heart; here he very often soars on the wings of pantheistic enthusiasm to heights that few Ṣūfī poets have been able to approach.

Probably about A.D. 1260, at the instigation of his favourite pupil, Ḥasan Ḥusām al-dīn, he began to compose the most celebrated of his works and perhaps the greatest mystical poem of any age, the *Mathnavī-i Ma'navī*, or 'Spiritual Couplets,' in six books containing altogether some 27,000 verses. The *Mathnavī* may be described as a medley of anecdotes, dialogues, allegories, and discursive theosophical speculations. Each book, however, forms an independent whole and has an inward, though not always obvious, unity of its own. Such difficulties as occur are generally due to the abstruse nature of the subject; the narrative portions are written in a plain style, singularly free from rhetorical conceits. Prolix, disconnected, and sometimes tedious though it be, the *Mathnavī* stands unrivalled as a comprehensive and thoroughly characteristic exposition of the religious philosophy of Persia—an exposition which is inspired by intense moral feeling and illuminated by many beautiful and profound thoughts.

While no attempt can be made to describe the author's doctrines in detail, a few salient points may be noticed. Jalāl al-dīn is a pantheist in the sense that he identifies all real being with God and regards the world of phenomena as a mere image of the divine ideas reflected from the darkness of not-being: the universe in itself is nothing, and God alone really exists. Every atom of the universe reflects some attribute of God, but man is the microcosm which reflects them all. In him light and darkness meet; he is compounded of awe and mercy, hell and heaven, and in virtue of this double nature, which God offered to him as a trust (*amānat*) and which he voluntarily accepted (*Qur'ān* xxxiii. 72), he is responsible for his actions and can choose good or evil. Admitting for practical purposes the existence of evil, the poet is careful to guard himself against dualism: he holds that evil is a negation of real being, or that, in so far as it has a positive character, it tends to good. He insists repeatedly on the supreme value of love as the unitive and purifying element in religion. Those who love God will discern the soul of goodness everywhere and will realize the unity underlying all differences of creed and ritual; not only will a moral transformation be wrought in them by grace of God, but they will pass utterly away from selfhood and individuality, which are the great obstacles to absorption in the divine life. Another noteworthy doctrine is that of the evolution of the soul through ascending grades of being—mineral, vegetable, animal, human, angelic—before its final return to the source whence it sprang. Besides the *Dīvān* and the *Mathnavī*, Jalāl al-dīn is the author of a prose treatise bearing the title *Fīhi mā fīhi*, several copies of which are preserved at Constantinople.

LITERATURE.—i. *Life and doctrine.*—The most authoritative Persian biography of Jalāl al-dīn is contained in the *Manāqib al-'ārifīn* by Aflākī, a pupil of the poet's grandson Chalabī 'Ārif, of which J. Redhouse has translated copious extracts (see below). Further information will be found in the translations of the *Mathnavī* and *Dīvān* and also in the following works:

E. G. Browne, *Literary History of Persia*, London, 1906, ii. 515–525; H. Ethé, *Morgenländische Studien*, Leipzig, 1870, pp. 95–124, and in *GIrP* ii. (1896-1904) 287–292; E. J. W. Gibb, *History of Ottoman Poetry*, London, 1900, i. 145–163.

ii. *Mathnavi*.—The *Mathnavi* has been frequently reprinted in the East with and without commentaries in Persian or Turkish. There are English versions of bk. i. by J. Redhouse, London, 1881, with biographical introduction translated from the work of Aflākī; and of bk. ii. by C. E. Wilson, London, 1910, with a full commentary. An abstract of the whole poem, together with an excellent account of the principal doctrines by E. H. Whinfield, was published in 1887 in Trübner's Oriental Series, and a second edition appeared in 1898.

iii. *Dīvān-i Shams-i Tabrīz*.—Complete edition in Persian, Lucknow, 1884; selected odes, Tabriz, 1863, and Lucknow, 1878. Translations: A. von Rosenzweig, *Auswahl aus den Diwanen Mewlana Dschelaleddin Rumi*, Persian text with German verse tr., Vienna, 1838; R. A. Nicholson, *Selected Poems from the Dīvān-i Shams-i Tabrīz*, Persian text with prose tr., introduction, and notes, Cambridge, 1898; W. Hastie, *The Festival of Spring, from the Divan of Jelāleddīn*, rendered in English ghazels after Rückert's versions, Glasgow, 1903.

REYNOLD A. NICHOLSON.

**JĀLANDHARA.**—Jālandhara (Jullunder) is the name of a town (lat. 31° 20′ N., long. 75° 35′ E.), district, and division in the Panjāb. The 'division' includes the 'districts' of Jālandhar (Jullunder), Hoshyārpur, and Kāngṛā. The ancient kingdom, called Trigarta by the Hindus and Jālandhara by the Chinese pilgrim Hiuen Tsiang (Yuan Chwang) in the 7th cent., included, like the modern 'division,' both the hill country of Kāngṛā and the plain of Jālandhar. The latter is associated in Hindu mythology with an eponymous demon, on whose back the town is supposed to be built, and the neighbourhood is regarded as holy ground, pilgrimages to which are meritorious. The fort of Kāngṛā (Nagarkōṭ), formerly considered one of the strongest places in India, possesses the famous Brāhmanical temple of Mātā Devī, or Vajreśvarī Devī, thrice desecrated by the Muhammadans, and mostly destroyed by the earthquake of 1905, as well as some Jain shrines and images, but no Jains now reside there. At Juālāmukhī ('flaming mouth'), about 20 miles S.E. of Kāngṛā, a discharge of inflammable gas from a fissure at the base of a high range of hills is honoured with great veneration and much visited by pilgrims.

The Chinese pilgrim, Hiuen Tsiang, twice visited Jālandhar in A.D. 634 and 643. The capital was then described as being 'the royal city of Northern India,' and the Rājā was specially selected by king Harṣa (Śilāditya), the paramount sovereign, to escort the 'Master of the Law' when on his return journey to China. An earlier unnamed Rājā of uncertain date, who had become a convert to Buddhism, is said to have been given by the paramount power 'sole control of matters relating to Buddhism in all India,' and to have been vested, in his capacity of Protector of the Faith, with jurisdiction to reward and punish monks impartially without distinction of persons. The same prince was believed to have travelled all through India and to have erected *stūpas* (topes) and monasteries at the sacred sites; but no record confirming these statements of the pilgrim has been discovered. Although Buddhism was decadent in most parts of N. India during the 7th cent., it was still the dominant religion at Jālandhar, where the Buddhist monasteries, served by more than 2000 brethren, students of both 'vehicles,' exceeded fifty in number, while the Brāhmanical temples of the Śaiva sect of Paśupati were only three, with about 500 votaries. Probably the Buddhist worship survived until the Muhammadan conquest early in the 11th century. The armies of Islām could not endure the multitude of images displayed in Buddhist establishments, and made an end of monks and monasteries wherever they found them. The brethren at Jālandhar made a special study of the *Abhidharma*, or metaphysical, section of the canon, and Hiuen Tsiang studied an *Abhidharma* commentary for four months in 634 under the guidance of a teacher named Chandravarma. The compilation of such commentaries is recorded to have been the business of the Council assembled by the Kuṣān monarch Kaniṣka (*q.v.*), probably in or about A.D. 100. But in the opinion of the Japanese scholar, Takakusu,

'all arguments about the Council and its works will be valueless until the *Mahāvibhāṣā*—an encyclopædia of Buddhist philosophy—is translated into one of the European languages.' He holds that the Council was merely an assembly of the adherents of the Hīnayāna school of the Sarvāstivādins (*JRAS*, 1905, p. 415).

Hiuen Tsiang had no doubt that the Council met in Kashmīr, presumably at the capital, and his account of its proceedings forms part of his description of the valley. He tells us that king Kaniṣka proposed that the sittings should be held in the plains of Gandhāra, but that objection was taken to the heat and damp there. A suggestion to assemble at Rājagṛiha, the ancient capital of Magadha (Bihār) was also rejected, and ultimately it was decided to hold the Council in Kashmīr. The commentaries authorized by the assembly are said to have been engraved on copper-plates and deposited in a *stūpa*. It is possible that they may still exist among the now insignificant ruins of Pāndreṭhan, Aśoka's capital, which lie to the south-east of Śrīnagar, or Pravarasenapura, founded by a Rājā of Śaiva faith, perhaps during the 6th century. A rival tradition alleged that the Council was held at the Kuvana or Tamasavana monastery of Jālandhar, and the Tibetan historian of Buddhism, Tāranātha, writing in A.D. 1608, was of opinion that this tradition was supported by the weight of learned authority (Schiefner, *Tāranātha*, p. 60). But the precise testimony of Hiuen Tsiang, nearly a thousand years earlier in date, obviously is entitled to more credence, and the fact may be accepted that most of the sittings of the Council were held in Kashmīr. It is possible that the assembly may have met first in a monastery at or near Jālandhar, and may have adjourned to Kashmīr for the hot season. Paramārtha (499–569), the author of the *Life of Vasubandhu*, fully confirms the tradition that Kashmīr was the place of meeting of the Council (*JRAS*, 1905, pp. 38, 52).

VINCENT A. SMITH.

**JAMBUKESWARAM** (Skr. *Jambukeśvara*, a title of Śiva, 'Lord of the *jambu*, or rose-apple tree,' under an old specimen of which, much venerated, the symbol of the god is placed).—A famous Śaiva temple in Śrīrangam Island (*q.v.*) in the Trichinopoli District of the Madras Presidency. It rivals the more famous Vaiṣṇava temple at Śrīrangam in architectural beauty, interest, and possibly in antiquity. The *liṅga* which is the object of worship is one of the five known as 'elemental,' the 'element' being in this case water, by which it is surrounded (for the other 'elemental' *liṅgas* see *Madras Manual of Administration*, iii. [1893] 429 f.). According to Fergusson,

'the first gateway of the outer enclosure is not large, but it leads direct to the centre of a hall containing some 400 pillars. On the right these open to a tank fed by a perpetual spring which is one of the wonders of the place. The corresponding space on the left was intended to be occupied by the 600 columns requisite to make up the 1000, but was never completed. [There are, in reality, 796 columns, or, in all, 938, if the 142 round the little tank which adjoins the hall be added.] Between the two *gopuras* (entrance gates) of the second enclosure is a very beautiful portico of cruciform shape, leading to the door of the sanctuary, which, however, makes no show externally, and access to its interior is not vouchsafed to the profane' (*Hist. of Ind. and East. Arch.*, p. 365).

He fixes the date of the building about A.D. 1600; one inscription, however, is said to be dated A.D. 1480. Formerly, when sectarian jealousy was less intense, the image of Viṣṇu used to be brought for one day in the year into a coco-nut grove within the enclosure of the rival temple, but owing to sectarian disputes this practice has now been abandoned.

LITERATURE.—J. Fergusson, *Hist. of Indian and Eastern Architecture*, London, 1876, p. 366; *IGI* xxiii. [1908] 109 f.

W. CROOKE.

**JAMNOTRĪ** (Skr. *Yamunā-avatāra-purī*, 'city of the appearance of the Jumnā').—A sacred place of the Hindus near the source of the river Jumnā; lat. 31° 1′ N.; long. 78° 28′ E.; in the State of Gaṛhwāl, United Provinces, India. The river rises from the group of mountains known as Bandarpūñch, 'monkey's tail,' the height of which is 20,731 ft., at Jamnotrī, at an elevation of 10,549 ft. above sea level. Close to the source of the river from a glacier there is a hot spring.

'From a rock which projects from the snow a small rill descends during the day, about 3 feet wide and very shallow, being only the result of a shower of spray produced by the snow melting under the sun's rays. Below this the snow-bed is intersected with rifts and chasms, caused by the falling in of the snow as it is melted by the steam of the boiling spring beneath it. The rill finds its way through crevices formed in the snow-bed to the ground beneath, out of which gush numerous springs of water of nearly boiling heat [194·7° Fahr.]; and the steam from these melts the mass of ice and snow above them so as to form numerous excavations resembling vaulted roofs of marble, and further causes a copious shower, which affords the principal supply to the Jumna' (Atkinson, *Himalayan Gaz.* iii. 376).

The place is a resort of pilgrims, but is not so popular as Gangotrī (*q.v.*), the source of the Ganges.

LITERATURE.—E. T. Atkinson, *Himalayan Gazetteer*, Allahabad, 1882–84, iii. 376; T. Skinner, *Excursions in India*, London, 1833, i. 296 ff.; *IGI* xiv. [1908] 51.

**JANSENISM.**—Jansenism, a religious revival within the Church of Rome, originated in the 17th cent. and is hardly yet extinct. Although its history is connected chiefly with France, its first home was the Flemish University of Louvain; and it bears the name of its chief Flemish apostle, Cornelius Jansen, bishop of Ypres. Jansen (1585–1638) was born of humble parents at Accoy in the province of Utrecht, and educated at Louvain, where he formed a momentous friendship with a French fellow-student, Jean du Vergier de Hauranne (1581–1643), who presently introduced his ideas to France. Jansen rose to be tutor and professor at Louvain; in 1636 he was appointed bishop of Ypres, but died within two years of his elevation. In 1640 his executors published the work of his lifetime: *Augustinus, seu doctrina S. Augustini de humanæ naturæ ægritudine, sanitate et medicina adversus Pelagianos et Massilienses.* This bulky treatise is the chief monument of a controversy that had raged at Louvain ever since its great professor Baius, otherwise Michael de Bay (1513–89), had revolted against the traditional Scholasticism of the college lecture-rooms. Mediæval theology boasted itself a *fides quærens intellectum*, making clear to reason the dogmas that faith already accepted; and reason, to the mediæval mind, meant the categories of Aristotle. With their help, it was thought that all the mysteries of religion could be translated into clear, coherent language; and, in pursuance of this end, the Schoolmen raised a gigantic monument of subtle dialectic, wherein they claimed that every article in the creed found its precise metaphysical equivalent. As time went on, however, the world grew increasingly dissatisfied with their performance. Simple souls were bewildered. They felt that faith and grace and love, when arrayed in all the pomp of logical abstraction, were woefully unlike all that they mean to the unsophisticated human heart. Accordingly they accused the Church of having over-intellectualized religion; the Flemish Huguenots told King Philip II. that it had 'brouillé la sapience humaine parmy la sapience divine.' Their protest was in some degree supported by de Bay and other moderate Catholics, who were in favour of making all reasonable concessions to the Reformation. They felt that scholasticism, in its enthusiasm for logic, had let theology drift out of touch with Christian feeling and experience. 'Divines talk of sin,' wrote de Bay (Linsenmann, *Michael Baius*, p. 75), 'as though it were a clever puzzle invented by some visionary dreamer, which must be pondered over and believed, although nobody could feel or grasp it.' Under his leadership an anti-Scholastic tradition grew up at Louvain, of which Jansen became the great exponent. In the preface to his *Augustinus* he declares that the first great enemy of God is Aristotle, the arch-logician. His *pura, puta philosophia* may be well enough suited to the investigation of physical phenomena; it is utterly out of place in a discussion of spiritual things. It engenders a blind trust in argument; and argument transforms theology into a kind of dialectical tilting-match, where everything is open to question, and nothing is held sacred or assured. 'What is held probable to-day will be considered false to-morrow, and the certainty of yesterday becomes the paradox of to-day.' Thus was theology become 'a tower of Babel for confusion, and a Cimmerian region for obscurity.'

Where find a remedy for this state of things? Jansen appealed to Augustine—raised up by God's Providence to be the eternal and victorious foe of Aristotle. To follow him was to escape from the frosty intellectualism of the Schoolmen; for Augustine, although more than a match in logic for the doughtiest Aristotelian who ever lectured in the Schools, had never hesitated to appeal to the imagination and the feelings; his works owed even more to his 'charity' than to his brain. Again, to follow Augustine was to escape for ever from the instability of the theologians. He had always taught that faith and reason have nothing to do with each other. Divine truth in no way depends on the vagaries of the human mind; it is determined solely by prescriptions and traditions flowing straight from the Fountainhead. In other words, it is given by God—not made by the hand of man. And what is true of faith is also true of works. Left to ourselves, we can neither think nor act aright. All that is good in us is the fruit of grace implanted in the individual heart by the hand of God Himself. Jansen's three volumes are an interminable elaboration of this central thesis. The changes are incessantly rung on the absolute necessity of grace, on the blindness of the human intellect and the weakness of the human will, until commonplace Catholics began to rub their eyes, and ask whether the bishop of Ypres was anything better than a Calvinist in disguise. They were wrong. Strongly as Jansen held to the Augustinian doctrine of individual sanctification by the direct personal agency of God, he held quite as strongly to the other side of the Augustinian system—to the *Civitas Dei*, or Visible Church, wherein the Redeemer becomes perpetually re-incarnate, generation after generation. Thus communion with the Visible Church—acceptance of its dogmas, participation in its sacraments—was absolutely necessary for salvation. The Church, as it were, provided the dry bones of righteousness; the inward witness of the Spirit clothed the skeleton with flesh. Hence, during their long struggle with the Roman authorities, none of Jansen's followers dreamed of casting loose from Rome.

Moreover, all their surroundings indisposed them from any sympathy with the Reformation. Jansen

spent most of his life at Louvain, the frontier-citadel of Rome over against Presbyterian Holland; there he more than once crossed swords with the great Calvinist controversialist, Voetius, still remembered for his attacks on Descartes. And he probably owed his mitre to the favour with which the Spanish Viceroy at Brussels had received his *Mars Gallicus* (1635), a fiery political pamphlet attacking Louis XIII. of France for having allied himself with the heretical powers of Northern Europe during his long fight with Spain and Austria, traditional champions of the papacy. On the other hand, Jansen, like de Bay before him, may well have dreamed of beating the Protestants with their own weapons, and proving that—given a strong infusion of Augustinian doctrine—Rome could be as truly evangelical as Wittenberg or Geneva. Certainly this idea appealed much to his friend and fellow-labourer, du Vergier de Hauranne. He came of a wealthy family near Bayonne, and was educated at Louvain, where he made Jansen's acquaintance. After his ordination he spent some years as confidential secretary to the bishop of Poitiers; in 1620 the bishop made over to him the 'commendatory' (or sinecure) abbacy of Saint Cyran, a Benedictine monastery in central France. Thenceforward he was generally known as Monsieur de Saint Cyran. At Poitiers he was often brought in contact with the Huguenots; for Touraine was the centre of French Protestantism. And experience soon convinced him that their reconciliation with the Roman Church was impossible, until the Church set its affairs in order. Accordingly he settled in Paris, and there started on a vigorous campaign to bring the Church's disorders to an end.

The disorders in question were fruits of the Wars of Religion in the previous century. After thirty years' fighting about theology, most Frenchmen were sick of the very name of dogma. As the long struggle had ended with the conversion of Henry IV. to Rome, most of them were willing enough to call themselves Catholics, and 'perform the ancient ceremonies of their country with a decent moderation,' as one of their own great writers enjoins. But independent spirits were drifting away from Christianity altogether to a purely natural religion untainted by sectarian bickerings—a religion of noble self-respect and disinterested love of duty, learnt from Marcus Aurelius and Epictetus. Such minds felt no need of grace or redemption: was not the wise man sufficient unto himself? As for the frivolous many, they were frankly weary of religion altogether; and the Church's only chance of luring them back within its fold was to pitch its standard of 'decent moderation' as low as possible. This view soon dawned on the Jesuits and the more worldly-wise among the clergy. They argued that severity in pulpit and confessional only scared sinners away altogether; thereby their money and influence were lost to the Church, and their souls robbed of the priceless benefit of priestly absolution. Accordingly, through their casuists—writers of official text-books on the management of the confessional—they entered on a vigorous campaign to force priests to be lax. The kind of question that a confessor might ask was rigorously defined. He must be satisfied with the merest show of repentance. He must always lean towards the most 'benign' interpretation of the law; and for his guidance the casuists ran many an ingenious coach-and-four through inconvenient enactments. Not that they went as far as some of their Protestant critics imagined. They did not legitimate grave sins; their object was to show that the Church's minimum standard was no higher than that of the average man or woman of the world. What did it matter if this level was miserably low? The less the casuists dared ask of the sinner, the more they trusted to the miraculous efficiency of sacramental grace. By hook or by crook get him to the confessional, and the magical words of absolution would make him a new man.

On both Jesuits and Neo-Stoics Saint Cyran waged a relentless war, for he held that both were infected by the same deadly error on the subject of grace. The Stoics ignored it altogether. Their theory set before man a high ideal, and left him to carry it out by himself as best he might; and Saint Cyran's criticisms of Stoic practice forestall the famous saying of Pascal that those who set out to be angels generally end among the beasts. The Jesuits certainly did not ignore the necessity of sacramental grace. But they said that, if a man wished for it, he must take the first step himself, and merit grace by coming to confession. For grace, on their principles, never took the lead; its business was to complement and continue what human nature had begun. That being so, they argued that it was unjust to ask men for more than they were fully capable of performing; God must perforce be satisfied with whatever the casuists thought it fair and reasonable of Him to expect. Saint Cyran brought all the batteries of Jansen's theology to bear on this position. He refused to ask what a man could do simply by himself; the question was how much he could do when borne up on the wings of grace. And whether he was so upborne depended in no way on himself; God did not ask His creatures to choose whether they would accept grace or refuse it. The mass of mankind He left to perish in their sins. On the few whom He elected to save grace descended like a whirlwind—irresistibly, unfailingly, victoriously. There were 'thunder-claps and visible upsets'—a sudden, often violent, awakening. 'In every true conversion,' wrote Saint Cyran in his *Spiritual Letters*, 'God speaks at least once to the soul as distinctly as on the road to Damascus He spoke to St. Paul, model of all penitents.' There followed a long course of internal repentance and external penitential discipline, carried out under expert guidance: was not St. Paul himself 'directed' by Ananias immediately after his conversion? At last the sinner emerged a new creature, living only for religion. To all other interests he was dead. Even the most innocent—art and literature, family ties, civic and professional duties—might prove dangerous rivals to the love of God, and were therefore better away. But for such a man the cloister is the only place, and of this Saint Cyran was well aware. As his first biographer says, he strove hard 'happily to depeople earth, and give new citizens to Heaven,' by driving most of his hearers into convents.

Hence it is scarcely surprising that his first celebrated disciple should have been a nun. This was Angélique Arnauld (1591-1661), abbess of Port Royal des Champs, a Cistercian convent near Versailles. She had early revolted against the spiritual deadness around her, and embarked on various schemes of reform. But all her efforts had been tentative and uncertain, until Saint Cyran appeared to give her the precise kind of guidance that she needed. In return, she furnished his doctrine with a local habitation and a name; within a very few years Port Royal became the headquarters of the Jansenist party. Angélique enlisted in its service her large and influential family—notably her brother, Antoine (1612-94), one of the most promising young divines in France. Her convent opened in the capital a daughter-house, known as Port Royal de Paris. At the abbey gates a little group of masculine adherents formed the 'hermits of Port Royal,' who lived an austere semi-monastic life, although bound together by no vow. Under the guidance of Antoine Arnauld, they poured forth an ever-increasing flood of devotional

literature remarkable for its literary style. Both nuns and hermits opened 'little schools' for the children of friends of the movement; Pascal's sister, Jacqueline, was a teacher in the one, and Racine a pupil in the other. So successful was the party that it soon excited the suspicions of Richelieu's police; in 1638 Saint Cyran was arrested as a disturber of ecclesiastical peace, and kept in prison till the Cardinal's death (December 1642). Then he was at once released; but his health had been broken by his confinement, and he died in October 1643.

The leadership of the Jansenist party at once devolved on Antoine Arnauld, who had just published (August 1643) a *Traité de la fréquente communion*, which for the first time set the Jansenist case before the general reader. The *Augustinus*, written in Latin, had been too learned; Saint Cyran's devotional works were at once too monastic and too inspirational—too full of 'thunderclaps and visible upsets.' Arnauld, scion of a family of lawyers, used the language of his country, and imported into theology all the hard-headed caution of his race. He dealt with the management of the confessional, a subject of interest to every one. And he dealt with it in a manner intelligible to every one. The casuistical party maintained that Catholics were the Chosen People—members of the One True Church—and that God showed His particular favour to them by giving them sacraments, which 'met their efforts half-way,' that is, made them holy with very little trouble on their part. Arnauld's *Traité* directly challenged this position. He denied that the mere fact of being a Catholic was any recommendation in God's sight. Religion did not consist in believing a particular opinion, or conforming to a particular mode of life; it meant conversion, becoming a new creature. But conversion was no affair of a moment; it was a slow and gradual process, involving a long course of discipline, internal and external. How absurd it was of the casuists to give absolution easily—'like footmen, rather than judges'—to all who chose to ask for it. How could a muttered absolution make a sinner a new man?

The casuistical party must needs take up so open a challenge. They could not discredit the *Traité* directly, for it had been very favourably received. So they concentrated their attacks on the weakest point in Arnauld's position, and accused the *Augustinus* of renewing the Predestinarian heresies of Calvin. The book had appeared in 1640, and was promptly censured by the Inquisition, on the ground that it was illegal to write controversial works on the subject of grace without special leave from Rome. This censure was confirmed by Urban VIII. in 1642. But various technical objections were raised to the legality of this condemnation, and a lively war of pamphlets ensued. In July 1649 seven propositions were denounced to the Sorbonne, or Divinity Faculty of Paris University. Two of these, taken from the *Fréquente communion*, were soon dropped; the other five made up what Bossuet called the soul of the *Augustinus*, though only the first proposition of the five was textually extracted from it. They run as follows:

(1) There are commandments which good men cannot obey, however hard they try. (2) In the state of fallen nature, internal grace is never resisted. (3) To make actions in the state of fallen nature meritorious or otherwise, it is not requisite that they should be free from internal necessity, but only from external constraint. (4) The Semi-Pelagian heresy consisted in teaching that men can choose whether they will accept grace or reject it. (5) It is a Semi-Pelagian error to say that Christ died for all men.

These five Propositions gave rise to heated debates in the Sorbonne, until Arnauld's supporters, finding themselves in a minority, appealed to the law-courts on a question of privilege, and the whole question was referred to the Assembly of the Clergy meeting in the following year. But the Assembly also was divided in opinion. In April 1651, eighty-five bishops wrote to Pope Innocent X., begging him to condemn the Propositions; eleven other bishops wrote deprecating the action of their colleagues. Innocent appointed a commission forthwith to examine into the whole question, with the help of advocates on both sides. Early in 1653 the commission reported; and on the strength of its findings Innocent declared all five Propositions heretical.

At first the Jansenists made light of his judgment. In the 17th cent. few Frenchmen believed in papal infallibility. Rome was looked on as a country where diplomatic intrigue went for more than theological scholarship, and one pontificate might easily undo the work of another. The Jesuits might manage to hoodwink Innocent X.; Port Royal could afford to wait till he gave place to a pope less amenable to their influence. Accordingly Arnauld temporized. He began by denying that Jansen was touched by the censure at all. Only one of the five Propositions was a literal extract from the *Augustinus*; and that one, though liable to Calvinistic misconstruction, was also capable of being read in the orthodox Catholic sense given it by Augustine, Jansen's master. Hence, to condemn the disciple was to condemn the Doctor of grace. The bishops replied that Innocent had condemned the Propositions in the precise sense intended by Jansen; and their assertion was confirmed by Innocent's successor, Alexander VII., in October 1656. Arnauld had already been expelled from the Sorbonne, in spite of Pascal's *Provincial Letters* (Jan. 1656–March 1657), begun in an attempt to save him. Early in 1657 the Assembly of the Clergy imposed on every priest, monk, and nun in France a 'Formulary,' or declaration, that the Propositions really were in Jansen's book. For a while, however, the Formulary hung fire. Although in a small minority, the Jansenists had powerful backers among both bishops and judges. Public opinion was impressed by the *Provincial Letters*, and still more by the so-called 'miracle of the Holy Thorn' (March 24, 1656), when Pascal's little niece, Marguérite Périer, was suddenly cured of an ulcerated eye by touching a relic from the Crown of Thorns in the convent chapel at Port Royal. But the respite was short; for in 1660 a new and most powerful enemy entered the lists. Louis XIV. took the reins of government into his own hands; and this great fanatic for uniformity was the last man in the world to tolerate a handful of eccentric recluses who believed themselves to be in special touch with Heaven, and therefore might at any moment set their conscience up against the law. In 1661 he stirred up the bishops to enforce signature of the Formulary; and, when the Jansenists objected that mere bishops had no right to impose it, he got a new Formulary drafted by the pope (1664).

At last the Jansenists found themselves between two fires. Were they to sign, or were they not to sign? A few of the most consistent were for a blank refusal. Just before his death (1662) Pascal had declared that the *Augustinus* was absolutely in the right, and the pope absolutely in the wrong. Hence to sign the Formulary, without expressly excepting Jansen's name from censure of every kind, was to act in a way 'abominable before God, craven in the sight of man, and of no use whatsoever to those already marked out for destruction.' But the mass of the party followed Arnauld in his temporizing tactics. He said that the Formulary might be signed by any one who bore in mind the common distinction of law and fact. In abstract matters of dogma the Church was certainly infallible. But this infallibility ceased so soon as it

approached concrete cases of fact; and it knew no more than any one else what was in a particular author's mind when he wrote a certain passage in his book. Properly speaking, it had no right to pronounce on such questions at all; if it insisted on doing so, the most that its decisions could expect was the 'respectful silence' that involves external conformity, but no inward acquiescence. Tacitly connived at by many bishops, this position was openly accepted by four—those of Alet, Angers, Beauvais, and Pamiers. The pope and Louis were furious, and there was talk of bringing the offending prelates to trial. But all sorts of legal difficulties arose as to who should try them; for the Gallican Church was exceedingly jealous of any interference from Rome. While the question was still pending, Pope Alexander died. The peacemakers at once stepped in, and persuaded the four bishops to make a very ambiguous submission to Rome. With this the new and very pacific pope, Clement IX., declared himself satisfied (1669); and Louis's ministers, who were utterly weary of the whole quarrel, induced him to take this opportunity of admitting the Jansenists generally to grace. Public opinion followed his lead. The nuns of Port Royal suddenly found themselves national heroines; and Arnauld ended twenty years of hiding by a triumphant entry into Paris.

Jansenist writers treat this 'Peace of Clement IX.' as a victory; really it was the beginning of their downfall. They had set out to reform the Church; they ended by having to fight hard for a doubtful footing within it. And under Arnauld's leadership the party itself had gone down-hill; a controversial, argumentative impulse was shouldering out the evangelical. The world admired Arnauld's talents; but, in admiring, it agreed with Bossuet, who said that Arnauld was inexcusable for having wasted his great abilities in an attempt to show that Jansen had not been condemned. Besides, Louis never forgot, and never forgave; and an incident very soon occurred that fanned his wrath to a flame. For a long while a sullen contest had smouldered between the Government and the bishops over the *régale*—the royal prerogative of enjoying the temporalities of a vacant bishopric, which the Crown lawyers had gradually extended into a most vexatious burden. The explosion came in 1673, when Louis tried to enforce it on the few dioceses which had been hitherto exempt. Loud protests were raised by the bishops of Alet and Pamiers—both well known for their Jansenist sympathies, and both strong opponents of the Formulary. Their action raised a violent storm, and led directly to Louis's quarrel with Innocent XI. and the Gallican Declaration of 1682. It also determined Louis to make an end for ever of the obnoxious sect. He stayed his hand during the life of his cousin, Madame de Longueville—once the heroine of the *Fronde*, and now the great patron of Port Royal. On her death (1679) he at once proceeded to sharp measures. The nuns of Port Royal were again subjected to persecution; and Arnauld fled from France, never to return.

Still, to strike at the leaders was one thing; to crush their followers was quite another. What was known as 'mitigated Jansenism'—a doctrine that just managed to keep within the four corners of orthodoxy—found many adherents among the clergy. And in lay homes the spirit of Port Royal was kept alive by a book, which played in the later history of Jansenism almost as large a part as the *Augustinus* itself. This was *Le Nouveau Testament en français, avec des réflexions morales sur chaque verset, pour en rendre la lecture et la méditation plus faciles à ceux qui commencent à s'y appliquer*; it was popularly known as *Les Réflexions morales*, and was from the pen of the Oratorian, Pasquier Quesnel (1634–1719). In various forms and under various titles it went through a number of editions between 1668 and 1692, without incurring any official censure. Indeed, it was formally approved by Noailles, bishop of Châlons, afterwards Cardinal Archbishop of Paris, although Quesnel's opinions were well known. In 1685 he had gone to share Arnauld's exile in Brussels; and on Arnauld's death (1694) he succeeded to the leadership of the party. Meanwhile the sale of his *Réflexions morales* continued to increase, and it became the target of an ever-growing hail of Jesuit bullets. At last the more sanguine Jansenists determined to take the offensive themselves. In 1701 they consulted the Sorbonne as to whether it was not enough to receive the condemnation of Jansen in 'respectful silence.' The question stirred the fires of fifty years before; and soon ecclesiastical France was in a blaze. In 1703 Louis wrote to Clement XI., suggesting that they should take concerted action to put an end to Jansenism for ever. Clement replied with the bull *Vineam Domini*, condemning respectful silence outright (1705). The bull only whetted Louis's appetite. The older he grew, and the thicker the disasters of the War of Spanish Succession rained upon him, the more the ugly superstitious side of his character awoke. He became frenziedly anxious to propitiate his Maker, and save himself another Blenheim or Malplaquet by exterminating the enemies of the Church. As the few old ladies left at Port Royal refused to accept the *Vineam Domini*, their community was broken up (1709); their cemetery was violated, and the abbey-buildings destroyed. The king next proposed to Clement to condemn the *Réflexions morales* in the most solemn possible form. For some time Clement, a pacific diplomat, hung back; but at last he yielded, and put forth the bull *Unigenitus* (1713). This was a censure not only of all that Jansenism said, but of all that it had tried to say. Even Fénelon, although a warm admirer of the bull, admits that public opinion credited it with having condemned St. Augustine, St. Paul, and Jesus Christ Himself. It went altogether beyond the technical questions raised by the *Augustinus*—notably when it dealt a heavy blow at the practice of popular Bible-reading lately sprung up among French Catholics. Hence its appearance was the signal for a popular outcry; even about fifteen bishops supported Cardinal de Noailles in refusing to accept it. The next two years were spent by the Court in a feverish endeavour to thrust it down their throats; Noailles was saved from deposition only by the death of the king in 1715.

On the accession of the regent Orleans, bigotry at once gave place to cynical indifference. Orleans was a free-thinker, and all he cared for was to keep the clergy quiet; hence he always sided with the stronger party, in the hope of crushing out the weaker. As the bull was generally unpopular, he began by taking the side of its opponents, and appointed Noailles chief ecclesiastical adviser to the Court. But he soon found that he had underrated the strength of the *Constitutionnaires*—the thick-and-thin supporters of the bull. Besides, its opponents were divided among themselves. Some rejected the *Unigenitus* altogether; others were willing to accept it with various modifications. At last the stalwarts of the party lost patience with its trimmers. In 1717 four bishops—those of Boulogne, Mirepoix, Montpellier, and Senez—appealed from the pope to a general Council; they were supported by Noailles and a number of others. The pope replied that any one who rejected the bull thereby cut himself off from communion with the Church of Christ (1718). The Court, foreseeing serious risk of a definite breach with Rome, called

in the services of a committee of moderate bishops, among them being Massillon of Clermont, the famous pulpit orator. The committee produced two documents. One—the *Corps de doctrine*—was a commentary on the bull, explaining away everything in its provisions that might stick in the gorge of an 'appellant.' The second document was a letter accepting the *Unigenitus* in the same sense as the pope—which, as the indignant Clement pointed out, was often very different from the sense laid down in the *Corps de doctrine*—and at the same time condemning some of the most extravagant utterances of the bull's extreme supporters. The two documents made up what was known as an *accommodement*, or compromise; and the Government decreed that any one who signed the compromise should be deemed to have accepted the bull, and be free from further molestation. After some wavering, Noailles and most of the appellant bishops accepted the Government's terms (1720); and Jansenism came to an end as an organized political force.

Not that it was by any means dead. The four original appellants refused the compromise, and 're-appealed' to a general Council. The tolerant Regent let them alone; but after his death (1723) power passed into the hands of Fleury, former tutor to the young king, and an ardent aspirant to a cardinal's hat. He determined to make an example of the most recalcitrant appellant, Bishop Soanen of Senez. This old man of over eighty was deposed from his bishopric, and exiled to a remote monastery in Auvergne. Noailles protested against his treatment; but shortly afterwards he died (1729), just after having made a humble submission to Rome. He was hardly in his grave before Jansenism burst out again in a new form. Persecution generally begets hysteria in its victims, more especially when they already accept a strong doctrine of conversion. Belief in material miracles goes hand in hand with belief in moral; and even in its great days Port Royal could furnish a long list of special providences and portents, like the miracle of the Holy Thorn. Now that the fortunes of the party were at their lowest ebb, these were multiplied a hundredfold. About 1728 the 'miracles of St. Médard' became the talk of Paris. These were a series of astonishing cures—mostly of nervous diseases—effected at the tomb of François de Pâris (1690–1727), a young Jansenist cleric of singularly holy life, and a perfervid opponent of the *Unigenitus*. In 1732 the Government closed the cemetery, and gave rise to the famous epigram:

'De par le Roi, défense à Dieu
De faire miracle en ce lieu.'

From mere miracles it was but a step to apocalyptic prophecy and speaking with tongues. The so-called *Convulsionnaires* worked themselves up, by means of frightful self-torture, into a state of ecstasy, in which they prophesied and cured diseases. They were speedily disowned by the serious Jansenists, but they dragged on a disreputable existence for many years. In 1772 they were still important enough for Diderot to take the field against them. A curious law-suit revealed that they had a regular organization, with elective officers and a common treasury, known as the *boîte à Perrette* ('Perrette's money-box'), from the name of the old lady who was its original custodian.

Meanwhile Cardinal Fleury was having much ado to enforce the *Unigenitus* on the clergy generally. The French judges were enthusiastically Gallican; and they hated the bull, because it was a triumph of their hereditary enemies, the Jesuits and the pope. Hence they put every possible difficulty in the way of its execution. Under their fostering care, a belief sprang up that to call oneself a 'Jansenist,' and abuse the *Unigenitus*, was to show oneself a lover of civil and religious liberty. And, as the Jesuits grew more and more unpopular, the word 'Jansenist' came to mean everything that they were not; it stood for a sterling, upright character, and a manly hatred of double-dealing and shams. Thus the historian Sismondi, who was born in 1773, remembered an old gentleman who used to boast that he was an atheist, but one of the Jansenist sort. Men of this type had much to do with the eventual suppression of the Jesuits (1773), and not a little with the French Revolution. Here political Jansenism joined hands with religious in the remarkable figure of the Abbé Henri Grégoire (1750–1831), sometime constitutional bishop of Blois. For religious Jansenism was not dead. The old spirit of Port Royal still survived in many a country parsonage and convent, and led throughout the 18th cent. to chronic conflicts with authority. Often the causes of quarrel were trumpery enough; and Jansen's latter-day descendants did not always show themselves reasonable or broad-minded. Still, in their dim fashion they upheld the great principle of their school—that religion begins and ends as an inward 'touch of the Spirit,' and over the movements of that Spirit no Church has jurisdiction.

Outside France also during the 18th cent. much was heard of Jansenism, though the word was loosely used to cover a great number of different meanings. Any one who wished to reform abuses—more especially abuses profitable to the Court of Rome—was at once set down as a Jansenist. So was any priest in any country who tried to keep a strict hand over his flock. In Ireland, down to quite modern times, Jansenism meant little more than a conscientious objection to dancing on Sunday. Much the same is true of Italy, though here something of the true spirit of Port Royal inspired the efforts of Bishop Scipione de' Ricci (1741–1810), the leading spirit in the ill-fated synod of Pistoia (1786). But the most direct heir of Port Royal was Jansen's native country of Holland. Here, ever since Jansen's own day, Catholic ecclesiastical affairs had been in a great tangle. The Dutch priests clung to their ancient right of electing their own archbishop of Utrecht—or, rather, since the archbishopric had lapsed at the Reformation, they wished to choose their acting bishop, or vicar-general. Rome, on the other hand, wanted to assimilate Holland to other Protestant countries, where the chief ecclesiastical officer was a vicar-apostolic, chosen by the pope and directly under his orders. The question was all the more burning, since in Holland, as in the England of Elizabeth, there were bitter quarrels between the Jesuits and the secular parochial clergy. The Jesuits wanted a papal nominee; the seculars held tightly to their local independence. Jansen had entered the lists on behalf of the seculars, while he was still a professor at Louvain; Saint Cyran and Antoine Arnauld had followed him, and ever since Port Royal had been on the friendliest terms with Utrecht. The fact was not forgotten at Rome. In 1702 the Vicar-General Codde was deposed by the pope on a charge of Jansenism. A section of the Dutch parish priests refused to recognize his deposition, and were supported by a number of French 'appellant' refugees, who streamed into Holland after the promulgation of the *Unigenitus*. Codde himself acquiesced, under protest, in his deposition; but his supporters were not so meek as he, and eventually organized themselves into a separate community. In 1723 Cornelius Steenoven was consecrated archbishop of Utrecht by Dominique Varlet, a French missionary bishop, who had been deposed by Rome as a suspected Jansenist; and suffragan sees were afterwards founded at Haarlem and Deventer. Popularly the community has always been known

as the Jansenist Church of Utrecht; officially it rejects the name of Jansenist, and calls itself the Old Roman Catholic Church—'De Oud-roomsch-katholieke Kerk.' Necessarily, however, its theology wears a strongly Jansenist complexion. It regards Arnauld's interpretation of Jansen as perfectly orthodox; and it rejects the *Unigenitus* and the infallibility of the pope. In all other respects it adheres strictly to Catholic beliefs and practices—the practices of two hundred years ago; for it is rigidly conservative, and boasts that it does not move with the times. Of late years, however, it has shaken off something of its immobility. Since 1872 it has been in communion with the Old Catholics of Germany, although it by no means approves all their departures from established Catholic usage. More recently it has established a mission in Paris—the 'Église gallicane'—and has consecrated a bishop to supervise the Old Catholics of England. And, if there is any future for free Catholic Churches in Western Europe, Utrecht will undoubtedly be their natural starting-point and centre.

LITERATURE.—For the contemporary works see Gustave Lanson, *Manuel bibliographique de la littérature française moderne*, ii., Paris, 1910; see also the bibliography to ch. iv. of vol. v. of the *Cambridge Modern History*. The principal modern works are: C. A. Sainte Beuve, *Port-Royal*4, 6 vols. and index, Paris, 1882; A. K. H., *Angélique of Port-Royal*, London, 1905; A. Le Roy, *La France et Rome de 1700 à 1715*, Paris, 1892; A. Gazier, *Une Suite à l'histoire de Port-Royal*, do. 1906; L. Séché, *Les derniers Jansénistes*, 3 vols., do. 1891. Theological studies are: F. X. Linsenmann, *Michael Baius, und die Grundlegung des Jansenismus*, Tübingen, 1867; J. Paquier, *Le Jansénisme*, Paris, 1909. For the Church of Utrecht see J. A. Gerth van Wijk, art. 'Jansenistenkirche,' *PRE*3 viii. 599.

ST. CYRES.

**JAPAN.**—The country of Japan (exclusive of Korea [*q.v.*]) consists of more than 40 islands and a great number of islets, lying between 50° 56′ and 21° 45′ N. and 156° 32′ and 122° 6′ E., and having an area of more than 173,786 sq. miles. Of these islands Honshū is the largest, containing nearly two-fifths of the total area; and it has been, and is likely to remain, the chief seat of national life. But Kyūshū, to the south-west of Honshū, is historically of far greater importance, having been for centuries one of the main channels through which Asiatic and European influences reached Japan.

A remarkable feature of Japan is the high ratio of coast-line to land area, this being estimated at 1 : 3½, whereas in Greece and Norway, which have the longest coast-lines in Europe, the ratio is 1 : 5. The south coast of Honshū and the west coast of Kyūshū have the greatest number of bays and inlets—which explains the historical fact that the civilization of Japan first began in those islands.

I. *ETHNOLOGY.*—What racial components entered into the making of the Japanese people properly so called cannot be determined with accuracy. It seems to be clear, however, that the Manchu-Korean, the Mongol, and the Malayan types predominate. This is the view propounded by E. Baelz, who made the most exhaustive study of the question, particularly on the physiological side (*Mitt. der deutschen Gesellsch. für Natur- und Völkerkunde Ostasiens*, no. 28 [1883]). It is historically evident that great numbers of Koreans constantly migrated to Japan in ancient times; and the oldest annals of Japan seem to indicate that in the pre-historic ages there was between her islands and the Asiatic continent, particularly S. China, an almost constant passing to and fro of the peoples on both sides of the water. The Manchu-Korean characteristics in the physique of the Japanese are the tall, slender figure, somewhat narrow, oval face, with no special projection of cheek bones, a straight or aquiline nose, more or less slanting eyes, and small hands with long, delicate fingers. People of this type were probably the first settlers on the north coast of Honshū, the province then known by the name of Idzumo. Mongol characteristics are a broad face, prominent cheek bones, oblique eyes, and a flat nose. The Malayans are said to have contributed the most important elements to the Japanese race. Their physical characteristics are the square-built, well-developed body, generally short in stature, and the round face with a conspicuous tendency to prognathism. They are found in S. China, in the south-western parts of Korea, and in all the islands along the eastern coasts of the Asiatic continent; and it is probable that at the dawn of Japanese history they landed in Kyūshū and thence pushed their way north until they finally conquered the Manchu-Korean settlers in Idzumo. These three types are now so blended as to make it impossible to trace any single one distinctly and exclusively in the features of particular individuals. Every Japanese is a composite, each differing from the rest only in the matter of proportion.

There is, however, a group of people in Japan who have preserved their racial distinctness until this day. They are the Ainus, the people who now inhabit the islands north of the Tsugaru Strait. It still remains an unsolved question whether they were the aborigines of Japan. Some assert that a primitive people known as the 'Koropokgul' inhabited the Japanese islands previous to the intrusion of the Ainus. In any case, it is quite evident that the latter once occupied the whole land, but were gradually driven out of Kyūshū and the main island by later intruders from the Asiatic continent or the South Sea Islands. Historical records show that the Ainus were once fierce, brave fighters, making strong opposition to the central government, and not infrequently becoming a menace to its security. There was, however, a distinct portion of the Ainus who were called the *nie-yéso*, the 'naturalized' Ainus, in contrast to the *ara-yéso*, the 'wild' Ainus. This tends to show that Ainu blood is flowing in the veins of the Japanese. The Ainu people, unlike the Manchu-Koreans or the Mongols, have a very close resemblance to some Europeans in physical characteristics. They are rather short and thickly built; they have prominent foreheads with deep-set eyes, bushy eyebrows, often overhanging the eyes, and, unlike their Manchu-Korean neighbours, wavy hair with heavy beards, and, remarkably enough, long divergent eyelashes. There is, accordingly, good reason for J. Batchelor, probably the best authority upon the Ainus, to hold that they belong to the Caucasian race. He maintains also that the 'Ainu language is Aryan, with the marks common to the languages of the six great Aryan peoples' (cf. W. E. Griffis, *The Jap. Nation in Evolution*, p. 5; see, further, art. AINUS, vol. i. p. 239 ff.). B. H. Chamberlain is opposed to this view, principally on the ground that the flattening of the shin bone differentiates the Ainus from the Aryans (*The Language, Mythology, and Geographical Nomenclature of Japan viewed in the Light of Aino Studies*, London, 1895, p. 10 f.). This involves the question whether there is an Aryan element in the physical and mental constitution of the Japanese race.

J. J. Rein declares that 'Japanese society exhibits a surprisingly large variety and mutability in feature and complexion. The latter, though, generally speaking, much darker than among Caucasians, approximates in occasional instances to even the fair, clear complexion of the Germanic peoples. Not unfrequently the symmetry and the regularity of feature are so great and so discrepant from the prevailing Mongolian type that we imagine we are in the presence of a well-formed European' (*Japan*, London, 1884, ch. on 'Ethnography'). It should, however, be added, that Rein thought the Japanese anything but beautiful.

More recently, Griffis (*op. cit.* pp. 3–47) has affirmed that he witnessed, to his surprise, many 'evidences,' including physical features and mental character-

istics, of the Japanese being descended from Iranian, Caucasian, or Aryan ancestry. It is a fact that in certain sections of the country—*e.g.*, in considerable portions of Kyūshū, Chūgoku, and Hokuriku—the inhabitants have at least physical excellencies both in form and strength that distinguish them from those of other parts of the empire. It is also to be noted that the Japanese, in spite of their having adopted the culture, and particularly the literature, of the Chinese, have preserved their language, which is radically different from that of their continental neighbours. On the other hand, this language is peculiarly isolated, and no congener to it has as yet been discovered.

II. *RELIGIOUS HISTORY*.—It has been rightly said that Japanese culture takes its origin from above and from abroad. The genius of the people so far has been shown not so much in original creation as in adaptation. The religious history of Japan shows no exception; it depicts a continual influx of foreign influences and the constant adjustment of them to Japanese temperament and needs.

1. **Early period.**—The religion of ancient Japan presents no definitely systematized forms of worship or belief. It was animistic or spiritistic. The term *kami*, which signifies 'deity,' was applied indiscriminately to any object or natural phenomenon that might arouse the feelings of wonder, awe, or reverence. Men, beasts, birds, plants, seas, mountains, rivers, winds, and storms, in which the people believed some supernatural spirit dwelt, were worshipped (see, further, art. GOD [Japanese], vol. vi. p. 294 f.). Belief in divine and demoniacal possession was common. Divination and augury of various kinds were practised. Magic and charms were employed to avert evil. The introduction of Confucianism (see art. CONFUCIAN RELIGION, vol. iv. p. 12 ff.) in A.D. 285, and of Buddhism in A.D. 538, produced no change in these primitive practices, which it only refined outwardly.

The mythological accounts contained in the *Kojiki* (*Record of Ancient Events*, compiled A.D. 712) and the *Nihongi* (*Chronicle*, compiled A.D. 720), however, seem to represent those ancient beliefs and practices in the light of an age in which a more or less definite form of ancestor-worship had been developed (see, however, art. ANCESTOR-WORSHIP [Japanese], vol. i. p. 455 ff.). The racial blending and political unification of the tribes inhabiting the islands, which took place at a time which cannot be precisely determined, must have brought about a type of religion which, in subsequent ages, took the name of Shintō (*q.v.*). The imperial thanksgiving festivals, such as the *Daijōé* (Great Rite of the First Rice), the *Shinjōé* (Annual Rite of the First Rice), and the *Kannamesai* (Thanksgiving Offering to the Ancestor-God), are generally regarded as having been handed down from time immemorial. All the mythological narratives contained in the ancient annals show the fundamental importance attached to the common ancestry of all the Japanese people; and this is also evident from the fact that the religious rites in which the ancestor-gods were invoked were regarded as a function of government, both rites and government having the same name, *matsurigoto*. In primitive Japan, a tax was levied to maintain those religious rites. A system of ancestor-worship implies a conviction of the immortality of the soul, and this belief was held by the ancient Japanese. Death was called 'disappearing,' 'going away,' or 'concealing one's person.' Distinction was made between the two kinds of soul existing in each distinguished person. The one was the *nigitama*, gentle, peaceful, and benevolent; the other the *aratama*, rough, strong, and brave. A medium known as *kamiko* ('child of the god') was on emergency called to discover the will of a departed ancestor. The idea of transmigration seems also to have been present. Closely connected with ancestor-worship are the rites of purification, which were of pre-eminent importance in Shintō ritual. There were two principal forms, one of which was *harai*, wind-purification (which often consisted in paying a penalty or fine), the other *misogi*, water-purification. To the mind of the ancient Japanese, cleanliness was next to godliness. Any defilement, sanitary, moral, or ritual, received the utmost care and attention. Prayers, called *norito*, are more of the nature of praise than of supplication.

2. **550–1200.**—Borne on the current of the continental civilization which brought various forms of art and culture to Japan, Buddhism came through Korea to the island-empire in the second quarter of the 6th century. This was the century of great Buddhist propaganda in China (cf. art. CHINA [Buddhism in], vol. iii. p. 552 ff.). Many of her immigrants, who were coming in great numbers, seem to have been devoted missionaries. In A.D. 538, through the agency of the king of Kudara in Korea, a royal gift, consisting of a statue of Buddha, *sūtras*, and banners, was presented to the Japanese Court, accompanied with the message that the Buddhist Dharma, the most excellent of all Laws, which would bring immeasurable benefit to its believers, had been accepted in all lands lying between India and Korea. The question whether the new faith should be accepted was taken up by two hostile Court parties struggling for political supremacy. The new religion was in the meantime being continually reinforced by the importation of missionaries, magicians, artisans, *sūtras*, and objects of ritual. It first received Court sanction when Prince Umayado or Shōtōku defeated the army of the anti-Buddhistic Mononobé family, and became regent to Empress Suikō in A.D. 593. He drew up Japan's first 'Constitution,' proclaiming the 'Triune Treasure,' *i.e.* the Buddha, the Law, and the Saṅgha, to be the ultimate object of faith, and single-hearted devotion to it the fundamental factor of an upright life. At the public expense he built Buddhist temples, pagodas, seminaries, hospitals, dispensaries, and asylums for the aged and the helpless. He sent students directly to China to study Buddhist doctrines. The new faith made headway among both the higher and the lower classes. In the year 624, less than 70 years after the first introduction of the *sūtras*, the temples numbered 46, the priests 816, and the nuns 569. From this time the influence of Buddhism continued almost without interruption to the close of the Tokugawa regime (1868). During the Nara period (708–794), successive Emperors fostered the faith. It became the religion of the Court, and the security of the crown and the peace of the land were thought to be dependent upon the continuous favour of Buddha and his saints. The cenobites, as his followers, were relieved from the public service required from all others. Under the Emperor Shōmu, a Buddhist temple was built in each province, and the Tōdai temple in Nara, the metropolis of that time, was the central shrine (741), dedicated to Vairochana (the universe personalized as Buddha), whose colossal bronze image, 53 ft. in height, was cast a few years later. The beautiful consort of Shōmu, Empress Komyō, who had great influence with him, was a zealous Buddhist. Shōmu and Komyō called themselves 'servants of the Triune Treasure,' and on one occasion prostrated themselves before Buddha's image. Under such circumstances it was but natural that the religion should become an instrument in the hands of ambitious politicians. In the time of Empress Kōken (749–769), the ecclesiastical body had grown into a political power which almost overshadowed the Imperial authority.

Yugé-no-Dōkyō, a notorious bonze, became Imperial abbot and prime minister, and would have usurped the Imperial throne but for the heroic opposition of Waké-no-Kiyomaro, a devoted royalist. At the same time a syncretistic movement was going on. Natural calamities and plagues, which frequently afflicted the people, disturbed their belief in Buddha's protection, and tended to drive them to the worship of the old *kami*, and the Emperors themselves had a dread that the forsaken deities might be avenging themselves. A religious compromise was arranged by the priest Gyōki, when the colossal image of Buddha, already mentioned, was cast after he had secured an oracle at the Shintō temple of Isé to the effect that Amatérasu, the ancestor-goddess, was a manifestation of Vairochana. This example of combining the worship of native deities with that of Buddha and his saints was followed in other parts of the country, to the advantage of Buddhism. This syncretistic movement was brought to completion by Kūkai, who appeared about fifty years later. Whatever may be said of the Buddhism of the Nara period, it made an unparalleled contribution to the advancement of religious arts.

The Heian period (beginning 794) is marked by the introduction of different divisions of Buddhism. The sect called *Tendai-shū* in Japan was inaugurated by Saichō (posthumously Dengyō, 767–822), a pre-eminent Buddhist of this period, who went to China and studied the doctrine of Tendai, which he rearranged and remoulded into something almost new. Saichō's doctrine is based upon the teaching known as the 'Lotus of the True Law.' Buddha, the historical revealer of truth, is here viewed as the full enlightenment. Realization of such Buddhahood in one's consciousness is the supreme object of all mysteries, virtues, and wisdom. Saichō's system combined different aspects of the Buddhist doctrine which received emphasis in different proportion at the hands of later Buddhists, and thus became the fountain-head of different branches of Japanese Buddhism. Breadth of learning and purity of character made Saichō influential with the Court, and he built a monastery on Mount Hiei (788), which was for several centuries one of the greatest centres of Buddhist learning as well as of ecclesiastical power.

Another division called *Shingon-shū* ('Sect of True Word') was introduced in the Nara period, and became a power under Kūkai (posthumously Kōbō, 774–835). He began his teaching by classifying various forms of religious life in ten grades of development, the last and highest being that of Shingon. It is the state in which full blessedness of Buddhahood is realized. According to Kūkai, the entire universe, including all spiritual existence, is made up of the six elements which again may be grouped as two, mental and material. The two are, however, inseparably blended. Matter contains mind, and mind incorporates itself in matter. The two are one, and the one is two. Every particle of matter is, therefore, pervaded by the divine presence of Buddhahood. The universe is but Buddha externalized. The Buddha within us may be called forth by practice of the 'mystery' in conduct, speech, and heart. This doctrine of Kūkai naturally lent support, especially on the theoretical side, to the syncretistic movement of Buddhism that had been inaugurated by Gyōki. The propagator of the Shingon sect thus became also the originator of Ryōbu, namely Buddhistic Shintō, proclaiming that the Imperial custom of *kami*-worship is, in reality, but disguised adoration of Buddha. Kūkai had far greater influence than any of his predecessors. His versatile genius, extending even to the work of engineering and the arts of writing and carving, his untiring energy, and his practical resourcefulness combined to make him a great power both in the Court circle and among the common people. He built a monastery on Mount Kōya, which became the headquarters of his denomination, and eventually overshadowed the influence of the hill-monastery on Hiei. We may here note a remarkable change that took place in the religious atmosphere. During the earlier part of this period, worldly blessings, such as health, good harvest, prosperity, and peace, were the reward sought in the worship of the *kami*, or Buddhist deities; and gorgeous rituals and the mystery practices pertaining to the Shingon sect made it attractive, especially in Court circles. Later, however, as the Fujiwara family declined and one civil war occurred after another, both the nobles and the common people felt the evanescence of this world; the yearning after supramundane bliss became imperative, while pessimism prevailed.

3. 1200–1600.—For half a century or more previous to Yoritomo's founding of the Bakufu (military government) at Kamakura (1192), clan struggles involved the country in constant warfare. Bloody combat, exhaustion, death, and the treachery of fortune, all of which were but common occurrences, could not fail to produce a pessimistic temperament. Elaborate rituals and theological distinctions offered no attraction. The religion which could point out a haven of security, undisturbed by the storms of life, was in urgent demand. To meet such a need Hōnen (1133–1212) and Shinran (1173–1262) appeared.

(*a*) *Jōdo and Shin sects.*—Hōnen, formerly a student of the Tendai doctrine at the monastery-school on Hiei, renounced all its philosophy as effete, and disowned the mystery practices and the discipline of conduct as useless. He preached the doctrine of Sukhāvatī, the Japanese 'Jōdo,' or the 'Western Pure Land,' according to which any man, ignorant or wise, high or low, could be saved by faith in the boundless grace of Amitābha. Saintly character, profound piety, and sincere conviction, with his doctrine of the future redemption, made Hōnen the greatest religious influence with the Court and common people, until the jealousy of his religious rivals caused him to be exiled and some of his disciples to be put to death. The faith which he once preached, however, did not cease to be a powerful influence. Hōnen had many capable followers, the most eminent of whom was Shinran, who carried his master's teaching to its logical consequence. He unhesitatingly abandoned the repeated invocation of Amitābha's name which constituted an important part in Hōnen's doctrine, proclaiming a simple, undoubting trust in the Deliverer as the sole condition of salvation. With a bold stroke of genius, he abolished the prohibition of the marriage of bonzes, practically removing the distinction between the secular and the sacred. He was married himself, and he called himself the *gutoku*, the 'tonsured ignoramus,' putting himself on the same level as common people. Thus the Shin sect was founded by Shinran, whose doctrine and influence have survived all vicissitudes of time, and are perpetuated to this day in the Hongwanji, the two greatest shrines in Japan.

(*b*) *Zen sect.*—While religious revivals were thus going on among the mass of the people, a doctrine peculiarly adapted to the military class was introduced by Eisai (1141–1215) and Dōgen (1200–53), the respective founders of the Rinzai and Sōdō divisions of the Zen sect. The doctrine of *zen*, or *dhyāna*, maintains that the state of enlightenment attained by Buddha cannot be conveyed by any external means. All doctrinal learning and rituals, therefore, are useless, and meditation or a con-

centrated reflexion upon one's essential nature is the only way to realize Buddhahood in one's self. A complete disregard of the letter and of ritual pageantry made the Zen doctrine exceedingly popular among military men, who prided themselves upon extreme simplicity of life. The Dhyāna doctrine also helped them to cultivate the spirit of stoical indifference to hardship and the habit of resoluteness in conduct. Many Shōguns became adherents of this doctrine.

(c) *Nichiren sect.*—In the meantime there arose an extreme form of bibliolatry. Nichiren (1222–82), after the teaching of Saichō, based his teaching upon the *Saddharmapuṇḍarika* ('Lotus of the True Law'). His principal tenet consisted in adoration of Buddha's Truth by repeatedly uttering the title of that scripture in which alone, he held, the genuine and, indeed, the only true doctrines of Gautama are set forth. Persecuted, exiled, almost put to death, he ever grew bolder in his denunciation of the faithless age, holding to the firm conviction that he was the heaven-sent Bodhisattva (*q.v.*) whose coming in the 'latter age' had been predicted by Gautama.

The religious leaders whom we have just mentioned had in every case many able disciples, who perpetuated and developed the movements which their teachers had begun. Roughly speaking, the Tendai and Shingon sects held influence among the nobles; the Zen among the warrior class; Jōdō and Shinshū among the mass of the people. In the 15th and 16th centuries, an age again involved in wars and political disorder, these religious bodies often became militant, and interfered with politics. The Zen sect, being that of the military aristocrats, became influential through its monasteries in educational work and literary culture. It was an age of religious fermentation, and a great number of minor sects arose, finding more or less of a following.

(d) *Shintō.*—Shintō also awoke from the dogmatic slumber which it had enjoyed under the name of Ryōbu Shintō, and made an attempt to systematize itself. Kitabataké Chikafusa (1339) tried to show the divine descent of the Imperial sovereigns, and vindicate *kami*-worship as essential to the preservation of national order. In this teaching, he became a forerunner of the royal Shintōists of the 18th century. In the 15th cent. Yoshida Kanétomo, borrowing his method largely from the Tendai doctrine, proclaimed unitarian Shintō (Yuiitsu Shintō), which stood in contrast with Ryōbu (syncretistic Shintō). Shintō did not become a great social factor, however, until the 18th century.

(e) *Roman Catholics.*—In the 16th cent. the Jesuit missionaries began operations in Kyūshū and extended them to Kyōto, where their message was welcomed by Nobunaga, the ruling Shōgun, who, at their instance, opened a theological seminary at Azuchi, Ōmi, and also built a cathedral in the Imperial capital. Their propaganda, often accompanied with gifts of musical instruments, clocks, glasses, and even distribution of rice among the poor, found great success among both the populace and the feudal nobles, especially in Kyūshū and Nagato. Thirty years after the commencement of their work the number of converts is estimated to have been 300,000. Their influence began to fail after the assassination of Nobunaga (1582), and under Hidéyoshi and the Tokugawa Shōguns, patrons of Buddhism, the Roman Catholic faith was prohibited. The suppression of the insurgents at Shimabara, Kyūshū, in 1638 marks the downfall of the 'Kirischitan' as a political factor.

**4. 1600–1868.**—The Tokugawa government adopted a definitely centralizing policy, designed to prevent the rise of any political or social factor to unmanageable magnitude. Religions of any potency were, therefore, either paralyzed by generous patronage or put under proscription. The aggressive movement of the Roman Catholic Christians was completely checked in 1638; and the government tried to exterminate individual Christians by charging the Buddhist priests with the office of taking a religious census. The nation as a whole was compelled to be Buddhist, at least in outward form. At the same time, Buddhism under the Shōgun's patronage fell into spiritual decay, although to its credit is the fact that most of the Buddhist scriptures and literary productions were put into print. The doctrines and ecclesiastical policy of each of the Buddhist sects were systematized. Takuan († 1645), Hakuin († 1786), and Jiun († 1804) were among the most conspicuous priests of this age. The oppressive policy of the Shōgunate government caused, as we have seen, religious and spiritual lassitude on the one hand; but, on the other hand, it produced a strong reaction on the part of the adherents of those religions which the government had neglected and overlooked. Such was the case with the Shintōists. Since the time of Dengyō and Kūkai, Shintō had lost its pristine purity and preserved a merely nominal existence under the shadow of Buddhism. Now Hayashi Rasan († 1657), officially a Confucianist, made an attempt to free Shintō from the 'defilement' of Buddhism; but the Shintō taught was strongly tinged with Confucian philosophies.

It was Hirata Atsutané (1843) who claimed Shintō as the only true religion, asserting that Japan and her Imperial household, as standing in a right relation to the Creator and the Ruler of the universe, were the special objects of divine favour. All other religions he denounced as false or deteriorated. He had a large following, especially among the *samurai*, and contributed greatly to the Restoration of the Imperial government.

In the 19th cent. religious beliefs arose which claimed the name of Shintō, but which really had little connexion with the ancient system of that name. Probably the best known and most worthy leader was Kurozumi, who preached on the four themes of divine revelation, prayer, providence, and honesty. He proclaimed also that the goddess Amatérasu was the fountain-head of all life, and that man must be in constant communion with her. Many other systems, such as Konkō, Tenri, and Remmon, are but old superstitious practices under the guise of Shintō worship.

**5. After 1868.**—The Restoration of 1868 brought Shintō into prominence, at least temporarily, since it was regarded as representing the 'way' of the national gods or ancestors. The first act of the Jingi Jimukyoku ('Bureau of Ecclesiastical Affairs'), established in 1868, was to effect a complete separation of Shintō and Buddhism, the former of which had been practically absorbed in the latter ever since the time of Gyōgi († 822) and Kūkai († 835). Political leaders in the government, regarding Shintō as the foundation of national morality, instituted it as a sort of State religion, giving Shintō priests official rank, whereas Buddhism was subjected by them to iconoclastic measures. Buddhist images were destroyed, the temples dilapidated, and the bonzes advised to return to the 'right kind of life.' This continued until 1872, when the Kyōbushō ('Ecclesiastic Department') was established, and Buddhist and Shintō priests were equally recognized as Kyōdōshoku (official moral instructors). The Shintō revival subsided, and Buddhism continued in its inertness until Christianity quickened it into renewed activity.

Christianity, at first proscribed, and yet secretly and perseveringly working its way through all adversities since 1859, formed in the seventies several

centres of influence through the agency of mission workers and teachers, of whom G. H. F. Verbeck, David Thompson, W. S. Clark, S. R. Brown, W. E. Griffis, George Cochran, James Ballagh, Captain Janes, and D. C. Greene are the best known. Of the Japanese Christian leaders, Niishima († 1890) and Honda (Bishop of the Japan Methodist Church, † 1912) exercised wide influence. The mighty current of 'Europeanization' which swept the country at the end of the eighties gave an opportunity for Christian propaganda to make rapid progress. In 1889 the Imperial constitution was promulgated, and confirmed the right of the Christians to maintain their faith. Indeed, the placards prohibiting the Christian faith had been removed in 1875, but it had continued to be a proscribed religion. Early in the nineties an extreme counter-current of Nationalism set in. The problem of Treaty Revision had aroused anti-foreign feeling, and Christianity, being regarded as an 'alien faith,' suffered. The faith was attacked as detrimental to educational interests; the doors of the Government schools were closed against it, and Christian education became an impossibility. Moreover, the European culture which had flooded the nation brought with it some ideas that apparently were hostile to Christian doctrine as it was presented at that time. Not only Bentham and Mill, but also Spencer and Darwin, were welcomed. All this, however, presented no serious difficulty to progressive Christians.

The Buddhists now started a movement which they called the 'Royalistic Buddhist Union,' and stirred up all Japanese to join their anti-Christian campaign. The Shintōists combined with them once more. The Imperial Rescript on Education was promulgated in 1889, with the purpose of setting up a national standard of morality, and this document was employed by conservatives as a basis of argument against Christianity.

The war with China in 1894–95 had two opposite effects. On the one hand, it awoke the whole nation to a consciousness of her own resources, both material and spiritual, which led some to believe that Japan required no other religion than those which she had had from olden times. On the other hand, the very gratifying of a long-cherished political aspiration led the people to feel the need of a higher and deeper nature which mere material or political glory could not satisfy. Here and there, amidst the blaze of the national exultation, a dark, cold stream of pessimism flowed. From *hanmon* ('spiritual distress') not a few young men took refuge in suicide. Christianity, now more 'naturalized' or 'Japanized' and stronger after many years of struggle, renewed her activity. At the beginning of the new century, all Protestant denominations (22 in number), except a few extremely conservative ones, joined in an evangelizing campaign which was carried on at strategic points in the Empire. Buddhism also, perceiving the spiritual crisis now pressing upon the nation, made an attempt to promote religious interests instead of wasting its energy in attacking Christianity; and a body of Buddhist scholars, mostly of the Shin sect, started a pietistic movement called 'New Buddhism.' The old conflict between Christianity and other forms of religion passed. A new alternative of choice presented itself—religion or irreligion; and the craving for a new spiritual power became intense. The Russo-Japanese war of 1904–05 marked a short period of suspense in this general tendency. The victory gave the nationalists one more opportunity to emphasize the traditional principle of morality—loyalty to the Emperor and filial dutifulness. Yet the younger generation seems to crave something deeper and more fundamental. Eucken and Bergson are now claiming their attention, and Christianity and Buddhism are expected to develop newer and more exalted aspects of power than they have hitherto revealed.

III. *ETHICAL DEVELOPMENT.* — **1. Earliest period to the 6th century.**—The history of Japanese ethics reveals a composite character in the temperament of the people. We find in it, even from ancient times, a combination of what may be called Hellenic and Hebraic tendencies, varying only in proportion in different ages. Clear sky, crystal waters, pine-clad mountains, and the blue transparent seas surrounding the whole land all tended to develop a moral conception in which ideas fundamentally ethical blended with æsthetic ideas. In ancient times, good and bad desires were expressed in terms designating optical sensations, such as *akai* (red, clear), *kuroi* (dark, black), *kiyoi* (clear, clean) and *kitanai* (turbid, impure, unclean). Even to-day these terms, used in proper context, may convey a purely spiritual signification. To the Japanese ear *sekishin*, 'red heart' (*i.e.* single-heartedness), and *haraguroi*, 'black-abdomen' (*i.e.* black-heartedness), do not sound strange. The conception of *tsumi*, 'offence,' therefore, was not purely ethical. The idea is better expressed by the term 'evil,' or, more strictly, 'foulness.' Among *amatsu-tsumi* (offences against the heavenly gods), the 'sin' of flaying a beast, or that of defiling the court set apart for religious functions, received the same treatment as certain crimes that might be committed in an agricultural community. Among *kunitsu-tsumi* (offences among the aborigines), leprosy and similar skin-diseases are mentioned side by side with incest and manslaughter. The most characteristic way of correcting any 'offence,' therefore, consisted in purificatory rites (cf. above, p. 482b).

Patriarchal morality was the one dominating feature among the ancient Japanese which has, with some modifications, persisted to the present time. In early times, Japan consisted of numerous tribes, the bravest and the most intelligent of which prevailed over the rest. Trades and professions were all hereditary. The land and the people belonged to the tribal chief who happened to take possession of them. The Japanese community is simply the development and coalition of these various tribes. The national characteristics of the Japanese people, therefore, were developed through the welding of a great number of tribes or families into one united people through the pressure of political and social struggle. The account, in the *Nihongi*, of early Emperors invoking the heavenly gods on behalf of the people may be due to the influence of parallel records in Chinese history, but it is evident that there existed between the chief and his tribesmen a relationship similar to that between father and son. The spirit of loyalty, which played a great part in later ages, is but the development of filial obedience. The ritual in which the celestial gods or ancestors were invoked is the religious expression of the filial sentiment. Numerical growth frequently has a decentralizing effect, and this fact accounts for the clan struggles in later periods. Only by capable Emperors or military rulers was a national unification brought about. So far as the official record goes, the Confucian *Analects* were introduced in A.D. 285, and Prince Wakairatsuko studied the Chinese classics; but it is doubtful whether this event produced any remarkable change in the moral life of the Japanese.

**2. 550–1200.**—With the introduction of Buddhism in the 6th cent. Japan entered upon a new phase of culture and moral life. Prince Umayado or Shōtoku, the first to bring the new faith to prominence, drew up the celebrated 'Constitution,' consisting of 17 articles relative to the duties of rulers

and officials. He included many injunctions which were Buddhistic and Confucian in spirit, and, therefore, theoretically speaking, opposed to certain moral principles which arose under the patriarchal form of society. Loyal obedience to the sovereign, for instance, is enjoined, not because he is the family head of the Japanese people, but because he is so appointed by heaven, it being presupposed that the ruler's position may be occupied by any one best fitted for it. The general welfare of the community is regarded as of the utmost importance, while loyalty to the clan receives no attention whatever. Further, the emphasis placed upon the importance of adoring the 'Triune Treasure' may be interpreted as involving Buddhistic universalism, which is essentially subversive of patriarchal morality. All this, however, may be due to the effort of the Prince to check those evils which the ever growing clannism of that period had developed. In fact, the Taikwa Reformation (A.D. 645) followed the downfall of the Soga family. The ethical history of Japan may in one sense be regarded as a struggle between the patriarchal morality (family or clan morality) indigenous to the country and the universal morality introduced from abroad, a combination of which may be found in the late development of Bushidō (the spirit of the *samurai*, *i.e.* feudal retainers). The introduction of Buddhism awakened the humanitarian sentiment, particularly among the Court nobles and members of the Imperial household, as may be seen in the establishment of asylums for the poor, in the building of dispensaries, and in the laws prohibiting the destruction of animal life. It also encouraged an ascetic disposition, inducing some to withdraw from the world. In the sphere of practical morality, the Confucian system seems to have had greater and perhaps more salutary effects than Buddhism. In the Nara period (708–794), when the culture of the Tang dynasty in China was transferred bodily to the Japanese Imperial Court, the names of men and women were placarded, after the Chinese fashion, for their dutifulness to their parents, and those who committed the 'sin' of filial disobedience were exiled to distant provinces. Believing the practice of filial obedience to be the foundation of all virtues, the Empress Kōken (749–758), earnest Buddhist though she was, ordered each household to keep a copy of *Kōkyō* ('Doctrine of Filial Dutifulness'), a Confucian classic, and to study it closely. From the beginning of the Heian period (794) to the downfall of the Fujiwara family (the middle of the 11th cent.) there was a remarkable development of literary culture, and the classical revival under the Tang dynasty in China was reproduced in Japan. The State university and other institutions of learning were established at public expense, and poets and prose-writers arose in great numbers. Yet all these seem to have contributed nothing to the ethical culture of the nation; nor did Buddhism bring any perceptibly wholesome results. The deeper and more exalted aspects of the spiritual life were left untouched. The tendency was to encourage superstitious practices such as magic and incantation, rather than to elevate the moral tone. Unrestricted admission into monasteries often turned them into institutions which menaced the peace of the community. Confucianism also seems to have done little to deliver the populace from ignorance and superstition. Teachings of the *I-King* ('Book of Change') tended to encourage a fatalistic belief, which had, no doubt, a morally paralyzing effect. In the Court circle, particularly, luxury, effeminacy, and corruption stood in striking contrast to splendid achievements in literature.

3. **1200–1600.**—The rise of the military class at the close of the 12th cent. had a purifying effect somewhat similar to the occupation of Europe by the Northern barbarians in the 5th century. The splendour and corruption of the Heian period were swept away with the fall of the Fujiwara family, and the establishment by Yoritomo of the military government became an occasion for the rise of a new type of morality, Bushidō (the way of the *samurai*). It was a moral spirit or temperament, prevalent among the *samurai*, characterized by austere simplicity of life, defiant endurance of hardship, love of truthfulness, and disinterested devotion to one's lord. It was a product peculiar to an age in which fighters were the preservers of social order. It included, therefore, physical and mental, as well as moral, training. Skill in military arts, adroitness of motion, capacity for endurance, quickness of perception, and mental alertness were essential parts of *samurai* education. Intellectual culture received little attention until the latter part of the Ashikaga period (the middle of the 15th cent.). Among moral virtues, valour naturally occupied the central position. It had value by itself irrespective of the results which it brought, and the verdict of cowardice was more hated than loss of life. Courage, however, had to be accompanied by a sense of propriety (*reigi*), even in the midst of fighting. Apart from the latter, valour itself was as worthless as the 'recklessness of a wild boar.' A custom was thus developed according to which hostile combatants declared their names and rank before they crossed swords. Again, truthfulness, especially fidelity to a promise, was emphasized equally with honour. 'The Bushi has no double tongue' and 'A gentleman never trifles with words' were sayings which became proverbial. The principle of 'fair play' became a maxim. The use of any base or cowardly means in war was despised and often involved destruction for its perpetrator. *Chūgi*, or the principle of loyalty, however, was the keystone in the arch of all military virtues. It was the organizing principle by which the *samurai* belonging to the same clan were united into one solid body which lived and died for the cause of its common master. As has already been observed (p. 484), Bushidō found a good ally in the Zen school of Buddhism which arose at the beginning of the period, and other branches of Buddhism also had some influence. Exposed to sudden changes of fortune in a warlike age, the *samurai* felt the need of some superhuman power upon which to rely. It became more or less a fashion among them, when they went to the front, to put a tiny Buddhist image in their tuft of hair, or a prayer-leaflet in the pocket of their armour. Their religious faith, however, sometimes differed from that of other classes in that they believed that the deities whom they worshipped favoured only the cause of the good and the righteous: 'If thy heart be upright, the gods will protect thee, though thou mayest not invoke them.' Compared with that of the Heian period, the religious faith of the *samurai* was more free from superstition. Towards the latter part of this period, Bushidō became more comprehensive, and took a form that might well serve as a moral code for the people in general. Some injunctions relative to economic and other practical lines of conduct, based upon Confucian teachings, were introduced in the written codes of certain feudal families. Popular education, so far as it existed, was in the hands of Buddhist priests. Text-books were compiled by them in which were expounded theories of filial duty and family morality, based on Confucian as well as Buddhist doctrines.

4. **1600–1868.**—The Tokugawa policy of diverting the attention of the *daimyō* from political to literary pursuits introduced a period of marvellous culture. Classical scholars were elevated to the

rank of official instructors, and numerous schools and libraries were established, some of which remain to this day. In accordance with the general movement, the lord of the province of Bizen devoted one-third of his total revenue to the cause of education. Under such circumstances, Confucianism blossomed in full splendour, though Buddhism withered under the blighting shadow of the Shōgun's patronage. Philological and loyal historical interest caused a revival of Shintō. Bushidō, which drew its strength from all these systems, burst forth after some vicissitudes into a political movement which brought about the Restoration of 1868. Side by side with all this, the Shingakuha ('heart culture') movement arose for the moral instruction of the uneducated (see below, (*d*)).

(*a*) *Confucianism.*—Of the different divisions of Confucianism, that of the *Shushi School* (named after its Chinese founder, Chu-Hi) was the earliest to appear, and became the pioneer of learning in this period. Its most prominent representatives were Fujiwara Seikwa (1561–1619), Hayashi Rasan (1583–1657), Muro Kyūsō (1658–1743), Kaibara Ekiken (1630–1714), and, later, Satō Issai (1772–1859) and Rai Sanyō (1780–1832). Sanyō's historical work, *Nippon Gwaishi*, is said to have inspired the *samurai* to the political movement which resulted in the Restoration. The first two in the list became personal teachers of Iyéyasu; and of these Rasan, erudite, versatile, and scarcely equalled by his contemporaries in literary talent, took an active part in framing the legislative and administrative systems of the Shōgun's government. His office of instructor and counsellor was made hereditary, and assigned to his descendants until the close of the Shōgunate. The doctrine of the school became the orthodox and only authorized teaching. Indeed, towards the close of the 18th cent., an edict was issued prohibiting all contrary doctrines. According to this school, the *taikyoku*, infinite, eternal, and absolute Essence, is the *ri* (reason, or logos), and the source from which emanate the *in* and *yo* (passive and active, or negative and positive) principles, which together may be called the *ki* (spirit, temperament, or inclination). The manner in which the *ri* and the *ki* interact and thereby generate all things is called the *michi* (way or truth), which should be practically applied and observed. The *ri*, or reason, is the controlling and directing principle of the universe, and veritably dwells in man's original nature, from which spring the five cardinal virtues: benevolence, justice, propriety, wisdom, and truth. He who applies these virtues to his family and social relations is in accord with the 'way,' the Will of Heaven. The 'way' is not far from one, but is in the heart. This doctrine often led scholars to adopt a speculative method, yet the *Mito School*, which was founded by the lord of Mito for the purpose of compiling a political history of Japan, consisted of scholars of the Shushi School, and its influence became one of the most potent factors for the overthrow of the Shōgunate government.

In the middle of the 17th cent. there arose the *Yōmei School* (named after Wang-Yang-Ming, a Chinese scholar of the Ming dynasty), which, in opposition to the dualistic system of Chu-Hi, taught a distinctively monistic, idealistic doctrine. Its earliest Japanese exponent was Nakaé Tōju (1608–78), who declared the alleged difference between the *ri* and the *ki* to be only nominal, both being different phases of the same Being. All is One, One is All. The *ryōchi* (conscience in the broadest application of the term) is embedded in man's original nature, and is at the same time the real entity which constitutes the universe. The nature of man and the universe are at bottom one and the same, *i.e.* spiritual and personal. Here his standpoint may be called religious. Following Wang-Yang-Ming, he taught the identity of knowledge (or, more properly, moral perception) and conduct. True to the spirit of the school, he practised what he taught, and became the centre of great influence in the district where he lived. The people called him Ōmi-Seijin ('Sage of the Province of Ōmi'), and, after his death, dedicated a temple to his memory, which stands to this day. Of his pupils the most distinguished was Kumasawa Banzan, who combined a fine talent of statesmanship with scholarly genius. During his service to the lord of Bizen, he did much for the advancement of culture in that district. The celebrated scholar and revolutionist Ōshio Heihachirō (1793–1837) was also a member of this school.

In the latter half of the 17th cent. another school appeared which took the name of *Kogakuha*, or 'Classical School.' It denounced the scholars of the Shushi School as corrupting the original teaching of Confucius by introducing extraneous elements. Its central theme was the establishment of an unmediated connexion with the teaching as it came directly from Confucius. Yamaga Sokō (1622–85) was the founder of the school. Upon the publication of his *Seikyō-Yōroku* ('Compendium of Confucianism'), in which he boldly denounced the standpoint of the Shushi School, he was driven out of Yédo (Tōkyō), put under the custody of Asano, the *daimyō* of Akao in the province of Harima, and his work confiscated. But his influence with the retainers of Asano was powerful, one of the results being the celebrated deeds of loyalty on the part of the 'forty-seven *rōnins*.' His interest was practical, and he declared the principles of *jin* and *gi* (benevolence and justice) to be the essence of Confucianism. In fact, he rendered greater service in promoting the spirit of Bushidō than in any theoretical sphere. Working independently of Sokō, yet advocating essentially the same doctrine and appearing at the same time, Itō Jinsai opened a school in Kyōto. In opposition to the views of the Shushi School, he proclaimed the necessity of striving for a complete development of one's natural capacities, and for a realization of the virtue of benevolence inherent in one's original nature. His doctrine somewhat resembles that of the modern perfectionist. His exalted personality and profound learning drew some 3000 students from all over the country, and called forth expressions of praise from the lips of his theoretical opponents. Ogiū Sorai (1666–1728) is generally regarded as of the Classical School; but his interest was philological and etymological. He regarded Confucius as a sage whose virtue is entirely beyond human reach.

(*b*) *Shintō.*—This cult, which heretofore had never been an ethical factor of much influence, now appeared against a Confucian background. An expounder of the type of Shintō which was called *Suika-Ryū* was Yamasaki Ansai (1618–82), who took the doctrine of Chu-Hi almost bodily and interpreted it in Shintō terms. He held it man's supreme duty to maintain and cultivate the original purity of his nature, and to regulate his conduct in accordance with the principle of righteousness. Bodily purification, prayer, and meditation received strong emphasis in his system. Rigoristic as he was, he was criticized as narrow and exclusive; but his intense zeal and sincerity awakened among his contemporaries a patriotic, royalistic sentiment which contributed not a little to the accomplishment of the political transformation of 1868.

Shintō as a religious system, however, like its politically disinherited Imperial representative, absorbed and forgotten in prosperous Buddhism,

would never have regained its ascendancy but for the tidal wave of royalism which began to swell early in the 18th century. Kada Azumamaro (1660–1736), Motoori Norinaga (1730–1801), and Hirata Atsutané (1775–1843) appeared one after another and proclaimed Shintō as the only system original and indigenous to Japan, and, therefore, naturally adapted to her people. Shintō in its purity they held to be the *kamunagara-no-michi*, the 'way' ordained by Amé-no-Minakanushi, the supreme Deity, the 'way' developed among the ancestor-gods of Japan, the only way to be reverently and unreservedly followed. According to them, Confucian teaching is exotic, mechanical, and artificial; the Emperor, as descended directly from the goddess Amatérasu, is alone worthy of absolute respect; and the laws of the Japanese State, being the embodiment of the divine will, are to be observed with the utmost devotion. Of those Shintōists Hirata Atsutané, though of broad learning, held extremely nationalistic views, which he based upon his cosmology. Japan he held to be the first created of all nations, guided by the constant presence of the spirit of the goddess Amatérasu, to be cherished and strengthened by all Japanese endowed with the divine spirit. His royalistic zeal was contagious, and greatly advanced the cause of the Restoration.

(*c*) *Bushidō.*—During the centuries of peace under the Shōgunate, the *samurai* gradually lost the rugged strength which had formerly characterized them, although, as we have seen, the *samurai* spirit, with its characteristic chivalry and its passionate devotion to personal honour and dignity, ever fearless of privation and death in any worthy cause, was cherished and nurtured by the various forms of Confucian and Shintō teaching until it burst forth in the political activity that resulted in the Restoration of the Imperial government. Interestingly enough, the requirement of periodical residence of the feudal lords and their retainers in Yédo, while it put an end to the existence of numerous *rōnins* (masterless *samurai*), occasioned, at the end of the 17th cent., the rise of a peculiar type of chivalry among the commoners resident in the metropolis, which was known by the name of *otokodaté* ('vindication of one's manhood'). There arose numerous communities consisting of these knights, who were characterized by a peculiar style of dress and coiffure, a bold, defiant attitude towards authority, and a passionate love for bravery, in which they often went too far.

(*d*) *Shingakuha.*—In the direction of extending moral culture to the masses of the people which had heretofore been excluded from that privilege, a movement called Shingakuha ('heart culture') arose in the first half of the 18th century. The leaders of the movement were Ishida Baigen and his followers. Their method was characterized by a free use of everyday language and humorous illustration, and, with a practical purpose in view, they derived their teaching from any source whatever, Confucian, Buddhist, or Shintōist, which seemed adapted to their use.

(*e*) *Buddhism.*—Reduced to a servile position under the Shōgunate, Buddhism in this period fell into slumber both in doctrine and in practice, although it did some service in carrying on popular education. Buddhists also included among their number men of eminent character and scholarship, such as Takuan, Hakuin, and Jiun. They were very practical, and showed a remarkable tendency towards compromise in their teachings. They did not hesitate to say, like some professed Confucianists, that *chu* ('loyalty') and *kō* ('filial fidelity') were the weightiest matters in life.

5. **The Meiji era.**—The Restoration of 1868, viewed from an ethical standpoint, was a reaffirmation in politics of the *samurai* spirit of loyalty, moved by an indomitable aspiration for a new order of things. The new era opened with the interplay of two opposing tendencies which were forced into united action by the pressure of political need, but which had to undergo radical transformation before they could be organically combined: the nationalistic, conservative, Bushidō spirit on the one hand, the progressive, Europeanizing tendency on the other. It was but natural, then, that the leading *samurai* of the Restoration, who had clamorously condemned the Shōgun's policy of opening the ports, eagerly sought, after the Restoration, to adopt European methods. The Restoration meant a revolution in the spiritual life of Japan. Under the new government Buddhism was deprived of its political prestige, and the bonzes became objects of unsparing taunt. Confucianism was consigned to the hands of classical exegetes. Shintō itself, now that it had achieved what it had long sought, was left to sink back into its old inertness. All moral doctrinists disappeared. Finally, Bushidō itself, the moving spirit of the Restoration, was rendered discorporate and temporarily effete when class-distinctions were abolished; but, charged with the best that all the past systems could impart, it continued to exert its influence, now expressed in the nationalistic movement, in co-operation with the progressive Westernizing tendency. The tendency of the time was represented by two personages entirely different in temperament and in ethical faith. One was Fukusawa Yukichi, founder of Keiō-gijiku, a pioneer importer of occidental learning. Standing upon utilitarian ground, which he adopted after serious investigation, he startled his contemporaries by pouring sarcasm upon the principle of royal fidelity. He held the establishment of one's self and the general welfare of the community to be the supreme objects to be pursued. Adopting the tenets of Rousseau, he declared that State sovereignty is simply a power delegated by the people, implicitly denying the doctrine of its divine origin. He rightly ascribed the spiritless and socially inefficient attitude of the commoners to the state of political dependence to which they had long been reduced. Thus he became a champion of democratic and individualistic principles of morality, which, he held, ought to take the place of the aristocratic and militaristic tendency of the time. Salutary as his influence was in that respect, his teaching tended to encourage the pursuit of material success at the expense of spiritual dignity.

The other was Niishima Jō. Born and bred a *samurai*, and, while in New England, thoroughly imbued with the spirit of Puritanism, he combined the essence of Bushidō and Christianity. He was no theorist; but he was an embodiment of the moral power which makes a man glad to sacrifice himself for whatsoever means spiritual progress and the enhancement of personal worth. In this he represented the general disposition of leading Christians who, while holding to no particular system-bound ethical doctrines, aimed at the moral and spiritual transformation of the community. Having embraced the religion that had been tempered by Teutonic and Anglo-Saxon individualism, the Japanese Christians were fundamentally no less revolutionary than the disciples of Rousseau or Bentham. Their persecution by the nationalists, especially among government educationists, was not altogether unreasonable, at least from the nationalist standpoint. Indirectly, but none the less effectively, the Christians brought home a truth that was bound to undermine the traditional forms of politics and society. Significantly enough, a considerable number of the leading politicians who advocated the cause of representative govern-

ment were Christians. Equally interesting is the fact that, in the minds of many, Christians and Socialists, or men of 'dangerous ideas,' were associated. But profounder and more subtle in its effect than any other ethical system that ever impressed the Japanese, the Christian influence was, and is, felt in the secret recesses of the heart. Its social effectiveness is being shown in all virtues resulting from faith in the value and dignity of the individual, such as sexual purity, regularity in matrimonial relations, the elevation of women, business honesty, cleanliness of habit, temperance, etc.

A conservative, nationalistic reaction set in at the close of the nineties. The cry of 'Nipponism,' with its emphasis upon the importance of the nation's coming to a consciousness of its inborn privilege and power, was raised in a somewhat extravagant fashion. The movement was not altogether unwholesome, and it gave expression to a legitimate and noble aspiration. The Imperial Rescript on education, which was issued in 1889, expressed the broadest and most ideal aspect of that movement. It was clearly the nationalistic, patriotic energy embodied in the Rescript that conducted the nation safely through the critical movements of war in 1894–95 and 1904–05. The conservative, chauvinistic aspect fast subsided at the conclusion of the later war. The beginning of the new century brought the younger generation into contact with a spiritual atmosphere which was hitherto unknown in Japan. Nietzsche and Tolstoi have each found their ardent exponents. Ibsen, Shaw, and Strindberg have gained a considerable number of admirers. Even a sceptical, rebellious, momentaristic temper has not altogether been wanting. Yet this is simply an indication of the great spiritual struggle which new Japan is undergoing. From an ethical standpoint, Buddhism is ineffectual; but it still has immeasurable resources. Christianity is as yet insignificant in numerical and material respects, but it is ever growing and achieving. Which will be the commanding authority in the spiritual and ethical realm is as yet an open question; but that there will be one seems assured.

K. ASHIDA.

**JĀṬ** (fem. Jāṭni; Panjābī *Jaṭṭ*, fem. *Jaṭṭi*).—The Jāṭs are found all over N.W. India, in the Panjāb, Sind, United Provinces, and the northern parts of Rājpūtāna, especially Bhartpur, but hardly in Kashmīr or the Himālayas to the east of that State. West of the Indus they are found in the N.W. Frontier Province, especially in its southern districts, but not in Afghānistān or in Balochistān, though they appear to have once occupied the latter territory. The Balochi term for a Jāṭ is Jagdāl or Jaghdal, and one of the Baloch tribes traces its descent from 'a Jaṭṭ, a Jagdhal, a nobody,' who on account of a woman, *i.e.* by marrying a Baloch bride, became a Baloch. The Jaṭoi tribe of the Baloch may also be of Jāṭ origin.

The term cannot, with any certainty, be regarded as ethnic, nor is it easy to draw any hard and fast line between the Jāṭs and Rājpūts in the N.W. Panjāb. The traditions of many Jāṭ tribes declare that they are by origin socially debased Rājpūts, whose fathers, by marrying Jāṭ wives or espousing widows, lost their Rājpūt rank and sank to the status of Jāṭs, or yeomen. Other Jāṭ tribes are of undoubted Brāhman origin. But, while many thus claim to be of gentle (Rājpūt) extraction or priestly (Brāhman) origin, few will admit that they have risen in the social scale. Nevertheless it is possible that the Sāṁsi tribe of the Jāṭs is akin to the criminal tribe of that name, though it produced the greatest of the Jāṭs in the person of Mahārāja Ranjīt Singh, the famous Sikh ruler of the Panjāb.

The earliest mention of the Jāṭs in history occurs in Ibn Khurdādba, before A.D. 912. He describes the Zats (Jāṭs) as keeping watch over the country between Kirmān and Mansūra. The *Mujmil ut-Tawārikh* observes that by the Arabs the Hindus are called Jāṭs; they and the Meds, a Sind tribe, are descendants of Ham. The Arabs appear to have found Jāṭs at Ghazni as well as in Sind, but the Muslims who later invaded the Panjāb cannot be said with certainty to have found them in that Province, and it is not until Tīmūr's invasion, in 1398, that we have any indubitable reference to Jāṭs as settled to the north of Delhi. While, then, it is credible that there is a Scythic element in the Jāṭs, it is impossible to regard them as identifiable with the 'wintry Getae,' the Massagetai, or the Goths.

That the Jāṭs are not a pure 'caste' or race is indeed apparent from the rules which they observe in marriage. While marriage within the caste, to use a convenient, but not a scientifically accurate or definable, term, is the rule, marriage with a woman of inferior caste is not invalid, though mixed unions are rare in a true Jāṭ country, such as that which centres round Rohtak near Delhi, and public opinion reprobates them.[1]

The popular derivation of the term Jāṭ is closely associated with its religious traditions. It is said to be derived from the hair (*jaṭ*) of the god Śiva, and the Mān, Her, and Bhullar, which are reputed to be the oldest Jāṭ tribes and to form a kind of nucleus of the caste, in particular claim this ancestry. In the S.E. Panjāb the Jāṭs are divided into two endogamous groups—one, the Śivgotri, who say that their forefather was created from the matted hair of Śiva and so named Jāṭ Budhra, and the other, the Kāsabgotra, who claim connexion with the Rājpūts and are so named after Brahmā's son Kāsab. It may be permissible to regard the Śivgotri as autochthones, Śiva being the earth-god, and the Kāsabgotri as later accretions to the caste.

The Jāṭs cannot, however, be said to have any distinctive religion or code of ethics. In the Central Panjāb they are mainly Sikhs, but to the south-east they have retained their original Hinduism, and to the west the vast majority have embraced

[1] Risley's statement, however, that Rājpūts and Jāṭs occasionally intermarry even now, the Rājpūts taking wives from the Jāṭs but refusing to give their own maidens in return (*People of India*, Calcutta, 1908, p. 48), must not be taken as meaning that there is any regular hypergamous relation between the two groups, but merely that a Rājpūt may even nowadays espouse a Jāṭ wife, though such a union would be looked down upon.

Islām, whole tribes not only professing that faith but setting up pedigrees which would make them Arabs or Sayyids by descent. Indeed, the Muhammadan Tahims are not impossibly Anṣārī Quraish by origin and descended from Tamīn, but it is much more likely that they are the Dahima, some of whom became Brāhmans, and worshippers of the goddess Śrī Dadhīmatī Mātājī. Tod mentions the Dahīma as an extinct Rājpūt race.

Another tribe, the Arbi, certainly appears to be Arab. But so many genealogies can be almost proved to have been invented on conversion that no reliance can be placed on etymologies corroborated by pedigrees.

The tribes of the Jāṭs probably number more than a thousand, and among the Hindus and Sikhs they are spoken of as *gots*, a corruption of the Skr. *gotra*.

Some of these tribes bear names which suggest a totemistic origin. Such are the Jūn ('louse'), Gorāya ('blue-cow'), Roja, or Rojh (same meaning), Karīr ('the wild caper,' *Capparis aphylla*), Waihri ('heifer'), Bandar ('monkey'), Gidar ('jackal'), Piplā (from *pīpal*, *Ficus religiosa*), Jaṇḍia (from *jaṇḍ*, *Prosopis spicigera*), Mor ('peacock'), Kohār ('hatchet'), and Gandāsia (from *gandāsa*, 'axe'). But no reverence is paid to any of these things. The Pankhal tribe is so called because a Jāṭ girl married to a Rājpūt fell out with him, and so he massacred all its members save those who had placed 'peacock's feathers' on their heads. The Mors' ancestor was protected by a peacock from a snake. The Jaria (from *jora*, 'twins') is said to have five branches, or apparently subsepts, all named after parts of the *ber* tree (*Zizyphus jujuba*), viz. Rangi (from *rang*, 'bark'), Jaria (from *jar*, 'root'), Beria (from the plum or fruit), Jhāṛi ('seedling'), and Khichar ('bud'). It is also very common to find a tribe named from some event at an ancestor's birth. Thus the Garewāl is so called because its ancestress was suddenly confined near a 'hay-stack,' and the Sibi or Siwi tribe derives its name from *siwa*, a funeral pile, because its ancestress gave birth to a son when about to commit *satī*. But such tales are told of countless tribes which are not Jāṭs, and folk-etymology is probably responsible for most of them.

Though nominally adherents of the great orthodox religions, the Jāṭs are often devotees of some sect, or devotees of a tribal or personal cult, as well. Thus in Hissār, a District near Delhi, large numbers are Bishnois, a Vaiṣṇavite sect, while in Karnāl, a District on the Jamna, many of them are Sādhs, or 'Pure' saints, belonging to a sect, founded about 200 years ago, which affects great personal cleanliness, forbids smoking, and adores only the one God under the title of Sat, or the 'True One.' Other Jāṭs do not eat or marry with them. Another cult very popular among the Jāṭs is that of the 'generous' Sakhi Sarwar, the Sulṭān, the 'giver of *lākhs*' (Lākhdāta), 'he of Nigāha' (Nigāhia), the earth-god—probably Śiva—taken over by Islām and transformed into the cult of a Muhammadan saint (and his descendants) with Paphian elements. The fertility which is the object of the worship naturally appeals to a landed peasantry.

Thus a Jāṭ may be by birth and education a Hindu or Muslim, by choice or conviction a Sikh, a Sulṭāni, or a sectary who has thrown in his lot with one of the countless sects old and new to be found in India. He can even become a Christian. But under or alongside of his religion and his sect is a mass of usage partly social, partly religious, and wholly based on custom, not on belief, to which he clings with a tenacity all the greater because it is irrational. In the northern and central Districts of the Panjāb these usages centre round the worship of forefathers (*jaṭheras*), but in the S.W. of that Province they cluster round the godling of the village (*khera*) rather than the tribal ancestor. This change in the religious system is congruous with the evolution from the tribal system of the tracts towards the N.W. frontier to the 'village community' organization of the long-civilized territories round Delhi. The *jaṭhera* is usually styled Bāwā ('master') or Siddh ('perfect') and bears some conventional name which shows that his real name has been forgotten. His tomb is sometimes called *bakhūhān* (pl.), and consists of three or four pits with pillars formed of earth dug out of them. He is usually worshipped at marriage.

A typical Jāṭ wedding according to the rites in vogue in the sub-montane districts which lie under the Himālayas in the N. Panjāb is thus described:
